"With these operations, the capture of some strongholds, and the surprise and destruction of a new competitor for Dhoondiah's fame, ended our first Mahratta war, in which, owing to the genius and energy of our generals, we had prostrated, with incredible rapidity, that redoubtable foe whose enmity had been for years the traditional dread of the Indian government. The personal contributions of Wellesley towards this consummation were well appreciated by those most intimately concerned. The British inhabitants of Calcutta voted him a valuable sword, the native population of Seringapatam received him with unfeigned congratulations on his return, and upon his departure from India, which soon followed, the thanks, the addresses, and the offerings of civilians, soldiers, and presidencies poured upon him in quick succession. A yet more remarkable testimony to the value of his services may be gathered from the opinions of that mighty antagonist with whom, at a future day, he was to compete in deadly grapple for the championship of the world. While Wellesley was clearing the Deccan of England's last enemies, Napoleon was mustering the whole resources of his empire on the heights of Boulogne for a descent on the island of his hate. The flotilla was ready, the camps were formed, and the conveying squadron anxiously expected from the west, when, at this very moment, with a vision of conquest before his eyes, he wavered, as we are now told by his latest biographer, for some weeks together, between the ideas of destroying us by invasion or attacking us through the side of India by reviving the Mahratta war!"

THE DUKE'S RETIREMENT FROM THE COMMAND IN MYSORE.

The consequences of these battles, however questionable they may appear to us at this distance from the scene and time of their accomplishment, may at least be said to have been immediate and successful, for by them the natives were taught to fear a power they had hitherto held in somewhat light esteem, and to acknowledge the supremacy of a nation, which, though thousands of miles distant, was yet paramount to the persons of the brave and irresistible soldiery. To go through the eastern career of General Wellesley, so as to render the relation by any means plain to ordinary readers, would require more space than we have at our command. After nine years service in India, he felt that the time had come when he might retire from the command of the army in Mysore, with credit to himself and honour to his country. On his determination becoming known to his comrades, the utmost regret was exhibited, and the expression of that regret, and of the high sense of their personal friendship and appreciation was conveyed to him in the following noble terms:—

"The officers who served with the division of the army under your immediate command in the Deccan, are desirous of presenting you a pledge of their respect and esteem; and, to express the high idea they have of the gallantry and enterprise that so eminently distinguish you, they request your acceptance of a golden vase, of the value of 2,000 guineas, on which it is proposed to record the principal event that was decisive of the campaign in the Deccan.

"In conveying to you this mark of their esteem, they sincerely add their wishes for your future welfare and prosperity; and their hopes, that when the public claims on your talent allow you repose, this vase may give pleasure to your social habits, in bringing to your remembrance events that add so much to your renown."

On the 9th of March, 1805, General Arthur Wellesley issued a farewell address to the troops he had led through many toils; and, embarking on board the *Trident*, looked his last on the scene of his Indian victories, and arrived in England in September of the same year. During his absence, his important services in the East had earned for him the thanks of his king and the parliament, a Major-generalship, the Knighthood of the Order of the Bath—one of the great prizes looked forward to by the most noble in the land—and the gratitude and admiration of the entire British nation. Once more, then, the conqueror of British India set foot on the shores of his native land.

"In reviewing General Wellesley's Indian career, strong evidence will be found to prove how much the actions of military commanders are obnoxious to misrepresentation, and how little their most brilliant efforts are appreciated or understood. At Seringapatam the night attacks upon the Sultaunpet were

set forth under Wellesley as a defeat, and under Baird as an achievement, and yet, in point of fact, no analogy existed between them. To enter an undefended post is an exploit on which no soldier plumes himself; and, on the night of the 4th of May, the whole position did not contain a matchlock. On the 5th the entire chain of posts, tope and aqueduct, village and enclosures, all were crowded with the Sultaun's best troops; and in the dense darkness an attack failed, which in daylight proved successful. Regarding the battle of Assaye, still more absurd remarks were hazarded; and the victor was accused of rashness in risking an engagement, when the most brilliant consequences resulted from its successful issue. Never were conclusions more fallacious than in asserting that Wellesley's attack at Assaye was a hasty or incautious experiment. It was a daring but a deliberate effort, for no alternative was left. Deceived by false intelligence, and once fairly in presence of the enemy, retreat was vain, and quick decision and iron nerve alone saved General Wellesley in this alarming exigency.

"To family influence Wellington's earlier success has been mainly attributed; and none will deny that the patronage of his gifted brother first opened to the young soldier that arduous path which ultimately led to fame and fortune; but who shall assert that the outbreakings of a master-mind were not discernible from the first moment when he received an independent command; and that, in an affair which was little more than the destruction of a brigand, the same system of quick but cautious movement, the seizure of momentary advantage in attack, were not as clearly demonstrated in the suppression of the robber horde as when he defeated his scientific opponent at Salamanca, or, by beautiful combinations, achieved his triumph at Vittoria? To compare events like these may appear preposterous; but let it be remembered, that intuitive ability and military tact may be as fully exhibited in bringing off a picket when endangered as in conducting the retreat of a division.

"In Wellesley's earlier successes, two circumstances connected with them strike us as being most remarkable; the enormous masses of organised men over whom his triumphs were achieved, and the scanty means with which these brilliant victories were effected. Small as the latter were, in examining the proportionate strength of his armies, his British soldiers did not exceed a fourth of the whole; and with his native troops—Mussalman opposed to Mussulman—Scindiah was routed at Assaye, and Gawilghur, esteemed hitherto impregnable, carried by assault."

HIS MARRIAGE, &c.

On the return to England he received the thanks of parliament, and was speedily appointed to a command under Lord Cathcart, in an expedition intended for the continent. The Battle of Austerlitz and the successes of Napoleon, however, prevented for the present the expedition being carried forward. He was then appointed to the home command of the Sussex district, and returned to the House of Commons as representative of Rye, and made his maiden speech in an English House of Commons in favour of Lord Mornington's government of India. On that occasion, as on others, both before and since, there were not wanting men ready to complain, and others proud to defend, the actions and policy of men in office; and the defence of his brother has been considered not only as a piece of plain out-spoken rhetoric, but as a graceful act of kindness in a young and promising officer. About this period the attention of the public was first directed to the parliamentary reports in the daily papers. The death of the Marquis Cornwallis, then Colonel of the 33rd, opened the way for further promotion for General Wellesley; and he who had been the lieutenant-colonel for thirteen years, was now appointed Commander of this famous regiment.

A change of administration taking place at this time, Sir Arthur Wellesley was appointed to the office of Chief Secretary for Ireland, under the lord-lieutenancy of the Duke of Richmond. The capacity for business possessed by the young soldier was soon displayed; and the Registration of Arms Bill remain as a monument of his useful labours in this respect.

About this time (1806), he was married to the Hon. Catherine Pakenham, sister to the third Earl of Longford. It is said that he had paid his addresses to this lady during his minority, and had been refused. The marriage, however, was not a happy one. The lady died in 1831, after bringing him two sons, both of whom entered the army, and at present hold the rank of lieutenant-colonel.

Next year (1807) the British determined to anticipate Napoleon at Copenhagen by a stroke of policy equal to his own; and for this purpose sent a force to seize the Danish ships—a kind of argument so very forcible that a bloodless capitulation was the speedy consequence. In this expedition Sir Arthur was employed as a matter of course; and so well did he acquit himself, that in his history M. Thiers compliments him as the greatest hero of the time, and tells French readers that the greatest achievements of Sir Arthur Wellesley—greater even than all that had been accomplished in India—were his diplomatic services at Copenhagen.

We shall now have to follow the great leader into a new scene, and transfer the theatre of his operations from India to Europe; but ere we enter on a review of his more brilliant acts in the Spanish peninsula and the field of Waterloo, we may pause awhile to consider the character of the man, besides that of his great French opponent. Both Wellington and Napoleon, says an acute writer, like most great generals, were eminently endowed with administrative talents, and both conceived themselves peculiarly gifted in matter of finance. The Duke is even said to have expressed his opinion that his true genius was rather for the Exchequer than the War-office. At one of the most critical conjunctures of the Peninsular War he drew up a most able paper on the true principles of Portuguese banking, and at Seringapatam after very serious evils had been experienced from a long-standing debasement of the coinage, a memorandum was accidentally discovered in the treasury from the pen of Colonel Wellesley, every prediction and observation of which had been exactly verified by events. On this point, no less than on the question of military strategy, the gigantic scale on which the French Emperor acted precludes any effective comparison with operations in a smaller sphere. It would be ridiculous to question Napoleon's extraordinary genius for organisation in the face of such imperishable records as remain. But in estimating these creations his unparalleled facilities of action should be taken into account. With no opinions to consult, no interests to reconcile, no claims to adjust—with a *tabula rasa* of all rights, prejudices, institutions, and establishments, it was not very difficult for a creative genius to occupy itself with the task of constructing anew. Wellington enjoyed no such opportunities. His abilities were tasked in a Government where all progress is the result of compromise, where no interest is destroyed without compensation, where the most resolute Minister is forced to qualify his own convictions in deference to those of his opponents, and where every act has to sustain the tedious ordeal of Parliamentary discussion. We do not say that Wellington possessed Napoleon's power of administration. But it should also not be forgotten that their respective spheres of action admit of no comparison, and that the Duke's conclusions, if less brilliant than the conceptions of his antagonist, have proved better calculated for the test of experience. The characteristic of Wellington's mind was that sterling good sense which is said to distinguish the capacities of his countrymen in general. This peculiar merit is visible in every line of his despatches and in every act of his career. He never neglected opportunities of observation. While stopping at Madras, on his first voyage to Calcutta, he so acquainted himself with the administration of that Presidency that the Mysore war found his local knowledge already prepared. Before hostilities commenced with Scindiah, he had studied the features of the debateable ground, and drawn up minutes on the management of the Mahratta campaign. He was found prepared, when the emergency arrived, with memoranda for operations in Egypt, in Portugal and in Spain. He gave advice to Louis and Ferdinand, which, if followed, might have saved many of the revolutions he lived to see. He was never credulous nor enthusiastic, bigoted nor vindictive. He restrained the exasperation of Blucher in 1815, and threw his weight on the side of moderation in the councils of Vienna. He never set human nature at more or less than it was worth. He made allowance for passions, interests, and contingencies, computed things at their true value, and deduced conclusions which were rarely wrong. (*To be continued.*)

LETTERS TO WORKING MEN.

No. I.—Introductory.

In addressing myself especially to you, my friends, it may be thought, by some, that the field of my labours will be too narrow and restricted, and that by the phrase Working Men, I intend that only the actual labourers in field and at forge, in mine and in factory, in workshop and in warehouse, should benefit by anything I may have to advance. But it is not so in fact,—for, though the writers of this Magazine have always before them the idea that they are addressing a class of readers never before or elsewhere selected as a special audience, it must not be forgotten, that by the second title of this work the conductor professes to be a Family Instructor, as well as a Working Man's Friend. In a series of articles which have already appeared under the general title of the Working Man, there have been given, as you know, such directions and advice as were deemed needful for the edification and guidance of the young among you. It is now proposed that those familiar letters shall be resumed upon a wider and more comprehensive plan. You know the nature of the subjects on which you have already been addressed—the duties, behaviour, and conduct of working men, the importance of the laws by which your labours are governed, and various other highly valuable hints and lessons. In the present series, will be embraced such matters as the History and Importance of Life Assurance, the Value of a Vote, and how to obtain it, the Rationale of Building and Land Societies, with many other subjects equally interesting and valuable.

Of course it need scarcely be said, in this place, that whatever tends to the improvement and refinement of society generally, must be of the utmost interest and importance to the working man. Labour is honourable, we must never forget that. Nor that, from the people—that is to say, the great mass of unknown, striving, persevering men,—have arisen all the great ideas which distinguish the present era. As the poet says,—

> "Nothing of honour, or riches, or worth,
> But hard-fisted labour has been at its birth."

Now, I do not mean to tell you that labour is the end of your life or mine, or that of itself, in the abstract, the idea of work is pleasant; but I do mean to declare that labour is the necessity of our existence, and that, as such, we should strive, by every means in our power, to render it as painless as possible. We labour—all of us, the hand that guides the pen no less than the arm that wields the axe—that in the end we may retire from toil and be at ease—that old age may find us no longer compelled to brave the summer's heat or the winter's cold; and that when death, the great consoler, shall call us away as a sentinel from his watch, we may be found prepared to obey the summons. Knowing all this, and being armed and ready to battle with the doubts, difficulties, and dangers which beset our path—looking forward continually to the great worldly object of our labour, emancipation from toil, it behoves us all that we should let no opportunity escape us of making ourselves acquainted with all that may be necessary for the accomplishment of that object. And that not only should we *know* what is right and fitting to our condition, but knowing, we should *practise* also. To you, my friends, it is of especial importance that you should so comport yourselves to the world, that the world may learn to respect you more than it has hitherto. Too long has it been the fashion to decry the men of toil, and to represent them as brutal, immoral, improvident, careless, ignorant; too long have the prejudices of education, or the want of it, been allowed to step between the workers and what are called the upper classes; too long have working men themselves nourished feelings of dislike and suspicion against those whom the all-seeing wisdom of God has placed above them in the social scale; but it is to be hoped that the spirit of the era will soon remove and ignore such idle, useless, and absurd untruths. It is for you, working men, to convince the world of your value in it. And this you may do without government assistance or royal patronage. This you may accomplish by the exercise of your own good sense, and courage, and patience, and perseverance and faith.

There is a story told of how a prisoner, confined within the four walls of a dreary dungeon, actually worked his way out into the open air with no tool or weapon but a rusty nail; and there is another, which you possibly may have read, of a weak and helpless man, who, after spending many years in a French fortress, watched constantly by jealous eyes, found pleasure and consolation in tending the growth of a little weed which grew up between the interstices of the stones of the parapet on which he was allowed to take his daily walk. We may draw a special meaning and lesson from these little stories. You, my dear friends, are prisoners, confined, hemmed in, pent-up, and breathing hardly, within the barriers which ignorance and prejudice, and the usages of society have built up around you; you, too, must escape and be free, though you have no other weapon than a rusty nail; you too have little human flowers to tend within your prison walls, and it is for you to transplant them into better soil, where they may be tended carefully and breathe the pure air of the mountains. But how accomplish this great escape from poverty and want, and discontent and ignorance, and toil? How rear the tender plant which pines for light and nourishment? How accomplish your deliverance from the prison of your own follies and vices? You know how. You have irresistible weapons in the patience, exertion, and faith with which God has endowed you all. You have no harder task than to exercise the faculties with which you are entrusted; no greater anxieties in your sphere than other men in theirs; but by prudence and care you may win for yourselves a deliverance from the prison of debt and bad habits, and vicious courses; and so in time you may see grow up about you precious flowers, which shall shadow your ripe old age and hang like a glory round your dying bed. Go forward, then, with a stout heart and fearless resolution, and doubt not but that you may accomplish for yourselves that liberty for which the idle and the improvident hope in vain.

> Labour is life! 'Tis the still water faileth;
> Idleness ever despaireth, bewaileth;
> Keep the watch wound, for the dark rust assaileth;
> Flowers droop and die in the stillness of noon.
> Labour is glory! the flying cloud lightens;
> Only the waving wing changes and brightens;
> Idle hearts only the dark future frightens.
> Play the sweet keys, wouldst thou keep them in tune.
>
> Work—and pure slumbers shall wait on thy pillow;
> Work—thou shalt ride over care's coming billow;
> Lie not down wearied 'neath woe's weeping willow;
> Work with a stout heart and resolute will.
> Work for some good, be it ever so slowly;
> Labour—all labour is noble and holy

It may not be necessary that I should again address you in this strain. You know that the social and political salvation of yourselves and your children is in your own hands. Exercise, then, the powers which God and the free laws of your country have made your own, and strive to win for yourselves that which acts of parliament can never accomplish,—the respect of the world and an eventual release from daily toil.

THE ORDER OF THE LONE STAR.

"I DIE FOR MY BELOVED CUBA," were the last words of that extraordinary man, whose piratical invasion of Cuba, and whose ignominious death, attracted public attention not many months ago. Many of those who gathered around to witness his death agony and saw the man garrotted, pitied but condemned him. To others his death was a martyrdom, and they recognized in him the noblest virtue and most exalted heroism. His short, brilliant career—brilliant to those who see in martial glory something to admire—his defeat and lonely wanderings on foot, till nature gave way, and he could hold out no longer—the extensive preparations made for his execution in the field of La Puerto, all gained for him a sort of renown, and added interest to his life and death—an interest that did not die out, that could not be destroyed, that would not be extinguished—that, though not blazing out conspicuously at once, burnt on with a steady radiance, and that at last is beginning to manifest itself in America in a new and unexpected manner.

Another Cuban conspiracy is on foot. It takes the form of a well-organized, and wide-spread political association It is known as the Order of the Lone Star In New York there are seven or eight divisions, embracing several thousands of members, who have all bound themselves to march at a moment's warning to Cuba. Eminent soldiers, merchants, physicians, lawyers, editors, and even divines, are active and influential members of this Order, and are rapidly filling its coffers with gold. The following particulars respecting the origin, progress, and objects of the Lone Star, have been derived from authentic sources, and may therefore be relied upon. It is translated from the Spanish, and has been prepared by order of the President-General of the LONE STAR.

"The insurrection that was organized by General Don Narciso Lopez, at Trinidad and Cienfuegos, and which was discovered by the government in July, 1848; the expedition of Round Island, prepared by Lopez, by means of funds supplied by the Cubans, and connected with the patriots resident upon the island, in August, 1849, that of Cardenas, in May, 1850, to which the Spanish guard of Cardenas was joined; that of the Cleopatra, prepared also by Lopez, in April, 1851, by means of funds sent from Cuba, and the insurrection of Puerto Principe and Trinidad, were public deeds which have borne witness to the revolution of Cuba, and which stamped Lopez as the chief of the Cuban patriots. Prolific of deeds and glory, and at the same time unfortunate for Cuba, has been the year 1851. In April, the Cleopatra expedition, which was to have been the nucleus of the operations in Cuba, when upon the point of sailing, was discovered and dispersed by the betrayal of one of the party. The fourth of July, desperation obliged the Cubans to raise the cry of liberty at Puerto Principe, the 24th of the same month, the citizens of Trinidad answered the movement of the patriots of Camaguey; the 12th of August, the formidable Lopez landed upon the shores of Cuba, with four hundred valiant men; that very day the blood was shed, on the scaffold, of the hero of San Carlos (Aguero) and four of his comrades; on the 18th, Armenteros and ten more were immolated to the fury of despotism. Meanwhile the hosts of the Spanish army ran away, frightened, before the unconquerable Lopez, abandoning their wounded general, and leaving the soil covered with corpses. In other places, great numbers of patriots, who came ready to unite themselves to the standard of liberty, when about to cross the enemy's lines, were assassinated and cruelly murdered by those who ran away shamefully in the field of battle. At last the hurricane came with fury, to put an end to the brave careeer of Lopez and his comrades, disarming them, and leaving them defenceless in the hands of their barbarous enemies. The first of September, upon a scaffold erected by despotism, was seen a hero, who, placing his confidence in God, said, 'My death shall not change the destinies of Cuba. Adieu, my dear Cuba, I die for you!' Thus he spoke, and his spirit soared above, and rose up to heaven That hero was Lopez!—the magnanimous Lopez, who died. The whole island of Cuba was shaken, and the light of a Lone Star rose above the horizon upon the Queen of the Antilles, penetrating the shades of despotism, and lighting the way of union, courage and valour, which only can conduce to the triumph of liberty."

Before the departure of Lopez from New Orleans, he received the pledges of several respectable persons to assist the expedition. Encouraged by these promises, Lopez started for the island, to fulfil the duty that was assigned to him as chief, as man, and as hero. Meanwhile, those persons who remained behind, formed a committee to carry out the fulfilment of their pledges. They collected together the necessary materials, and a powerful auxiliary expedition was prepared, which, doubtless, would have ensured the triumph of liberty in Cuba; but at the moment of weighing anchor, the fatal news arrived that Lopez had died upon the scaffold, and that the revolution was stopped.

These events followed so rapidly, one after the other, that time was not allowed for the promised reinforcements, and Lopez, defeated *by the elements*, sealed by his death his sacred convenant to protect his dearest Cuba. The fusillade and mutilation of the fifty one Americans under the walls of the Castle of Atares gave solemnity to the promises made on their part, and, at the same time, Aguero, Armenteros, and some others, martyrs of liberty, proclaimed the revolution from the scaffold, thus re-affirming the covenant entered into by Lopez. Witnesses, also, of the revolution in Cuba, and of the authority of Lopez to invoke the aid of free men in favour of unhappy Cuba, are the many Cuban victims who fill the Spanish prisons and fortresses, and the many who now eat the bread of exile in the United States, in Mexico, Venezuela and France.

The revolution of Cuba was then an unquestionable fact, and that Lopez was the recognized chief of the Cuban patriots does not admit of the least doubt. "In this manner," say the advocates of the system, "we have vindicated the expeditions against the colonial government of Cuba, and freed ourselves from the imputation of piracy which the servants of despotism desire to attach to our operations, influencing, not a little, ignorant men. Lopez was recognized before the war as the chief of the revolution of Cuba, and the covenants entered into by him we looked upon as having been entered into by Cuba

"In view of acts so public and so notorious, while the hearts of the murdered victims yet palpitated, the friends of liberty met together to take those measures necessary for the redemption of the promises of Lopez; and the institution of the 'Order of the Lone Star' was the result of their consultations.

"The death of Lopez, and the suppression of the insurrections of Puerto Principe and Trinidad, put a period to the revolution It was not considered practicable or legal to re-commence the struggle by means of an American expedition. Consequently, the 'Lone Star' was dedicated to perfect and spread its organization, gathering all the elements and necessary resources, for the assistance of all enslaved but valorous people, who may rise the cry of independence.

"A constitution was adopted, having for its general basis 'the extension of the area of liberty', and the first division of the 'Order of the Lone Star' was instituted in New Orleans. Soon others, and others, were instituted, until now there exist over fifty divisions, in eight or ten States of the Union, amongst them the Cuban division, 'La Union,' in the City of New York. The members number more then fifteen thousand; every one of them sworn to help and contribute to whatever enterprize the Order may undertake; obliged to assist in their own persons, or to fill their place with another, when the moment of action arrives. Until now we have only sought to incorporate those men most useful, on account of their knowledge and virtues, and many distinguished men belong to this Order, some military and some civil.

"By looking over the constitution, the organization and character and power of the Order will be easily recognized. By it can be seen that each member must pay at least three dollars for his institation, five dollars for the second degree, and five dollars for the third, besides four shillings monthly dues; but nearly all, if not all the divisions have raised the scale of dues. As soon as three divisions exist in any State, a general assembly is formed, composed of two members of each division, elected by ballot. These general assemblies are authorized to pass such by-laws and regulations as they may judge convenient for the good and increase of the Order. The supreme council is composed of two members from each general assembly, elected by themselves, which is charged with the general interests of the Order. This council has power to dispose of the funds, to levy contributions, if it is deemed necessary, to name officers and agents, and to act as umpire in all disputes of grave moment which occur.

"In this manner we are gathering together the most honorable persons, to place them at the head of affairs, and the management of the enterprize will correspond to the principles and objects of this noble and powerful institution. Who can believe that this is a piratical institution, incited only by a thirst of vengeance? Who can believe that illustrious men of this powerful republic, which shows to the world a perpetual example of justice, should mysteriously meet together to conspire against the interests and feelings of an unhappy people?

"Many, however, have appeared to believe that the motive which gave origin to and which moves the Order of the Lone Star, is the desire to avenge the American blood basely shed in Cuba, that its object is to invade and conquer Cuba, if it should be necessary, usurping all the international rights, and caring nothing for the interests of the country. This is an absurd and malicious idea, propagated by the enemies of the liberty of Cuba. It is enough to say that many Cubans are incorporated with the order, and co-operate with its plans; and, moreover, are interested in the happiness and welfare of their country, thus giving the lie to their malign detractors The origin of the Order, as above explained,

wes a compact entered into by Lopez. Its object is the extension of the area of liberty, without reference to people or places. Although to Lopez belongs the glory of having caused the existence of so noble and powerful an institution, to Cuba and to other oppressed people it appertains to take the benefits of such beneficent assistance, by rising, with faith and courage, in a new revolution."

The constitution of the Order of the Lone Star was adopted at the city of Lafayette in 1851, and has been revised by a committee duly appointed It consists of fourteen articles, which arrange for the officers, their duties, the eligibility of members—under which head it is stated that no person shall be admitted as a member who does not believe in the existence of a Supreme Being, or who does not possess a good moral character, or is incapable of earning a livelihood, or who has no visible means of support, and not less than twenty-one years of age. The dues are fifty cents per month, paid quarterly in advance.

The president of the General Assembly is empowered to establish Divisions anywhere, when so called upon by seven persons, and grant them a charter for the same. He is also empowered to delegate said authority of establishing Divisions to any presiding officer.

In case of absence or sickness of the president, the vice-president shall be clothed with his powers and perform his duties

In cases of emergency, section 2d of Article V, of this constitution, may be suspended by dispensation of the president of the General Assembly.

The movement is one which is most throughly organized It is no ebullition of public feeling Men with clear heads and business habits have brought all their energy to bear upon the question. The organization is a formidable one.

That oppression exists in Cuba it would be brazen effrontery to deny. That this oppression, instead of becoming ameliorated by time, becomes more and more grievous every day, is a fact that the history of the present teaches. Some of this oppression is incidental, and not the necessary result of the system. The present Governor-General delights in a tyranny, which enables him to drive the African slave trade without let or hindrance, and the necessity for employing measures for the repression of the vastly increased discontent of the population is one of those incidental circumstances, but, says an American writer—and we prefer giving his opinion to our own, because he *is* an American—

"Authority, which has to sustain itself by crushing its subjects into the dust deserves to fall, and the Cubans themselves are clearly justifiable in attempting to overthrow it. So far as regards the intrinsic justice of the matter, the sympathies of all true Americans must be with the resistants But there is another great point to be considered by the people of this country. Though Cuban oppression is an evil, would not its violent overturn bring greater evils in its train? A successful rebellion could end only in independence. From a variety of causes, and chief of all from the preponderance of slave population, independence would quickly lead to a connection of some sort with one of the powerful nations That nation could only be ours; first, because the Cuban people would not wish it to be otherwise; and secondly, because the American people could not permit it to be otherwise. But no connection could be formed with the United States except by becoming an integral portion of them. This is to be deprecated, because our territory is already becoming too extensive, and our population too heterogeneous, and because it would again raise the extremely dangerous slavery issues, which have just been so fortunately settled. Looking, then, to the inherent rights of the Cuban people, we cannot blame them for endeavoring to escape from the Spanish yoke; looking to the ultimate effects of such an escape upon our own interests, we must consider it a national misfortune.

"But whether Americans regard these revolutionary movements with favour or not, they have but one political duty in the premises. That duty is strict non-intervention. We have treaties of amity and commerce with Spain, against whom these hostile movements are directed, and, at the peril of our national honour, these treaties must be maintained inviolate. Our neutrality laws must be respected by our people and enforced by our government. If the Cubans think it their duty to fight, let them fight, it is clearly our duty to preserve our faith and remain at peace. We have little doubt that hostile operations will, at some day not very distant, be recommenced against the Spanish rule in Cuba, on a scale more formidable than ever: but we most fervently trust that the scenes of last year will not be repeated. It is to be hoped that we have heard the last of Cuban invasions. It is to be hoped so, because our government, being amply forewarned, will exercise greater vigilance, and employ stronger preventive means; because our people are more deeply sensible of the wrong, the mischief, and the folly of treading over national obligations to propagate liberty in other lands by fire and sword; and because the Cubans themselves have far better learned that if they would be free 'themselves must strike the blow.' The struggle sooner or later will come. We may invoke it, we may deprecate it; but it is alike inevitable. It is the part of our countrymen not to be actors in it, but spectators of it—spectators eager and anxious indeed, for politically interested as they are in the result, they cannot and should not be otherwise."

SCIENTIFIC MEMORANDA.

BEAUTIFUL IMPRESSIONS FROM SEALS.—The stone is first thoroughly cleaned with a brush of moderate softness; it is then warmed over the flame of a candle, the stone being traversed in a circle at a moderate distance above the flame, that it may be heated uniformly. The usual test for the proper degree of heat is the placing of the seal upon the naked hand; and if the heat is about as great as can be borne without pain, it is considered to be suitable. The engraved surface of the seal is then coated with a *very thin* layer of clean tallow, applied with a small brush, and this hollowed surface is again coated with a thin layer of vermilion, applied with a camels' hair pencil. This completes the preparation of the seal. When the impression is made, the vermilion becomes attached to the surface of the wax, and materially heightens the beauty of the impression.

The sealing-wax is prepared by holding the stick of wax at a little distance above the flame of the candle, until it is thoroughly softened, but only so far heated as is necessary to allow of a sufficient quantity of wax being detached to form the impression. Care must be taken to avoid blackening the wax, either by smoke, or allowing it to become ignited The softened wax is deposited in a small heap upon a piece of stout paper, and when enough to form the impression has been placed on the paper, the fusion of the wax is completed by traversing the under surface of the paper above the flame of the candle, at a sufficient distance to avoid scorching the paper.

When the wax has become thoroughly softened, it is stirred with a small stick, to drive out all the air bubbles, and work it into a uniform mass of a conical shape The paper is then laid on the table, and when the surface of the wax has become bright and quiescent, the seal is applied, to give the impression. In order that both the seal and wax may be at the requisite temperature, the preparation of the two is carried on almost simultaneously.

In applying the seal to the wax, the seal-handle is held between the thumb and the first two fingers, applied as near to the seal as convenient. To give steadiness to the hand, the wrist is rested upon the surface of the table, and the position having been carefully determined, the seal is quickly dabbed upon the wax with a firm perpendicular stroke, but only with moderate force. Some little practice is necessary to attain sufficient dexterity to give the impression with precision; but the method of quickly dabbing the seal upon the wax yields far more defined impressions than the mode sometimes adopted of applying the seal with quiet but considerable pressure, which not only fails to copy the most delicate of the lines and angles, but the imperfect copy thus produced is also liable to be further deteriorated by the seal sliding on the gradually yielding wax, which then receives a double, and, of course, a spoiled impression.

In this, as in similar processes, the most sharply-defined impressions are produced by employing sufficient momentum to drive the wax at the same instant into all the minute crevices of the seal, exactly as in the chichée casting and type-founding.

ELECTRO-MAGNETIC AND MAGNETO-ELECTRIC APPARATUS.—This apparatus consists, 1, of an improved method of charging or magnetising iron and steel bars to be used as permanent magnets or electro-magnets; 2, of certain new forms of electro-magnetic machines, the *Mining Journal* says —The first branch of the improvements is carried into effect by the employment of an electro-magnet formed by a current of electricity produced from a magneto-electric machine, instead of that generated in a voltaic battery; and such an electro-magnet may be very advantageously used for magnetising large bars of steel, or for producing very powerful magnets. Any of the known forms of magneto-electric machines will serve thus to convert a bar of steel to an electro-magnet, but the patentee prefers to use one composed of four, eight, or any other number of permanent magnets, having double the number of armatures, and coiled with strong wire of about 60 feet in length. The machine about to be described has been found to answer well in practice. In this machine, the steel magnets are composed of eight plates of a U form, weighing about 30 lb each plate, and there are eight such compound magnets, all the north poles of which are arranged on one side of the machine and the south poles on the other side, although this precise arrangement is not essential, and may be varied. The armatures are of soft iron, weighing

about 15 lb., and are coiled with about 60 ft. of copper wire, of No. 4 gauge, and insulated in the usual manner. The armatures revolve in a brass wheel, and are caused to pass as near to the poles of the magnets as practicable, the commutator or break acting on the whole eight magnets at the same instant, so that the current of electricity shall always pass in one direction, and the surfaces of the whole of the 64 plates be in combination at the same time. The bar of soft iron used as the electro-magnet with this machine weighs about 500 lb, and is coiled with bundles of about 30 copper wires of No 16 gauge, and about 60 feet in length (the bundles are formed by binding a series of uncovered wires together into one covered strand or bundle), and the power of the electro-magnet will depend upon the power of the permanent magnets used in the machine, both as to the weight it will support from a keeper, and as to its capability of rendering bars of steel permanently magnetic by contact therewith. It will therefore be evident that by having two sets of the permanent magnets, and changing them in such machine, their supporting power may be increased by continued charges or passes from the electro-magnet thus produced. In one form of electro-magnetic machine represented and described under the second head of the invention, the steel bars or permanent magnets are eight in number (these bars may be of cast or soft iron, but when soft iron is employed, bars of steel permanently magnetised will have to be used in conjunction with them) of a U form, and arranged around a circle with their poles pointing towards the centre. Each arm of each of the magnets has attached to it straight bars of steel, also rendered permanently magnetic (of which any desired number, and of any length or size, may be employed, according to the strength of magnet required), which are so placed as to be out of the influence of the armatures when the latter are revolving. The poles of the U-shaped magnets are, on the contrary, as nearly as possible in contact with the armatures which revolve within the circle formed by them, either between the poles or in front of them Instead of the bars which form the circle being of steel and magnetised, they may be made of soft iron, and depend for their magnetism upon the magnetic bars beforenamed placed around them In another form of machine both the magnets and armatures are stationary, and the commutator alone has motion between the poles of the horseshoe magnets and the armatures, being mounted on a spindle and caused to revolve by a band from some driving machinery. The commutator or breakpiece is composed of a brass centre, with four radial arms of soft iron, either solid or formed of two or more plates.

PHOTOGRAPHS IN NATURAL COLOURS —In No 7 of the *Illustrated Exhibitor and Magazine of Art* some interesting particulars were furnished respecting recent improvements and discoveries in photography. To the information which is there given, we add the following in the words of the *Athenæum* —In some experiments made by Sir John Herschel a coloured impression of the prismatic spectrum was obtained on paper stained with a vegetable juice. Mr. Robert Hunt published some accounts of the indications of colour in their natural order obtained on some sensitive photographic surfaces. These were, however, exceedingly faint indications; and M. Biot and many others regarded the prospect of producing photographs in colours as the vision of enthusiasts— not likely from the dissimilar action of the solar rays ever to become a reality. M Edmund Becquerel has published a process by which on plates of metal many of the more intense colours have been produced; but it appears to have been reserved for the nephew of the earliest student in photography, Niepce, to make the discovery of producing on the same plate by one impression of the solar rays all colours of the chromatic scale Of this process, called by the discoverer, M. Niepce de St Victor, "Heliochromy" —sun-colouring—we have, through the kindness of Mr Malone, had an opportunity of seeing the earliest specimens imported into this country. They are three copies of coloured engravings,—a female dancer and two male figures in fancy costumes, and every colour of the original pictures is most faithfully impressed on the prepared silver tablet. The preparation of the plates still remains a secret with the inventor, and he informs Mr Malone—to whom these pictures were given by him—that it is in many respects different from that published by him in his paper "On the relation which exists between the colour of certain coloured flames and the heliographic images coloured by light." Suffice it to say, that the plate when prepared presents evidently a dark brown, or nearly a black, surface, and the image is *eaten out* in colours We have endeavoured by close examination to ascertain something of the laws producing this most remarkable effect; but it is not easy at present to perceive the relations between the colorific action of light and the associated chemical influence. The female figure has a red silk dress, with purple trimming and white lace. The flesh tints, the red, the purple, and the white are well preserved in the copy. One of the male figures is remarkable for the delicacy of its delineation · here, blue, red, white, and pink are perfectly impressed. The third picture is injured in some parts, but it is, from the number of colours which it contains, the most remarkable of all. Red, blue, yellow, green, and white are distinctly marked—and the intensity of the yellow is very striking. Such are the facts as they have been examined by us; and these results are superior to those which were given to the world when photography was first announced. We may expect shortly to see these *Heliochromes* presenting favourite scenes and chosen friends to us in all the beauty of native colour.

AN ADDRESS TO THE PRESS.

Read by C. S. Mackintosh, at the Rural Party to Earl's Wood, from M. Billing's Establishment, Birmingham, August 14, 1852, in Commemoration of the Invention of Printing, discovered A.D. 1437. Written for the occasion by FREDERICK HINE.

FOUR hundred and fifteen years have rolled away since thou wert born glorious birth! which we have this day met to celebrate. We hail thee a thousand times! Thou wert born in the dark ages, for thou camest to enlighten the world, thou wert born in the mist of Ignorance and amid the dark clouds of Despotism and Tyranny, but thou camest to remove the one and dispel the others. Interested men saw that thou wert precious, and sought to keep thee to themselves, but thou didst burst asunder the bonds with which they sought to bind thee—for thy native element is FREEDOM Thou art the messenger of PEACE, and the herald of TRUTH—the mental railway upon which the train of thought shall run to the everlasting temple of KNOWLEDGE and WISDOM. Thou art the ladder upon which the human mind mounts to heaven, and holds communion with its Maker. Thou art old Father TIME's daybook, within whose pages he transcribeth his mighty transactions, and recordeth LIFE and DEATH Thou art the dial of time—a bark upon the boundless ocean of thought, in which HUMANITY floats down the ever-flowing tide of time into the gulf of ETERNITY! By thy aid do we learn the noble thoughts of the brightest geniuses, that ever trod the earth, for with thy aid do we mount with the mind of a MILTON into the dwelling-place of the ETERNAL, and stand upon the ethereal shores of Paradise—or rise with the genius of a NEWTON into the spheres above, and wander amidst the orbs which illuminate the vault of heaven—or penetrate with a SHAKSPERE into the deep recesses of the human heart. By thy aid may we soar with the mind of the poet into the regions of imaginative thought—or, treading in the footsteps of a HOWARD, pierce the gloomy shades of the world's dungeons—or roam with the adventurous traveller over the snow-clad mountains of the north, under the fervid heat of the zone, amid the pathless forest, and across the dreary desert Thou preservest the vast treasures of History—gatherest the wisdom of the most profound scholars and the most acute philosophers, and layest it at the feet of mankind Thou art now widening the sphere of thine activity; tyrants would bind thee, because they dread thee, but their efforts shall be in vain. Thy home is the WORLD—thy motto, JUSTICE—and thy weapon, TRUTH Thou wilt not relax in thine efforts, nor sink in despair, for, though thy difficulties are great, thy triumph is sure. Thy aim is a noble one, and thy victory will be glorious. Thanks to thine aid, Mankind is rising rapidly in the scale of civilization. The world is becoming alive to thine importance, and thou shalt, ere long, be freed from thy present bondage It is thou that hast raised England to her present proud position—a refuge for the exile, and a home for the world. Science and the Arts are at thy command, the vessel that ploughs the ocean, the engine that traverses the land, shall bear thee with lightning speed to deliver thy tidings, and proclaim to mankind the convulsions of empires and the fall of thrones Thou art the safety-valve of a nation! Diversity of language shall not stop thy progress, for thou shalt step from nation to nation until thou hast bound all in the bonds of universal peace To take away thine independence would be to deprive thee of thy power! to curtail thy freedom would be to destroy thy usefulness May thy light—which has been rising for four hundred and fifteen years—still rise in magnitude, until it illuminates the whole earth. Millions shall have cause to bless thine existence, and when the world is dissolved, their acclamations shall be thy requiem, and thy epitaph shall be engraven upon their souls, which the everlasting ages of eternity shall not obliterate Mayest thou increase in strength as in years, until the end of time, to forward the coming of that glorious era when the sun of Human Freedom shall shine all over the world, and Ignorance exist only in name

ONE of the most terrible of legacies is a union of great talents with greater honesty, in a corrupt time.

PIONEER LIFE IN OHIO.

BY A WESTERN CONTRIBUTOR.

ELIZABETH HARPER.

ELIZABETH BARTHOLOMEW, one of the pioneer band who made the earliest settlement in north-eastern Ohio, was born in Bethlehem, Hunterdon County, New Jersey, February 13, 1749 She was the sixteenth child of her parents, and had still a younger sister. She was descended, on the maternal side, from the Huguenots of France, and her ancestors were persons of wealth and respectable rank, firmly attached to the principles they professed, and willing to surrender all, and yield themselves unto death, rather than give up their religious faith They removed to Germany after the revocation of the edict of Nantes, and there is a family tradition that the grandmother of the subject of this notice, then a child, was brought from Paris concealed in a chest. She married in Germany, and in old age emigrated to America.

In 1771 Elizabeth was married to Alexander Harper, one of several brothers who had settled in Harpersfield, Delaware County, New York. At the outbreak of the revolutionary war, these brothers immediately quitted their peaceful occupations to enter into the continental service, Alexander receiving a commission to act as captain of a company of rangers. The exposed situation of that part of the country, and the frequent visits of Indians and tories, made it necessary for the whig families to seek the protection of Fort Schoharie. Mrs Harper repaired thither with her family, including the aged parents of her husband. In time of comparative security, she lived at the distance of about a mile from the fort. Here, when there was a sudden alarm, she would herself harness her horses to the waggon, and, placing in it her children and the old people, would drive with all speed to the fort, remaining within its walls until the danger was over, and then returning to her occupations on the farm. As peril became more frequent or imminent, the old people were removed to a place of greater security, while Mrs. Harper, with her four children and a lad they had taken to bring up, remained at home. One night they were startled by the sound of the alarm-gun. The mother took the youngest child in her arms, another on her back, and, bidding the two elder hold fast to her clothes, set off to escape to the fort, the lad running closely behind her, and calling to her in great terror not to leave him. The fugitives reached the fort in safety, and for the present Mrs Harper concluded to take up her abode there. She would not, however, consent to live in idleness, supported by the labour of others, but undertook, as her special charge, the bread-baking for the whole garrison, which she did for six months

During her stay, the fort sustained a siege from a party of tories and Indians commanded by British officers Messengers were despatched to the nearest forts for relief, but while this was slow in arriving, the commanding officer, in opposition to the wishes of all his men, determined on a capitulation, and ordered a flag of truce to be hoisted for that purpose. The announcement of his intention created a dissatisfaction which soon amounted almost to rebellion. The women, among whom Mrs Harper was a leading spirit, had on that day been busily occupied from early dawn in making cartridges, preparing ammunition, and serving rations to the wearied soldiers, and they heartily sympathised in the determination expressed, not to surrender without another effort to repel the besiegers.

One of the men declared his willingness to fire upon the flag which had been ordered to be hoisted, provided the women would conceal him. This they readily agreed to do, and, as often as the flag was run up, it was fired at, while the commander was unable to discover the author of this expression of contempt for his authority. The delay consequent on this act of insubordination and the displeasure of the soldiers, prevented the capitulation being carried into effect, till the arrival of reinforcements caused the enemy to retreat.

In the spring of 1780 Captain Harper availed himself of an interval in active service to look after his property in Harpersfield. While there with several of his friends, they were surprised by a party of Indians and tories under Brandt, and taken prisoner, an invalid brother-in-law being killed. Harper and Brandt had been schoolfellows in boyhood, and the chief did not fail to show a remembrance of the days thus spent together. The Indian captor of Harper treated him with great kindness, taking him, however, to Canada. Here his exchange was effected soon afterwards, but he was not released until peace was concluded, being offered, meanwhile, large rewards by the British if he would enter into service on their side. Mrs. Harper remained in ignorance of his fate during the time of his absence, and supposing him killed, mourned for him, while she did not suffer grief to paralyse her efforts for the protection and support of her family All her characteristic energy was devoted to keep them together, and do what she could towards improving their shattered fortunes.

In 1797 a company was formed in Harpersfield to purchase lands in the country then called "the Far West." Besides Alexander and Joseph Harper, the company consisted of William M'Farland, Aaron Wheeler, and Roswell Hotchkiss; others joining afterwards. In June of that year these individuals entered into a contract with Oliver Phelps and Gideon Granger, members of the Connecticut Land Company, for six townships of land in what was then called New Connecticut, in the Northwestern Territory Three of these townships were to be east, and three west, of the Cuyahoga river. The Connecticut Land Company drew their lands in the same year, and the township now known as Harpersfield, in Ashtabula County, was one of those which fell to the company formed at the town of that name in New York In September commissioners were sent out by them to explore the country. They were much pleased with the locality called Harpersfield, and selected it as the township most eligibly situated for the commencement of a settlement. On the 7th of March, 1798, Alexander Harper, William M'Farland, and Ezra Gregory set out with their families on their journey to this land of promise. As the winter's snow was upon the ground, the emigrants came in sleighs as far as Rome, where they found further progress impracticable, and were obliged to take up their quarters till the 1st of May. They then made another start in boats, and proceeded to Oswego, where they found a vessel, which conveyed them to Queenstown. Thence they pursued their journey on the Canada side to Fort Erie, being obliged to take this circuitous route on account of there being no roads west of Genessee river, nor any inhabitants, except three families living at Buffalo, while a garrison was stationed at Erie, in Pennsylvania. At Fort Erie they found a small vessel which had been used for transporting military stores to the troops stationed at the west, and which was then ready to proceed up the lake with her usual lading of stores. This vessel was the only one owned on the American side, and the voyagers lost no time in securing passage in her for themselves and their families as far as the peninsula opposite Erie. As the boat, however, was small, and already heavily laden, they were able to take with them but a slender stock of provisions.

Having landed on the peninsula, the party was obliged to stop for a week until they could procure boats in which to coast up the lake, at that time bordered by the primeval forest After having spent nearly four months in performing a journey which now occupies but two or three days, they landed, on the 28th of June, at the mouth of Cunningham's Creek. The cattle belonging to the pioneers had been sent through the wilderness, meeting them at the peninsula, whence they came up along the lake shore to the mouth of the stream Here the men prepared sleds to transport the goods they had brought with them, the whole party encamping that night on the beach The next morning Colonel Harper, who was the oldest of the emigrants, and was then about fifty-five, set out on foot, accompanied by the women, comprising Mrs. Harper and two of her daughters, twelve and fourteen years of age, Mrs. Gregory and two daughters, Mrs M'Farland, the colonel's sister, and a girl whom she had brought up, named Parthena Mingus. Their new home was about four miles distant, and they followed up the boundary line of the township from the lake, each carrying articles of provisions or table furniture. Mrs. Harper carried a small copper teakettle, which she filled with water on the way to the place of destination. Their course lay through a forest unbroken except by the surveyor's lines, and the men who followed them were obliged to cut their way through for the passage of the sleds About three o'clock in the afternoon they came to the corner of the township line, about half a mile north of the present site of Unionville, Ohio, where they were glad to halt, as they saw indications of a coming storm The women busied themselves in striking a fire and putting the teakettle over, while Colonel Harper cut some forked poles and drove them in the ground, and then felled a large chestnut-tree, from which he stripped the bark, and helped the women to stretch it across the poles, so as to form a shelter, which they had just time to gather under when the storm burst upon them. It was not however, of long continuance, and when the rest of the men arrived, they enlarged and enclosed the lodge, in which the whole company, consisting of twenty-five persons, great and small, were obliged to take up their quarters Their tea-table was then constructed in the same primitive manner, and we may suppose that the first meal was partaken of with excellent appetite after the wanderings and labours of the day

The lodge thus prepared was the common dwelling for three weeks, during which time some of the trees had been cut down, and a space cleared for a garden. The fourth of July was celebrated in the new Harpersfield by the planting of beans, corn, and potatoes The next thing was to build log-cabins for the accommodation of the different families, and when this was done the company separated. The location chosen by Colonel Harper was where he first pitched his tent, while his brother-in-law took a piece of land about half a mile east of Unionville, near the spot

now occupied by the Episcopal Church, and Mr. Gregory put up his dwelling close to the river, where Clyde Furnace was afterwards built.

The settlers suffered from the sickness peculiar to a new country when the season came. A hired man in Harper's service was taken ill in August, and soon after the colonel himself was seized with the fever, of which he died on the 10th of September. They had been able to procure no medical aid, and a coffin was made by digging out the trunk of a tree, and hewing a slab for the lid This melancholy event was a peculiar and distressing affliction to the little band of pioneers, and its effects on them would have been paralysing, but that the firmness and energy exhibited by the widow, who now found her exertions necessary to sustain the rest, restored the confidence and hope which had nearly been extinguished by the loss of their leader Although the principal sufferer by the dispensation, she would not for a moment listen favourably to the proposition made to abandon the enterprise. When an invitation came from friends in Pennsylvania for herself and daughters to spend the winter, both she and her eldest daughter, Elizabeth, declined, knowing how necessary was their presence to keep up the spirits of the little community, and that their departure would discourage many who had intended coming to join them in their forest home. The magnanimity of this resolution can only be appreciated in view of the hardships which they knew it would be their lot to share.

In the fall another small vessel was built for use on the American side of the lake, and two of our pioneers were sent to Canada to procure provisions for the winter They despatched four barrels of flour by this vessel, and waited some weeks for the other, the captain of which had agreed to bring provisions up the lake for them. Disappointed in this expectation, and hearing nothing of the vessel, they were compelled to return, when the season was far advanced, without supplies, finding, on their way home, the remains of the vessel, which had been wrecked near Erie They found, also, that the vessel which had on board the flour they had purchased, had been driven into the basin, and was too fast locked in ice to proceed. They were obliged therefore to remain till the ice became so strong that the flour could be removed in sleds They at length arrived at home just in time to bring relief from absolute want to the settlers, who had lived six weeks without any kind of breadstuffs, substituting salt beef and turnips, the supply of which was just exhausted Some grain had been raised at Elk Creek, in Pennsylvania, but there were no mills in that neighbourhood, and the wheat procured there afterwards was brought in hand-sleds on the ice to Harpersfield, and ground in a hand mill somewhat larger than a coffee-mill, which the pioneers had brought with them. By keeping this constantly in operation, enough flour was obtained for daily use, mingled, of course, with the bran, from which they had no means of separating it, but having a relish and sweetness which such necessity only could impart to the coarsest food There were no deer in the country at that time, but large droves of elk, the flesh of which resembled coarse beef, were frequently seen. The flesh of the bears was much more oily, and really very palatable, raccoons also were abundant, and easily obtained, and were much used by the settlers, although, in after years of plenty, they lost all relish for "coon meat" Hickory-nuts were also abundant that year, and were found a valuable article of food when other provisions failed. It is worthy of notice that, in the severest straits to which the settlers were reduced, the utmost harmony and friendly feeling prevailed among them, and, whatever game or provisions chanced to be obtained by any one family, was freely shared with the other two.

Towards spring, the men were again sent for a supply of wheat, but, by that time, the ice was growing tender, and the weather tended towards thawing so that they were detained on the way much longer than they had expected, and on their arrival at home, found the families reduced to the last extremity, having been without provisions for two days. In this time of distress, the fortitude and energy of Mrs Harper aided to sustain the rest, she was fruitful in expedients, and for the last days they had lived on the wild leeks she had gathered from the woods and boiled for them Their troubles did not terminate with the severity of the winter. As soon as the lake opened, the men set out for Canada in boats to procure provisions, but found so much ice as they went down, that they were unable to reach Buffalo without much detention. In the mean time, new difficulties arose in the little settlement The mill, on which all depended, was broken beyond hope of repair, and there appeared no way of grinding the wheat, which they could not pound so that bread could be made of it, and which, when prepared by boiling, proved unwholesome food In this extremity, some relief was afforded by the arrival, at the mouth of Cunningham's Creek, of Eliphalet Austin, who came to make preparations for a settlement at Austinburgh, and gave the pioneers what they needed for immediate use from his supplies of provisions, thus preventing them from suffering till the return of their messengers.

About this time an accident, not uncommon in this forest life, occurred to Mrs. Harper. She went out one morning to find the cows, which had strayed away, but, not having yet learned to tell the north side of a tree by the difference in the bark—a species of woodcraft with which she afterwards became familiar—she lost herself, and wandered all day along the banks of a stream that ran through the depth of the forest. Her family, of course, became alarmed at her lengthened absence, and blew the horn repeatedly; but it was not until the shades of night had fallen that she heard the signal, when she managed to light upon the township line, and followed it to the clearing

In the summer following, her sons were obliged to watch closely the hogs they had brought from Canada, on account of the bears, which were very numerous and destructive to stock The men being occupied in clearing and working the land, or procuring provisions, various outdoor employments were cheerfully assumed by the women. One evening Mrs Harper, with her eldest daughter, went to look up the hogs, taking the path that led to the nearest neighbour's house. Presently, they were startled by seeing a small bear's cub cross the path just in advance of them; it was followed by another, and the old bear composedly brought up the rear, taking no notice of the females, who made their way home with all speed, unmindful of the pigs, which came to their quarters directly, unharmed. So frequent were encounters with wild beasts, that the men never went beyond the clearing without firearms

In July, 1799, Major Joseph Harper, the colonel's brother, joined the colony with his family, while a relative of the same name, with some other families, commenced a settlement at Conneaut, some thirty miles down the lake. This year, wheat, corn, &c, were raised sufficient for consumption, but there was a scarcity of meat, the severity of the preceding winter having killed several of their cattle, and many of the hogs being devoured by the bears. They were under the necessity, therefore, of depending on wild game, and the ease with which they secured it in traps, or by the unerring aim of their rifles, with their iron strength for the endurance of fatigue when ranging the forest, might well entitle them to be called "mighty hunters." But they were heavily laden with daily cares and laborious duties, which even the pleasures of the chase could not induce them to neglect, the clearing of the land and the culture of grain and vegetables demanded incessant attention, and the grinding of the grain was a matter requiring the exercise of some ingenuity. Corn they soon contrived to pound in mortars scooped in the top of oak stumps, with pounders attached to spring poles, but they were obliged to send their wheat in boats down the lake as far as Walnut Creek, in Pennsylvania, where a mill was erected this year. The families of the new emigrants suffered considerably in the latter part of the summer from sickness, and Mrs Harper went down to the settlement at Conneaut to offer assistance in attending to them. She remained some weeks occupied in her ministrations of kindness, and was not ready to return home till the last of November Travelling in open boats and on horseback were the only modes practicable among the pioneers. The season was too far advanced for the first, and, accompanied by her relative, James Harper, our benevolent heroine set out on her homeward journey, the only road being along the lake shore Fording the streams at their mouth, they had rode some fifteen miles when they came to the mouth of Ashtabula Creek, across which a sand-bar had formed during the summer, but had now given way to the increased force of the waters, which flowed into the lake. Harper was not aware of the depth of the stream, into which he rode without hesitation, and presently found his horse swimming He called out to warn his companion, but she was too anxious to reach home to heed his remonstrance, and followed him fearlessly Both reached the other side with some difficulty, Mrs Harper wet to the shoulders, and in this condition she rode the remainder of the way, arriving at home before midnight.

During the fall, there were some accessions to the colony, Judge Wheeler, who had married a daughter of Colonel Harper, came in October, with his family, and Harper's eldest son, who had been out the year before and returned. For a year and a half after the settlement was commenced, they were not visited by Indians, though they frequently heard their dogs, and learned afterwards that they had not escaped the observation of their savage neighbours, who had counted them, and had noticed all their occupations and new arrivals. The winter of 1799 was remarkable for the depth of snow upon the ground In consequence of this, game could not be procured, and the Indians suffered severely Some thirty of them, unable to procure anything to satisfy the cravings of hunger, came to the settlement to ask relief, and were treated with the most generous hospitality. They remained six weeks, sheltered and fed by the pioneers; and when the snow melted, they found plenty of game in the forest, which they showed their gratitude by sharing with their white friends. In March, 1800,

Daniel Bartholomew brought out his family, accompanied by that of Judge Griswold, whose destination was Windsor. They came on the ice from Buffalo, arriving only the day before the breaking up of the ice left the lake clear as far as the eye could reach. The winter preceding, the whole Western Reserve had been erected into a county, which was called Trumbull, the part of it comprising Ashtabula, being then included as one township, and called Richfield. In May there were still further accessions, in consequence of which a scarcity was experienced of provisions raised the previous year, and designed for the use of a much smaller number. The settlers were again compelled to send to Canada in an open boat, in June, for fresh supplies. In August, an election was held for the purpose of sending a delegate to a convention appointed to be held at Chillicothe in the ensuing winter, for the purpose of taking measures preparatory to the admission of Ohio as a State into the Union. The winter of 1800-1801 passed without any remarkable occurrence, the country being healthy and provisions abundant. In the following June, other families were added to the number of inhabitants, and the summer was signalised by the erection of a horse-mill, the first built in the county, and the only one, till others were built in Austinburgh. The sufferings of the settlers from scarcity of food and other privations were now over, the advance of improvement developing the resources of the country, and the farmers were able to enlarge their cleared lands, and cultivate the soil to better advantage. Their friends from the east continued to join them, and Mrs. Harper had the satisfaction of seeing her elder children settled around her. In 1802 a school was established in the settlement—supposed to be the first on the Reserve. The scholars came from a distance of two miles and a half, and as the reputation of the institution extended, they were sent from Windsor and Burton, twenty and thirty miles distant. The same year regular meetings were established by the "Lovers of Good Order," and the year following saw numerous accessions.

In about three years after the commencement of the settlement, the Indians began to visit them periodically. They were chiefly Ojibbeways, and belonged to Lake Superior in the summer, but moved down every fall in their bark canoes, and built their wigwams on the streams, carried the canoes on their heads over the portages to Grand River, seven miles from the lake. Here they took up their quarters for the winter, returning west in the spring. They showed a friendly disposition towards the white men, and as the pioneers gave them assistance in sickness and destitution, they endeavoured to show their gratitude by bringing them portions of such large game as they killed. Many a choice piece of bear's or elk's meat, carefully wrapped in a blanket, has Mrs. Harper received from her savage friends. One day she saw a party of drunken Indians coming towards her house when the men were absent, and she had just time to conceal a small keg of liquor under the floor before they came in, demanding whiskey. They were told they could not have any, but, insisting that they would they commenced a search for it, and finding a barrel of vinegar asked if that would "make drunk come," as, if so, they would take it. Finding it not the right sort of stuff, they insisted, before leaving the house, on treating the women from a calabash of muddy whiskey which they carried with them.

During all the privations, trials, and sufferings which Mrs. Harper was compelled to undergo, she was never known to yield to despondency, but with untiring energy exerted herself to encourage all within the sphere of her influence, teaching them to bear up against misfortune, and make the best of the home where their lot was cast. Her own family knew not, until the hardships of pioneer life had been overcome, how much she had endured—how many sleepless nights and hours of anxiety she had passed in the days of darkness and disaster. She found her reward in the affection and usefulness of her children, several of whom filled important stations in their adopted State. During the war of 1812, the country was exposed to all the dangers of a frontier, liable, on every reverse of the American arms, to be overrun by hostile Indians. In time of peril, Mrs. Harper's advice was always eagerly sought, as one whose experience qualified her to decide on the best course in any emergency. Her granddaughter well remembers seeing her engaged one day at the house of her son-in-law in showing a company of volunteers how to make cartridges.

Her life was prolonged to her eighty-fifth year, and she died on the 11th of June, 1833, retaining unimpaired, until her last illness, the characteristic strength of her remarkable mind.

To be *above* public opinion is as unfortunate a position as to be *below* it. It produces a tendency equally with the other to what is called "*Blackguardism*." Society is a circle of which the *extremes meet* and he who has seen in their naked deformity the passions of high life will own that "from St. James's to St. Giles's there is only one step."

SONGS FOR THE PEOPLE.

ORIGINAL AND SELECTED

No. VIII.—WHAT DOST THOU WORK FOR?

BY CAROLINE ORNE

What dost thou work for, oh, tree of the forest,
Spreading thy branches so wide and so free?
Why hast thou many years wrought in thy season?
What is the end of thy work and of thee?
"Earth, mother earth, I have wrought for and toiled for,
Life still bestows her beneficent breast,
When for her I shall garner up treasures no longer,
Back shall I sink to her bosom to rest."

What dost thou work for, sweet flower of the wild-wood,
Spreading thy garlands of beauty and bloom?
Why dost thou toil to bring buds into blossom?
Who shall come hither to seek thy perfume?
"Earth, mother earth, 'tis for her that I labor,
Cheerfully work I by night and by day,
All she hath given, and more, shall I measure
Into her bosom, where yet I shall lay."

Man, that art heaping up riches and treasure—
Man, that art seeking for praise and for fame—
Man, that art chasing the phantoms of pleasure—
Whose is your toil? Who your labor can claim?
"Earth, mother earth, 'tis for her we are toiling,
These are her gifts, and to her they return,
All we have gathered must go to her keeping,
When she ourselves shall in darkness inurn."

Thou who art filling each hour's golden measure
Full of good deeds, and of kindness and love,
Who bindeth the wounded, and helpeth the weary,
For what is thy toil—who thy work shall approve?
"High heaven will approve, though my labors are humble,
For the soul's truest welfare I toil, not in vain,
Earth from her bosom such treasures bestows not,
With the soul back to heaven return they again."

LITERARY NOTICES.

THE Second Volume of the WORKING MAN'S FRIEND, New Series, containing upwards of 100 pages, richly illustrated, is now ready, price 3s 6d, neatly bound in cloth.

JOHN CASSELL'S Illustrated Shilling Edition of UNCLE TOM'S CABIN, is now ready, foolscap 8vo, with eight beautiful illustrations. *** Be particular in ordering JOHN CASSELL'S Illustrated Shilling Edition, which is the only one published.

AN EDUCATIONAL WORK FOR EVERY FAMILY.—Now ready, The First Volume of the Popular Educator. Common Edition, with weekly Headings, 3s 6d, Extra Edition, without the weekly Headings, 4s. 6d, or strongly bound, 5s. This Volume contains Lessons in the French Language, Latin, German, English, Arithmetic, Music, Geometry, Botany, Natural History, Biography, Geography, &c. The "Popular Educator" is published in monthly Parts and weekly Numbers, both Common and Fine Editions.—Common Edition, 1d per Number, Fine Edition, 1½d.

THE POPULAR EDUCATOR ALMANACK, price 2d, containing a large amount of Educational Statistics, compiled from the most authentic sources, with brief notices of the various arts, sciences, languages, &c., will be ready for delivery November 1st.

CASSELL'S SHILLING EDITION OF EUCLID.—THE ELEMENTS OF GEOMETRY, containing the First Six, and the Eleventh and Twelfth Books of Euclid, from the text of Robert Simson, M.D., Emeritus Professor of Mathematics in the University of Glasgow, with Corrections, Annotations, and Exercises, by Robert Wallace, A.M., of the same university, and Collegiate Tutor of the University of London, is now ready, price 1s in stiff covers, or 1s 6d neat cloth.

CASSELL'S ELEMENTS OF ARITHMETIC, will be issued shortly, price 1s in stiff covers, or 1s 6d. cloth, uniform with Cassell's Edition of Euclid, edited by Professor Wallace, A.M., of the University of Glasgow. Editor of Cassell's "Euclid," the POPULAR EDUCATOR, &c.

THE PATHWAY, a Monthly Religious Magazine, is published on the 1st of every month, price twopence—32 pages enclosed in a neat wrapper. No. 34, for October, is now ready, and Vols. I. and II., neatly bound in cloth and lettered, price 2s. 3d each, may be obtained by order of any Bookseller.

CASSELL'S EMIGRANT'S HANDBOOK, a Guide to the Various Fields of Emigration in all Parts of the Globe, Second Edition, with considerable Additions, and a Map of Australia with the Gold Regions clearly marked, is now ready, price 9d.

BITS OF MY MIND.

It is not improbable in my opinion that much of the anguish of pain called *bodily* is really seated in the mind. Much of it resides in the apprehension of something worse, and in the nervous agitation and prostration of soul caused by the disturbed nerves. I could always bear the very worse toothache or gout composedly, because I saw no danger to life. Cramps in the stomach soon deprived me of all sensation; but then I thought I was dying, and that fear, and cramp to boot, all but killed me. Fear, however, I am sure heightened the anguish very materially. Where fear is *totally overcome*, as in martyrs or amongst the Indians, the bodily pain is always borne with composure. In fact, if man had perfect courage, mere bodily torture is a bearable thing.

Never attempt to *reason* a female into or out of anything, it only irritates, without the slightest chance of producing any other effect. The truth is, women act by impulse altogether; the way is therefore, to wait and get the humour changed insensibly. As for the best "ratiocination," all the idea that the run of the sex have of it is that it is a *mode of circumventing people* that the men have a knack at using.

From the many discoveries now made amongst Egyptian and other remains of high antiquity, it is clear the ancient progress of these nations in the arts was very great How came all to perish and pass away so completely? What a solemn mystery! *Was the want of the art of Printing* the cause? If so, why was it withheld so long? and especially until so long *after the promulgation of Christianity?*

Until I saw Carlyle's letters and speeches of Oliver Cromwell's, my impression was, that Oliver, great man as he was in many respects, was yet unquestionably an actor, or in plain terms, a hypocrite in his religious professions, especially at last. I now do not think so. If we had no other genuine effusion of the great Protector, those few affectionate lines, addressed to his wife, on the evening after the trying victory at Dunbar, are sufficient to convince any person of sense that Cromwell was sincere in his religious feelings. Such a time and such circumstances he never would have chosen for enacting the "Hypocrite." The letter consists of not a dozen lines; but the affection for his wife, and his sincere gratitude to Providence for the great mercy he had just experienced, do infinite honour both to the heart and head of this great man, who was far above the crowd amidst which he was placed, and who made the best of the indescribable throng of fools and knaves, with which England at this time teemed.

All mathematics rest on what mathematicians call "anxioms," but which I call *assumptions* They are things taken for granted, but which yet include in them as much uncertainty as any thing I know.

It is an extraordinary fact that many musical instruments—especially those made of brass—when long played out of time and by bad players, undergo a change, and cannot be made tunable even by the skilful. The metal is essentially altered; and the instrument must be fused and re-made, if ever it is to be worth any thing. May not this be the case with souls long steeped in vice or crime? Custom may alter them, so essentially, that the fusion of long and extreme suffering may be absolutely necessary to their regeneration.

I read the other day about a curious state, most of the sensations of naval officer when drowning. He was a very short time under water, and yet during these few seconds went over the incidents of his boyhood and of his life generally up to that time. This helps to prove that *time* like *space* exists only in our ideas. It is a mode given us for certain purposes, and not an *abstract reality*. In this case the pressure on the brain had called up, in half a minute, the impressions of years; just as a *time* or a *hand organ*, that usually takes *five minutes*, might be played in *five seconds*, if the handle were turned with due celerity.

Ordinary arguers generally fall into the enormous folly of imagining they "*text* the truth of a position" by putting it "*in extremes*," and then concluding, if the extreme does not hold—neither does the original position. This is sheer imbecility and childishness; "*extreme*" for *hardly anything is true in extremes*, or will hold good beyond a certain distance into more or less With finite and imperfect beings, this must necessarily be the case. Knowing not our own beginning or end, knowing nothing of final causes, and being always limited by our own imperfections, we can no more push *truth* to its extreme, than we can arrive at the end of "infinite series," or solve the quadrature of the circle.

Time strangely changes the meanings and applications of words The original etymology is nothing The use of words is capricious and arbitrary, and differs at different periods. The word "convince," which now means to cause belief by evidence, originally meant to "conquer" or "overcome" The term "animosity," which now expresses only anger or resentment, used to mean "courage" or "daring," or great "mental excitement" as to anything or any body.

We know little of the effects of pressure Water is not compressible by human means, but probably by some extent of compression might be made solid Gas may It is certain that *carburetted hydrogen* exists in coal-strata, in a compressed, liquid, or solid state, probably the latter. It is then called a "bag of gas" by the colliers, and the worst accidents arise from the sudden letting loose of this compressed gas, which when it meets a light explodes The gas known to issue from a small fissure in the *stratum* of coal, would often in its gaseous form fill the whole colliery *a hundred times over.*

William Chapman, the engineer, of Newcastle, first tried the locomotive steam engine. My impression is, he tried it about 1805, or 1806 at latest I have seen his little experimental engine, lying neglected in a corner at Willington Ropery, a patent rope-walk of his This was about 1811 or 1812 The wheels were slightly indented He had no idea weight and friction would give the wheels sufficient hold The engine must have been built *six* or *or seven years* before I saw it. To state this truth is due to the memory and character of an accomplished and excellent man.

Never yet knew a Scotsman who got rid of his peculiar intonation, and I never knew one who fairly tried. This is one of the points on which I honor Scotsmen. "Nationality" be it called, but they are not ashamed of their country, nor will disown aught belonging to it. This is good. For my part, I have always had a distaste for people, who, the moment they got from home, set to work to *clip* their mother-tongue, as if it were some *barbarism* fit only to make *mince-meat* of.

NOTICES TO CORRESPONDENTS.

A Subscriber (Ashford).—The ballot will not be resorted to, as a means of raising the number of men required for the new militia, till the result of the plan of obtaining volunteers is known. It was stated by Mr. Walpole, in the course of the debate, that the operation of the ballot would be postponed until after the meeting of the next parliament.

Do. Do.—Pale French polish may be made thus: put one pound of pale shell lac, and two ounces of clean mastic into one quart of spirits of wine of 90 degrees. The polish is made in the cold, by frequently shaking the ingredients together, which should be put into a well-closed bottle. It will not require to be filtered.

J Pratt.—*Hyperion* is the name given to one of the fabled giants, a son of Titan. *Titan* is said to have been the son of *Cœlus* and *Terra* (that is, of heaven and earth), the family of giants who warred against heaven. *Hyperion* is sometimes referred to, figuratively, as a model of perfection as to form and development; hence Shakspeare makes Hamlet, when comparing his murdered father with his usurping uncle, describe his father as possessing "a form on which each god did seem to set his seal, to give the world assurance of a man," adding,—"that was to this (that is, his uncle), Hyperion to a Satyr!" that is, a form almost superhuman, compared with one of those horned monsters, represented as half men and half goats.

J P.—*Geyser* is pronounced in English as it is spelt, only the sound of the *y* is incorporated with that of the *e*, somewhat like the *ei* in *either*

An Adventurer.—The *Orlop* deck of a vessel is the platform on which the cables are usually coiled. A *Galliot* is a small vessel with sails and oars. A *Xebec* is a small rigged vessel, navigated in the Mediterranean. The difference between *hove to* and *lying to*, is that of the active and passive, in the first case, the vessel is heaved or forced to a certain point, in the latter it is laid to merely by slackening its motion. A vessel is said to "*sail well on a wind*," when it goes on steadily and swiftly under a strong gale. Answers to your other questions in a future Number.

Galileo.—You may obtain a pocket telescope for a few shillings, at almost any pawnbroker's or general sale shop, such as would answer your purpose. A good "night glass" will be more expensive.

T Kenyon.—The presses, tools, and materials for bookbinding will cost you far more than you can get two or three hundred volumes bound for, and, without much instruction and considerable practice, you would not like to let your books be seen when you had bound them.

S S E.—We could not well introduce the science of *colouring* into the work you refer to, as it would require a number of coloured specimens.

A Swimmer.—Doctors tell us that "when *the cramp* comes on during cold bathing, the limb should be thrown out as suddenly and as violently as possible, which will generally remove it" They add, however, as a matter of considerable importance, that "great care should be taken not to be flurried or frightened; as *presence of mind* is essential to personal safety on such an occasion." Persons subject to the cramp should have a friend with them when they bathe

S B B.—Received, and will shortly appear.

W. Kellam.—Your verses are hardly suitable for our pages

W H Benson.—You will not be able to obtain any separate *Part* of the book you speak of. A new Edition of the entire work may be had at Tweedie's, 337, Strand.—There are so many "Winter Plants," and so much depends upon situation, personal taste, &c, that we cannot give you a definite answer. Any honest florist or gardener will supply you with those most suitable for your purpose.

*** In our next will be commenced a series of papers on "The Character and Tendencies of American Society," from the French, of M. Emile Montegut Translated by Walter Welden.

All Communications to be addressed to the Editor, at the Office, 335, Strand, London.

Printed and published by John Cassell, Belle Sauvage Yard, London.—October 2, 1852.

THE

WORKING MAN'S FRIEND

AND FAMILY INSTRUCTOR.

NEW SERIES.—VOL. III., No. 54.] SATURDAY, OCTOBER 9, 1852. [PRICE ONE PENNY.

MEMOIR OF WELLINGTON.

THE PENINSULAR WAR

AT this moment so great is the interest with which every incident connected with the life of the great man so lately gone from among us is regarded, that it becomes a matter of difficulty to look upon the events in which he was engaged for more than half a century without assigning to him the most prominent places. He was indeed the most popular man of the present century. But it was not alone for his military achievements that he was regarded as the most capable man of his age,—it was that in his whole character there was that consistent firmness, loyalty, and piety which so peculiarly belongs to the English character. Men of all creeds and parties—we had almost said of all nations—are unanimous in awarding to the great Duke the praise of having secured the peace of Great Britain and of Europe, and from every newspaper, and city, and town, and village, there are pouring forth eloquent testimonials to the worth of the departed.

Lord John Russell, at a meeting at Stirling, at which the provost and magistrates presented his lordship with the freedom of the corporation, said "While I am one of those who most admired the Duke of Wellington, I am not one of those who think that we ought to be so dazzled by the fame of his exploits, that we should not endeavour to gather objects of imitation, even from the conduct of a man so great and so illustrious. While many of the actions of his life—while many of the qualities which he possessed are unattainable by others, there are lessons which we may all derive from the life and actions of that illustrious man. It may never be given to another subject of the British crown to perform services so brilliant as those of his; it may never be given to another man to wield the sword which was to gain the independence of Europe, to rally the nation around it, and while England saved herself by her constancy, to save Europe by her example. It may never be given to any other man, after having attained such eminence, after an unexampled series of victories, to show equal moderation in peace as he had shown greatness in war, and to devote the remainder of his life to the cause of internal and external peace for that country which he had so served. It may never be given to any man to have such great authority, both with the sovereign, the senate, and the people, and after such a splendid career to preserve to the last the respect of all men, and the possession of the faculties with which he had been endowed, and to carry on the service of one of the most important departments of the state with unexampled regularity and success. These are circumstances, these are qualities which may never again occur in the history of this country, but there are qualities which the Duke of Wellington displayed that we may all imitate. That sincere and unceasing devotion to his country, that honest and upright determination to act for the benefit of his country upon all

occasions, that devoted loyalty, which, while it made him ever anxious to serve the crown, never induced him to conceal from the sovereign that which he believed to be the truth—that constancy in the performance of his duty, and that temperance of life which enabled him at all times to give his mind and his faculties to the services which he was called upon to perform, that regular, unceasing, and consistent piety by which he was to the last distinguished—these are qualities that are attainable by others, and to which, while we render all fitting honour to his memory, should never be lost sight of or forgotten. Let us all recollect that in this man, whom a nation mourns, and whom kings were delighted to honour, there were qualities which all may possess, and in which the meanest may not despair of distinguishing himself."

This elegant tribute, by one of the most celebrated statesmen of the nineteenth century, expresses the kind of feeling which

possesses the public mind. It is not now the pride of victory and the national love of military glory which animates the tongues of the speakers, or the "pens of the ready writers"—for, happily, the war spirit, a hateful one at best, is rapidly dying out, and was by none so thoroughly despised as by the great Duke himself, but it is that all feel and acknowledge the loss of the most famous hero of modern times.

THE BRITISH ARMY IN PORTUGAL.

We resume the story of the Duke's life, and of necessity we follow him through the "battles and sieges he had passed" We left him at the conclusion of the Mahratta war, happy in the possession of his young wife, the confidence of the nation, a seat in the House of Commons, the ultimatum of an English gentleman's ambition—the popularity which ever attends the winners of battles—and the prospect of useful labours in his native land. In this way, three years of his life was passed But in those three years, events were passing on the continent of Europe, in which General Wellesley was destined to take active and memorable part

"At the very moment," says Mr Charles Dod, in his admirable memoir in the *Times*, "when England seemed to be excluded from all participation in the military contests of the age, and the services of the British soldier appeared likely to be measured by the demands of colonial duty, events brought an opportunity to pass which resulted in one of the most memorable wars on record, and enabled Britain to support a glorious part in what, without figure of rhetoric, we may term the liberation of Europe The coalition effected against France at the period of Sir Arthur Wellesley's return had been entirely to the winds under the blows of Napoleon Russia had been partly driven and partly inveigled into a concert of politics with her redoubtable adversary; Austria had been put *hors de combat*, and Prussia was helplessly prostrate. To compute the concern experienced at this prospect of universal dominion, Napoleon had availed himself of the occasion to occupy and appropriate the whole of the Spanish Peninsula Under the pretence of a treaty with Spain for the partition of Portugal, he had poured his troops into the former country, even as into the latter, and then repudiated the stipulations of his compact by retaining undivided possession of the prize A few months later he established himself in similar authority at Madrid, and made open avowal of his intentions by bestowing on his own brother the inheritance of the Spanish Bourbons Success, however, had his projects been disclosed when he encountered a tempest of popular opposition, the nations of the Peninsula rose almost as one man; a French army was compelled to capitulate, King Joseph decamped from Madrid, and Marshal Junot was with difficulty enabled to maintain himself in Lisbon. At the intelligence of this unexpected display of vigour, England tendered her substantial sympathies to the Spanish patriots; the overtures of their juntas were favourably received, and at length it was decided by the Portland Ministry that Portugal would be as good a point as any other on which to throw 10,000 troops, who were waiting at Cork for embarkation on the next 'expedition' suggesting itself Such was the origin of the Peninsular War—an enterprise at first considered, and even for some time afterwards reputed, as importing little more to the interests or renown of the nation than a lodgment at Stralsund or Otranto, but which now, enshrined in the pages of a famous history, and appreciated by the lights of experience will take its place among the most memorable contests which the annals of Europe record Beyond doubt, the enthusiasm of the British nation at this conjuncture was unusually great, and there were not wanting arguments to prove that the contemplated expedition differed greatly in its promise from those heretofore recommended to favour It was urged that Napoleon was now for the first time encountered by strong popular opinion, and that the scene of action, moreover, was a sea-girt territory, giving full scope for the exercise of our naval supremacy These observations were sound, but it must needs have been expected by many that the 'particular service' now announced to the nation would have the ordinary termination, and that the transports bound for Portugal would soon return, as others had returned before them from St Domingo and the Helder, from Quiberon Bay and Ferrol. Nor was it owing, indeed, either to the wisdom of the nation or the strength of the cause that such predictions were belied by the triumphs and glories of an immortal war"

To comprehend the service now intrusted to Sir A. Wellesley, it will be necessary to retain constantly in mind the circumstances and persuasions under which it was undertaken The actual state of the country which it was proposed to succour was only known from the exaggerated descriptions of the Spanish patriots, who represented themselves as irresistible in military strength, and as needing nothing but stores and money to expel the French from the Peninsula. Nothing was ascertained respecting Napoleon's actual force in these parts, and, although it might reasonably have been inferred, from the continental peace, that the whole hosts of the French Empire were disposable on the one side, and, from the contradictory reports of the Spanish envoys themselves, that neither unity nor intelligence existed on the other, these simple deductions were not drawn The British Ministry had despatched the expedition without any purpose more definite than that of aiding in the resistance unexpectedly offered to France on the Peninsular territories It had not been determined whether the landing should be effected in Portugal or Spain, and with the latter country, indeed we were nominally at war when the armament was received Neither was the single appointment which composed all those deficiencies the result of any general or deliberate convictions The nomination of Sir Arthur Wellesley to the command was chiefly due to the private regard of Lord Castlereagh whose preference on the point was conspicuously manifested at every subsequent period by the appointment itself, too, was accepted to be provisional for Sir Arthur was to assume the command on Sir Harry Burrard who was put in motion he was for Sir Hew Dalrymple, to whom it was hoped when the expedition should arrive in the Tagus, it would be left for six months after he was placed beyond the reach of those whose hands the conduct of the war was military event

The [illegible] which followed [illegible] the [illegible] of the Government Sir Arthur [illegible] action, precede the [illegible] the [illegible] to the [illegible] to escape during the [illegible] With the events which followed on the [illegible] with the juntas succeeded the affairs of the [illegible] soon prove [illegible] that [illegible] the Spaniards had fully experienced extraordinary [illegible] at Baylen, but the victory was unknown to those who [illegible] Sir Arthur the magnitude of their forces, and whose ignorant vain-glorious [illegible] was instantly detected by his acute and impartial vision Dupont had indeed been encountered in the South, but the other French Generals had been easily victorious in the North, and a force was at hand under Napoleon sufficient to sweep the country between the Pyrenees and Madrid The patriot levies were miserably destitute of equipments and discipline, and below their reported strength even in mere numbers, their ranks were mostly devoid of any better qualities for the contest than mere stubbornness and thorough hate, while as to unity of purpose or organisation [illegible] there were no such features visible in any quarter of the Peninsula Portugal offered somewhat better opportunities Its geographical position favoured the designs of the English commander, and its internal condition offered considerable inducements to a descent on the coast Junot, cut off from all communication with his colleagues in the Peninsula, was maintaining his ground with difficulty at Lisbon, between the insurgents of Portugal and the menacing patriots of Spain The troops under his command amounted to fully 25,000 men, but so many detachments were required for various services that his disposable force could only become formidable by virtue of greater military skill than he happened to possess He himself lay with a large garrison at Lisbon, and on the first rumours of the [illegible] he despatched General Loison with a [illegible] 7000 men, to scour the country, overwhelm the insurrection, and "drive the English into the sea"

Into a war, then, in which Napoleon and the French were our avowed [illegible] and the people of the Spanish peninsula were our [illegible] were now about to enter.

"The Spaniards," says André Vieusseux "were determined even to obstinacy, enduring of privation, proud and reserved, prone to enthusiasm, and, generally speaking, ignorant of worldly affairs. Thus lost deficiency assisted them greatly in their resistance. If they had been better acquainted with the history of Europe, if they had been more calculating, commercial, and refined, they might have shrunk from the fearful contest. They might have paused ere they ate apprehensive, with their raw battalions, those hero and well appointed phalanxes which had fought and conquered in a hundred pitched battles, and at whose encounter the splendid armies of Austria, Prussia, and Prussia had been dissolved as by the touch of a necromancer's wand. If they had known the stern determination of Napoleon to carry his point at any cost, and the merciless devotion of his officers and soldiers to his absolute will, if they had decked beforehand of the blood, the tears, and the cold graves that would cover their peaceful valleys and sunny plains, of their towns taken by storm, of their villages given up to the flame, of the shrieks of despair of their outraged wives and daughters, hearts as stout as theirs might have paused ere they drew upon themselves the awful visitation of the French. Luckily for the common cause of mankind, luckily in the end to Spain as a component member of England to Europe, Spanish pride and Spanish confidence blinded most of the Spanish chiefs, they thought only of the bravery, their head-strong enemy, who had rushed headlong into the midst of their cities and fortresses, who had succeeded only when they met them with confidence; and the whole host advanced against the Spanish soil, the French and Spanish could meet only on either south of the Pyrenees."*

Unfortunately for the Spanish people, many of their leaders were unworthy of the trust they had

Sir Arthur Wellesley reached Coimbra on the 26th of July, and accompanied by Colonel Murray, he hastened to join the Spanish army, which had gone to England from the Asturias and Galicia, had quelled the disaffection of the Spanish troops, and had driven back the French beyond the Pyrenees. Their own native province, the Asturias and Galicia, were the only countries of Spain which were entirely free from the French yoke. The Spanish troops, who

entrance, and that communicated with the Vallonga road, and was secured by an iron gate. Could this edifice be occupied Wellesley might open a passage for his army but where were means to be obtained by which troops could be thrown across the stream, and the seizure of that building effected? A barrier, to all appearance impassable, was unfortunately interposed. When no hope presents itself the most ardent spirit will yield. Before Wellesley rolled the Douro, and "Alexander the Great might have turned from it without shame!"

There is an air of romance in the means by which this singular difficulty was surmounted. Colonel Waters had been despatched, on what appeared a forlorn hope, of finding some means of transport. Fortune unexpectedly befriended him: a barber of Oporto had eluded the vigilance of Soult's patrols, and paddled his skiff across the river. Him the Colonel found in company with the Prior of Amuante, and the latter, having volunteered his services, the barber consented to assist, and with these unmilitary associates Waters crossed the stream, and in half an hour returned, unperceived, with several large barges.

The passage of the Douro, a fitting pendent to the daring of Wellesley, at Assaye, is thus detailed in an extract from the victor's despatch:

"The ground on the right bank of the river at this ferry is protected and commanded by the fire of cannon, placed on the height of the Seixa Convent, at Villa Nova, and there appeared to be a good position for our troops on the opposite side of the river, till they should be collected in sufficient numbers.

"The enemy took no notice of our collection of boats, or of the embarkation of the troops, till after the first battalion (the Buffs) were landed, and had taken up their position under the command of Lieutenant-General Paget, on the opposite side of the river. They then commenced an attack upon them, with a large body of cavalry, infantry, and artillery, under the command of Marshal Soult, which that corps most gallantly sustained till supported successively by the 48th and 66th regiments, belonging to Major-General Hill's brigade, and a Portuguese battalion of detachments belonging to Brigadier-General Richard Stewart's brigade.

"Lieutenant-General Paget was unfortunately wounded soon after the attack commenced, when the command of these gallant troops devolved upon Major-General Hill.

"Although the French made repeated attacks upon them, they made no impression, and, at last, Major-General Murray having appeared on the enemy's left flank, on his march from Avintas, where he had crossed, and Lieutenant-General Sherbrooke, who by this time had availed himself of the enemy's weakness in the town of Oporto, and had crossed the Douro at the ferry between the towns of Villa Nova and Oporto, having appeared upon their right with the Brigade of Guards and the 29th regiment, the whole retired in the utmost confusion towards Amarante, leaving behind them five pieces of cannon, eight ammunition tumbrils, and many prisoners.

"From the Douro, which had witnessed his opening success, Wellesley advanced toward the Tagus, intending to co-operate with Cuesta's army, which occupied the banks of that river. The object was a united attack on Victor. Unfortunately, however, no unanimity in views or plans existed between the British and Spanish commanders. Whilst Cuesta desired, above all things, that the armies of the two nations should be united—that they should fight side by side, and follow up to the utmost any advantage which they might obtain, Sir Arthur Wellesley was guided by other motives, and restricted his designs to a narrower, but a much safer and surer field."

THE BATTLE OF TALAVERA.

This brilliant operation being concluded, Sir Arthur was at liberty to renew the main project of the campaign—to which, in truth, the attack on Soult had been subsidiary—the defeat of Victor in Estramadura. The events which followed we give in the elegant and perspicuous language of our before-quoted authority.—"At this time the various difficulties of the English commander began to disclose themselves. Though his losses had been extremely small in the recent actions, considering the importance of their results, the troops were suffering severely from sickness, at least 4000 being in hospital, while supplies of all kinds were miserably deficient through the imperfections of the commissariat. The soldiers were nearly barefooted, their pay was largely in arrear, and the military chest was empty. In addition to this, although the real weakness of the Spanish armies was not yet fully known, it was clearly discernible that the character of their commander would preclude any effective concert in the joint operations of the allied force. Cuesta would take no advice, and insisted on the adoption of his own schemes with such obstinacy, that Sir Arthur was compelled to frame his plans accordingly. Instead therefore, of circumventing Victor as he had intended, he advanced into Spain at the beginning of July, to effect a junction with Cuesta and feel his way towards Madrid. The armies when united, formed a mass of 78,000 combatants; but of these 56,000 were Spanish, and for the brunt of war Sir Arthur could only reckon on his 22,000 British troops, Beresford's Portuguese having been despatched to the north of Portugal. On the other side, Victor's force had been strengthened by the succours which Joseph Bonaparte, alarmed for the safety of Madrid, had hastily concentrated at Toledo, and when the two armies at length confronted each other at Talavera, it was found that 55,000 excellent French troops were arrayed against Sir Arthur and his ally, while nearly as many more were descending from the north on the line of the British communications along the valley of the Tagus. On the 28th of July the British commander, after making the best dispositions in his power, received the attack of the French, directed by Joseph Bonaparte in person, with Victor and Jourdan at his side, and after an engagement of great severity, in which the Spaniards were virtually inactive, he remained master of the field against double his numbers, having repulsed the enemy at all points with heavy loss, and having captured several hundred prisoners, and 17 pieces of cannon in this the first great pitched battle in the Peninsula.

In this well fought field of Talavera, the French had thrown for the first time, their whole disposable force upon the British army without success, and Sir Arthur Wellesley inspired with a just shade confidence, that the relative superiority of his troops to those of the Emperor was practically decided. Jomini the French military historian, confesses almost as much, and the opinions of Napoleon himself, as visible in his correspondence, underwent from that moment a serious change. Victor home the people, wholly unaccustomed to the contingencies of a real war, and the Opposition, unscrupulously employing the delusions of the people, combined in decrying the victory denouncing the successful general, and despairing of the whole enterprise. The city of London even ventured on a petition in its discontent with the "*rashness, intoxication, and want of talent*" of that commander whom M. Thiers depicts as endowed solely with the sluggish and phlegmatic tenacity of his countrymen and though ministers succeeded in procuring an acknowledgment of the services performed, and a warrant for persisting in the effort, both they and the British general were sadly cramped in the means of action. Sir Arthur Wellesley became indeed, "Baron Douro, of Wellesley, and Viscount Wellington of Talavera, and of Wellington in the county of Somerset," but the Government was afraid to maintain his effective means even at the moderate amount for which he had stipulated and they gave him plainly to understand that the responsibility of the war must rest upon his own shoulders. He accepted it, and, in full reliance on his own resources and the tried valour of his troops, awaited the shock which was at hand.

THE FRENCH IN THE PENINSULA.

The battle of Talavera acted on the Emperor Napoleon exactly like the battle of Vimiero. His best soldiers had failed against those led by the "Sepoy General," and he became seriously alarmed for his conquest of Spain. After Vimiero he rushed, at the head of his guards, through Somosierra to Madrid, and now, after Talavera, he prepared a still more redoubtable invasion. Relieved from his continental habilitties by the campaign of Aspern and Wagram, and from nearer apprehensions by the discomfiture of our expedition to Walcheren, he poured his now disposable legions in extraordinary numbers through the passes of the Pyrenees. Nine powerful corps, mustering full 280,000 effective men, under Marshals Victor, Ney, Soult, Mortier, and Massena, with a crowd of aspiring generals besides, represented the force definitely charged with the final subjugation of the Peninsula. To meet the shock of this stupendous array Wellington had the 20,000 troops of Talave

augmented, besides other reinforcements by that memorable brigade which, under the name of the Light Division, became afterwards the admiration of both armies In addition he had Beresford's Portuguese levies, now 30,000 strong, well disciplined, and capable, as events showed, of becoming first-rate soldiers, making a total of some 55,000 disposable troops, independent of garrisons and detachments. All hopes of effectual co-operation from Spain had now vanished Disregarding the sage advice of Wellington, the Spanish generals had consigned themselves and their armies to inevitable destruction, and of the whole kingdom Gibraltar and Cadiz alone had escaped the swoop of the victorious French The Provisional Administration displayed neither resolution nor sincerity, the British forces were suffered absolutely to starve, and Wellington was unable to extort from the leaders around him the smallest assistance for that army which was the last support of Spanish freedom. It was under such circumstances, with forces full of spirit, but numerically weak, without any assurance of sympathy at home, without money or supplies on the spot, and in the face of Napoleon's best marshal, with 80,000 troops in line, and 10,000 in reserve, that Wellington entered on the campaign of 1810—a campaign pronounced by military critics to be inferior to none in his whole career

BATTLE OF BUSACO

Withdrawing, after the victory of Talavera, from the concentrating forces of the enemy attracted by his advance, he had at first taken post on the Guadiana, until, wearied out by Spanish insanity and perverseness, he moved his army to the Mondego, preparatory to those encounters which he foresaw the defence of Portugal must presently bring to pass Already had he divined by his own sagacity the character and necessities of the coming campaign Massena, as the best representative of the Emperor himself, having under his orders Ney, Regnier, and Junot, was gathering his forces on the north-eastern frontier of Portugal to fulfil his master's commands by "sweeping the English leopard into the sea" Against such hosts as he brought to the assault a defensive attitude was all that could be maintained, and Wellington's eye had detected the true mode of operation He proposed to make the immediate district of Lisbon perform that service for Portugal which Portugal itself performed for the Peninsula at large, by furnishing an impregnable fastness and supreme retreat. By carrying lines of fortification from the Atlantic coast, through Torres Vedras, to the bank of the Tagus a little above Lisbon, he succeeded in constructing an artificial stronghold within which his returning forces would be inaccessible, and from which, as opportunities invited, he might issue at will These provisions silently and unobtrusively made, he calmly took post on the Coa, and awaited the assault Hesitating or undecided, from some motive or other, Massena for weeks delayed the blow, till at length, after feeling the mettle of the Light Division on the Coa, he put his army in motion after the British commander, who slowly retired to his defences Deeming, however, that a passage of arms would tend both to inspirit his own troops in what seemed like a retreat, and to teach Massena the true quality of the antagonist before him, he deliberately halted at Busaco and offered battle Unable to refuse the challenge, the French marshal directed his bravest troops on the British position, but they were foiled with immense loss at every point of the attack, and Wellington proved, by one of his most brilliant victories, that his retreat partook neither of discomfiture nor fear. Rapidly recovering himself, however Massena followed on his formidable foe, and was dreaming of little less than a second evacuation of Portugal, when, to his astonishment and dismay, he found himself abruptly arrested in his course by the tremendous lines of Torres Vedras

TORRES VEDRAS, AND RETREAT OF MARSHAL MASSENA

These prodigious intrenchments comprised a triple line of fortifications, one within the other, the innermost being intended to cover the embarkation of the troops in the last resort. The main strength of the works had been thrown on the second line, at which it had been intended to make the final stand, but even the outer barrier was found in effect to be so formidable as to deter the enemy from all hopes of a successful assault. Thus checked in mid career, the French marshal chafed and fumed in front of these impregnable lines, afraid to attack, yet unwilling to retire. For a whole month did he lie here inactive, tenacious of his purpose, though aware of his defeat, and eagerly watching for the first advantage which the chances of war or the mistakes of the British general might offer him. Meantime, however, while Wellington's concentrated forces were enjoying, through his sage provisions, the utmost comfort and abundance within their lines, the French army was gradually reduced to the last extremities of destitution and disease, and Massena at length broke up in despair, to commence a retreat which was never afterwards exchanged for an advance Confident in hope and spirit, and overjoyed to see retiring before them one of those real Imperial armies which had swept the continent from the Rhine to the Vistula, the British troops issued from their works in hot pursuit, and, though the extraordinary genius of the French commander preserved his forces from what, in ordinary cases, would have been the ruin of a rout, yet his sufferings were so extreme and his losses so heavy that he carried to the frontier scarcely one half of the force with which he had plunged blindly into Portugal. Following up his wary enemy with a caution which no success was permitted to disturb, Wellington promptly availed himself of his position to attempt the recovery of Almeida, a fortress which, with Ciudad Rodrigo, forms the key of north-eastern Portugal, and which had been taken by Massena in his advance Anxious to preserve this important place, the French marshal turned with his whole force upon the foe, but Wellington met him at Fuentes d'Onoro, repulsed his attempts in a sanguinary engagement, and Almeida fell

As at this point the tide of French conquest had been actually turned, and the British army, so lightly held by Napoleon, was now manifestly chasing the eagles from the field, it might have been presumed that popularity and support would have rewarded the unexampled successes of the English general. Yet it was not so The reverses experienced during the same period in Spain were loudly appealed to as neutralising the triumphs in Portugal, and at no moment was there a more vehement denunciation of the whole Peninsular war. Though Cadiz resolutely held out, and Graham, indeed on the heights of Barossa, had emulated the glories of Busaco, yet even the strong fortress of Badajoz had now fallen before the vigorous audacity of Soult, and Suchet, after a long and [illegible] abilities, was effecting [illegible] of the [illegible] strongholds, the complete conquest of Catalonia and Valencia Eagerly turning these disasters to account, and inspirited by the accession of the Prince Regent to power, the Opposition in the British parliament so pressed the Ministry, that at the very moment when Wellington, after his unrivalled strategy, was on the track of his retreating foe, he could scarcely count for common support on the Government he was serving He was represented in England, as his letters show us, to be "in a scrape," and he fought with a consciousness that all his reverses would be magnified and all his successes denied. Yet he failed neither in heart nor hand He had verified all his own assertions respecting the defensibility of Portugal His army had become a perfect model of discipline and daring, he was driving before him 80,000 of the best troops of the Empire, and he relied on the resources of his own genius for compensating those disadvantages to which he foresaw he must be still exposed Such was the campaign of 1810

THE SIEGES OF THE PENINSULA.

As the maintenance of Portugal was subsidiary to the great object of the war—the deliverance of the Peninsula from French domination, Wellington of course proceeded, after successfully repulsing the invaders from Portuguese soil, to resume the offensive, by carrying his arms into Spain Thus, after defeating Junot, he had been induced to try the battle of Talavera, and now, after expelling Massena, he betook himself to similar designs, but with this difference—that instead of operating by the valley of the Tagus against Madrid, he now moved to the valley of the Guadiana for the purpose of recovering Badajoz, a fortress, like that of Ciudad Rodrigo, so critically situated on the frontier, that with these two places in the enemy's hands, as they now were, it became hazardous either to quit Portugal or to penetrate into Spain At this point, therefore, were now to commence the famous sieges of the Peninsula—sieges which will always reflect immortal honour on the troops engaged, and which will always attract the

strongest interests of an English reader; but which must, nevertheless, be appealed to as illustrations of the straits to which an army may be led by want of military experience in the Government at home. By this time the repeated victories of Wellington and his colleagues had raised the renown of British soldiers to at least an equality with that of Napoleon's veterans, and the incomparable efficiency, in particular, of the Light Division was acknowledged to be without a parallel in any European service. But in those departments of the army where excellence is less the result of intuitive ability, the forces under Wellington were still greatly surpassed by the trained legions of the emperor. While Napoleon had devoted his whole genius to the organisation of the parks and trains which attend the march of an army in the field, the British troops had only the most imperfect resources on which to rely. The engineer corps, though admirable in quality, was so deficient in numbers, that commissions were placed at the free disposal of Cambridge mathematicians The siege trains were weak and worthless against the solid ramparts of Peninsular strongholds, the intrenching tools were so ill made that they snapped in the hands of the workmen, and the art of sapping and mining was so little known, that this branch of the siege duties was carried on by drafts from the regiments of the line, imperfectly and hastily instructed for the purpose. Unhappily, such results can only be obviated by long foresight, patient training, and costly provision, it was not in the power of a single mind, however capacious, to effect an instantaneous reform, and Wellington was compelled to supply the deficiencies by the best blood of his troops

The command of the force commissioned to recover Badajoz had been intrusted to Marshal Beresford until Lord Wellington could repair in person to the scene, and it was against Soult, who was marching rapidly from the south to the relief of the place, that the glorious but sanguinary battle of Albuera was fought on the 16th of May. Having checked the enemy by this bloody defeat, Beresford resumed the duties of the siege until he was superseded by the Commander-in-chief. But all the efforts of Wellington and his troops were vain, for the present, against this celebrated fortress, two assaults were repulsed, and the British general determined on relinquishing the attempt, and returning to the northern frontier of Portugal for more favourable opportunities of action. He had now, by his extraordinary genius, so far changed the character of the war, that the British, heretofore fighting with desperate tenacity for a footing at Lisbon or Cadiz, were now openly assuming the offensive, and Napoleon had been actually compelled to direct defensive preparations along the road leading through Vittoria to Bayonne—that very road which Wellington, in spite of these defences, was soon to traverse in triumph. Meantime fresh troops were poured over the Pyrenees into Spain, and a new plan of operations was dictated by the Emperor himself. One powerful army in the north was to guard Castile and Leon, and watch the road by which Wellington might be expected to advance; another, under Soult, strongly reinforced, was to maintain French interest in Andalusia and menace Portugal from the south; while Marshal Marmont, who had succeeded Massena, took post with 30,000 men in the valley of the Tagus, resting on Toledo and Madrid, and prepared to concert movements with either of his colleagues as occasion might arise. To encounter these antagonists, who could rapidly concentrate 90,000 splendid troops against him, Wellington could barely bring 50,000 into the field; and though this disparity of numbers was afterwards somewhat lessened, yet it is scarcely in reason to expect that even the genius of Wellington or the valour of his troops could have ultimately prevailed against such odds, but for circumstances which favoured the designs of the British and rendered the contest less unequal. In the first place, the jealousies of the French marshals, when unrepressed by the Emperor's presence, were so inveterate as to disconcert the best operations, and in the next, although the Spanish armies had ceased to offer regular resistance to the invaders, yet the guerilla system of warfare, aided by interminable insurrections, acted to the incessant embarrassment of the French, whose duties, perils, and fatigues were doubled by the restless activity of these daring enemies. But the most important of Wellington's advantages was that of position. With an impregnable retreat at Lisbon, with free water carriage in his rear, and with the great arteries of the Douro and the Tagus transmitting his supplies, he could operate at will from his central fastness towards the north, east, or south. If the northern provinces were temporarily disengaged from the enemy's presence, he could issue by Almeida and Salamanca upon the great line of communication between the Pyrenees and Madrid; if the valley of the Tagus were left unguarded, he could march directly upon the capital by the well-known route of Talavera; while if Soult, by any of these demonstrations, was tempted to cross the Guadiana, he could carry his arms into Andalusia by Elvas and Badajoz. Relying, too, on the excellence of his troops, he confidently accounted himself a match for any single army of the enemy, while he was well aware, from the exhausted state of the country and the difficulties of procuring subsistence, that no concentration of the French forces could be maintained for many days together. In this way, availing himself of the far superior intelligence which he enjoyed through the agency of the guerillas, and of his own exclusive facilities for commanding supplies, he succeeded, by constant alarms and well-directed blows, in paralysing the enormous hosts of Napoleon, till at length when the time of action came he advanced from cantonments and drove King Joseph and all his marshals headlong across the Pyrenees.

The position taken up by Wellington when he transferred his operations from the south to the north frontier of Portugal was at Fuente Guinaldo, a locality possessing some advantageous features in the neighbourhood of Ciudad Rodrigo. His thoughts being still occupied by the means of gaining the border fortresses, he had promptly turned to Rodrigo from Badajoz, and had arranged his plans with a double prospect of success. Knowing that the place was inadequately provisioned, he conceived hopes of blockading it into submission from his post at Fuente Guinaldo, since in the presence of this force no supplies could be thrown into the town, unless escorted by a convoy equal to the army under his command. Either, therefore, the French marshal must abandon Rodrigo to its fate, or he must go through the difficult operation of concentrating all his forces to form the convoy required Marmont chose the latter alternative, and uniting his army with that of Dorsenne, advanced to the relief of Rodrigo with an immense train of stores and 60,000 fighting men. By this extraordinary effort not only was the place provisioned, but Wellington himself was brought into a situation of some peril, for after successfully repulsing an attempt of the French in the memorable combat of El Bondon, he found himself the next day, with only 15,000 men actually at his disposal, exposed to the attack of the entire French army Fortunately Marmont was unaware of the chance thus offered him, and while he was occupying himself in evolutions and displays, Wellington collected his troops, and stood once more in security on his position. This movement, however, of the French commander destroyed all hopes of reducing Rodrigo by blockade, and the British general recurred accordingly to the alternative he had been contemplating of an assault by force.

To comprehend the difficulties of this enterprise it must be remembered that the superiority of strength was indisputably with the French whenever they concentrated their forces, and that it was certain such concentration would be attempted, at any risk, to save such a place as Rodrigo Wellington, therefore, had to prepare, with such secrecy as to elude the suspicions of his enemy, the enormous mass of materials required for such a siege as that he projected. As the town stood on the opposite or Spanish bank of the river Agueda, and as the approaches were commanded by the guns of the garrison, it became necessary to construct a temporary bridge. Moreover, the heavy battering train, which alone required 5000 bullocks to draw it, had to be brought up secretly to the spot, though it was a work almost of impossibility to get a score of cattle together. But these difficulties were surmounted by the inventive genius of the British commander. Preparing his battering train at Lisbon, he shipped it at that port as if for Cadiz, transhipped it into smaller craft at sea, and then brought it up the stream of the Douro. In the next place, he succeeded, beyond the hopes of his engineers, in rendering the Douro navigable for a space of forty miles beyond the limit previously presumed, and at length he collected the whole necessary materials in the rear of his army, without any knowledge on the part of his antagonist. He was now to reap the

reward of his precaution and skill. Towards the close of the year the French armies having—conformably to directions of the Emperor, framed entirely on the supposition that Wellington had no heavy artillery—been dispersed in cantonments, the British general suddenly threw his bridge across the Agueda, and besieged Ciudad Rodrigo in force. Ten days only elapsed between the investment and the storm. On the 8th of January, 1812, the Agueda was crossed, and on the 19th the British were in the city. The loss of life greatly exceeded the limit assigned to such expenditure in the scientific calculations of military engineers. but the enterprise was undertaken in the face of a superior force, which could at once have defeated it by appearing on the scene of action, and so effectually was Marmont baffled by the vigour of the British, that the place had fallen before his army was collected for its relief. The reputation of such a stroke at Badajoz, which was now Wellington's aim, presented still greater difficulties, for the vigilance of the French was alarmed, the garrison of the place had been reconstituted by equal drafts from the various armies in order to interest each marshal personally in its relief, and Soult in Andalusia, like Marmont in Castile, possessed a force competent to overwhelm any covering army which Wellington could detach. Yet, on the 7th of April, Badajoz like wise fell, and after opening a new campaign with these famous demonstrations, he prepared for a third time to advance definitely from Portugal into Spain

Though the forces of Napoleon in the Peninsula were presently to be somewhat weakened by the requirement of the Russian war, yet at the moment when [illegible] were wrenched from their grasp, the ascendancy of [illegible] was yet uncontested, and from the Niemen to the Atlantic there was literally no resistance to his universal dominion, save by this army, which was clinging with invincible tenacity to the rocks of Portugal at the western extremity of Europe. From these well defended lines, however, they were now to emerge, and while Hill, by his surprise of Girard at Arroyo Molinos, and his brilliant capture of the forts at the bridge of Almaraz, was alarming the French for the safety of Andalusia, Wellington began his march to the Pyrenees

On this occasion he was at first unimpeded. So established was the reputation of the troops and their general, that Marmont retired as he advanced, and Salamanca, after four years of oppressive occupation, was evacuated before the liberating army But the host into which Wellington had thus boldly plunged with 40,000 troops still numbered fully 270,000 soldiers, and though these forces were divided by distance and jealousies, Marmont had no difficulty in collecting an army numerically superior to that of his antagonist. Returning, therefore, to the contest, and hovering about the English general for the opportunity of pouncing at an advantage upon his troops, he gave promise of a decisive battle, and, after some days of elaborate manœuvring, the opposing armies found themselves confronted, on the 22nd of July, in the vicinity of Salamanca. It was a trial of strategy, but in strategy as well as vigour the French marshal was surpassed by his redoubtable adversary. Seizing with intuitive genius an occasion which Marmont offered, Wellington fell upon his army, and routed it so completely that half of its effective force was destroyed in the engagement. So decisively had the blow been dealt, and so skilfully had it been directed, that, as Napoleon had long foretold of such an event, it paralysed the entire French force in Spain, and reduced it to the relative position so long maintained by the English—that of tenacious defence. The only two considerable armies now remaining were those of Suchet in the east, and Soult in the south. Suchet, on hearing of Marmont's defeat, proposed that the French should make a Portugal of their own in Catalonia, and defend themselves in its fastnesses till aid could arrive from the Pyrenees; while Soult advocated with equal warmth a retirement into Andalusia, and a concentration behind the Guadiana There was little time for deliberation, for Wellington was hot upon his prey, but as King Joseph decamped from his capital he sent orders to Soult to evacuate Andalusia; and the victorious army of the British, after thus, by a single blow, clearing half Spain of its invaders, made its triumphant entry into Madrid.

Wellington was now in possession of the capital of Spain. He had succeeded in delivering that blow which had so long been meditated, and had signalised the growing ascendancy of his army by the total defeat of his chief opponent in open field. But his work was far from finished, and while all around was rejoicing and triumph, his forecast was anxiously revolving the imminent contingencies of the war. In one sense, indeed, the recent victory had increased rather than lessened the dangers of his position, for it had driven his adversaries by force of common peril into a temporary concert, and Wellington well knew that any such concert would reduce him again to the defensive Marshal Soult, it was true, had evacuated Andalusia, and King Joseph Madrid; but their forces had been carried to Suchet's quarters in Valencia, where they would thus form an overpowering concentration of strength, and in like manner, though Marmont's army had been shorn of half its numbers, it was rapidly recovering itself under Clauzel by the absorption of all the detachments which had been operating in the north. Wellington saw, therefore, that he must prepare himself for a still more decisive struggle, if not for another retreat, and conceiving it most important to disembarrass his rear, he turned round upon Clauzel with the intention of crushing him before he could be fully reinforced, and thus establishing himself securely on the line of the Douro to wait the advance of King Joseph from the east.

With these views, after leaving a strong garrison at Madrid, he put his army in motion, drove Clauzel before him from Valladolid, and on the 18th of September appeared before Burgos. This place, though not a fortification of the first rank, had been recently strengthened by the orders of Napoleon, whose sagacity had divined the use to which its defences might possibly be turned. It lay in the great road to Bayonne, and was now one of the chief depôts retained by the French in the Peninsula, for the campaign had stripped them of Rodrigo, Badajoz, Madrid, Salamanca, and Seville. It became, therefore, of great importance to effect its reduction, and Wellington sat down before it with a force which, although theoretically unequal to the work, might, perhaps, from past recollections, have warranted some expectations of success But our Peninsular sieges supply, as we have said, rather warnings than examples. Badajoz and Rodrigo were only won by a profuse expenditure of life, and Burgos, though attacked with equal intrepidity, was not won at all. After consuming no less than five weeks before its walls, Wellington gave reluctant orders for raising the siege and retiring It was, indeed time, for the northern army, now under the command of Soulam, mustered 44,000 men in his rear, and Soult and Joseph were advancing with fully 70,000 more upon the Tagus To oppose these forces Wellington had only 34,000 troops, Spaniards included, under his immediate command, while Hill, with the garrison of Madrid, could only muster some 20,000 to resist the advance of Soult. The British commander determined, therefore, on recalling Hill from from Madrid and resuming his former position on the Agueda—a resolution which he successfully executed in the face of the difficulties around him, though the suffering and discouragement of the troops during this unwelcome retreat were extremely severe. A detailed criticism of these operations would be beyond our province. It is enough to say that the French made a successful defence, and we have no occasion to begrudge them the single achievement in the whole Peninsular war against the English arms which could be contributed to the historic gallery of Versailles.

Such, however, was in those times the incredulity or perverseness of party spirit in England, that while no successes were rated at their true import, every incomplete operation was magnified into a disaster and described as a warning. The retreat from Burgos was cited, like the retreat from Talavera, as a proof of the mismanagement of the war, and occasion was taken in parliament to contrast even the victory of Salamanca with the battles of Marlborough to the disparagement of Wellington and his army. Nor did any great enlightenment yet prevail on the subject of military operations, for a considerable force destined to act on the eastern coast of Spain was diverted by Lord William Bentinck to Sicily at a moment when its appearance in Valencia would have disconcerted all the plans of the French, and by providing occupation for Joseph and his marshals, have relieved Wellington from all fear of concentration of his enemies before which he was compelled to retire. But neither the wilfulness of faction nor the tenacity of folly could do more than obstruct events which were now steadily in

course. Even the inherent obstinacy of Spanish character had at length yielded to the visible genius of Wellington, and the whole military force of the country was now at last, in the fifth year of the war, placed under his paramount command. But these powers were little more than nominal, and, in order to derive an effective support from the favourable dispositions of the Spanish Government, the British general availed himself of the winter season to repair in person to Cadiz.

It will be remembered that when, after the battle of Talavera and the retirement of Wellington to Portugal, the French poured their accumulated legions into Andalusia, Cadiz alone had been preserved from the deluge. Since that time the troops of Soult had environed it in vain. Secured by a British garrison, strongly fortified by nature and well supplied from the sea, it was in little danger of capture, and it discharged, indeed, a substantial service by detaining a large detachment from the general operations of the war. In fact, the French could scarcely be described as besieging it, for, though they maintained their guard with unceasing vigilance, it was at so respectful a distance that the great mortar which now stands in St. James's Park was cast especially for this extraordinary length of range, and their own position was intrenched with an anxiety sufficiently indicative of their anticipations. Exempted in this manner from many of the troubles of war while cooped in the narrow space of a single town, the Spanish patriots enjoyed ample liberty of political discussion, and the fermentation of spirits was proportionate to the occasion. It was here that the affairs of the war, as regarded the Spanish armies, were regulated by a popular assembly under the control of a licentious mob; and it was here that those democratic principles of government were first promulgated which in later times so intimately affected the fortunes of the Peninsular monarchies. "The Cortes," wrote Wellington, "have framed a constitution very much on the principle that a painter paints a picture—viz., to be looked at. I have not met any person of any description who considers that Spain either is or can be governed by such a system." From this body, however, the British commander succeeded in temporarily obtaining the power he desired, and he returned to Portugal prepared to open with fresh spirit and confidence the campaign of 1813.

Several circumstances now combined to promise a decisive turn in the operations of the war. The initiative, once taken by Wellington, had been never lost, and although he had retrograded from Burgos, it was without any discomfiture at the hands of the enemy. The reinforcements despatched from England, though proportioned neither to the needs of the war nor the resources of the country, were considerable, and the effective strength of the army—a term which excludes the Spanish contingents—reached to full 70,000 men. On the other hand, the reverses of Napoleon in the Russian campaign had not only reduced his forces in the Peninsula, but had rendered it improbable that they could be succoured on any emergency with the same promptitude as before. Above all, Wellington himself was now unfettered in his command, for if the direction in chief of the Spanish armies brought but little direct accession of strength, it at any rate relieved him from the necessity of concerting operations with generals on whose discretion he had found it impossible to rely. These considerations, coupled with an instinctive confidence in his dispositions for the campaign, and an irresistible presage of the success which at length awaited his patience, so inspirited the British commander that, on putting his troops once more in motion for Spain, he rose in his stirrups as the frontier was passed, and waving his hat, exclaimed prophetically, "Farewell Portugal!" Events soon verified the finality of this adieu, for a few short months carried the "Sepoy General" in triumph to Paris.

"At the commencement of the famous campaign of 1813 the material superiority still lay apparently with the French, for King Joseph disposed of a force little short of 200,000 men—a strength exceeding that of the army under Wellington's command—even if all denominations of troops are included in the calculation. But the British general reasonably concluded that he had by this time experienced the worst of what the enemy could do. He knew that the difficulties of subsistence, no less than the jealousies of the several commanders, would render any large or permanent concentration impossible, and he had satisfactorily measured the power of his own army against any likely to be brought into the field against him. He confidently calculated, therefore, on making an end of the war; his troops were in the highest spirits, and the lessons of the retreat from Burgos had been turned to seasonable advantage. In comparison with his previous restrictions, all might now be said to be in his own hands, and the result of the change was soon made conclusively manifest.

"Hitherto, as we have seen, the offensive movements of Wellington from his Portuguese stronghold had been usually directed against Madrid by one of the two great roads of Salamanca or Talavera, and the French had been studiously led to anticipate similar dispositions on the present occasion. Under such impressions they collected their main strength on the north bank of the Douro, to defend that river to the last, intending, as Wellington moved upon Salamanca, to fall on his left flank by the bridges of Tore and Zamora. The British general, however, had conceived a very different plan of operations. Availing himself of preparations carefully made, and information anxiously collected, he moved the left wing of his army through a province hitherto untraversed to the north bank of the Douro, and then, after demonstrations at Salamanca, suddenly joining it with the remainder of the army, he took the French defences in reverse, and showed himself in irresistible force on the line of their communications. The effect was decisive. Constantly menaced by the British left, which was kept steadily in advance, Joseph evacuated one position after another without hazarding an engagement, blew up the castle of Burgos in the precipitancy of his retreat, and only took post at Vittoria to experience the most conclusive defeat ever sustained by the French arms since the battle of Blenheim. His entire army was routed, with inconsiderable slaughter, but with irrecoverable discomfiture. All the plunder of the Peninsula fell into the hands of the victors. Jourdan's *bâton* and Joseph's travelling carriage became the trophies of the British general, and the walls of Apsley House display to this hour in their most precious ornaments the spoils of this memorable battle. The occasion was improved as skilfully as it had been created. Pressing on his retiring foe, Wellington drove him into the recesses of the Pyrenees, and, surrounding the frontier fortresses of St. Sebastian and Pampeluna, prepared to maintain the mountain passes against a renewed invasion. His anticipations of the future proved correct. Detaching what force he could spare from his own emergencies, Napoleon sent Soult again, with plenary powers to retrieve the credit and fortunes of the army. Impressed with the peril of the crisis, and not disguising the abilities of the commander opposed to him, this able 'Lieutenant of the Emperor' collected his whole strength, and suddenly poured with impetuous valour through the passes of the Pyrenees on the isolated posts of his antagonist. But at Maya and Sorauren the French were once more repulsed by the vigorous determination of the British; St. Sebastian, after a sanguinary siege, was carried by storm; and on the 9th of November, four months after the battle of Vittoria, Wellington slept, for the last time during the war, on the territory of the Peninsula. The Bidassoa and the Nivelle were successfully crossed in despite of all the resistance which Soult could oppose, and the British army, which five years before, amid the menacing hosts of the enemy and the ill-boding omens of its friends, had maintained a precarious footing on the crags of Portugal, now bivouacked in uncontested triumph on the soil of France. With these strokes the mighty game had at length been won, for though Soult clung with convulsive tenacity to every defensible point of ground, and though at Toulouse he drew such vigour from despair as suggested even an equivocal claim to the honours of the combat, yet the result of the struggle was now beyond the reach of fortune. Not only was Wellington advancing in irresistible strength, but Napoleon himself had succumbed to his more immediate antagonists; and the French marshals, discovering themselves without authority or support, desisted from hostilities which had become both gratuitous and hopeless."

And thus was terminated, to the immense advantage of Great Britain and Europe, the great Peninsular War—a war begun without definite object; carried forward in doubt and suspicion, but brought at length to a brilliant conclusion by the bravery and genius of the great man, at the close of the second period of whose life we have now arrived.

(To be continued in our next.)

A WET NIGHT IN LONDON.

It is a cold night—a *very* cold, wet, miserable night; the pedestrians are wrapping themselves closely up; and, with bent heads and shuffling steps, are making their several ways to warm fire-sides and cheerfully lighted rooms. The air is thick with fog, and round the street lamps there is a kind of red areola which extends just far enough to be dismal and no farther. The shops are tenantless *before* the counters, while *behind* them stand assistants with blank faces and blue cold noses. The neighbourhood cannot be said to be a genteel one, for every third or fourth house is a gin or an eel-pie shop, and a dull radiance which disappears as soon as they reach the ground. It is a miserable night, indeed; and the mist seems to envelop everything it touches with a cold, damp, uncomfortable kind of garment. Even the street musicians have packed up their instruments, and moved away from the door of the public-house, in an utterly wretched and hopeless condition; and if we glance within the swinging portals, we catch a glimpse of the fat landlord smoking his evening pipe in solitary discontentedness; and the little crowd about the theatre door—for the neighbourhood being poor and out-at-elbows, is theatrical as a matter of course,—has gradually become less; and the proprietor of the broker's shop hard by is removing

ONE OF POVERTY'S LAST SHIFTS.

at the corner of the street there is a man standing with a baked potato can, who, ever and anon recommends his wares with a hoarse voice in the rapid and customary manner of his trade—"Baked taters all hot hot hot hot! mealy and flowery, hot hot hot!"—without a pause; the while he rubs his hands together and stamps a rough tune out upon the ground with his thick boot soles. But the influence of the weather is upon even him, and in a short time, he shuts off the steam from the little pipe above the fire, and shouldering his machine, makes his way to a more promising spot; and as the red hot cinders drop from his little furnace they shine with his medley stock, which consists, he is in the habit of saying, of everything, from a cart-wheel to a watch-spring,—from the wide muddy pathway to the shelter of the house; and the miserable women who make a living in the streets are cowering in doorways, if they have no money, or crowding round gin-shop counters, if they have; and the wretched creature, with a child on her arm, attempts to "turn a penny" by the sale of little bunches of stale flowers—one of the very last shifts of honest poverty in London; and the cabman sits disconsolately on the box of his vehicle, his face half hidden in the collar of his wet coat, and the smoke of his short black pipe

rising up into the air in a very lazy and unconvivial manner, and the sellers of cheap fruit and boiled sheep's trotters stoop helplessly over damp stalls and dilapidated baskets; and beneath the sun-blind of the cheesemonger's shop a group of wet, shabby-looking people have collected; and out upon the murky air the light from the flaring gas-lamp at the butcher's-shop streams in smoky yellowness, and the streets are filled with that foul, earthy, disagreeable kind of smell peculiar to London and bad drainage, and altogether, is a kind of night when one likes to be at home, with the shutters fast and the lamp lighted, and the sofa drawn somewhat nearer to the bright autumn fire, and the favourite book brought down from the shelf, and the children all in bed, and the cosy little wife in the best humour, ready to listen or to talk, just as it happens to hit the humour of the good man of the house.

On just such a night as this it is that he who would know something more of the lower life of London than can be gleaned from books, be they ever so graphic, or can be seen by daylight in the crowded thoroughfares of wealth and commerce, be the observer ever so observant,—on such a night he should go forth, and if he be as benevolent as he is observant, he will discover no lack of objects on which to exercise his goodness. He will see in dark archways, and damp doorsteps, and in strange out-of-the-way places, poor, miserable, houseless, wretches crouching down in the very lowest state of human degradation,—the old and the young, the palsied crone and the premature baby-man, the vice-grey scoundrel and the fallen woman scarce sixteen, the hardened jail-bird and the widowed mother with her dying child, huddled indiscriminately together, without hope, without morality, and without a thought of the future. And he will see, too, if he knows where to look, good men, God's servants, teaching ragged children in crowded rooms, and doing their best to redeem them from a life of ignorance and vice. All honour to the brave men who dare foul poverty and disease, that they may lessen, by ever so little, the mass of wretchedness and filth, and ignorance and irreligion, which hangs like a poisoned vapour on the very garments of wealth and pride, and comes in a thousand fearful shapes into the very homes of luxury and ease.

It is a solemn thought, that, in the midst of our material grandeur and prosperity, we allow the poor to be so *very* poor as to become dangerous to themselves and to society, that we go on, careless of warnings from cholera and typhus, in our old easy way, making new streets and building grand palaces, and opening out fine city ways, without a thought of any but ourselves,—a very solemn thing indeed, that for every foul street cleared away from Westminster, Whitechapel, or St. Giles', we only fill the rotten wastes and wildernesses and rookeries of vice and want the fuller, and keep up the jail supply, in spite of emigration, home missions, and philanthropic endeavours. Let the rich look to it.

COURTESY.

Opinions seem to be much divided on that weighty question, What constitutes a gentleman? There are few points more frequently agitated in society, and unfortunately, though codes of etiquette are innumerable, individuals essentially differ in their estimate of the comparative importance of each. No Blackstone has made a digest of its laws, common and statute, to the test of which every character can be summoned; and in consequence, there is a ridiculous variety in the alleged evidences of gentility. Ask one person,—say the laundress,—how she distinguishes a gentleman, and the reply will be, "by the exquisite texture and snowy whiteness of his linen," ask another, and it will be, "by the kid and the boot;" while a third will tell you that complexion and deportment are infallible indices. Others think to discover the secret by a strict observance of the application and uses of certain important instruments in modern civilisation—the fork, and more especially the knife—in wielding which, say they, there is a magical touch known only to gentlemen. We once heard of a worthy who sagely observed that to break *bread* with one's meat was a sure mark, but to such men the masonic symbols of the dinner table are so numerous, that we may not dwell even on the chief.

Passing from individuals to sections of the community, we shall still perceive discordant theories. The votaries of fashion hold that a man's lineage, and the blood that courses through his veins, at once stamp on him superiority to his fellows; while another class, the minions of wealth, believe that gold and silver make the man. If the word "gentleman" is to be thus confined, out with it from my vocabulary! or let me use it only *as a name*, conferring no more honour on its owner than that of Toby or my dog. Society, however, does not seem always to set exactly this meaning on it. Then give me nature's aristocracy, wherever found,—the good and the great; not artificial titles or accidental circumstantials! Not one of the things I have mentioned, nor all of them together, make a gentleman, take my *ipse dixit* for it, the principles of his character lie deeper, and a much more scrutinizing analysis will alone detect them.

My definition is one another way, yet there is a connexion between it and courtesy that may have warranted this exordium. Courtesy is the characteristic feature of a gentleman, it does not absolutely constitute, but it chiefly distinguishes him. What then is this courtesy? It consists not in conformity to any set of rules, but we must rather regard the habitude of the mind, the spirit of the heart. Selfishness is alien to it, its simple but beautiful motto is "in honour preferring one another." It therefore cheerfully sacrifices its own to the convenience of another, and with all due self respect, lays itself out for his happiness. He that is most courteous will be least selfish. Generosity and [illegible] are [illegible] from it. It is not a thing of [illegible], a garment that must never be cast off, it seeks no opportunities for its development in unusual times and situations, but is unceasingly active in the ordinary and often trifling incidents of every day. It is a *social* virtue, and its special study is to learn what is *most* agreeable to another.

Hence it plainly cannot be imbibed from the precepts of a *maître de danse*. Circumstances so alter cases that what at one movement may be the very "pink of propriety," will at another be very objectionable. Some persons forget this, they have a beaten track to tread, and no consideration can turn them from it. Others will never permit any attentions to be paid themselves, they will heap them on you, but resist every attempt to return the compliment. do they ever remember that it is often a greater pleasure to give than to receive? Others again act similarly, though from different reasons. such, to use a sensuous illustration, if you hand them a plate of good things at table, imagine that your own wants suggested the act, and immediately seizing it, signify to you to help yourself! With more than Cicero's vehemence we might justly exclaim,—"*O tempora, O mores!*" A seeming act of courtesy may eventually prove unfortunate. It is not merely good but *intelligent* intention that is wanted, for the blunders of good-natured ignorance may much and do frequently annoy. He that would be courteous then should cultivate discriminating talents and generous sensibilities,—should make himself acquainted with the feelings of others, and rigidly do what he then conceives is most to their happiness.

Courtesy results from the right appreciation of our relations to others. These relations have two modes of developement—intercourse and association, and in these twin branches it has therefore a wide field of action. Far be it from me to dogmatize here,—

> "I only speak right on
> To tell you all what you yourselves do know"

The properties of conversation will be at once remembered, but those cases not involving direct interpersonal communication are often overlooked. May I presume to mention a growing abuse as an instance of what I mean? Go to a large meeting nowadays, at least in some parts of the country, and you will see heroines scattered here and there, who are magnanimously endeavouring to undermine some of the customs of their grandames. *They* were content to darn the unsightly stocking in "dark, unfathomed" rooms, but these ladies, armed with needles and crochet, threaten to invade the public arena, and disclose with sad impiety the mysteries of worsted and cotton. "Stitch, stitch, stitch" is emblazoned on their bonnets; but I leave them to reflection, and may it never be my arduous task to point out offences against courtesy.

In conclusion, then, be generous, you that are ambitious of the name "gentleman." Cultivate manly sentiments, and, as St. Paul says, "*Be courteous.*"

GARRULUS.

CHARACTERS AND TENDENCIES OF AMERICAN SOCIETY.

From the French of M Emile Montegut *

Among all the spectacles presented by the world to-day, there is none more interesting, nor, in a certain sense, more alarming, than the changing and noisy panorama, which extends from the frontier of Canada to that of Mexico, and which the arrival of each steamboat causes to pass before our eyes. The time is past in which the United States appeared only to the eyes of Europe as a perfect specimen of democratic Government. These States, which had then remained, since their formation, exclusively American, whose interests had interfered not in the least with ours, which to us were only subjects for our studies, the representation of certain abstract theories, the experiment of the working of the human mind in a certain way and for a certain purpose, have now left the solitude in which they were shut up, and have forsaken the apparent indifference with which they had always looked upon whatever questions were discussed beyond their boundaries. They endeavour now to enter into the affairs of the world, and trouble themselves with the politics of other nations, as though they suspected them of aiming at the infringement of their liberties. It is not alone the ardour of republicanism that pushes onwards the Americans, it is a more fatal ardour, a more hurtful zeal, —the warmth and fervour inseparable from the blood and temperament of a young people, to which has been added the covetousness—refined and egotistic of old nations. To this ardour, thus partaking both of civilisation and of barbarism, the obscure and fanatical presentiment of a great mission has added all that it has the power to develop of national ambition and religious instincts. The Americans need only now the intoxication of success, the respect of other nations, and in default of that respect, then fear. To gain these, all means they will consider good, while the prestige of their institutions, and the example of successful democracy which they have given to the world, will do much to help them to the attainment of their end. If the moral prestige they possess to-day, should be by any means annihilated and destroyed, there will still remain to them their physical puissance, and thirty millions of men will possess always [illegible] people of the earth. The power of [illegible] which, [illegible] of all hazards, will enable them to dispense with all they lack of that which commands moral respect, and with all that they possess not of that consideration which a secular existence, an ancient civilisation, and the services which have been rendered to the world by the labour and toil of centuries, has given to the states of the European continent. In the language of their representatives and public men may always be found one double sentiment,—the joy of being sheltered from all danger, and, conjoined with it, the desire to encounter unknown adventures. They are quarrelsome, without being overtly and [illegible], they look everywhere for enemies, and are deeply chagrined and disappointed at not finding any. In a word, they wish do some great thing, of whose exact nature they are ignorant, but occasion and opportunity are two smiling deities, which never failed to favour the determined and bold-hearted.

It is time at last to dissipate the false ideas respecting the United States, which have been rooted in us since the eighteenth century —to cease judging of them by their constitution only, and to begin to judge of them, on the contrary, by the character and temperament of the people who inhabit them. It is time that Europe ceased to create for itself a conventional America. There are not wanting many amongst us still who are ready to demonstrate that the increasing prosperity of the United States is caused by this and that legal arrangement, by that and the other political combination, or by the fabric denominated their constitution, and who therefore sing loud hymns and chant hosannahs in praises of human reason and the *contrat social*. But experience has made evident and clear as need be, that the first cause of the greatness of the Americans as a nation is nothing other than their Protestant origin, and that the temperament and *humeur* of the people of the United States are far more powerful auxiliaries to their progress, and superior aids to their advancement, than their political constitution. What is the nature of this constitution which has been so vaunted, and of which men fear not to present the example, with ignorance and effrontery, to France? It was a compromise, having for its object the bringing together and uniting of men who could have no repugnance to being bound by the same political ties, seeing that they were already united by the same moral ones. In one of the speeches which he delivered last year during his travels through the state of New York, Daniel Webster admirably said: "Before the establishment of the constitution, no political bonds existed between the different colonies; but the tongue of England was their common language, Shakespeare and Milton were their common property, the Bible and Christianity they adored in common, and these were ties which firmly united them." Believing one and all in the same creed, looking back on one and the same past, bound together by community of interests, a political union of the various colonies cost them nothing. The constitution did not demand the sacrifice of any of their habits or their customs, it was not intended to give them any new ones. In uniting themselves together, the Americans demanded nothing, nor were they called upon to make any sacrifice. It is with the founders of the republic as with the constitution; people cease not to extol their tolerance, their gentleness, and their humanity; and how, in truth, could they have had any other virtues,—these men whose followers demanded nothing of them, and who, in their turn, had nothing to demand of them? They played the only part that it was possible for them to play, that of amanuenses of the public thought. The republic was not their personal conception, it existed already, though not legally acknowledged; they had not to found it,—merely to proclaim its foundation. If, with only this modest rôle to fill, Washington, Franklin, and Adams had been tyrants and dictators, they must have had a remarkably strong natural disposition to become so. Let us cease, then, to speak of the foundation of the American republic as of a work of profound genius, for never had men a more simple task throughout all time than had its founders. On the other side, our absolutists fail not to attribute all the faults and adventures or unjust enterprises of the Americans to this same constitution, to this same form of government that our republicans assert has been the cause of all their successes and prosperity. But the faults of the United States prove no more against the republic than their prosperity proves in its favour. There is no political conclusion to be drawn from its successes or its faults; the one and the other are alike to be attributed to their temperament, and qualities of race and blood who live beneath it. The United States present us simply with the spectacle of a republican England, they show us the great Anglo-Saxon race freed from and unembarrassed by traditional shackles, and all the bonds, infinitely multiplied, which enchain mankind in old civilisation, even the most liberal. The Anglo-Saxon race established itself in America in its primitive condition and with its original energy. In order to convince ourselves of this, it will be sufficient to examine successively, as we shall endeavour to do here, the manners and instincts of American Society.

I.—RELATIONS OF THE UNITED STATES TO ENGLAND.

The numerous affinities which exist between the two great branches of the Anglo-Saxon race have not, perhaps, been sufficiently remarked. It is easy to demonstrate that in England as in America, society reposes upon the same moral data, upon the same principles, applied, perhaps, in a slightly different way, but not so different at the bottom as one at first sight would imagine. No writers, in our opinion, has yet thoroughly pointed out the differences which separate the English and American nations from all others. The Count de Fiquelmonte, in a recently published work, giving the motives for his hatred towards England, has mentioned the true character of that country in accusing it of being in contradiction with all other peoples, and of having pressed towards republicanism, whilst other nations were pressing towards monarchy. Never was a deeper observation made upon the policy of England. The world is writing day by day the record of our revolutions, of our marches towards democracy. But how march we? we and the English are marching by two systems, which are as different from each other as the absolute power of the many, from the absolute power of one. England, and we dare add America, march to democracy by the path of liberty and individualism; the nations of the continent march thitherward by the path of equality and monarchy. The two systems, clearly distinct, are in each other's presence, disputing for the victory.

We shall perhaps astonish our democratic readers by telling them that the Emperor of Russia represents democracy, as never representative has done before, yet, nevertheless, nothing is more true. The kings of Europe, at the present day, represent no other thing than crowned democracy, the protector of equality, the ruler over

* Translated from the "Revue des Deux Mondes" by Walter Weldon.

aristocratic individualities of all kinds. That which has lately passed among the peoples has caused the light to shine into the eyes of kings, has taught them what is the true tradition of democracy, and has made them, as we have said, its crowned representatives. Valiant and feudal Poland, valiant and feudal Hungary, subdued and conquered by the alliance of emperors, with the popular masses, bear witness, by their misfortunes, to the tendency which is inherent in continental nations: while the destruction, twice repeated, of the monarchy of the Stuarts, by the alliance of the people and the aristocracy, bears witness to the opposite tendency of the English. The mode of comprehending democracy which exists with us in France, is common to all Latin peoples, and nations of Roman origin; and common to every people, whatever be their origin, who have been for a long time used to submit to strong authorities, and who have received, in one way or another, the traditions of empire and of the Latin peoples. The contrary system, represented by England and America, is the rule of aristocracy; that is to say, the system of human individuality in all its freedom, without shackles, but without protection, protecting itself, governing itself, without any other guide than conscience, or any other master than God. The services of the individual as a privilige which no power has the right to interfere with. We might call this equality at once, aristocracy,—aristocracy not more concentred in a few great families than scattered over an immense territory, and incarnated in the poorest labourer, and the most humble artisan.

It is not in order to make a vain historic parallel that we have drawn this line of separation between the two civilisations. For one thing we have wished to show how this Anglo-Saxon democracy was naturally opposed to our own tendencies and instincts; and for another we wished to point out a fact which is already preparing itself noiselessly, and of which the accomplishment is perhaps less distant than one might suppose, namely, the union of the two great fractions of the Anglo-Saxon race,—in other words, of England and America. There is not, perhaps even at the present hour, a tendency more observable, in either of the two countries, than the one which appears to be drawing them thus together. A kind of presentiment of some danger near at hand, and which is growing every day more imminent, keeps binding their two great peoples more closely to each other, in spite of ancient rivalries, and popular passions and ambitions. The United States would easily be able, without doubt, to add the names of the English colonies in North America to those of the States which already compose its territory; with as little doubt England would be able easily to preserve to herself alone the commerce of the world and the domination of the seas; but the people of both countries feel in the air of the future that one great danger menaces both alike in their puissance, and even in their instincts, their religion, and their independence. *Bon gre, mal gre*, they remember that they speak each the same language, and profess each the same worship Accordingly as the Americans become more civilised, they discover in themselves more and more the most singular resemblances to and sympathies with the English; and in proportion, as the English become more democratic, they feel themselves possessing the more in common with their brethren beyond the sea The union of these two nations, which has been so long predicted, is in fact accomplishing itself from day to day. Bound together by community of origin, they are so united by community of tendencies and interests, that everything which the one accomplishes benefits the other. The abrogation of the old navigation laws and of the duty upon corn by England, has been not a little to the advantage of America; while whatever progress in the mechanical arts is made by the Americans is immediately made use of by the English, who are the only nation in a condition to profit by it. There is thus between these two nations a rapid, immediate, almost instantaneous interchange, of the progress and advancement made by each respectively. The audacity of the trans-Atlantic Anglo-Saxons astonishes and frightens all the nations, besides England; she, and she alone, can look without astonishment upon the rapid growth of the United States, for it has at least been equalled during the last few years in her own dominions. New York has risen, it is true, within sixteen years, from being a city of 60,000 inhabitants to be one of 400,000; but the population of Glasgow has increased in the same time from 77,000 to 367,000, and that of Birmingham, from 73,000 to 300,000; as Mr Johnson, the author of "Notes on North America," has proved by figures which may be relied upon. If young America boasts of the rapid augmentation of manufactures which are hardly in their birth, it is the arms of England which keep her machinery in motion. The increase of American manufactures neither restricts nor limits the English markets. The mania of exalting at all hazards the United States, exists as much in England as in the countries of the continent; only when we, for example, pronounce a panegyric upon the United States, we utter involuntarily at the same time our own condemnation, while the English in so doing only recognise their own characteristics. Moreover, when the Americans speak of outstripping the English, the feeling which they give utterance to is merely one of family jealously. "It is the ties of blood and of language," says Mr. Johnson," which give birth to this sentiment, as well as to the desire of surpassing whatever in us is excellent. They speak exactly upon the same principle as that which causes some of our English malcontents to see perfection only in the fields, the cities, and the institutions of the New World. Our malcontents never suffer themselves to emigrate to any European country, nor do they ever ask that our institutions should be corrected according to any models to be found upon the continent. It is only the prosperity of men of their own race and blood that they ever deem to be superior to their own "

These words are significative, and they perfectly sum up all that we have said respecting the differences which separate these two peoples from all others, and of the close resemblance which they bear one to the other. European civilisation, Mr. Johnson declares, would be infinitely repugnant to an Anglo-Saxon, and this fact is sufficient to show the importance of America to England. Although the United States may be regarded by her as a great rival, the non-success of the great experiment of American republicanism would be a great deal more fatal to England than the loss of her best colony. The United States confirm England in her political faith and principles At the moment when these principles are everywhere proscribed upon the continent, after having been dishonoured, and detestably applied by the ignorant, the foolish, and the dishonest, in the midst of the general prostration of nations and the universal abandonment of the principles of liberty, England, if it were possible for her to doubt herself, could only turn her eyes towards America, where she would not only see these principles, but even the exaggeration of them, prosper and succeed. Mr. Johnson has made evident enough this moral influence of America over England, —an influence which encourages the English to remain in their isolation, without endeavouring to follow the examples of the continent, and without suffering themselves to be alarmed by the misfortunes of the other European peoples, believing those misfortunes to be powerless to strike them . he has made it easy for us also to comprehend that there is a peculiar and cordial understanding existing between the two peoples, which renders themselves alone capable of mutually comprehending one the other. The greater part of the events which take place in the United States, are to us enigmas almost inexplicable. It is only with great difficulty that we can comprehend the character, the manners, or the policy of the Americans. We can only comprehend them by placing ourselves out side ourselves. If we attempt to judge of them by our natural instincts, we shall always fail. To the Englishman none of these difficulties exist

In the bosom of the popular classes, the union of which we have spoken has been long accomplished. Thanks to emigration, there are but few individuals in the three kingdoms belonging to the rank of working men—and the same is the case also in a great measure with a higher class—who have no friends or relatives among the American colonists, or among the manufacturing workmen of Boston or New York. America is thus attached to England, not only by the ties of blood and common origin, but also in some sort by the ties of family, and by the strongest and the sweetest sentiments and sympathies, which occasion a perpetual exchange of *souvenirs* and affections between the peoples of the two countries. The English people, habituated to a government, liberal but aristocratic, find again in America the same liberal government, *minus* the oligarchic preponderance; and thus it finds itself in the United States altogether at its ease, and even *more at home* than in the old country Nothing shows more clearly the identity of the two peoples than the great ease with which are propogated in England the follies of what would suppose to be essentially American. Mormonism, for instance, counts numerous adepts among the workmen in the manufacturing towns of England, and the colony of the Mormons driven from all the American cities, has added to its number, during the last few years, an immense crowd of English emigrants, who have left their native country purposely to join the ranks of the novel sect, On the other side, the exactly contrary sect to that

Mormons, that of the Shakers, whose creed is quite as extravagant as that of their Mormon brethren, only in just an opposite direction, arrived in America ready made from England,—thanks to the dreams of a certain Anne Lee of Manchester, who received, according to her own account, by divine inspiration, the mission to proclaim a new revelation in America. Still, in the breasts of the superior classes among the English, in the bosom of their politicians and literary and commercial men, the antagonism to America is subsisting still, and the union of the two nations farther from being accomplished. The political classes fear naturally for England, the commercial classes fear naturally for their own interests, and the men of letters, authorising themselves by the confessions and complaints which are made by Americans respecting the rudeness and barbarity of their fellow-countrymen, raised against a country in which nothing is submitted to the control of a minority, however much enlightened. Nevertheless, the tone of English writers on the United States has been gradually changing during the last ten or twelve years, from one of raillery and comtempt to one of deference, admiration, and impartiality. Charles Dickens and Miss Martineau's way of speaking of America is now quite out of fashion, and one finds not in the writings of more recent travellers the slightest trace of the same style or tone. Merchants and philosophers, men of the world and ladies of fashion, all on visiting America return full of admiration for her people, and they communicate to the public, through their works, the same sentiments which they feel towards their transatlantic cousins Such is the spirit which inspires the books of Sir Charles Lyell, the geologist, of Alexander Mackay, recently dead, of Mr. Johnson, professor of agriculture at Edinburgh, and of Lady Emmeline Stuart Wortley. In the United States themselves there exists a kind of English party, which demands a closer union with the mother country, and founds this demand chiefly upon the reasons we have given. No one was more ardent in promoting this alliance than the last president, the brave General Taylor. Every English traveller who visited him bore testimony on his return to the cordial sentiments which animated his heart. "We spoke of Great Britain," says Mr Johnson, "and the benefits which would result from a union of the two nations. 'If England and the United States,' said he, 'can but agree together, they will be able to maintain the peace of the whole world'" Lady Emmeline Stuart Wortley visited him also He spoke to her of the establishment of the line of packet boats known as the Collins' line, and he added; "'The voyage will thus become more and more rapid, and I hope that England and America, by this means, will become quite neighbours' 'The sooner the better, sir,' responded I, with all my heart. He inclined his head and smiled. 'We are the same people,' he afterwards continued, 'and it is good that we should see each other as often as is possible.' 'Yes,' said I, 'and by so doing we shall lose all the foolish prejudices against each other, which we have so blindly cherished for generations.' 'I hope so,' he replied, 'and that will be greatly to the advantage of us both.'"

How is this alliance to become accomplished? When we consider attentively the character of the Americans, we find that the patriotism of the Yankees is at bottom only a patriotism of the head. The English and the Americans are the two most nomadic—and at the same time the least cosmopolite—races among mankind. For them, it is nothing to change the land of their habitation, but they are not inoculated by the qualities of the people they reside among,—they always keep intact their own vices and virtues. The English, however, always feel at heart, in whatsoever place they find themselves, attached to their native country, and each of them would be able to repeat the response of Fox to the First Consul; but one does not observe in the Americans—who have pushed their nomadism to such limits, that all their ideas are connected with onward progress, as is instanced by the almost invariable answer of "Moving, Sir," which an American gives you when you inquire respecting his health—this intimate and profound love of country. Their patriotism, if such it may be called, is a patriotism of family and blood; it is the belief, simply, in the superiority of their race. As for America, to her children she is only a means of obtaining power and riches, only an *exploitation*. In this patriotism, men are everything, country is nothing. This is the secret of the peculiar character of the United States, which retain to this day, in some sort, the physiognomy of colonies. The "mother country" with the Americans is always England; and the descendants of the pilgrim fathers still seem like their ancestors, emigrants, settlers in a foreign land.

This tendency towards a closer and still closer union with England is the one which is the most curious and interesting among all the actual tendencies of the Americans, and this is why we have wished to point it out before it has been changed into an accomplished fact. It is easy to see what the effects of it will be in the immense crisis which now hangs over the whole civilised world, when all the nations of the earth appear to be ranging themselves in battle array, and separating themselves from, or approaching nearer to each other, according to their natural affinities, and their affinities of race and creed and instincts, and not, as heretofore, according to to the chances of loss or gain by warfare, to the various degrees of cleverness of diplomatic chess-players, or the caprices and necessities of government.

THE UNKNOWN MAN.

A CONSCIOUSNESS of celebrity sends an exquisite tingling through the veins. All men, and some women, feel this delicious fever of the pulse. The thirst for fame even of the lowest grades, is so intense in many, as to make them totally unscrupulous about its quality, or their title to it. To them a counterfeit is just as good as any, provided it will pass. If they can get the credit, no matter for the substance Reputation is everything, desert nothing. Still worse; bad fame to them is better than none at all, and to be cursed by every lip preferable to not being mentioned at all.

But the delight of living *unknown* is not so generally admitted. Still it has some advantages. A young traveller in Europe enjoys the sweet immunity of secresy among thronging millions. The espionage of home weighs no longer on the freedom of his heart. No eye of recognition is turned towards him. There is no one to dart the glance that checks the spontaneous wish as it is bursting into action, or hush back into silence the half articulated word. The apprehension of the possible presence of an observer ceases, and the muscles of conformity, caution, and hypocrisy, enjoy at least a holiday, and relaxed and idle, fall asleep, for want of provocation Such perfect isolation is delightful, but quite impracticable where the most distant suspicion lurks that our acquaintance can possibly intrude.

Having made by travel this valuable discovery, the next thing is to render the beatitude perpetual. This will, indeed, appear almost a duty, on considering the sharp thorns which a love of distinction has planted in the breast, and the terrible crops of evil they have produced to wound it. If this briery harvest could only be removed from men's paths, what a glorious thing it would be to live! We should walk then perpetually on roses. The history of man would be cut down from its thousand volumes folio to a single one no bigger than the "Pilgrim's Progress." Much gall and sulphate of iron would be saved, and rags, decaying and dropping off as now, from paupers' backs, where they have been doing good service, would not undergo a resurrection in millions of books, where they are working mischief. Authors would then be happy in solitary contemplation on their immense geniuses, and try *to be* what they have *fancied* and described. If the race of unknown men and women should chance to multiply to much extent, the importation of French frippery, would fall off sadly, and opera-boxes become what booths are after Vanity Fair is over.

What a world of trouble does the Unknown Man escape! Nobody plagues him for his autograph, or certificates of the merits of cough candy. No impertinent fellow sends him a letter telling him that he is a scoundrel or traitor to his country, obliging him at the same time to pay double postage for the information. The Unknown Man, secure in his panoply of nothingness, defies the cut of an impudent coxcomb of either sex, if such a creature can maintain a claim to any sex at all. Besides a material economy in hats, the multitude of fibs and maudlin compliments he shuns from not encountering a lady acquaintance, is perfectly prodigious. Never invited to public dinners, he is entirely guiltless of the silly speeches delivered there, or of farcical letters apologizing for an absence that was expected and accounted on. His name is not found upon electoral and jury lists, and so he is not pestered about his vote, nor fined for not spending weeks in settling the difficulties of other people, when it has been the study of his lifetime to avoid any of his own. Quack and humbug handbills, which penetrate everywhere, like bad news and odours, fail to reach him, for his name cannot fortunately be discovered in the Directory. Nobody asks him to head a subscription for getting "Emerson's Essays"

translated into the English tongue, nor to sign a petition for the abolition of the potato rot on one side of 36½°, or the social rot upon the other.

Having no reputation, he is not compelled, like authors and single ladies who are troubled with a surplus, to prosecute perpetually for slander to preserve it. He snaps his fingers at Mrs. Candor and Mrs. Charity, whose powers he thinks very highly of, but who cannot, let them do their best, by any kind of whispering, backbiting, or inuendo make out to take away a character which one never had. There is, therefore, great comfort in being little. Such a man may cock his hat, and set the world at defiance; for the police can no more take hold of him than a jug without a handle.

He can speak of politicians without fear of party whippers-in. If he chooses he may, without loss of caste, decline to cover one of his extremities with French boots, or line the other with affectation, and can enjoy the privilege of using the old, blunt, honest Saxon style and manners, without first running them through a Gallic strainer. Being nobody, of course, he can send an answer to a bore "that he is not at home," without a lie. Not the least of his good fortune is that of not being forced to dance with a rich dowdy, nor invited to lend his name to a friend to raise money on. No pickpocket asks him to be his bail, and the honour of suffering as surety for a political defaulter is denied him.

Invulnerable being! He passes among man-traps thickly set by the artful sex, and yet comes away unhurt; for it takes the weight of gold to spring them. How happy! He has only to write a successful tragedy, and he becomes at once the "Great Unknown," and enjoys the secret mightily. Should he happen to be hanged at last, he will pass mysteriously away, like the Man in the Iron Mask, and his relations will be for ever spared any uncomfortable sensation about the throat, whenever hemp happens to be mentioned. When he dies he takes his name along with him, of course. In this he differs from the *would-be* great and little immortals, who leave *theirs* behind to be kicked about a little while, and then sent after them.

The gentleman we have been describing received the other day the following epistle. We ought to add, that he made immediately the acquaintance of the honest writer.—

"Sir,—I have been your next-door neighbour for the last ten years, and must do you the justice to acknowledge that I have never heard your name once mentioned, nor yourself once alluded to in all that time. This is, therefore, necessarily addressed to you as No. 196. I suppose that I ought to ask forgiveness for recognising your existence even now, but I promise not to do it again as long as I live, should you continue as deserving of obscurity as at present. But it was impossible wholly to withhold the credit due you for being so shining an example of a purely negative quantity, hitherto imagined, indeed, by mathematicians, but not actually exemplified before. Your position is certainly a happy one, since you can cut a figure without exciting envy, because that figure is a cypher. Your name, in consequence has fortunately not been mixed up in the newspapers with those of pill-makers, pickpockets, great criminals, little politicians, philanthropists on a small scale, defaulters on a large one, with all the quacks, hacks, and dealers in everlasting clacks about blacks, to which may be added, by way of postscript, distinguished actors on the stage, and unpitied sufferers in pits and boxes, inventors of fancy shirts for those who can buy them, and verbose preachers of patience and endurance to those who cannot, but are obliged by poverty to make shifts for themselves.

"With sincere congratulations on your insignificance, I am, sir, your unknown correspondent, and intend always to remain so, FRANK FREESPEECH."

A CHAPTER ON NAMES.

"WHAT'S in a name?"

Love is a sophist, and the implied but false answer to Juliet's impassioned query is, "Nothing!" Nothing? Every thing, rather, in thy case, O "White Dove of Verona!"—enough at least to raise a barrier between thee and the Romeo of thy heart-worship which even love cannot surmount! Such, it seems to me, is the teaching of Shakspear, in the play, and the world's experience confirms it.

The ancient Greeks attached great importance to names. Plato recommends parents to be careful to give happy ones to their children, and the Pythagoreans taught that the minds, actions, and success of men were according to the appellations which they bore. The Romans seem to have been equally impressed with the same idea. *Bonum nomen bonum omen*, became a popular maxim among them. To select *bona nomina* was always an object of solicitude, and it was considered unlucky if a man bore a name of evil import. Livy, speaking of such an appellation, calls it *abominandi ominis nomen*. A similar belief prevailed among all the nations of antiquity. It embodied a truth which has not yet lost its significance or its importance. To a man with the name of Higgins or Snooks, no amount of talent or genius is of any avail—though it has been lately asserted that the last name comes from the rather aristocratic seven-oaks. Thus, sevenoaks, senoaks, snoaks, snooks! He cannot possibly raise himself above a very humble sphere of usefulness. Or let an unfortunate biped have attached to him the appellation of Gotobed, a name which has been borne by many a worthy individual, and he may quite innocently sleep all day! His waking efforts can effect nothing to elevate him to any position of honour or distinction. He bears about him "the doom of everlasting mediocrity." John is a most excellent name, and Smith is a surname which is worthy of respect and honour, but wo to the man on whom they are conjoined! For John Smith to aspire to senatorial dignities or to the laurel of the poet is simply ridiculous. Who is John Smith? He is lost in the multitude of John Smiths, and individual fame is impossible—unless, indeed, he adopt the *y*, instead of the *i*, and make his name *Smythe*.

All names were originally significant, and were always bestowed by the ancients with reference to their well-understood meaning. Sometimes they were commemorative of some incident or circumstance connected with the birth of the individual bearing them. as Thomas, *a twin*; Marius, *May* (applied to one born in that month); Septimus, *the seventh*. In other case they were expressive of the aspirations, desires, or hopes of the parents: as Victor, *one who conquers*; Probus, *truthful*; Felix, *happy*, Benedict, *blessed*. Not unfrequently they were descriptive of personal qualities: as Macros, *tall*; Pyrrhus, *ruddy*, Rufus, *red-haired*. It is probable that the surnames ending in *son* were originally bestowed on the sons of domestic servants, as Robertson, the son of Robert, Thomson, the son of Tom, &c. The prefix *Fitz* has generally been applied to the illegitimate descendants of royalty. The *Fitz*, *mac* of France are the descendants of the Stuarts. The O and Mac are peculiar to the Irish and Scots—as the the old hexameter has it:—

"Per Mac atque O tu veros cognosces Hibernos,
His duobus demptis, nullus Hibernus adest."

Which may be thus translated—

"By Mac and O you know the real Irish,
If these two are wanting, no Irishman is present."

Names are as significant now as they of were in the days Plato, and as important, but we ignorantly or carelessly misapply them, making of them the most absurd misnomers. "A man with the name of George or Thomas," as Leigh Hunt observes, "might as well, to all understood purposes, be called Spoon or Hat-band!" Blanche is now any thing but the flaxen-haired *blonde* which her name indicates. Isabel is no longer *brown*. Cecilia (*gray-eyed*) belies her name, and "lets fly the arrows of love" from orbs of heavenly blue. Rebecca, who ought to be somewhat "rounded into beauty," as the poet hath it, is perhaps a slender, lily-like maiden, better suiting the name of Susan. As thus misapplied, our personal nomenclature is worse than meaningless. We should deem the person either hopelessly insane or unpardonably ignorant, who should in science or in business, thus misuse well-understood terms.

We are not disposed to enter the domain of the abstract, and show that there is an inherent fitness in names for persons and things; a correspondence between the word-symboland the object which it was originally intended to represent, is intuitively recognized, though perhaps not fully comprehended. Our design is a more practical one. We propose to present some of the personal names now in use, with their origin and signification, together with such illustrations, etymological, historical, and poetical, as may occur to our mind.

ADA is well known as the name of Byron's only daughter. It is from the Saxon (*Edith, Eadith, Eade, Ada*), and signifies *happy*.

"Is thy face like thy mother's, my fair child,
Ada?"

ADELAIDE is of German derivation, and has the meaning of a *princess*.

"A little maid,
Golden-tressed Adelaide."

ADELINE is only a different form of the same name.

"What aileth thee? whom waitest thou,
With thy softened shadowed brow,
And those dew-lit eyes of thine,
Thou faint smiler, *Adeline?*"

AGATHA, *good*, is from the Greek. To be worthy of this name, indicative as it is of all the virtues, is an object which may well enlist the highest ambition of the fair ones who bear it, whether maidens or wives.

AGNES, *chaste*, is also from the Greek, and is one of the best names in use among us. None but pure, gentle, and loving beings, it would seem, should beare it; but in one case, at least, it has belonged to one in whom the heroic predominated over every gentle sentiment: *Black Agnes* of Dunbar, who, as the reader of history will recollect, kept her husband's castle, like a lioness, against his enemies.

"Twine ye roses, for the brow
Of the lady of my vow,
My *Agnes* fair!"

ALFRED is Saxon, and signifies *all-peace*. It is a good name, and should be a favourite among us, boasting as we do of our Saxon or Anglo-Saxon descent, and tracing some of our free institutions to the great and good king who bore it "in the olden time."

ALICIA, or *Alice*, is from the Latin, and has the meaning of *noble*. It is one of the sweetest of our female names.

"Oh that I were beside her now!
Oh! will she answer if I call?
Oh! would she give me vow for vow,
Sweet *Alice*, if I told her all!"

ALPHONSO is said to be the Spanish form of the ancient Gothic *Elfuns*, *our help*. It is a euphonious name, but is now seldom used. Byron condemned it to everlasting ridicule in one of his inimitable rhymes.

"Ungrateful, perjured, barbarous, *Don Alphonso*,
I really wonder how you can go on so!"

AMELIA, or *Amelie* (French, *Amie*), signifies *beloved*. *Amy*, or *Aimee*, and *Emily*, have the same derivation and meaning. Our vocabulary contains few sweeter or more *loveable* names. Happy is she who bears a name pregnant with such sacred significance, and happy the man who is privileged to whisper it in her ear as the highest word of endearment. *Aimée*, beloved! The reader will recollect, in connexion with this name, that dark page in the romance of history which records the sad fate of *Amy Robsart*.

ANNA, or *Annie* (Hebrew, *Hannah*), signifies *kind* or *gracious*.

ARABELLA (French, *Arabelle*), is of Latin derivation, and has the meaning of *beautiful altar*. Before no place of sacrifice bend devouter worshippers.

"Bella, *Arabella*, belle
Fairer than my verse can tell
Well
I love thee, *Arabella*—
Bella!"

AUGUSTUS, *increasing*, is from the Latin, and signifies that those who originally bore it continually *grew* in power and honour. It has been a favourite name in kingly and princely palaces, but princes have no monopoly of it. Its feminine form is *Augusta*.

BALDWIN, a *bold winner*, is a fine name of the old Saxon stock.

BARBARA is of Latin derivation, and signifies *strange* or *foreign*. Its mention recalls to our minds the melancholy fate of Jemmy Grove, of ballad memory, who died of a broken heart (poor fellow!)

"For love of *Barbara Allen!*"

BASIL, *kingly*, is of Greek origin. It can hardly be a popular name in these republican times.

BEATRICE is *one who blesses* or *makes happy*. Blessed (*Benedict*) is he on whom she smiles. No name can be more appropriate for a lovely and affectionate woman. Dante immortalised it, and Shakspeare and Shelly have thrown around it the charm of their numbers. It is derived from the Latin. Why is it not more frequently used?

(*To be continued.*)

SONGS FOR THE PEOPLE.

No. IX.—THE LAND OF ENGLAND.

BY JOHN ALFRED LANGFORD.

This brave old land of England
Has noble sons to boast,
All down the course of ages
Hers is a worthy host,
In song, in art, and science,
She boasts a matchless line—
Bard, sage, and saint, and hero,
Have garlanded her shrine.

Hers is a fair succession
Of high heroic deeds,
Her patriot oft for freedom,
For faith her martyr bleeds.
And oft her people bravely
Have struck the oppressor low,
Oft made the gilded tyrant
To truth and justice bow.

A freedom-loving nation,
A people strong and brave;
For progress onward, upward,
They now as ever crave
And they will be triumphant
In struggling for the right,
Despite the serried legions
Of stern opposing might

Her annals are the annals
Of struggles for the truth,
And still her blood is ruddy,
And still her age is—youth
She has the strength of giants,
And ever will be free,
On on, from good to better,
To perfect liberty

Her cross-enshrin'd banner,
So far and wide unfurl'd,
Shall be the sign of gladness,
Shall bless the toiling world
Her name shall be the watchword
Of peace to all the earth;—
The first of all the nations
In canonizing worth.

Oh may we prove all worthy
The sons our land can boast,
And strive to swell the number
Of her high heroic host
In art, and song, and science,
Hers is a matchless line,
Bard, saint, and sage, and hero,
Have garlanded her shrine!

LITERARY NOTICES.

THE Second Volume of the WORKING MAN'S FRIEND, New Series, containing upwards of 400 pages, richly illustrated, is now ready, price 3s 6d, neatly bound in cloth.

John Cassell's Illustrated Shilling Edition of UNCLE TOM'S CABIN, is now ready, foolscap 8vo, with eight beautiful illustrations. *** Be particular in ordering John Cassell's Illustrated Shilling Edition.

AN EDUCATIONAL WORK FOR EVERY FAMILY.—Now ready, The First Volume of the Popular Educator. Common Edition, with weekly Headings, 3s 6d. Extra Edition, without the weekly Headings, 4s. 6d. This Volume contains Lessons in the French Language, Latin, German, English, Arithmetic, Music, Geometry, Botany, Natural History, Biography, Geography, &c. The "Popular Educator" is published in monthly Parts and weekly Numbers, both Common and Fine Editions.—Common Edition, 1d per Number, Fine Edition, 1½d.

THE POPULAR EDUCATOR ALMANACK, price 2d, containing a large amount of Educational Statistics, compiled from the most authentic sources, with brief notices of the various arts, sciences, languages, &c., will be ready for delivery November 1st.

CASSELL'S ELEMENTS OF ARITHMETIC, will be issued shortly, price 1s in stiff covers, or 1s 6d cloth, uniform with Cassell's Edition of Euclid, edited by Professor Wallace, A.M., of the University of Glasgow, Editor of Cassell's "Euclid."

PICKINGS AND STEALINGS.

A PHILOSOPHIC EDITOR.—The editor of the *Alabama Argus*, published at Demopolis, in Marengo, makes merry after the following fashion, over what most folks would consider a serious trouble:—We see the sheriff has advertised the *Argus* for sale during our absence. We hope the bidders will have a merry time of it. If the sheriff can sell it, he will do more than we ever could. Like a damp percussion cap, we think it will fail to "go off."

A WORD OR TWO FOR YOUNG LADIES.—Women, and especially young women, either believe falsely, or judge harshly of men in one thing. You, young loving creature, who dream of your lover by night and by day—you fancy that he does the same of you? He does not—he cannot, nor is it right he should One hour, perhaps, your presence has captivated him, subdued him even to weakness the next he will be in the world, working his way as a man among men, forgetting for the time being your very existence Possibly, if you saw him, his outer self, hard and stern—so different to the self you know—would strike you with pain Or else, his inner and diviner self, higher than you can dream of, would turn coldly from your insignificant love Yet all this must be, you have no right to murmur. You cannot rule a man's soul—no woman ever did—except by holding unworthy sway over unworthy passions. Be content if you lie in his heart, as that heart lies in his bosom—deep and calm, its beatings unseen, uncounted, oftentimes untelt, but still giving life to his whole being.

THE PAST.—History is, so to speak, the geology of humanity. Its records are the annals of the growth and development of humanity through the ages. The various forms of civilisation which it tells us of, immature efforts to attain the true social state, developing up to a certain point and then falling, because incapable of further progress, may be considered as the analogues of the various types of the animal creation, which preluded to the culminant creature man

INGRATITUDE.—Garrick, applying to Lord Rochford to appoint a Mr. Glover a surgeon in the Essex militia, says—"He is a most skilful, worthy man, a good writer, and a steady friend to Government. I have known him long, he is much beloved, and the worst thing I ever heard of him was, that, by his skill in his profession, he recovered a thief, after he had hung half an hour, and which thief, before he had healed the circle the rope had made, picked Glover's pocket by way of gratitude, and never thanked him for his good offices."

A TOWN KILLED WITH KINDNESS.—Bedford is an example of a town killed with kindness. It has been pauperised by the number and wealth of its charities. A mechanic or small tradesman can send his child, if it be sick, to a free hospital; when older, to a free school, where even books are provided; when the boy is apprenticed, a fee may be obtained from a charity; at half time of apprenticeship, a second fee; on the expiration of the term, a third; on going to service, a fourth; if he marries, he expects to obtain from a charity fund 'a portion' with his wife, also educated at a charity; and if he has not sufficient industry or prudence to lay by for old age—and those are virtues which he is not likely to practise—he looks forward with confidence to being boarded and lodged at one of Bedford's fifty-nine almshouses.

HOW TO BREAK OFF A BAD HABIT.—The late Mr. Loudon, the celebrated writer on gardening, &c., during the time he was suffering so severely from the pain in his arm, found no ease but from taking laudanum; and he became at last so habituated to the use of this noxious potion, that he took a wine-glassful every eight hours. After the amputation of his arm, however, he wished to leave off taking it, as he was aware of its injurious effects upon his general health; and he contrived to cure himself by putting a wine-glassful of cold water into his quart bottle of laudanum every time he took out a wine-glassful of the potion, so that the mixture gradually became weaker every day, till at last it was little more than water, and he found that he had cured himself of this dangerous habit, without experiencing any inconvenience.

MR. B DISRAELI, in his "Revolutionary Epic," published at the age of thirty, exults over tyrannicide, and writes of the Stuarts not quite so flatteringly as his present colleague, Lord John Manners. He says—

> "The brainless people summon'd back
> Their heartless monarch with a sick'ning shout,
> As to its vomit some vile dog returns,
> And Restoration and its juggling spells
> The moonstruck land enslaved"

THE FIRST OMNIBUS.—The honour of having invented the omnibus is due to Mr. Baudry, a native of Nantes The first omnibus that ever ran made its appearance in the streets of that city in the year 1826, and in the short space of time that has since intervened, the manufacture of that most convenient of popular vehicles has extended to all parts of the world Even in the sandy environs of Cairo you are whisked to your hotel in an Oriental omnibus.—*Fraser*. [The first omnibus in England was started by the well-known Mr. Shillibeer in 1829 It ran from the Bank of England to the Yorkshire Stingo Tavern, Paddington, and was drawn by three horses abreast!]

HABITS.—Like flakes of snow that fall unperceived upon the earth, the seemingly unimportant events of life succeed one another. As the snow gathers together, so are our habits formed. No single flake that is added to the pile produces a sensible change; no single action creates, however it may exhibit, a man's character but as the tempest hurls the avalanche down the mountain, and overwhelms the inhabitant and his habitation, so passions acting upon the elements of mischief, which pernicious habits have brought together by imperceptible accumulation, may overthrow the edifice of truth and virtue.

RESPECT DUE TO WIVES.—Do not jest with your wife upon a subject in which there is danger of wounding her feelings. Remember that she treasurers up every word you utter. Do not speak of some virtue in another man's wife to remind your own of a fault. Do not reproach your wife with personal defects, for if she has any sensibility, you inflict a wound difficult to heal. Do not treat your wife with inattention in company, it touches her pride—and she will not respect you more or love you better for it. Do not upbraid your wife in the presence of a third person; the sense of your disregard for her feelings will prevent her from acknowledging her fault. Do not entertain your wife with praising the beauty and accomplishments of other women. If you would have a pleasant home and cheerful wife, pass your evenings under your own roof. Do not be stern and silent in your own house, and remarkable for sociability elsewhere.

NOTICES TO CORRESPONDENTS.

J. JONES.—Your penmanship is very good. An answer to your other question would not require any "exercise of ingenuity."

PETER ROBERTS.—You will find directions for tinning iron in No. 43 of the *Working Man's Friend*, page 278.

R. V. S.—The statistics of the "Primitive Methodists" will be found in the "Protestant Dissenters' Almanack for 1853," to be published next month.—For a marriage licence you must apply to the registrar appointed for the district in which you reside.

"A B. C.—The old mode of silvering looking-glasses is as follows:—In the first place a sheet of tinfoil is laid down on a perfectly flat, smooth stone table; the liquid mercury (quicksilver) is then poured on the foil and made to float over the entire surface. The glass, made thoroughly clean, is laid upon the mercury with a peculiar sliding movement, which suffices to remove the slight film of oxide which soon forms upon the surface. The glass is then entirely covered with heavy leaden weights and left for two days *slightly* inclined. It is then found that the superfluous mercury has been pressed out, and the remainder has chemically combined with the foil in such a way as that both adhere firmly to the back of the glass. A small trough is placed at the bottom of the inclined stone to catch the superfluous mercury, which will be found in an uninjured state.

AN INQUIRER.—We decline furnishing you with a receipt to cure a cold The remedies prescribed are almost innumerable.

J TWADDLE.—It is not quite certain; perhaps Turkey or America.—There is a fine-paper edition of the *Popular Educator*, but not of the *Working Man's Friend*.—The "*knout*" is the name of a punishment common in Russia, by flogging the backs of criminals with a long strap of thick hard leather.

THOMAS WATKINS.—We cannot tell you where to apply for the Rules of the society about which you inquire.

G K.—Your being "young, strong, and healthy" will not obtain for you a free passage to America, nor to any of the British colonies, unless you are an experienced agricultural labourer

A WORKING MAN AND SUBSCRIBER.—The "National Provident Institution" will answer your purpose admirably. Write to the secretary Mr J. Marsh, 48, Gracechurch-street, London, and he will send you all particulars.

J. M. A.—Any optician will furnish you with a camera such as you describe.

J. P. MORRIS.—Your lines have been received and will probably be inserted.

CASIMIR T. N.—You had better submit a specimen of your drawing to the Secretary of the Royal Academy. He will tell you how to obtain admission as a student. But residence in London would be necessary. I fear that we shall not be able to use the article you have sent us.

G. S.—The leather must first be wetted with a sponge dipped in white of *egg*, and before it is *quite* dry the leaf gold must be laid on. The tool whether letter or ornament, must be made moderately hot and applied to the gold with a pressure sufficient to make a clean impression. The refuse gold must then be rubbed off with clean soft cotton wool.

W. W. W.—Several compositions by the "Welsh Choristers" have been published. Apply to E. Jones, publisher, Bethesda, near Bango North Wales.

STEWART MCWALTERS.—You had better put your questions as to the refreshments sold in the late Crystal Palace to the secretaries; but we question whether any one can give you a correct answer except the persons who actually furnished them.

S. S.—Your lines are unsuitable for our publication.

W. COTTON.—Water will not rise higher than its own level, unless artificial force be applied to it. Unless, therefore, your kitchen be lower than the well in its neighbourhood, you will not obtain a supply of water from it by the plan you propose.

A. TEACHER.—John Pounds, a poor shoemaker, was the founder of ragged schools. He was born at Portsmouth, May 9, 1766, and died Jan. 1, 18[illegible]

All Communications to be addressed to the Editor, at the Office, 335, Strand, London.

Printed and published by JOHN CASSELL, Belle Savage Yard, London.—October 9, 1852.

WORKING MAN'S FRIEND
AND FAMILY INSTRUCTOR.

NEW SERIES.—VOL. III., No. 55.] SATURDAY, OCTOBER 16, 1852. [PRICE ONE PENNY.

BURIAL PLACES IN THE EAST.

ALL over the world, the everlasting houses—as the receptacles of the dead are poetically called—display something of taste and feeling. It is, indeed, one of the great characteristics of universal humanity, that care and reverence for the dead are everywhere displayed. The gorgeous mausoleum and the flower-covered mound are but illustrations of the same feeling. We, perhaps, are too practical a people—too busy and too much in the habit of taking things as matters of course—to bestow much thought upon the decoration of our last houses; and, although we associate with the idea of a grave, a pleasant spot in a quiet country churchyard, with leaves and flowers about it, and a gentle wind sighing through dark melancholy trees, we have in fact, so much neglected the proper decencies and solemnities of burial as to allow graveyards to grow up—literally grow up—in our midst, fat, reeking, unwholesome, deadly! But in the East—the quarter to which the illustra-

VIEW OF A TURKISH CEMETERY. TOMB OF THE SULTANA VALIDE, MOTHER OF MOHOMET IV.

tion has reference—they manage things much better (as, indeed, did we in the days gone by, and as we hope yet to do, in time. There—in the East—the burial places are usually situated outside the cities, and quite beyond the dwellings of the people. Among the Jews, the Mosaic law respecting defilement by means of dead bodies rendered it necessary that the dead should not be located among the living, and the various nations with whom the Jews have come in contact, and the various religions which have the Mosaic dispensation for their foundation, have so far followed the practice of the Hebrews as to always select for their graveyards some place distant from the cities, except in the cases of kings or other distinguished people, whose ashes are permitted to repose in the place where their lives were passed.

In the East we are often reminded of the Scriptures by the close observance among the various nations of the traditions common to the Jews. Thus we find their burial places among groves and gardens; and in sepulchres, each one of which is commonly devoted to the use of a single person such receptacles are, however, sometimes made the property and resting-place of a whole family, as with us in the present day.

The public cemeteries of the East, resemble, in all probability those which were common among the various polished nations, in and around Palestine in the time of our Saviour They occupy, says Dr. Shaw, a large space, a great extent of ground being allotted for the purpose. Each family has a portion of it walled in like a garden, where the bones of its ancestors have remained undisturbed for many generations. For in these inclosures the graves are all distinct and separate, each of them having a stone placed upright, both at the head and feet, inscribed with the name or title of the deceased, whilst the intermediate space is either planted with flowers, bordered round with stone, or paved with tiles.

There were other sepulchres which were private property, erected at the expense and for the use of several families in a neighbourhood, or provided by individuals as a separate burying-place for themselves. These were situated either in some conspicuous place, as Rachel's on the highway to Bethlehem, or in some lonely and sequestered spot, under a wide-spreading tree in a field or a garden. In common cases, sepulchres were formed by digging a small depth into the ground. Over these, which were considered an humble kind of tomb, the wealthy and great often erected small stone buildings, in the form of a house or cupola, to serve as their family sepulchre. 'This custom,' says Carne, 'which is of great antiquity, and particularly prevails in the lonely parts of Lebanon, may serve to explain some passages of Scripture. The prophet Samuel was buried in his own house at Ramah, and Joab was buried in his house in the wilderness. These, it is evident, were not their dwelling-houses, but mansions for the dead, or family vaults which they had built within their own policies.' Not unfrequently, however, the richer classes purchased, like Abraham, some of the natural caverns with which Palestine abounded, and converted them by some suitable alterations into family sepulchres; while others with vast pains and expense made excavations in the solid rock. Many sepulchres of this description are still found in Palestine. Along the sides of those vast caverns niches were cut, or sometimes shelves ranged one above another, on which were deposited the bodies of the dead, while in others the ground-floor of the tomb was raised so as to make different compartments, the lowest place in the family vaults being reserved for the servants.

THE FABLE OF THE THREE SILVER TROUTS.

A PIOUS father, who is now in the grave, related this story to his little children, to illustrate and teach a useful lesson.

There were once three little silver trouts, who lived in a stream of clear water which ran between two high banks. The banks protected it from the wind and storms, so that the water was always smooth; and, as the sun shone there, it was a very delightful place. Besides, these little fishes had plenty to eat and drink, and nothing to trouble them; so that you would have expected them to be perfectly happy. But it was not so, these little trouts were so foolish as to be discontented and unhappy, so the little trouts were told that each of them might wish for whatever it pleased, and it should be granted. So the first little trout said, "I am tired of hopping up here in the water, and of having to stay all the time in one place, I should like to have wings to fly in the air as the birds do, and go where I please."

The next said, "I am a poor ignorant little fish, and I should like to have a great deal of knowledge about hooks and nets, so that I might always keep out of danger."

The other little trout said, "I too am an ignorant little fish, and for that reason I do not know what is best for me; my wish is that there should be given me what is best for me, I do not want anything that is not proper I should possess."

So wings were given to the first, and it soared away into the air, and felt very proud, and despised its companions whom it had left in the river It liked so much to fly, that it flew away till it came to a great desert, where there was no water, nothing but sands as far it could see. By this time it was faint and thirsty, but it could see no water It tried to fly further, but it could not; its wings failed, and it fell down panting on the hot sand, where it died miserably

The second little fish had the knowledge as it desired, and it understood all kinds of danger, but instead of being happier, it was filled with terror. It was afraid to go into the deep water, lest the great fishes there should swallow it up, and it was afraid to go into the shallow water, lest the stream should dry up and leave it. If it saw a fly, or anything it would like to eat, it did not venture to touch it, lest there should be a hook concealed beneath. So it pined away and died

But the other little trout lived in the clear stream of water, and was contented and happy with its lot.

And now which of the three fishes was the wisest?

"Oh, the last, father But I am sorry for the two little fishes that died They were not much to blame, after all, they did not know what would happen to them."

"No, certainly they did not, but you have that sense given to you which should teach you better. Learn to be satisfied with the station in which you are placed"

HOW TO MAKE A MATHEMATICIAN.

The following humorous description is taken from a rather scarce work entitled "Gale's Recreations." It would appear that, notwithstanding the author's knowledge in various branches of the arts and sciences, that the labours of the mathematician were not held in the highest estimation. "Take a pound of earth from the grave of Sir Isaac Newton, two scruples of imperceptible atoms; twelve ounces of demonstration, three hundred important problems unsolved, and forty-one solved, four ounces of fluxions, five ounces of caput mortuum of common sense, nine ounces of precipitated reason, of sublimated cyphers, subquintuplicated reciprocal ratios, spiderial, sectatrical curves, and hyperboloims, each a scruple, plusses, minuses, multiples, radices, dividendas, equals, postulatas, datas, investigations, theorems, corollaries, and scholiums, each a drachm, crooked patten-rings, a pair, six of Heath's logarithmic exponential equations; all Demoivre's, Muller's, and Simpson's disputes, with his late whole doctrine and application of fluxions; the seventy enormous astronomical tabular blunders, in the mathematical digests, a lady's diary, and palladium, Mother Whiston's chronology, and half an ounce of dry conversation; put these ingredients into a retort, fitted with a bolt-head, hermetically sealed, and let them all calcine together, in a sand-heat, for three days; when cool, break the bolt-head, take out the powder, and stop it close in a large long-necked bottle, for use. With half an ounce of this powder made into an ointment, with a *quantum sufficit* of hog's lard, rub well the intended artist's breast, before a fire made with chips of mathematical instruments. This done, let him walk seven times round the Royal Observatory, at Greenwich, in a spiral curve. Then fix him on his back, upon a moveable axis, in the middle of a tobacco-hogshead, headed up, with its poles passing through the centre of both ends. The circles of the sphere being chalked out about him, and light admitted at circular holes, each half an inch radius, round the ecliptic and equinoctial, he must roll down Greenwich-hill, by the force of gravity to comprehend the earth's motion, and aberration of light. Being come to the bottom of the hill, the hogshead must be staved, and the artist set at liberty. Then he must take of silence, self-conceit, and stuffness, each half a scruple, made into a bolus with the electuary of technical terms, washing it down with a pretty large draught of ill manners. Thus, he will instantly become a famous mathematician, fit to be made professor of geometry, astronomy, algebra, fluxions, gunnery, and fortification; likewise fit to be admitted an uranographical surveyor, stock-jobber in Change-alley, star-gazer, almanack-maker, or secretary to a regius professor

MEMOIR OF WELLINGTON.

THE DUKE IN FRANCE.

At the conclusion of the Peninsular war, the British people were more than ever convinced of the talents displayed by their great military commander, and honours and rewards were showered thickly upon the hero of Talavera and Vittoria. "A successful soldier and a popular commander he had been accounted from the beginning, but he was now recognised as something infinitely more. By degrees the Spanish war had become a conspicuous element in the mighty European struggle;—it was the only war, indeed, in which an ascendant was permanently maintained over the star of Napoleon. All eyes were therefore turned upon the general enjoying such an exclusive privilege of genius or fortune. Nor were his merits limited to the field of battle alone. He was the visible adviser of Spanish and Portuguese statesmen, and whatever administrative successes awaited their efforts were due to no counsels but his. His clear vision and steady judgment disentangled all the intricacies of democratic intrigues or courtly corruption, and detected at once the path of wisdom and policy. It was impossible, too, that his views should be confined to the Peninsula. In those days all politics wore a cosmopolitan character. There was but one great question before the eyes of the world—European freedom or European servitude,—the "French Empire" on one side, and a coalition of adversaries or victims on the other Wellington's eye was cast over the plains of Germany, over the wilds of Russia, on the shores of the Baltic, and the islands of the Mediterranean. His sagacity estimated every combination at its true import, and measured the effects of every expedition, while his victories served to check despondency or animate resistance in countries far removed from the scene of his operations. The battle of Salamanca was celebrated by the retiring Russians with rejoicings which fell ominously on the ears of their pursuers, and the triumph of Vittoria determined the wavering policy of Austria against the tottering fortunes of Napoleon. These circumstances lent a weight to the words of Wellington such as had rarely been before experienced either by statesman or soldier. On all points relating to the one great problem of the day his opinion was anxiously asked and respectfully received—and not by his own Government alone, but by all Cabinets concerned in the prosecution of the pending struggle. When, therefore, the dissolution of Napoleon's empire compelled a new organisation of France, the Duke of Wellington was promptly despatched to Paris as the person most competent to advise and instruct the new Administration—four days only elapsing between his departure from the head of the army and his appearance as British Ambassador at the Tuileries.

"The Duke of Wellington's stay in Paris was necessarily brief*; and from the French capital he proceeded to Madrid, where his presence was ardently expected. The country was threatened by a political convulsion, which Ferdinand's early display of unamended despotism and cruelty seemed calculated to hurry to a crisis. From the commanding influence which the Duke possessed over every party, it was considered possible, that the spirit of the contending parties might be sufficiently moderated to lead to such practicable alterations, as might restore national tranquillity; and, anxious for its accomplishment, he left Toulouse, and reached Madrid on the 24th of May.

"Arrived at the Spanish capital, the Duke of Wellington continues thus his correspondence, 'You will have heard of the extraordinary occurrences here, though not, probably, with surprise. Nothing can be more popular than the king and his measures, as far as they have gone to the overthrow of the constitution. The imprisonment of the liberals is thought by some, I believe with justice, unnecessary, and it is, certainly, highly impolitic, but it is liked by the people at large. Since the great act of rigour which has placed Ferdinand on the throne, unshackled by the constitution, nothing of any kind has been done, either for the formation of a new system, or for any other purpose; as far as I can judge, it is not intended to do anything.

"'I entertain a very favourable opinion of the King, from what I have seen of him, but not of his ministers. I think they might have managed things better than they have; and as men, ought to have been certain of accomplishing their object, they ought to have chosen a less objectionable mode; and they appear to have been little aware of the nature and difficulties of their situation.

"'I have accomplished my object in coming here; that is, I think there will be no civil war at present, and I propose to set out on my return on the 5th of June.'

"'Of the ministers of Ferdinand,' he says again, 'it is quite obvious to me, however, that unless we can turn them entirely from their schemes, or can attain their objects for them, they will throw themselves into the arms of the French, *coute que coute*; and I am anxious for an early settlement of these points, because we have the ball at our feet; having no French minister here to counteract us; and the nation, as far as they have anything to say in the matter, being, evidently, in favour of the alliance with England. But, the fact is, there are no public men in this country who are acquainted with the interests or the wishes of the country, and they are so slow in their motions, that it is impossible to do anything with them.'

"Previous to the Duke leaving his gallant army, he addressed them the following general order:—

"Adjutant-General's office, Bordeaux, 14th June, 1814

"The Commander of the Forces being on the point of returning to England, takes this opportunity of congratulating the army upon the recent events which have restored peace to their country and to the world

"The share which the British army has had in producing those events, and the high character with which the army will quit this country, must be equally satisfactory to every individual belonging to it, as they are to the Commander of the Forces, and he trusts the troops will continue the same good conduct to the last

"The Commander of the Forces once more requests the army to accept his thanks.

"Although circumstances may alter the relation in which he has stood towards them for some years, so much to his satisfaction, he assures them he will never cease to feel the warmest interest in their welfare and honour, and that he will be at all times happy to be of any service to those to whose conduct, discipline, and gallantry their country is so much indebted.

Signed "E. M. PAKENHAM, A.G."

"The Duke having made a flying visit to Paris, to arrange with the minister of war for the transit of the British cavalry to England, he landed at Dover on the 29th of June, amidst the enthusiastic applause of a large assemblage of peers and foreigners of distinction; he was dressed in a field-marshal's uniform, and wearing the order of the garter. He was introduced by the Dukes of Beaufort and Richmond. Having been absent from the country five years, all the patents of the titles conferred on him by the Prince Regent of England were read to him, seriatim. Immediately this ceremony was concluded, the Lord Chancellor addressed the noble Duke in a speech of some length, congratulating him, in their lordships' names, upon his return to his country, after his brilliant and meritorious services. The Duke replied, in an address of deep feeling and modesty, attributing the success which had crowned his efforts to the valour of his troops, and the ability of his coadjutors. He was loudly cheered. The House of Commons appointed a deputation to wait upon his Grace with their congratulations, and he attended in person to return thanks.

"He was received by the assembly with great cheering, all the members of a crowded house, on his entrance, rose, and remained uncovered, while the Speaker addressed him in the following eloquent terms:—

"'It is not the grandeur of military success which has alone fixed our admiration or commanded our applause; it has been that generous and lofty spirit which inspired our troops with unbounded confidence, and taught them to know that the day of battle was always a day of victory; that moral courage and enduring fortitude which, in perilous times, when gloom and doubt had beset ordinary minds, stood nevertheless unshaken; and that ascendancy of character which, uniting the energies of jealous and rival nations, enabled you to wield at will the fate and fortunes of mighty nations.

"'It now only remains that we congratulate your Grace on the high and important mission on which you are about to proceed, and we doubt not that the same splendid talents, so

* J. M. Tucker's Life of Wellington. London Willoughby and Co.

conspicuous in war, will maintain, with equal authority, firmness, and temper, our national honour and interest in peace."

"The Duke made a suitable reply, and, on retiring from the House, the members rose uncovered, and cheered him vehemently.

"London was, at this period, in high gaiety, in consequence of the presence of the Emperor Alexander, the King of Prussia, Marshal Blucher, Platoff, and a numerous train of foreign officers, but no one was more the object of attention and respect than the Hero of the Peninsula.

"The Lord Mayor and Corporation of London voted him the freedom of the city in a gold box, and presented him with a splendid sword. He was also invited by them to a grand banquet, to which the noble and the titled were invited to meet him.

"The Duke of Wellington now received his credentials, as Ambassador Extraordinary, and Minister Plenipotentiary to the French Court. He left London on the 8th of August, 1814, and proceeded to Paris, *via* the Netherlands; his visit to the latter having for its object, the inspection of the fortresses of the frontier.

"His reception by Louis XVIII., he describes thus:* "His Majesty received me with his usual complacency, and having perused the Prince Regent's letter on the subject of the slave trade, he expressed his determination to perform the stipulations of the treaty, and all that he had promised upon that subject.

"I then laid before his Majesty the addresses of both Houses of Parliament, and apprised his Majesty of the earnestness with which the Prince Regent and the government, the parliament and the nation, wished that his Majesty would concur in immediately abolishing this traffic by his subjects, and would co-operate with the British government, in inducing the powers of Europe to put an end to it entirely, and I urged all those arguments suggested in your Lordship's despatch No. 2, and such others as occurred to me.

"'I then urged his Majesty to adopt measures to restrict the trade as much as possible, as directed by your lordship, and particularly to prevent its revival on that part of the coast of Africa on which it has been put an end to during the war, and his Majesty said that these were points of detail that he wished that I should bring under his consideration in the official form, by note to his minister, and that he was perfectly disposed to adopt any measure which he could, consistently with the due attention to the opinions of his people.'

"Although the Duke of Wellington met with little encouragement from the French authorities, to abolish this infamous traffic, yet he persevered strenuously to accomplish so desirable and so humane an object, in spite of his knowledge of the fact that, at the very time, ships were fitting out at Nantes and Bordeaux, with *the aid of British capital*, to carry on the slave trade on the coast of Africa.

"His Grace was, in the meantime, no inattentive or indifferent spectator to the germs of revolution showing themselves not only in Paris, but in the provinces; the very numerous, unemployed, and discontented military, greatly increased by the release of the prisoners of war; the extreme unpopularity of the House of Peers, in passing a vote for paying the debts of the King, incurred while out of France, at the same time that they rejected the law on the liberty of the press, except with restrictions calculated to destroy that liberty altogether; the complaints of Marshal Ney on the settlement of the Yearly Finance Bill, that no provision had been made for the payment of the six millions of livres guaranteed to the Bonaparte family, and the acknowledged secret societies, composed of persons well known as ardent admirers of the fallen dynasty; these were signs of coming events, which did not escape the sound judgment and clear perception of the British envoy, and it is even asserted that it was in consequence of some hint, supposed to have come from the Duke of Wellington to the favourite of the French King, De Blacas, that an attempt was made upon the life of his Grace while in Paris."

The peace of Paris was concluded on the 30th of May, 1815, but the Duke of Wellington was not left long to repose upon his laurels. One more victory remained yet in store for him, his antagonist being no other than his great rival, with whom he had never yet measured swords.

Before, however, describing the extraordinary incidents of the year 1815, it may be interesting to state,—and here we quote *in extenso* from an able and correct writer in the *Weekly Dispatch*—that, towards the end of the preceding summer, his Grace made a tour of the Netherlands, for the purpose of reporting upon the necessary steps to be taken to protect the frontier against any future Gallic descent upon Europe. The line of defences proposed was from Liege, along the Meuse and Sambre, to Namur and Charleroi, and thence by Mons to the sea; and in the paper, which is characterised by his Grace's usual perspicuity, the position on which he fought the battle of Waterloo is indicated as an advantageous one to cover Brussels. This report was dated from Paris, whence his Grace proceeded, early the next February, to Vienna, to replace Lord Castlereagh, the presence of whom was necessary at home.

On the 26th of February, Napoleon escaped from Elba with about 700 men. On the 28th, having eluded the observation of the English frigates, he disembarked in the gulf of Juan, not without losing 25 of his small force, who were taken prisoners at Antibes, which their captain had imprudently attempted to seize. At 11 the same night, Napoleon set out for Cannes, and thence he proceeded towards the capital, which he reached on the 20th of March, having collected a considerable army on his way; for his old troops threw off their allegiance to Louis XVIII, and returned by whole regiments at once to the standard of Bonaparte. On the 13th of March, the representatives of the Allied Powers assembled at Vienna, namely, the Austrian, Spanish, French, British, Prussian, Russian, and Swedish, promulgated a declaration, in which they denounced him as a truce breaker, and declared their determination to give him the most strenuous opposition. On the 28th, the Duke of Wellington was appointed Generalissimo of the Belgic armies, the Prince of Orange resigning his command, and taking a subordinate one.

The powers of Austria, Russia, England, and Prussia, had agreed to keep in the field 150,000 soldiers each, including one-tenth cavalry, and a due proportion of artillery—the English government having the option of commuting the performance of its contract by subsidising the other powers in proportion. The Duke, however, had only 78,500 men, most of whom were new levies, the troops from Spain having, for the most part, been sent out of reach. It was, in fact, as the Duke described it, "an infamous army, very weak and ill-equipped, and with a very inexperienced staff." In France, almost every man between 20 and 60 years old had been called out, and the army was stated to amount to two million men, but probably not more than a tenth of that number actually took the field.

On the 1st of June Napoleon exhibited a grand military pageant, on which occasion he reviewed 50,000 soldiers. He then took the field in earnest. On the 12th he left Paris, and on the 14th he had joined his troops on the frontier. The right wing of the Duke of Wellington's army, which, it has been stated, was altogether 78,500 strong, was stationed under the command of Lord Hill, at Ath, the left, under the Prince of Orange, at Breine-le-Comte and Nivelles; a strong corps of cavalry was quartered, under the Earl of Uxbridge, near Grammont; and the reserve was at Brussels, which the Duke had made his head-quarters. The Prussian army, which comprised 115,000 men, was in four divisions, stationed respectively at Charleroi, Namur, Cmey, and Liege. The French army was 154, 370 strong, and comprised 24,750 cavalry, 122,000 infantry, and 7,520 artillery, with 269 guns.

On the 14th, Bonaparte published a general order, and at daylight the next day his second corps, commanded by Reille, crossed the Sambre, near Thuin, and drove in the outposts of the Prussian first corps, at the head of which was Von Ziethen. The Prussians made a gallant resistance, but, being overpowered by number, evacuated by Charleroi, where Napoleon fixed his head-quarters. The night was spent by the French in crossing with the remainder of their corps, and by Prince Blucher (who was Commander-in-chief of the Prussians) in taking up a position to give him battle. Blucher stationed his first corps at St. Amand, his third (Thielman's) at Brie, and

* Despatch to Lord Castlereagh, dated Paris, August 25th.

his fourth (Bulow's) at Ligny; the second (Von Pirch's) being kept in reserve.

All military critics were of opinion that Napoleon's best policy at first would have been a defensive war in France; and Wellington and Blucher had concluded that such a course would have been adopted. They had, accordingly, agreed to enter the Gallic territory, near Maubeuge, by the 1st of July; but they had taken every precaution, in case the enemy should decide otherwise. The usual policy of Napoleon is too well known to need much description. His genius led him to despise the elaborate trifling which constituted the military science of the age preceding his own. His plan was suddenly to concentrate his army into one massive and irresistible column, and piercing the line of his foe, to annihilate first one wing then the other. The novelty of this system of tactics confounded his adversaries, who had been bred up in a pedantic adherence to the old traditions; and there is a story of a German general who, in the early days of Bonaparte's career, found the bitterest part of his defeat in the ignorance of his victor in the art of war. But the Duke of Wellington, in the memorable campaign of 1815, showed how the *tactique Napoleonnenne* might be met and successfully resisted. Compelled by the necessities of the case to dispose his army over a wide front, he had concerted with Blucher a plan of radial retreat as it may be called, by which the allied forces, even if thus broken through, might be again united. In the event of attack, they were to retire on Mont St. Jean, and there to effect a junction against the forces of the enemy.

WATERLOO.

On the 15th of June, Brussels was as quiet as if there had been neither war nor rumours of war in the neighbourhood Until the arrival of the Prince of Orange in the evening, nothing was known of the combat at Charleroi, except that it was a sharp affair of out-posts. After receiving the Prince the Duke returned to his dinner; but soon afterwards General Muffling came into the room in great haste, and brought further despatches. The Duke was not, however, put in full possession of the facts of the case till midnight, when a second courier arrived from Blucher. His despatches were instantly conveyed to his Grace, who was at the Duchess of Richmond's ball. He then read them through with great apparent earnestness; and after remaining for a few minutes absorbed in deep reflection, he gave some orders, in his usual clear and concise manner, to one of his staff, and was again as animated as ever. After supper he went home; but before the ball broke up, the troops were under arms, and by eight o'clock all had departed for the forest of Soignies.

While the Prussians were being driven from Charleroi, the Prince of Weimar's brigade, which formed the Prince of Orange's advanced guard, was attacked at Frasnes, and forced back to a hamlet about 20 miles from Brussels, called Quatre Bras, or the four roads, formed by the highway from Charleroi to the capital, crossing that from Namur to Nivelles. The Prince of Orange reinforced the retreating corps, and before morning had recovered the greater part of the lost ground, and thus restored the communication with Prince Blucher. On the next day they were attacked by Ney, with the whole of the 2nd corps, numbering 30,640 men, but after a bloody encounter, Wellington, who was present in person, succeeded in repulsing him with great loss. The British casualties were 350 killed, 2,380 wounded, and 181 missing, of whom 34 killed 224 wounded, and 149 missing were Hanoverians. The Duke of Brunswick was amongst the slain. The French loss was admitted by their official account to be 4,200 killed and wounded. On the same day the Prussians were attacked at Ligny, where a no less desperate battle was fought. Napoleon, with the whole of his army, excluding the troops engaged at Quatre Bras, and the 1st corps in reserve, commenced an attack on the whole of Blucher's force, except Bulow's corps, the absence of which reduced it to 80,000 men, the enemy being about 20,000 stronger. The issue seemed to hang upon which side should receive the first reinforcement. Blucher was expecting the British, who, however, had their own work to do, and the 4th corps, which had been stationed between Liege and Hannut, and which various circumstances prevented from arriving. Napoleon, at about 4 o'clock, had despatched a messenger for the 1st corps (which comprised 25,000 men; but Ney had also sent for it, and it was kept back, as the marshal afterwards complained, "idly parading from the right to the left and from the left to the right," until it could be of no service to either. Napoleon, however, at last succeeded in carrying the village. A body of his infantry managed in the gloom to gain the Prussian rear, while a mass of Cuirassiers made a similar movement on the other flank. The Prussians then retreated leisurely towards Tilly, leaving 15 dismounted guns behind them, but no prisoners, except wounded. At a quarter of a league they re-formed again, but the enemy did not venture on a second attack. The villages of Brie and Sombref remained in the possession of the Prussians, who, however, began the next day to retreat towards Gembloux, where the the 4th corps had arrived during the night. The losses on both sides were as tremendous as the valour exhibited by either army was creditable. Blucher was in the thickest of the fight, and narrowly escaped being slain or taken prisoner. While leading an unsuccessful charge of cavalry his horse was wounded, and after galloping furiously forward, fell dead upon him. He could not be extricated, but his aide-de-camp, Count Nostiz, refused to leave him, and lying down by his side covered him with his cloak as he lay senseless on the ground. The Cuirassiers passed and repassed without noticing; and the prince having by this time recovered from his swoon, mounted a dragoon horse and rode off. On the 17th he retreated on Wavre to concentrte his troops, which he was allowed to do without any attempt being made to interrupt his operations, though Marshal Grouchy, with 45,000 men, was despatched in pursuit of him.

On the 17th the Duke of Wellington executed his retreat, which he masked by a number of clever manœvers until he had safely conveyed the great portion of his army across the Dyle, by the long narrow bridge of Genappe. By the time this was completed, Napoleon had been reinforced by the 6th corps and his reserves, and now made arrangements for an attack, but to his surprise he found there was no enemy before him. He immediately ordered a large body of cavalry to follow the English rear guard, and at Genappe there was a smart affair. The 7th Hussars and some squadrons of the 11th and 23rd Dragoons gallantly charged them, but those light troops being unable to make any impression upon the Cuirassiers, were repulsed. Lord Uxbridge, however, "followed on the same side" with the Life Guards, before whose superior weight and prowess the mailed chivalry of France recoiled with heavy loss. No other attempt was made to interrupt the allied movement except a distant and ineffective cannonade.

The weather, which, during the whole of the 17th was unsettled and stormy, grew worse as darkness set in. The rain fell incessantly, sometimes in torrents, and was accompanied by loud peals of thunder and almost a hurricane of wind. It continued cloudy the whole of the next day, but the rain ceased with the darkness. At dawn the soldiers started from their cheerless bivouac, and made them ready for the battle; and when the trumpets and drums sounded and beat to arms the whole of the forces sprang to their posts with the utmost alacrity and zeal. Of the glorious 18th of June it is needless to give many particulars, for there are few that have not read the story of that "day of battles," and fewer still from whose memory the details have escaped.

The effective strength of the allied army, according to Captain Siborne, was as follows:—

	Infantry.	Cavalry.	Artillery.	Total Men.	Guns.
British	15,181	5,813	2,967	23,991	78
German Legion	3,301	1,191	326	5,818	18
Brunswickers	4,586	866	510	5,962	16
Hanoverians	10,956	465	465	11,886	12
Nassauers	2 830	—	—	2,830	—
Dutch Belgians	13,402	3,305	1,177	17,784	32
	49 608	12,403	5,645	67.055	156

The French army comprised—infantry, 48,950; cavalry, 15,765; artillery, 7,232; total, 71,917 men, and 246 guns. Other accounts raise the allies to 74,000 men, and the French to 90,000, and 296 guns. Nothing could exceed the surprise and delight of Napoleon and his generals at the allied movement of the 17th, which, attributing it to any cause but the

right one, they tortured into evidence of defeat. Soult sent a despatch to Davoust, the Minister of War, in which he fairly out-Soulted Soult. He announced that Wellington and Blucher had been separated, and had only "saved themselves with difficulty." "The effect," he said, "was theatrical. In an instant the enemy was routed in all directions." Another account in the *Moniteur* naively remarked that a whole Scotch division of 5,000 or 6,000 men had been cut to pieces, for they had not "seen any of them prisoners!" A third narrative concluded by stating that they would not hear of the Prussians again for some time, even if they should be able to rally. As for the English, they would "soon see what would become of them. The emperor was there!" The two rival armies had bivouacked on the night of the 17th, within three-quarters of a mile, and in some places at even less than that from each other; and Napoleon expected the next day to resume his pursuit. He was, therefore, much pleased at discovering the allies setting their battle in array; and, turning to one of his staff, he exclaimed, "Ah! je les tiens donc, ces Anglais!" He is also reported to have praised the soldierly manner in which the army took up their ground, adding, that "they must run." Soult, who, notwithstanding his Munchausenic despatches, thoroughly appreciated British prowess, expressed some doubts, and Napoleon, turning quickly round, asked him, "Why?" The curt reply was, "Because they will be cut to pieces first."

The positions of the two armies were both masterly, and the manœuvring took up a considerable portion of the morning. Napoleon's first thought was to attack the centre, but he postponed his assault on that part of the allied lines, and ordered his brother Jerome to advance with the 2nd corps, consisting of 30,000 men, against the farm of Hougoumont. About half-past ten or a quarter to eleven o'clock, Sir George Wood, by the Duke's direction, caused the first gun to be fired at an advancing column of the enemy. The discharge killed six or eight, and was soon followed by a general cannonade in support of the attack, and one in reply from the British batteries. The enemy succeeded in carrying the wood, but against the buildings they could effect nothing. On the contrary, as they confidently rushed towards the garden wall, they were received with a tremendous volley that prostrated the leading files, and this was supported by a fusilade so telling that they quickly began to give way. The guards sallied and cleared part of the wood, and the Duke, justly relying on the skill of his artillery, then ordered Major Bull to open his howitzer batteries upon the remainder. In ten minutes the whole was abandoned by the French.

Napoleon now commenced a tremendous cannonade throughout the line, which was promptly returned by the English guns—every piece that could be brought to bear on both sides being vigorously employed. Large masses of cavalry were observed concentrating on the French side of the field, and it was apparent that some new attack was intended. The Duke of Wellington, therefore, formed his centre divisions into squares, and withdrew them behind the ridge, so as to shelter them from the storm of cannon balls. Meanwhile Jerome had reinforced his troops, and returned with still greater fury to the attack on Hougoumont. The guards outside the farm made a gallant resistance, and when driven back retired to the cover of a haystack, from which they kept up the fight till it was set on fire. Finding themselves also outflanked, and in danger of being cut off, they retired hastily into the farm-yard, the gate of which they strove to barricade with ladders, posts, barrows, or anything they could lay hands upon. All was in vain; the gate was forced open, and a few Frenchmen rushed into the yard. The defenders instantly ran to the nearest cover, and opened such a fire as soon checked their advance. The gallant fellows then made a fierce attack in return, and after an intrepid struggle on both sides, Colonel Macdonnell, Captain Wyndham, Lieutenants Gooch and Harvey, and Serjeant Graham, contrived, by the exercise of great daring and personal strength, to close the door, while the intruders paid the penalty of their rashness. The attempt, so nearly successful, thus entirely failed.

Napoleon had now determined to make his left and centre attack on the British lines, intending thereby to turn the former and force the latter; and by possessing himself of La Haye Sainte and Mont St. Jean, to cut off the Duke's communications by the main road with Brussels, as well as to sever the allied from the Prussian army. For that important enterprise he had selected the whole of Drouet's corps, amounting to 18,000 infantry, in four columns, in addition to Roussel's cavalry division. To support this imposing force, he had placed 10 batteries, containing 74 guns, with ranges of from 600 to 800 yards of the English line. Between half-past 1 and 2 the advance commenced, the French guns gradually becoming silent as the columns approached the English lines. On they came shouting, "En avant!" "Vive l'Empereur!"—till, driving back a Belgian brigade, they reached a broken hedge, behind which Picton was posted with the 5th division. The columns halted, and began to deploy: and whilst so engaged, a tremendous volley, at less than 40 yards, threw them into confusion. Picton thundered the words, "Charge, charge! hurrah!" and fell from his horse, pierced in the right temple by a musket shot. This truly-gallant officer had two ribs broken at Quatre Bras, but he had concealed his hurt lest he should be prevented from taking part in the glorious 18th of June. His death was amply revenged, for the 5th, struggling through the hedge, fell upon the enemy and routed them with great slaughter. The 2nd Cavalry Brigade, numbering 1,300 men, and consisting of the Royals, Greys, and Enniskilleners, led by the Earl of Uxbridge, fell on the disconfited troops with terrific violence, and covered the ground with slain. In vain did the Cuirassiers and Lancers, who had been drawn up to charge the 5th in flank, seek to oppose them; they were swept away with the rest, and two eagles as well as 2,000 prisoners were taken. The English cavalry, in fact, succeeded in completely destroying a division 5,000 strong, and cut the traces of all Drouet's cannons, which were thus rendered useless for the rest of the day. These successes, however, were purchased at a considerable cost. While the victorious troops were disorganised by their pursuit, they were charged in their turn and repulsed, scarcely a fifth of their gross number returning from the conflict. Sir William Ponsonby was overtaken by a troop of Polish Lancers in a newly ploughed field, in which his horse stuck fast, and, together with his aide-de-camp, was speared as he was giving the latter his watch and his lady's picture to deliver to her in case he should escape. Sir William's death also was terribly avenged, for his brigade falling in with the Polish Lancers again, scarcely left one alive.

At this time Hougoumont continued to be a principal point of attack. Foiled in every attempt to carry it by storm, Napoleon had at last ordered it to be bombarded, and by this means it was set on fire. The chapel was burnt down, and many of the wounded of both sides perished in the flames. Still the blazing ruins were as obstinately held as ever, and though 10,000 Frenchmen were killed and wounded in the numberless attacks upon it, the old chateau was never for an instant in the hands of the enemy. Another and more desperate assault than ever was made about this period upon the devoted building, but its defenders having been reinforced by Byng's brigade, the attempt failed as signally as its predecessors. The farm of La Haye Sainte, which stood about 250 yards in advance of the allied line, and formed an important outpost, did not fare so well. Three attacks were made upon it, and all of them were gallantly beaten off. Twice a barn, or outhouse, close to the main building, was fired, and twice the flames were extinguished; but when the operations against it had continued about two hours, the ammunition of the defenders began to fall short, and unhappily the communications with the main body were all cut off. The little garrison, overpowered, but fearless still, felt the

"Una salus victis, nullam sperare salutem."

They husbanded well each shot, and when it was all gone, they made a desperate defence with their bayonets. They were, of course, forced to yield, and, it is said, were all sacrificed to the rage of their captors. The enemy could make but little use, after all, of this dearly-acquired conquest, as the ruined house was opposed to the destructive and incessant fire of the guns on an adjacent ridge.

One of the most furious cannonades on record was now turned upon the English centre, and formed the overture to Napoleon's last and most desperate attack. Before, however, describing the concluding scene of this bloody but glorious day, it is necessary to digress for a few moments to narrate the

state of affairs at Wavre. The Duke, in giving battle, had calculated on receiving Blucher's aid at 2 or 3 o'clock; but the badness of the roads, occasioned by the rain of the previous night, rendered it impossible for it to come until nearly four hours later; and the allied resources had thus been taxed to support the contest for that long period beyond what their noble commander had intended. This is a point which, in estimating the merits of the victory, ought not to be overlooked; for, to have held the position a single hour against the terrible cannonade which Napoleon's enormous park enabled him to pour upon the allied troops, was a task that would have severely tried the mettle of the best disciplined and most experienced troops. In a letter the Duke wrote to Lord Beresford from Paris, he said, "Never did I see such a pounding match. Both were what boxers call 'gluttons.' Napoleon did not manœuvre at all. He just moved forward in the old style, in columns—and was driven off in the old style. I never saw British infantry behave so well." The routine was, in every instance, nearly the same. The British were mostly in square. The French cannonaded them for some time, and then ceased firing; the cavalry rushed on them; fell upon an immovable rock; rallied, and were charged by the allied cavalry in return. This was repeated innumerable times. Occasionally the French would concentrate their fire on some devoted regiment, which to avoid the iron hail, would lie down; but as soon as the cannonade ceased, would rise and repulse the cavalry attack, with the calm steadiness which all the British regiments showed throughout the day. The loss, however, was awful. The 27th regiment had four hundred killed in square, without returning a shot, the 92nd, though reduced to less than two hundred, undauntedly charged, pierced, and routed a whole French column; the officer commanding the 33rd sent to beg for support, and the only answer that could be given him was, that he must stand or fall where he was. The English guns were many times taken and retaken. It was with an anxious eye that the great Duke, all of whose reserves had been gradually sent into action, watched the battle. Often was he seen to glance at his watch, and once he was heard to exclaim, "Would to God that night or Blucher would come!" Still he kept a composed countenance, and, regardless of danger, rode about in the thickest of the fire, seeing that all went well, and giving his men the encouragement they so much needed, for it is an admitted fact that the intrepidity which enables a soldier to stand still is of a much higher description than that required to make a charge, in which excitement often supplies the place of valour.

At a little before 5, Bulow, with a portion of his corps, arrived, and commenced his attack, the cannon balls of his artillery reaching as far as the Charleroi-road. Napoleon immediately despatched part of his reserves, under Count Lobau, against him. These troops soon repulsed Bulow, and separated him from the English army. A report in the mean time was spread along the French line that the fire proceeded from Grouchy's guns, and victory now seemed certain. At half-past 6, Pirch's corps, reinforcing the Prussians to 46,000 men, began to show themselves, and Napoleon, still full of confidence as to the result, made his grand attack on the left centre. Throwing back half his right wing to hold the Prussians in check, he collected the reserve of his Imperial Guards, amounting to 15,000 men, and ordered their attack to be supported by the simultaneous advance of the whole front line. Having led the Guards to the bottom of the hill, he pointed to the English lines and said, "There, gentlemen, is the way to Brussels!" The response was a hearty "Vive l'Empereur!" and the attack was handed over to Ney. The French marched proudly on to the encounter, preceded by a cloud of skirmishers, who, carrying on a smart battle with the light troops to the left, rapidly advanced to cover with the smoke of their pieces the movement of the Guards, and to drive the men from the English guns, which were making frightful havoc with the approaching column. At last the leading one reached the crest of the hill, behind which the Duke of Wellington had made the Foot Guards lie down to avoid the tremendous fire which we have said formed a preliminary to the attack. To the surprise of the French in the front ranks, there appeared no obstacle except a few mounted officers, whom they could just discern through the smoke from Napier's battery, which the minute before had been engaged in driving back the skirmishers by a shower of canister, grape, and shrapnel shells. One of these officers was the Duke himself, who shouted, "Up, Guards, and at them!" Instantly they sprang up in a compact line of four deep, and at fifty paces poured into the column a volley that fairly staggered it. The Imperial Guards attempted to deploy, but the rapid and telling fire which was kept upon them rendered the movement a failure, and the Duke ordered Maitland to charge. A tremendous cheer was the reply. Guard met Guard for the first time, and in an instant the French were fleeing before the unmatched prowess of the English. The second column now came on with imposing steadiness, disregarding the fire of Napier's battery, and returning with effect the musketry with which it was received. Sir John Colborne, who had been anxiously watching its advance, suddenly wheeled the 52nd, so as to bring its fire on the left flank of the column, the front of which was exposed to that of Maitland's Guards. The Duke, whose intentions Sir John had anticipated, instantly supported him with the 71st, and two companies of the 3rd battalion of the 95th. The cross fire, added to the cannonade, soon broke the Imperials, and the English regiments giving three truly British cheers, charged on both faces, and routed them. The Duke, as they ran in confusion down the hill, launched Vivian and Vandeleur's cavalry upon the flying mass, and rendered a rally impossible. Meanwhile Druet's corps had been desperately engaging Alten's division, and the fugitives to whom the flank charge had given a sidelong impulse, rushed against it, and communicated the panic to their comrades, so that they also broke and fled. Fresh cavalry now advanced to keep back the French horse, and the Duke perceiving that the Prussians were at hand, closed his telescope with the exclamation, "The hour is come," and ordered the whole line to charge. Just at this moment the sun, as if to light the English troops to victory, burst forth for the first time on that eventful day, and the lurid glare struggling through the battle smoke, produced the strangest effect perhaps ever beheld. It did not, however, last long. The "regent of the skies" set to rise on the morrow, but the sun of Napoleon's fame, as bright and fleeting as these last rays, had sunk for ever! The desperate determination to stand or die, which, up to this period, had sustained the allies, now gave way to an indescribable tide of emotions. The conviction rushed with irresistible force into every mind, that the same judgment which had caused their illustrious commander to turn so long a deaf ear to their demands to be led on, could not be at fault when he now bade them to advance. Every one, therefore, felt that victory was certain. Then the presentment that the field they were now contesting would be the most glorious in the world's history, begot in each soldier's breast a fervent desire to distinguish himself, and, lastly, there was not a regiment that had not some beloved officer, for whose death they had to exact a terrible reckoning—not a man that had not some brother, some friend, some comrade to avenge. Thus it was that the Duke's command was received with a thrilling cheer; and, forming one long and splendid line, the infantry hurry on to certain conquest. Every man is a hero. No troops can resist such a host, for "Victory sits upon their helms."

"Possunt quia posse videntur!"

The French flee at their approach—the horse artillery open on the panic-stricken mass—the cavalry thunder upon them broken ranks—"Sauve qui peut!" becomes the cry—order, discipline, courage, are forgotten—and in a few short moments one of the bloodiest and most complete routs ever experienced by an army has taken place. Three squares of the Old Guards attempted to stand, but the Duke ordered Adams' brigade to charge, and as it approached they faced about, and began to retire. This movement soon degenerated into a confused flight, and, with scarcely an attempt to rally, the French army was a total wreck. The portion of the right wing opposed to Blucher being unsupported, collapsed before the Prussians, who took Planchenoit with little trouble, and cut off all chance of an orderly retreat.

We shall now have to follow the Duke to the close of that glorious victory at Waterloo, which not only gave peace to France, but consolidated the material interests of Europe and the world.

(To be continued in our next.)

CHARACTER AND TENDENCIES OF AMERICAN SOCIETY.

From the French of M. Emile Montegut.

II.—EMIGRATION.

All the facts connected with the emigration which takes place to the United States offer themselves freely to the support of our thesis. This emigration, we believe, has reached to-day its culminating point, for it hardly seems possible to imagine that so great a number of emigrants should ever leave Europe for America in any similar space of time in the future, as have done so during the years which have just passed. Nothing is more false than much that has been said respecting the *mixture of races* which this emigration causes to take place in America, for if it infuses new blood into the veins of the Americans, it is not the blood of foreigners or strangers, but blood drawn from exactly the same sources as their own. The emigrants come not from all portions of the world indifferently, as would seem to be imagined by many, but by far the greater number of them come from England, the remainder being principally Scandinavians and Germans. We have before us the exact statistics of American emigration during the years 1848 and 1849, since when the numbers may perhaps have risen, but their characteristics have undergone no change. 189,176 Europeans emigrated to the United States in 1848, 220,607 in 1849. Let us decompose these two numbers, in order to find the amounts of the contributions of each nation. England, then, furnished 23,062 emigrants in 1848, Ireland 98,061 in the same year, Scotland 6,115, Germany 54,973; Holland, Norway, and Sweden,—these countries of small dimensions and but thinly populated—furnished 2,932, and France, this country which disgorges its inhabitants, who flee from it because it cannot support them, furnished a smaller number than even these three last pigmy countries, namely 2,734 emigrants In 1849 the number of emigrants who exchanged a home in Europe for one in the New World, was greater, as we have seen, than even that of the year preceding; and of this greater number 28,324 were from England, 112,594 from Ireland, 8 810 from Scotland, 55,705 from Germany. The number from Holland, Norway, and Sweden amounted to 6,734—nearly treble the number of the preceding year, while that from France remained stationary, or rather, to speak more accurately, fell to 2,683 With the exception of the Irish, who, however, according to Mr. Johnson, are by no means all of the pure Celtic blood, these emigrants, we see, are nearly all of the German race; very few of them belonging either to the Celtic, the Latin, or the Sclavic races. Thus, we see, the American nation is recruited only from its sister nations, from the various branches of the great race of barbarians who have *renouvelé* the world,—Germans, Saxons, Scandinavians, so long time enemies upon the soil of Europe, or, like the English, separated from the continent, meet upon this common country to unite themselves anew, and, perhaps, for who knows? to depart from thence and *renouveler* the world once more.

Even when the peculiar instincts of each of these races efface themselves, in order to leave predominant the common instincts of the whole, once landed and fairly settled in the far-west, the emigrants strive hard to preserve their ancient habitudes and manners; they are not absorbed without resistance by the general spirit of the country; they endeavour to remain Irishmen, Germans, or Norwegians in America? but all is in vain, they cannot prevent themselves becoming, and in but few generations, North Americans, as is plainly instanced on a large scale by the Germans and the Dutch, each of whom seeked vainly to remain in America a peculiar people, the one in Pensylvania and Ohio, the other on the banks of the Hudson The Anglo-Saxons bend them to their manners, and fix the seal of America indelibly upon them. They arrive with a vast amount of ignorance respecting the laws and institutions of the New World, and during the period which elapses before they have succeeded in establishing themselves in the land, they have but little to lose, and consequently but small inclination to mix themselves with political affairs. Thus, we may observe in passing, America providentially avoids that fault which so often ruins the cause of liberty upon the continent,—the participation of the poor and ignorant in public affairs. Her emigrants meddle not with her political matters till they have acquired some stake in the country, which they give themselves, and some amount of instruction respecting the workings of its laws and institutions, which is given them by the example of the inhabitants of the country. The Americans take possession of them, and break them into American habitudes and manners. Poor and illiterate, the emigrants have but few men among them belonging to the liberal professions, and the northern States take upon themselves the task of furnishing them therewith; sending into the west their lawyers, their physicians, their ministers of religion, their journalists, their bankers, and their merchants. To these men, the west is at first a mart for their professional abilities, and afterwards a workshop for the manufacture into American citizens of European emigrants. As emigration is continual, this work is one which requires constantly recommencing. It is an education which is essential to all European emigrants, and one of which they are all easily susceptible, and it is principally by its means that the Americans of the Northern and Southern States, in whose hands it chiefly lies, they being the holders of all official situations, the rulers of the churches and the schools, and the deities presiding over the courts of justice and the press, preserve their influence and preponderance. Emigration thus adds immensely to the strength and power of the United States, and, thanks to the ability and energy of the Americans, is utterly unable to be the worker of any harm in them; socially and materially it is of great power and importance. It furnishes the New World with the most excellent miners, the most indefatigable clearers of the soil, the most adventurous searchers for Californian gold, and the most admirable hunters, equally capable of battling with an Indian or a wolf. Politically, however, its influence is small. In the bosoms of the deserts, to which they repair by swarms, the emigrants find themselves submitting naturally and insensibly to the influence of the Anglo-Saxon race; and in the towns, in which their union and agglomeration are much more dangerous, the Americans employ the most energetic means, not to dissolve and scatter their bands, which would be a proceeding both difficult and illegal, but to make them feel their superiority, and to keep themselves in some degree their masters There, the prejudices, the national pride, and the imperious brutality of the Americans, occasion their frequent combats and collisions with the emigrants. We read a few months ago an account of one of these combats which took place at Hoboken, between the Americans, sustained by the Irish, and the Germans, sustained by the Hollanders. This combat transported us in spirit to those ancient times in which the Hebrews, for example, wrestled with the Philistines and the Ammorites, in order to preserve the sacred ark from the outrages of idolaters who belonged to the same race as themselves. In America, that which, like the sacred ark of the Hebrews, must be protected at all hazards from the outrages of other tribes, is the race of men who are established in the country, the blood, the laws, the manners, and the customs of the Anglo-Saxon.

Emigration, in addition to the physical strength and material force which it bestows upon the United States, gives, and will continue to give more and more, a moral force and prestige to them, which has already begun to make itself much felt, but which, we think, has not been yet sufficiently remarked. In this age of ours, in which the masses have been agitated to their very depths over all the continent, in which they have threatened to overturn all laws and order, and to burst asunder all the bonds which hold society together, and have only been repressed after the expenditure of immense energy and labour,—at this period when the sentiment of suffering is more keen than it has ever before been, when each supports his misery with more difficulty than heretofore, and when poverty and misfortune are not merely sorrows but burdens the most heavy and intolerable,—a country which offers such marvellous facilities for the employment of labour and the acquisition of landed property is sure to draw down upon itself the gaze of every unfortunate in Europe. Now, the love of country is effaced in the minds of Europeans to a greater extent than it ever was before, and this effect has been produced principally by these two causes:—firstly, an unexampled longing after riches, which whispers to every European—*Ubi bene, ibi patria*, and which makes of every malcontent morally an exile in his own country; and secondly, the civil wars engendered by these same desires, which have filled with resentment against their fellow citizens, and indifference towards their country, the minds of all those who have become their victims, of all the vanquished, and of all those who, without having taken part in the contest, feel themselves aggrieved by the rigorous measures which it has been necessary to use against those who have. The United States are therefore for all European unfortunates and malcontents *la vrais patrie*, the longed-for El

Dorado. Thence is derived the prodigious and ever increasing influence, the potent fascination, which the United States exercise over all the poor, all the indigent, and all the *proscrits* of the earth. However meanly we may estimate this influence, we cannot but admit that it tends to divide the world into two portions, Europe and America; not so much, we mean, geographically as morally: in the one of which all seems suffering, misery, war, and tyranny, in the other of which all seems happiness, peace, and liberty. It is thus creating a redoubtable political war between Europe and America, a rivalry which is only now commencing. Philosophy, for which the existence of a generation or two, more or less, is not even a point in the infinity of the ages, perceives by the example how much the greatness of communities is due to accidental circumstances and temporary causes. Assuredly, when the United States shall be as thickly peopled as is Europe, and long before they have existed for as many ages as our continental states, the same evils, the same sufferings, the same disorders, and the same necessities of government will have produced themselves therein as those which are so much complained of and lamented here. The unfortunate population who leave Europe for America doubtlessly disengage themselves, by so doing, of their misery. That is all true enough, but they do not and cannot know that their descendants will not be as wretched as they have been themselves. Such happiness and *aisance* generally last only a few ages, and though well for those who are so fortunate as to enjoy them, in the history of humanity they pass unperceived. But what do we see in the mean time? The emigration attracted by this prospect of good fortune towards America will be sufficient to found the power and greatness of the United States, and to cast into them the germs of new states of society. But emigration will not only serve to found the future greatness of the New World, but also to retemper the races which Europe has corrupted. The prosperity of the American emigrants, which will not be transmitted in its material shape to their descendants, will however produce moral results of a higher salutary character. In a country in which the price of an acre of land is less in amount than the sum given for the satisfaction of any vice, it suffices, for a man to become rich and a landed proprietor, that he denies himself the gratification of his vices and sensual appetites, Ambition takes the upper hand insensibly of his ancient habitudes and manners; idleness and extravagance give place little by little to economy and industry; the necessity for perseverance endows these new manners with a sort of tradition, and, at the end of a few years, these formerly demoralised Europeans will have become changed into a new population, having another character, a manner of spending life which they owe to the unforseen circumstances among which they find themselves, to the nature of the new relations which they have entered into with the former inhabitants of the country, and to the original physical features of the land of their adoption,—a manner of life which, transmitted to their descendants and modified by time, will pass from these huts and farms of the prairies of the west into the immense towns and the vast cities of the future, and will become the law and the wisdom of nations yet unborn. This rapid reformation of European races, who have become demoralised, corrupted, and almost savage in the very heart of civilisation, is observed with respect to the most debased and most degraded of all nations,—the Irish, for example, of whom England can make nothing, but who, transplanted to America, while keeping intact their natural virtues, disembarrass themselves easily of their abjection, and become as good farmers, as excellent *aventuriers* as the Americans themselves.

Emigration will perform to the United States many other services than the few which we as yet have alone named, and henceforth for some time from the crowd of voluntary exiles who flock to the shores of the New World, the real military force of the United States, will, we think, be solely recruited. Whenever the Yankees require to commit some injustice, whether in order to escape from their interior difficulties, as we have seen in the affair of Texas, and in the war of Mexico, or to add to the number of their states and to extend their dominion, the new population of the west will not desert them, as the expeditions they have so unceasingly sent out against Cuba prove. For a long time the Union may not possess a permanent regular army, like the regular armies we possess in Europe, but they will have, and have in fact already, a large irregular army, for some years, hostile to all symbols and intermediaries in matters of religion and of government, the enemy of everything which is not essentially individual and free, and consequently the foe of all anonymous forces, and of all *grand armées* and great administrative machines, fashioned after the Roman patterns, those two admirable instruments of government and oppression. In other nations, the aim of democracy is to prevent this domination of the individual, to arrest this natural developement and to establish a tyrannic level. It has for its end the contraction as much as possible of liberty in its essence when it is not in its effects, and in its effects when it is not in its essence. In England and America, on the contrary, liberty is esteemed as the one great good to maintain which every other should be sacrificed, it is held to be the fundamental principle of society, nay as the very principle of life itself, and the proof that man possesses an immortal soul, and it is looked upon as the instrument not only of men's earthly happiness but also as that of their eternal welfare, and as the faculty which renders man capable of committing actions always new and fruitful, in the place of being always the slave of never changing functions, for ever the same, for ever barren and mechanic. Deprive an Anglo-Saxon of his liberty, and he will be very little more a man than beast.

Democracy thus understood, then, is in perfect opposition to and in complete war with the democracy of our continent; it attaches itself to an entirely different tradition,—to a tradition purely barbarous, Germanic and feudal. The two traditions are completely distinct, and one may trace in history their double but parallel development. One thing only belongs to both in common, and that one thing is Christianity, but their manner of interpreting even it is as different as the mode of comprehending the services of society and of government. On the one side, Catholicism, Roman government, monarchy, dictatorship, and equality; on the other side Protestantism, feudalism, republicanism, and liberty: such are the diverse manifestations of these two opposite civilisations. Nothing could be found more contrary and antithetic. For a long time these two civilisations have marched in parallel paths: to-day they encounter one another with one and the same word upon the lips of each, pretending that their ends are both the same. They each speak of democracy, and sometimes even of republicanism; but each of them is stupefied and astonished at seeing how different is their manner of pronouncing the modern shiboleth which calls itself democracy. And they will not rest long mutually astonished merely, they will breathe a mortal defiance to each other, and the day is not far distant which will see commenced between them the most important struggle of which the world as yet has ever been the theatre; it will soon become necessary that the one should perish that the other may live; this fate is inevitable. There can neither be truce nor agreement between the humble, obedient, and timid spirit of equality and the aristocratic, imperious, and proud spirit of liberty.

"THERE WILL HE REST IN HIS LONELY TOMB, MOURNED OVER BY THE WATERS"

(From a Description of the Spot where are interred the Remains of Chateaubriand.)

YES! lonely is thy resting place,
Girt by the foaming wave,
The sterile rock which cradled thee
Has now become thy grave.

Lonely and wild that chosen grave
Life's stirring pageant o'er,
Thy requiem sung by hollow winds,
Thy dirge the ocean's roar.

Nor may affection's pensive step,
Stray there to weep and pray,
The drops that on thy dust shall fall
Will be the billow's spray.

No mournful yew, no cypress sad
Shall wave above thy head,
Nor garlands as in church-yards green,
Bedeck thy dreamless bed.

But rock-birds on that lonely cross,
Their snowy wings shall plume,
And tangled seaweed, tempest hurled
Enwreath thy ocean tomb.

While faithfully the wave-washed rocks
Through time, in calm and storm,
More lasting than the proudest fane,
Shall guard thy mouldering form.

C. S.

LETTERS TO WORKING MEN.

No. II.

THE BENEFITS OF LIFE INSURANCE.

BY FRANCIS PLIMLEY, GARDENER, SHEPHERD'S BUSH.

In presuming to address some of my fellow working-men on this important and too much neglected subject, I do not pretend to display that knowledge of it, which only those can have who devote their time and talents (almost exclusively) to this and other subjects, tending to advance the working man higher in the scale of moral and social improvement; but, simply to suggest a few thoughts that have crossed my own mind upon it. In looking at the objects of Life Insurance generally, they offer almost the same advantages to the operative, the artisan, the shopman, the labourer,—and, in fact, all those who get their living by the sweat of their brows,—as to their more affluent brethren; and, if such be the case, why should not those classes of men avail themselves of the opportunities offered them, to render those who are bound to them by the nearest and dearest ties, some benefit, after God has seen fit to remove them from their earthly pilgrimage? This, to many who have not given this subject any thought, may appear an erroneous idea, a false argument; but, there are offices where the son of toil may insure his life for the sum of £50; and even as low as £25; and I think even less than this; and, when you calculate at what a little self-denial (if it can be so called) these feelings may be awakened within you, that tell you that you are performing a solemn and sacred duty, in trying to alleviate in some degree the sufferings that would be occasioned in the minds of your wife or children at your premature death, it becomes your duty to think seriously of it. A working man, under the age of thirty, may (if in good health), insure the sum of £50 at his death, to his wife, children, or friends, upon the annual payment of a sum under 30s.; or, to say 26s., that would be but 6d. a week; this apparently trifling sum to offer such advantages. Oh! working men, let me entreat of you to throw aside the use of intoxicating drinks, and smoking that nauseous and poisonous tobacco, and think on the importance of insuring your life; and if you will not entirely abstain from them, look what the value of three pints of beer a week less than you are accustomed to partake will effect. Those among you who consider yourselves moderate drinkers, in not drinking more than three pints of beer a day, look what seven times the sum of 6d. will effect;—3s. 6d. a week, that you are spending on an article worse than useless, will insure your life for more than £300; and there are many, alas! who are in the receipt of sums varying from 12s. to 30s. weekly, that are spending more than the sum I have mentioned in intoxicating drinks alone. Oh! let me beg of you to remove the film that is at present before your eyes, that you may see clearly the benefits of Life Insurance; and if those among you who are not total abstainers, will become so, and spend part of that money that you used to throw away when you partook of alcoholic beverages, in taking a Life Policy, you will never regret it; but, on the contrary, you will feel in the enjoyment of better health alone the advantages you are deriving in so doing, and to those who are more advanced in years, the same advantages are offered, by paying, of course, proportionately higher premiums.

The next inquiry is, who are the parties that ought to insure their lives? I contend that it is *the duty* of every working man, whether old or young, married or single; in the first place, the old man, according to the laws of nature, has not many years to live; and, if he has not joined some Mutual Life Insurance office, I would say, do so immediately; it will be a source of much comfort to you, when your increasing age and infirmities, are weighing you down to the grave, to know that those whom you *must* leave behind, are not left totally destitute, as is the case, too often alas! upon the death of the head of a family; not that the payment of any sum of money will compensate the working man's family for the loss of him on whom they have been accustomed to look for support; but, as we are certain of nothing but death, it will serve to alleviate in a great measure the sufferings and temporal wants of those whom you leave behind. To the young man, the advantages that are offered are still greater; to look at the subject in a pecuniary view, you will pay a much less premium than your older fellow-man; and the advantages that are offered to your relatives or friends are the same; and let not that vain boast, that you are young, and have many years yet before you, have any weight on your mind; for although we are told, that our years are threescore and ten, how many thousands, nay hundreds of thousands are there cut off in the prime of life? And again, are there not accidents continually occuring, that may take the life of you or I, as well as any of the rest of our fellow mortals? Who can tell what a day or an hour may bring forth? and there is this very good and peculiar feature in life assurance, that the moment you have paid your first premium, whether it be quarterly, half-yearly, or annually, you are free; you have not to wait six or twelve months, before the liability of the association commences; so, that should you be taken off suddenly, either by a malignant fever, or some serious accident the day after you have paid your premium, your relatives will reap the benefit of your forethought. This, I think, is one of the most important advantages offered by life insurance; how dreadful then, must be the feelings, of one who in the prime of life, feels himself going that journey from which no traveller returneth, who has not been able from his limited means to lay much of his earnings by for a future, and who has neglected to avail himself of the opportunities offered him when in health and strength, of paying an annual sum (in proportion to his earnings) towards the funds of an insurance office, in the event of his premature death, none can pretend to fathom the feelings of one so situated but the sufferer himself; to all young men I would say, think seriously on the subject, join some respectable office, and make yourself acquainted with its benefits; and in a quiet conscience, and contented mind on this point you will have your reward.

To the married man I would say, in addition to the foregoing,—the wife of your bosom, whom you have sworn to love and cherish, and who is depending on you for many temporal comforts, ought to be a powerful argument to induce you to insure your life, and every child she bears you is a much more powerful argument still in favour of your so doing, as, in the event of some direful disease seizing you that may terminate in your death, you will know that you have in some measure done your duty towards them, to endeavour to mitigate their sufferings when the Almighty shall see fit to prevent you from labouring for their sustenance, in removing you by death. And to the single man (especially if he has youth on his side) I would say,—avail yourself of the opportunity you have of joining a society, although you may not appear to have the same demands made upon you as a married man, yet there are very few but who hope to obtain some day a prize in the shape of an affectionate and loving wife. Having youth on your side, your rate of premium will be very low; and it will be a great proof to her whom you hope to make your wife, that by your forethought you are not unmindful of the future; and the fact of your having done so will show to her parents or friends that they are about to consign the future temporal happiness of their daughter into the hands of one who, to say the least of it, has shown some prudence, by providing in some degree for her, should you be snatched from her arms by the rude hand of death.

There are some persons who object to the objects of life insurance, who say that it is a sin to insure your lives; but I believe, on the contrary, that we are only following out the ordinances of a beneficent Creator in so doing; that we are obeying one of his laws, in endeavouring, in some measure, to provide for those who are dependent on us, at our decease. There are others who view it in the light of a superstitious fear; that, to insure our life is, to a certain extent, to insure our death; but, I would ask you, would the fact of your having done so hasten your death any more than a prudent man making his will when in the enjoyment of health and strength? No, that objection is ridiculous; but, perhaps, the serenity of your mind may to some extent *prolong* your existence. There are others, again, so selfish, who will not join a life insurance office because they themselves will not participate of the bene-

fits,—that they would be paying money away for which *they* would receive no benefit; and that not till the termination of their existence would the benefits of life insurance be proclaimed. To those who are of such a mind, even they can partake of the benefits by paying in a certain sum, and receiving an annuity after they have attained a given age; but this is a point on which I will not dwell; I will content myself by saying,—let not this feeling pervade the breasts of those among you who are husbands or fathers; make the effort, and join some office without delay. There are other objections made equally futile; and, indeed, there is only one objection, I think, to the rules of insurance offices, that I deem worthy of consideration, and the want of such a provision that I am about to mention ought to be seriously looked to by all life insurance directors. We have seen instances of the most affluent becoming reduced to very low circumstances; and if those who are in the possession of wealth are likely to meet with losses so severe, how much more likely, then, are some of the working classes to become so reduced (and not from any improvidence of their own) as to be unable at some time to meet the claims of their insurance office? I think this objection might be easily met by there being a reserve made, at the division of the profits of each society, to meet such unforeseen and unhappy contingencies; a very small sum set aside triennially would suffice for such a praiseworthy object. I am satisfied that there would be more working men joining life insurance societies if the directors were to make such a provision. I myself have heard working men express their fears that should they join one, they may, at some future day, through want of employment, illness, or other causes, be unable to keep up their payments. I would say, then, to all directors of such offices, If you are in earnest to benefit, or rather to meet the wishes of, a large portion of the community, give this idea your serious consideration; let not the working man be prevented from participating in the benefits of life insurance through this natural fear; let not his feelings be wounded, so that should he insure his life, and be prevented from keeping up his payments, that the provident savings of more prosperous times be all lost,—that what he had paid in would not benefit his wife, his children, or his friends; again, I say, then, to those who have the power, try and do something of the sort, and you will find that the result will be, a large accession to your members of those who at present are kept aloof from joining on that account; you will not have to say with so much cause, that out of so many millions, there are so few members of life insurance offices; you will find working men who are becoming total abstainers from intoxicating drinks, and who are joining freehold land societies, that they will also join your offices, as that fear then will be entirely dispelled, and more confidence will be placed in you; it might be urged that there will be too many wanting to avail themselves of the fund; but, to prevent imposition, I would suggest, that a form of declaration be made by the persons who wish to participate on this privilege, and that all inquiries be made among those likely to know, before allowing any member to partake of the reserved fund; but, I think, you would not be much troubled with such inquiries, as I have that opinion of the majority of the working classes, that they would not want to fall on the funds, unless really compelled from necessity; there might be an exception occasionally, a black sheep might be discerned sometimes, trying to impose upon you, but, as a body, they would scorn the idea. And in conclusion, I would say to the working man, although this provision is not yet made in insurance offices, let not that deter you from joining one; you will not all be unfortunate, but rather let me hope that the contrary will be the case; make an effort and begin, join one, if you only insure for £25; you will have feelings within you that you at present are strangers too; you will have the satisfaction of knowing, that you have done as far as lies in your power, to prevent your wife and children from becoming destitute, should you be suddenly taken from them, and you will be conscious that you have in an important degree done your duty, as a husband, father, and friend.

[In continuing this series of papers, we have availed ourselves of the above sensibly-written article. The subject of life assurance is, however, too important to be passed over slightly, —on a future opportunity, therefore, we shall return to its consideration.—Ed.]

CHAPTER ON NAMES.—No. II.

BENJAMIN, *son of the right hand*, is a fine old Hebrew name and has been borne by men of renown, among whom were Jonson and Franklin.

BERTHA, *bright* or *famous*, is a fine name of Greek origin, and should be more common.

BIANCA is the Italian form of *Blanche*, which, as we have already hinted, has the meaning of *white* or *fair*. It is a sweet name in both forms, but should be fittingly bestowed.

CATHARINE, or *Katharine*, is derived from the Greek for *pure* or *chaste*, and is one of the best of our female names. In the Irish it becomes *Kathleen*, and in the Flemish, *Katelina*. A pretty diminutive of Catharine is *Katharina*, but we like it best in its familiarised form of *Kate*. Whoever knew a Kate who was not frolicsome, mischievous, and saucy? The shrew-taming Petruchio, in his play, thus harps upon the name.—

> "You are called plain *Kate*,
> And bonny Kate, and sometimes Kate the cross;
> But Kate, the prettiest Kate in Christiandom,
> Kate of Kate-Hall, my supper-dainty Kate,
> For all cates are dainties"

The name of Catharine, disgraced by her of Medici, was honoured by the noble but unfortunate queen of Henry VIII, whom the pen of a Shakspeare and the voice of a Siddons have immortalised.

CHARLES. Some etymologists derive this illustrious name from the German *kerl*, Anglo-Saxon *ceorl* or *churl*; a term denoting rusticity, and quite opposed to every idea of nobility. Its real origin may probably be found in the Sclavonic *krol*, a king. Thus. Krol, Korol, Karolus, Carolus, Charles. Krol may have come from the Latin *corona*, or *corolla*, a crown. Charles, then, is a king, or *one who is crowned*. This seems an appropriate signification for a name which has been borne by so many kings and emperors. Charles sometimes occurs in the Spanish form, *Carlos*. *Charlotte* is one of the feminine forms of Charles, and, if we accept the foregoing etymology, signifies *a queen*. Those who derive the name from the German, give it the signification of *prevailing*. We have no quarrel here with the etymologist. All Charlottes may be queens of love, and, being queens, must *prevail* over the hearts of men. *Charlotte Corday* will be remembered as one not unworthy of so brave a name. But

> "My *Charlotte* conquers with a smile,
> And reigneth *queen of love*!"

In the home-circle and among her companions, Charlotte lays aside her queenship and becomes gentle *Lottie*. *Caroline* is the feminine of Charles, in another form, and of course has the same meaning as Charlotte. It is another noble and queenly name, and has been borne by many a noble woman. Caroline assumes the familiarised or pet forms of *Carrie*, *Callie*, *Cave*, and *Cal*.

> "Oh! a thing of earth, but half divine,
> Is she, my fair young *Caroline*!"

CLARA, *clear* or bright, is from the Latin. It is a very pretty name, and is immortalised in one of the best of Scott's novels, "St. Ronan's Well." *Clarissa* is from the same root, as is *Claribel*, *bright* and *beautiful*.

> "Diamonds bright shall *Clara* wear,
> Woven 'mid her shining hair."

DANIEL, *a judge*, is from the Hebrew.

DAVID, also from the Hebrew, signifies, as I have already said, *well-beloved*.

DEBORAH, signifying *a bee*, is another good but rather homely name from the Hebrew stock.

EARINE, *vernal*, a name immortalised by Ben Jonson, should certainly be revived.

EDWARD is a *truth-keeper*. The name is of Saxon derivation, and is surrounded by rich historical associations. Its French form is *Edouard*.

EDWIN, *happy winner* (bonum nomen bonum omen), is also from the Saxon.

ELEANOR (French, *Eleanore*) is of Saxon derivation, and signifies *all-fruitful*.

> "*Eleanore*,
> A name for angels to murmur o'er!"

EMMA, *tender, affectionate* (literally, *one who nurses, cares for, clothes over another*), is of German origin. Who could desire his mother, his sister, or his beloved to bear a sweeter or a better name? Under the form of *Imma* it was honoured by Charlemagne's fair daughter, whose love-history, in connexion with Eginhard, her father's secretary, forms one of the prettiest episodes in the chronicles of the time. *Emmeline* is simply a diminutive of Emma.

ERASMUS is from the Greek, and signifies *worthy to be loved.*

EUNEST, *earnest*, is derived from the German. Its feminine form is *Ernestine.*

EUGENE, *nobly descended*, is of Greek derivation. In the feminine, in which it ought to be oftener used, we give it the form of *Eugenia.*

EVERARD is a good name from the German stock, and has the meaning of *well-reported.*

FRANCIS is of German origin, and signifies *frank* and *free.* It is one of our finest names. *Frances*, of which *Fanny* is the familiarised or pet form, is the feminine.

FREDERICK, *rich peace*, is another German name of historical importance. Frederick, the grenadier king of Prussia, was not particularly well named.

GEORGE, *a farmer*, is from the Greek. It should be a very common name in agricultural communities. It has been borne by kings, and by one at least, as great as any king—WASHINGTON. *Georgia, Georgette*, and *Georgianna*, are its feminine forms.

GERTRUDE is from the German, and, according to the etymology usually given, signifies *all-truth*; but Jung-Stulling, in his Pneumatology, gives it a very different meaning. Speaking of the Druids, he says: 'Into this mysterious, spiritual order, old women were also received, who by this means attained to considerable rank, and became priestesses. Such individuals then received the title of *Hara*—Druidess. Both these names were, at that time, honourable appellations; they are now the most disgraceful terms of reproach. The name of *Gertrude*, or *Gertrudis*, is probably also derived from this source, and ought reasonably to be disused, for it has the same meaning as the word *hasa* or *hexe, a witch.*' Well, this may be true, for Gertrudes *are* generally very *bewitching.*

GRACE, *favour*, is from the Latin. Well may it be a favourite name. Commend to me the *Graces*

> "You may toast your charming *Sue*,
> Praise your *Mary's* eyes of blue,
> Choose whatever name you will
> Your fancy or your verse to fill.
> In *my* line no name has place
> But the *sweetest one of Grace.*"

HELEN (Latin, *Helena*, French, *Helene*) is of Greek origin. The true signification of it seems to be one of those *vexatæ questiones* which abound in etymological discussions. According to one it has the meaning of *alluring*; another makes it signify *a taker*, or *one who seizes*; while a third defines it as *one who pities.* I am inclined to endorse the last. Many a poor unfortunate lover has found Helen *alluring*, and has finally been taken, *seized*, conquered by the *prestige* of her bright eyes and sweet voice. Happy is he who finds her *one who pities*, for pity is akin to *love.* *Ellen* is only a different form of the same name. It is often contracted to *Nellie* and *Nell*, and is a fine name in all its forms.

HENRY, *rich lord*, is of German derivation. It has been borne by many kings, noblemen, and patriots. In its familiarised form it becomes *Harry.* Its feminisations are *Henrietta, Henrica*, and *Harriet*, who, since they cannot be rich lords, should be *rich ladies.*

ISABEL (French, *Isabelle*, Spanish, *Isabella*) signifies *olive-complexioned*, or *brown.* This is just the name for a "bonny brunette;" for such a one as the poet praises when he sings,

> "Give me the *brown* girl, with a *bright sunny glow!*"

There is a silvery, bell-like music in the name, which is exceedingly attractive, and which has made it a favourite with the poets. One says,

> "Full many maidens' names there be
> Sweet to thee,
> Fair to me,
> And beautiful exceedingly;
> But none on my ear so sweet doth swell
> As the name of mine own *Isabel!*"

Mary Howitt, in her Flower Comparisons, has the following melodious lines:—

> "Now for mad-cap *Isabel:*
> What shall suit her, pr'ythee tell!
> ISABEL is *brown* and wild;
> Will be evermore a child!
> Is all laughter, all vagary,
> Has the spirit of a fairy."

JAMES (in the French, *Jacques*, Spanish, *Jayme*, Italian, *Giacomo*, Scotch, *Jamie*), comes from the old Hebrew stock, and is generally supposed to be the same as *Jacob*, and to signify *a supplanter.*

JOHN is generally supposed to be from the Hebrew, and to signify *gracious*; but Talbot traces it, as he thinks, to the Latin *juvenis, a young man.* In the Italian it is *Giovanni*; in the Spanish, *Juan*; and in the French, *Jean.* It has been borne by some of the greatest men that the world has ever produced. It was the name of Milton, Hampden, Locke, Dryden, Molière and Boccaccio. Shakspeare bestowed upon it one of his best characters, the fat knight who was wont to subscribe himself, "Jack Falstaff with my familiars; John with my brothers and sisters; and *Sir John* with the rest of Europe." The name is a great favourite with the very respectable and somewhat numerous family of Smiths; and probably the most noted of all the Johns, ancient or modern, is *John Smith.* The commonness of the name is the only valid objection to it. It has ceased to be sufficiently distinctive. The English are prone to convert John into *Jack*, and the Scotch into *Jock*, neither of which is either elegant or genteel.

JUDITH, from the Hebrew, signifies *praising.*

JULIUS, *soft-haired*, is of Latin origin. *Julia, Julietta, Juliet*, and *Julianna* are feminisations of Juhus, and should wear on their queenly heads "soft and silken tresses." *Julia* needs no eulogist, since she is one whom the poets have immortalised. *Julietta*, or *Juliet*, is a diminutive of Julia, "but has," as Talbot remarks, "apparently united itself with another name, *Jolicte*, the diminutive of *jolie, pretty.*"

LETITIA, *joy*, is one of the happiest as well as the sweetest of names. The woman we love should be "a joy for ever" to our hearts. It is a good old Roman name.

LEONARD is from the German, and signifies *lion-like.*

MABEL is probably from *ma bella, my fair*, though some think it a contraction of *amabilis, lovely* or *amiable.* The fair ones who bear it have no reason to complain of either derivation.

MADELINE (Syriac, *Magdalene*). *Magnificent*, is a noble name, and a favourite with the poets. It often occurs in the French form of *Madeleine*

> "Thou art not steep'd in golden languors,
> No tranced summer calm is thine,
> Ever-varying *Madeline!*"

MARGARET, *a pearl* is from the Latin *Margarita.* Another, and, if possible, a more beautiful signification has curiously enough attached itself to this name. The German word *magd, a maid*, was anciently written *magete* and *maghet*, which words were easily confused with *Madge* and *Maggie*, and thus with *Margaret.* Daisies were also called *maghets*, maids or *margarets*, whence we have the French *marguerites*, daisies. Margaret, then, may be a *pearl* or a *daisy*, as she chooseth; or she may, if she will, combine the beauty and purity of both, in her life and character, and thus prove herself worthy of her doubly significant name. But maidens are something *more* than pearls or daisies, and well may the poet ask,

> "Where may the bright flower be met
> That can match with *Margaret?*"

MARTHA is a pleasant name from the Hebrew, but is is unfortunate in its signification, meaning *bitterness!*

MARY. This sweetest of all female names is from the Hebrew, and has the meaning of *exalted*; a truly appropriate signification. It is a famous name, both in sacred and in profane history. In all ages it has literally been *exalted.* From Mary the mother of JESUS to Mary the mother of WASHINGTON, the glory has not departed from the name. It has been linked with titles and power, with crowns and coronets, and adorned by goodness and beauty. It has ever been a favourite with the poets. Byron, as he assures us, felt an absolute passion for it. It is inwoven with some of his sweetest verses. It is still the theme of bards and bardlings innumerable.

"The very music of the name has gone
Into our being."

In the French, Mary becomes *Marie*. *Maria* is another form of it.

"Is thy name *Mary*, maiden fair?
Such should, methinks, its music be.
The sweetest name that mortals bear
Is but befitting thee!"

MATILDA is from the Greek, and signifies *noble* or *stately*.

MIRANDA, *admired*, is from the Latin. Prince Ferdinand in "The Tempest" exclaims,

"Admired *Miranda!* indeed the top of admiration."

NANCY, it is believed, may be traced to the same source as *Anna* and *Hannah*, which have the same signification, *kind* or *gracious*.

OLIVER is from the Latin word *oliva*, an *olive-tree*, and is thus significant of *peace*. *Olivia* and *Olive* are its feminine forms.

PHŒBE is a bright and beautiful name; one full of the happiest significance. Phœbe, *light of life!* What more or better can a lover or husband desire? Those who have read Hawthorne's "House of the Seven Gables," (and who has not?) will here recall to their minds the sweet-tempered, cheerful, and warm-hearted country-maiden who brought the sunshine and the fragrance of the fields with her to enliven and purify the dark, damp, and mouldy old mansion of the Pyncheons. She was rightly named *Phœbe*.

PHILLMON is *one who kisses*. It is, I think of Greek derivation.

PHILIP, a *lover of horses*, is from the Greek.

ROSE (Latin, *Rosa*), *a rose*, is sweet enough for the name of a fairy or an angel. There is a veritable fragrance in it. It calls up visions of garden-arbours and embowering shrubs and vines. It is poetical as well as euphonic.

"Where the Juniata flows,
And the forest shades repose,
Dwelleth she, my lovely *Rose*,
In rural grace."

Rosabel (Italian, *rosa bella*) is from the same Latin root, but comes to us through the Italian. It signifies *fair* or *beautiful rose*. *Rosalie*, (French, *rose et lis*) *rose and lily*, combines the fragrance and beauty of two lovely flowers. *Rosalind*. It is enough to say of this name that it is one of Shakspeare's immortalized appellations. The termination, *lind*, may have been coined by him simply for the sake of euphony, or it may have been derived from the Spanish *linda*, *neat* or *elegant* (*rosa linda*, *elegant rose.*)

"From the east to western Ind
No jewel is like *Rosalind*"

Rosamond is one of the prettiest names of the rose-family. The derivation of the last part of the word is somewhat doubtful. Perhaps it is from *mundi* (French, *monde*), and perhaps from the German *mund*, the *mouth*, so that Rosamond may have originally been *Rosen-mund*, or *rosy-mouth*; but Talbot thinks that it is the from Spanish *rosa montes*, *rose of the mountain*,—that is, the *peony*. *Rosina*, the Swedish form of the same name, is the sweetest and most euphonious of them all.

RICHARD is from the Saxon, and signifies *rich-hearted*, or, according to another etymology, *richly honoured*.

ROBERT, otherwise *Rupert* or *Ruprecht*, appears to come from the old Anglo-Saxon words *ro* or *ru*, red, and *bart*, beard, *red beard*, so says Talbot.

ROMEO, *a pilgrim*, is from the Italian.

RUTH is from the Hebrew, and signifies *a trembler*. It is a pretty name, but is seldom used.

SARAH, *a princess*, is from the Hebrew. In poetry and familiar address it takes the form of *Sally* or *Sallie*, and is found in many a love-song and ballad.

SOPHIA, *wisdom*, is from the Greek.

"Wilt thou be a nun, *Sophie*?
Nothing but a nun?"

SUSAN is of Hebrew origin, and has the meaning of a *lily*. In its familiarised or pet form it becomes *Sue*. It is a very pretty name, and is immortalised in Gay's well known ballad, in which its signification is very happily introduced into the closing line:

"'Adieu,' she cried, and waved her *lily* hand."

THEODORE is a fine euphonic name from the Greek, and signifies *gift of God*. Its feminine form is *Theodora*:

"Since we knew her for an angel
Bearing meek the common load,
Let us call her *Theodora*,
Gift of God!"

VIOLA, a *violet*, is derived from the Latin. For a pure, modest, bashful maiden, what name could be fitter?

WALTER is of German origin, and signifies a *woodman*.

WILLIAM is of German derivation, and signifies *defender of many*. "This name," says Verstegan, the distinguished French antiquary, "was not given anciently to children, but was a title of dignity imposed upon men from a regard to merit. When a German had killed a Roman, the golden helmet of the Roman was placed on his head, and the soldier was honoured with the title of *Gild-helm*, or golden helmet, and was hailed as a *defender*." With the French the title was *Guild-haume*, since *Guillaume*. The German form of William is now *Wilhelm*. *Wilhelmine* and *Willamette* are feminine forms of the name. Those who bear these latter, since they cannot be expected to occupy the post of *defenders*, may well take, as the signification of their names, *worthy to be defended*.

"What's in a name?"

CROSS PURPOSES COMFORTABLY COMPROMISED.

THE *American Commercial Journal* contained one day a couple of advertisements, each for a very different purpose, indeed, from that of the other, to which was mutually appended a direction for the individual who should respond to them, to address, "X. Y Z." through the post-office. It might, and might not, have been a very singular coincidence, that the epistles were directed thus to be addressed in the same way; while it certainly could not have been considered strange or inexplicable if a very grievous or ludicrous mistake had been committed in consequence.

Jefferson Brown had inserted one of the advertisements in the *Commercial Journal*, and duly paid for it. So far so good. He had thoughtlessly advertised for a "partner with a capital of at least 10,000 dollars." Mr. Brown, be it known to the reader, was a man doing a somewhat extensive business in the hides and skins line, and as his trade expanded and his cares multiplied correspondingly, he deemed it no less a matter of prudence than of policy that the title of his business should become more dignified by an addition to the firm. Hence his advertisement.

The other advertisement in question was for a wife. The required characteristics—physical, moral, and intellectual—were described as much at large as an ordinary newspaper advertisement would permit, while it was insisted upon as a *sine qua non*, that the lady should be possessed of a comfortable fortune of her own.

Mr. Jefferson Brown dropped in at the post-office one afternoon on his way to his boarding-house to tea.—Mr. Brown was yet a bachelor—and inquired of the clerk if there was a letter there directed to "X. Y Z." The attentive tide-waiter took from a pigeon-hole quite a number of missives, and began running over the superscriptions with great rapidity.

"'X. Y. Z,' sir, did you say?" inquired he, suddenly stopping in his search over the back of a particular letter.

"That's the direction," triumphantly replied Mr. J. Brown, his eyes manifestly brightening.

Taking the proffered document in his hand, he threw down the postage on the frame, and hurriedly left the office. Not until he reached his own chamber did he attempt to get at the contents of the epistle, desirous of there taking a comprehensive and uninterrupted view of the whole subject.

No sooner had he broken the seal and glanced over the page, than his suspicion was aroused that the hand was that of a female. To be sure the chirography was decidedly of a masculine cast, yet there appeared to be a running cast of smoothness of a woman's pen through every word that found its way to his eye.

"M. S. would be glad to have an interview with 'X Y Z' this evening, at 127,—— street. Inquire for Smith. Oct 11"

"It can't be a woman's hand!" exclaimed Mr Brown, again and again running his eye over the manuscript. "And yet it does look a good deal like it, too. I'm fairly beat this time. I will be punctual to the engagement this evening. 'Inquire for Smith,' eh? Not so very uncommon a name as that I shall be afraid of forgetting it, though. Let me see. How is it going to sound? Brown and Smith. At any rate I'll manage not to miss the chance of being on the ground in full season. And not a word

said about the amount of money either. I rather like this now. It looks wonderfully like business to me! 'Inquire for Smith!' Well, I'll be sure to do so!" and in this style he suffered his truant tongue to run on unchanged.

At a convenient, seasonable hour after tea, he emerged from his quiet place of residence, attired in a style that at once betrayed excessive care and particularity. Walking rapidly up the street, he soon reached the thoroughfare, and, for a time, was lost in the crowding mass of human beings.

By the bye, however, he returned again, and was to be seen ringing the bell at the door, No. 127, —— street.

"Is Smith in?" inquired he of a servant girl who answered his ringing summons.

"Yes, sir." was the maid's response; "will you walk this way, sir?"

Mr. Brown, with a palpitating heart, followed her into the snug little hall, and was ushered into a much snugger and very cozy-looking little parlour. Seating himself on the sofa that stretched its proportions out so invitingly to him, he awaited the appearance of the mysterious "M S," with whom he had formed an acquaintance only through the very mysterious note which he had received but a few hours before.

He had kept his position in quiet no longer than three minutes when he heard the door open again, and looked up. Never seemed his dark and handsome eyes so full of interest before.

A lady entered the room

Mr Brown was evidently to much pleased to be surprised simply, and for the moment, forgot the object for which he had come there

The lady was neither short nor tall, but quite enough of both, to find no difficulty in creating the desired impression She was by no means thin, and her neck looked whiter and cleaner than even marble itself She was attired in the very simplest, and for that reason the very sweetest dress, and walked across the carpet with all the grace imaginable. As soon as her expressive eyes caught sight of Mr. Brown, sitting there so cosily on the sofa, she attested her delight by approaching him as near as propriety admitted, and seated herself not far from him.

Mr. Jefferson Brown was stumped. He was a stranger to the charms of beautiful women, and felt an all-overish sensation, of which language can give no deserved description

"Am I to see Mr —Mr Smith?" he at length stammered out.

"*Mrs* Smith," responded the lady in a charming silvery voice, that played the very deuce with the heart strings of Mr Brown, smoothing down her hair with both of her fair hands as she spoke.

"But I thought it was Mr. Smith," exclaimed he, though half the effect of his surprise was lost in his fervent admiration of the lovely person who sat by his side

"No, sir, I told you to call for Mrs. Smith!

"But ——

"You received my note, I trust, sir?" interrogated she, with an expression of the most charming *naiveté*

"Your note!" exclaimed he, greatly surprised, yet still more captivated with his fair companion.

"Yes"

"But I advertised for a *partner* ——"

"I know."

"With ten thousand dollars"

"Yes, yes—I know."

"And advertised to direct a reply to 'X Y Z'"

The lady was by this time just as much smitten with Mr. Jefferson Brown as he was with her.

"I hope we may make an arrangement that shall be mutually satisfactory," continued she

"But the dickens, madam!" exclaimed Mr. Brown, in a measure recovering from his surprise, and coming to his senses again.

"Sir!" said the lady, in a tone that would have softened the heart of the hardest bachelor that lived.

"I advertised for a partner, madam."

"So I understood it, sir," said she.

"No, no—I—I"

"Sir?" a second time, inquired Mrs. Smith.

Mr. Brown was fast losing his senses. Her eyes grew perceptibly dark and more handsome than ever, while the richest glow in the world suffused her cheeks.

"It was a fair partner, madam, with ten thousand dollars."

"I know it," replied his companion, her face lightened with a radiance that was both bewitching and bedazzling. The money is ——"

"A *business* partner!" exclaimed the stricken Mr Brown, grasping eagerly hold of the idea that thus accidentally offered itself to him.

"Yes, I consented to this business way of doing the thing," responded she, her countenance losing a very trifle of its archness.

"No, no, madam; you fail to understand me."

"What am I to understand, then, sir? asked she, her expression growing suddenly more blank.

"I mean a partner in the business of *hides?*" cried Mr. Brown, blushing quite to the roots of his hair while he said it.

"But, sir—but—"

"Madam?" demanded he.

"Have I been deceived?"

"This was what I advertised for," said Brown, "and nothing else, madam."

Forthwith she drew a slip of paper from her bosom and handed it to him

"I answered that advertisment," said she.

Mr. Brown took it trembling from her dainty little hand, and read it with swimming eyes.

It ran as follows —

"The subscriber, who is a single gentleman of not more than forty years, takes this method of proposing marriage with any lady of not more than forty-five, provided, after meeting, both parties are mutually satisfied with each other. He is possessed of a considerable fortune, has had good educational advantages, and flatters himself that he is capable of making his wife happy. It will be preferred that the lady have ten thousand dollars, a good education, a refined taste, and polished manners. Should this advertisment meet the eye of any one disposed to reply to the same, an interview will be had at the earliest notice proposed. Address 'X Y Z.'"

"Mr. Brown read on in amazement until he came to the last sentence This was the key that unlocked the whole mystery.

"There is some mistake here, madam?" he began to say.

"I see there is—there must be," she replied.

"This is my advertisment," said he, handing it to her

"She drew still nearer to him on the sofa, and took it from his hands. She read it carefully through, still keeping her seat near him, and when at last she finished the reading, her face was suffused with crimson

"Really, madam," exclaimed Mr. Brown, mustering into instant service all the courage he had, "this is very embarrassing"

"It might have been more so," naively suggested the lady

"Mr Brown was already smitten with her, and now he recollected the fact that she was worth at least ten thousand dollars

"Perhaps she will make the best partner, after all," whispered some voice to him

"Madam," said he—with this word he laid his hand next to hers on the sofa—"Madam"

Their eyes instantly met. The lady's were liquid and melting They were enough to melt the heart of any old bachelor that ever lived

"As I advertised for a partner"—here he took her soft hand into his own, she making not the slightest show of resistance, "and this unforseen occurrence has taken place, I am sure I can do no less than offer you a partnership, though of a different character from the one I had thought. I am not yet forty, and am worth more than twenty thousand dollars. I was never married, and never before thought seriously on the subject. But my views are changed since seeing you"—and so went on in a style and strain of gallantry which would be very ungallant for us to divulge

The upshot of all was, that the same newspaper which contained the two totally different advertisements, soon contained the following announcement —

"Married, on Monday, the 24th instant, by the Rev. Mr. Hudston, Mr. Jefferson Brown, to Mrs. Mary Smith."

Every story has its moral—so has this.—"Always be careful, if you advertise for a wife, never to request replies directed in any such vague and dangerous ways as 'X. Y. Z.' or 'A. B. C.' The chances are, the reply will get into the wrong hands."

Life in the Arctic Sea.—Icicles hung round the deck, peaches became a mass of calcedone, butter was cut with a chisel, beef with pickaxe and crowbar. Walking out, you are conscious of a bracing atmosphere. Whiskers and face are glazed with ice. Put out your tongue, and it is frozen to your chin. Walking on, you get into a fine glow, often into a perspiration; but if the wind rises, then you have a sensation of pricking pins. Extremes meet. Extremes of heat and cold are alike. In our new life cold gave a positive character to our existence almost impossible to describe. We protected ourselves from metals with fur and buckskin. The crawl, the chill, which is with us at home the indication of varying temperature, was there unknown. In fact, it was only by the direct attack of cold that we were aware of it, and officers and men agreed that we had suffered more at home from cold. With such an inveterate enemy, however, we could not hope to escape scars, but we all returned alive. On one occasion, a poor fellow, recovering from inflammation of the lungs, being asked how his frost-bitten ear came on, produced it in a piece of paper, and said, "Doctor, I didn't want to trouble you, but it dropped off last night."—*Dr. Kane's Lectures on the Arctic Expedition.*

A BALL AT GRAHAM'S TOWN.

We enter a large, long room in the hotel indicated, at about nine o'clock. The company are nearly all assembled; for when they do get a ball at the Cape, and especially at Graham's Town, they take time by the forelock, being considerably in doubt when they may chance to see another. This one is a very grand affair, for it is a "fancy" and full-dress ball. The characters are not very grand, but they are not bad in their way. Here is a Kaffir chief, at least the costume of one. Observe the cloak, or kaross, of leopard's skin, and the string of leopard's tails hanging down in front; see the beads round his head, the feathers projecting therefrom, regard the war assagais he holds in his hands, very fearful looking affairs, and the knobbed stick, or know-keerie, wherewith he is supposed to crack his enemies' skulls. You will observe that his costume is decidedly scanty, but he has contrived, with great ingenuity, to make it decent, a point in which he differs remarkably from the individual he represents. Here comes an old Boer, in blue linen trousers, rolled up at the ankles, veltschoens, (or grass-shoes, so called from their being made of soft leather, and adapted only for walking on turf, and not on stony roads,) short brown moleskin jacket, below which appears a larger *de quoi s'asseoir*, than any fat old major in a shell jacket could display, and a hat made of rushes, with a brim of the true "donkey race" width. Next is a very slender youth, with the lightest and most sickly of moustaches struggling into existence on his upper lip, a green braided jacket, with a Hussar ditto of black sheep-skin dangling over his shoulder, a crimson sash, and—but this gentleman is not in fancy costume, he is one of his country's gallant defenders, an officer of the Cape Mounted Rifles We beg his pardon for our mistake What thing is that whirling round in a waltz, now black and now white? It is a gentleman representing Time his "frontispiece" is a clock But this is tiresome, let us turn to the ladies Alas! they don't look so brilliant in complexion as in Old England The sun is a terrible destroyer of bloom on a maiden's cheek, still there are some pretty damsels among them, and not so badly "got up" for the land of the desert. We ask one to dance, and she accepts Now comes the puzzle What the deuce is a man to talk about in a Cape ball-room? There is neither opera nor theatre, nor parks, nor concerts, nor court, nor news, even the weather, that eternal refuge for the destitute of small-talk, won't do in a country where it is always fine We wish we could think of something entertaining. We begin to puz some of the company, (dangerous, by the way, as you may chance to select your partner's brother, or husband, or papa for your shafts of ridicule,) but we find the young lady has no taste for the humorous. We talk about the beauty of the scene, the shortest monosyllable issues from the fair one's lips, and all is silent again We begin to suspect we are very stupid, and feel proportionately uncomfortable. A bright idea strikes us! "Do you live in the town or in the country?" "In the country." We hesitate a moment, and then, making a plunge, we say, "how many head of cattle have you got?" What a start for a ball-room confab with a pretty girl! No matter, it was, at all events, successful

> "And success
> Is much in all this, but especially in youth."

No sooner had that magic question passed our lips than the fair one's lips were opened also, and forth poured a torrent of information touching cows and sheep, the breeding and rearing them, the milking and shearing thereof, and such a quantity of practical farming observations, that we half expected she would offer to "deal" with us if we were disposed to make an investment in the butter or wool line. * * * Until I went to a ball at the Cape I never knew what thorough enjoyment of dancing was The Africanders, blessings on their simple souls, don't walk through a quadrille, or glide through a polka, but they pound away with feet and arms, and the "orient humour," oozing from each pore of face, and hands, and neck, bears witness to the energy of their movements. And then the supper! Your partner does not take a piece of truffle, or a cream, or a tart, and sip a thimble-spoonful of negus, but she demolishes all the chicken and ham you give her, and drinks every drop of the three bumpers of champagne you pour out for her, and looks all the happier for both As for yourself, you attack everything you can lay your hands on, and, after the ladies have retired, you find yourself actually indulging in that highly dangerous and deleterious practice of "hurrahing" in response to the toast of "The Ladies," which that fat man with a red face in white waistcoat, having an uncomfortable tendency to work its way up to his chin, has just proposed You find, too, that you come down again to that same supper-room after the fair ones have begun to depart for their homes, you find that you prefer brandy and water to doubtful champagne and spurious claret, you find that you have a cigar in your pocket, and you smoke it, you find that you can sing capitally—in a chorus, and lastly, if you do find [illegible] a lucky fellow.—*The Cape and the Kaffirs*

SONGS FOR THE PEOPLE.

ORIGINAL AND SELECTED.

No. X.—THE PHILOSOPHY OF SPORT.

BY CHARLES MACKAY.

Bear lightly on their foreheads, Time!
Strew roses on their way,
The young in heart, however old,
That prize the present day,
And, wiser than the pompous proud,
Are wise enough to play.

I love to see a man forget
His blood is growing cold,
And leap, or gather flowers,
Oblivious of his gold,
And mix with children in their sport,
Nor think that he is old.

I love to see the man of care
Take pleasure in a toy,
I love to see him row or ride,
And tread the grass with joy;
Or hunt the flying cricket-ball,
As lusty as a boy.

All sports that spare the humblest pain,
That neither maim nor kill—
That lead us to the quiet field,
Or to the wholesome hill—
Are duties which the pure of heart
Religiously fulfil.

Though some may laugh that full-grown men
May frolic in the wood,
Like children let adrift from school—
Nor mine the scornful mood—
I always honour happiness,
And deem it gratitude

And though, perchance, the cricketer,
Or "Chinaman," that flies
His dragon-kite, with boys and girls,
May seem to some unwise—
I see no folly in their play,
But sense that underlies.

The road of life is hard enough,
Bestrewn with slag and thorn,
I would not mock the simplest joy
That made it less forlorn,
But fill its evening path with flowers,
As fresh as those of morn.

'Tis something, when the moon has passed,
To brave the touch of Time,
And say, "Good friend, thou harm'st me not,
My soul is in its prime;
Thou canst not chill my warmth of heart.—
I carol while I climb."

Give us but health and peace of mind,
Whate'er our clime or clan,
We'll take delight in simplest things,
Nor deem that sports unman;
And let the proud, who fly no kites,
Despise us if they can

LITERARY NOTICES.

THE Second Volume of the WORKING MAN'S FRIEND, New Series, containing upwards of 400 pages, richly illustrated, is now ready, price 3s 6d, neatly bound in cloth.

John Cassell's Illustrated Shilling Edition of UNCLE TOM'S CABIN, is now ready, foolscap 8vo, with eight beautiful illustrations. *** Be particular in ordering John Cassell's Illustrated Shilling Edition.

AN EDUCATIONAL WORK FOR EVERY FAMILY.—Now ready, The First Volume of the Popular Educator. Common Edition, with weekly Headings, 3s 6d, Extra Edition, without the weekly Headings, 4s. 6d.—Common Edition, 1d. per Number; Fine Edition, 1½d

THE POPULAR EDUCATOR ALMANACK, price 2d., containing a large amount of Educational Statistics, compiled from the most authentic sources, with brief notices of the various arts, sciences, languages, &c, will be ready for delivery November 1st

CASSELL'S ELEMENTS OF ARITHMETIC, will be issued shortly, price 1s in stiff covers, or 1s 6d cloth, uniform with Cassell's Edition of Euclid, edited by Professor Wallace, A M, of the University of Glasgow, Editor of Cassell's "Euclid."

EXCERPTS.

Post Office Statistics.—The following are the towns in Great Britain which contribute over £10,000 to the revenue of the post-office.—London, £953,663 17s. 10d.; Liverpool, £75,926 6s. 4d.; Manchester, £60,070 13s. 9d.; Dublin, £47,466 18s. 4d.; Glasgow, £43,414 5s. 2d.; Edinburgh, £42,623 2s. 7d.; Birmingham, £28,805 6s. 3d.; Bristol, £25,115 7s. 2d.; Leeds, £16,932 9s. 10d.; Hull, £15,497 16s. 8d.; Newcastle, £14,441 0s. 11d.; Bath, £11,319 4s. 6d.; Sheffield, £10,408 3s. 9d.

An English Woman of Fashion.—Have you any idea, asks Lord Jeffrey, in a letter to a friend, what sort of a thing a truly elegant English woman of fashion is? I suspect not, for it is not to be seen almost out of England, and I do not know very well how to describe it. Great quietness, simplicity, and delicacy of manners, with a certain dignity and self-possession that puts vulgarity out of countenance, and keeps presumption in awe, a singularly sweet, soft, and rather low voice, with remarkable elegance and ease of diction, a perfect taste in wit and manners and conversation, but no loquacity, and rather languid spirits; a sort of indolent disdain of display and accomplishments, an air of great good nature and kindness, with but too often some heartlessness, duplicity, and ambition. These are some of the traits, and such, I think, as would most strike an American. You would think her rather cold and spiritless, but she would predominate over you in the long run, and, indeed, is a very bewitching and dangerous creature, more seductive and graceful than any other in the world, but not better nor happier; and I am speaking even of the very best and most perfect.

The Matrimonial Well.—In the small parish of St. Keyne, Cornwall, there is a famous well, the virtues of which are such that it gives mastery to the husband or wife, just as the one or the other may have first tasted its waters. Southey made this supposition the groundwork of an amusing tale, in verse, commencing—

"A well there is, in the west countrie,
And a clearer one was never seen,
There is not a wife in the west countrie
But has heard of the well of St. Keyne."

A traveller, sitting by the side of this well, the story goes on to say, met a countryman, with whom he had a long chat about its tradition—

"'You drank of the water I warrant betimes,'
He to the countryman said;
But the countryman smiled as the stranger spoke,
And sheepishly shook his head

'I hastened as soon as the wedding was o'er,
And left my good wife in the porch;
But little she had been wiser than I,
For she took a bottle to church!'"

Jacobite Toast.—The following ingenious verse is taken from Byrom's "Miscellaneous Poems:"

"God bless the King, I mean the Faith's Defender;
God bless—no harm in blessing—the Pretender;
Who that Pretender is, and who is King,
God bless us all—that's quite another thing."

Keep Moving.—Cobbett said he despised a man who was contented with his condition. We do not like this bold expression, but we hold that a man should always be seeking to make good better, and better best. This is our maxim. We go, therefore, in all cases, for the very largest product, and advise no farmer to be satisfied, while in a fair race, his neighbour is so much as the length of his nose before him. We advise every farmer, in the religious sense of the term, to be content with his condition, and thankful for all the blessings which God gives him; but we advise no man to be satisfied when he can honestly mend his condition, until that condition is amended. In the competitions of life never cross your neighbour's path so as to take the road from him; never throw him down; never run him over if he falls down; have the magnanimity to help him up; but never try to lift yourself up by pulling him down, or try to stand upon his shoulders. give him fair play, and cheer him on if he comes out first, but determine to lack no efforts, if you are beaten, to come out first next time. Don't mind the lazy dogs who are always croaking and crying out, "You'll fall, you'll fall." Those fellows do not get their eyes open in nine days; indeed, they never get their eyes open; but are always lying in the way of other people If you get 60 bushels of corn this year per acre, resolve that next year you will get 80

Views of London.—The difficulty of selecting points of view whence we may form a correct estimate of the grandeur of London is great Views of the bird's eye kind, like those from the Monument, Saint Paul's, and the Duke of York's Column, are by no means satisfactory, save in giving an idea of the vastness of its extent and the quantity of ground it covers. What with the smoke contending with haze and fog, and the great height, by which the streets are narrowed into alleys, the passengers appear to be diminished to the size of ants, and seem merely to crawl along the surface of a spreading brick-red desert of tiles and chimney-pots. Instead of this, or if he will in addition to it, we reccommend the individual who wants to see London under its best and most comprehensive a peet, to wend his way to Waterloo-bridge early, in a clear sunshiny morning, and there, leaning upon the parapet of the third arch from the Middlesex side, he shall behold a sight to which no other city in the world can afford a parallel. The thickly-clustered houses on every side proclaim the vast population, and the numerous towers and steeples, more than fifty of which together with five bridges are visible from this spot, testify to its enormous wealth. One of the best of the suburban views is that from the archway at Highgate. The rural appearance of the road beneath, with the overhanging trees in the shrubbery on the side, and the glad chirp of birds, make a striking contrast with the world of brick and mortar that stretches forward before the eye, evidently fast encroaching upon the few remaining fields in the foreground, and apparently determined to exterminate all that is green and rural. The spires of several modern churches relieve the monotony of the mass of houses which, at this end of London, are destitute even of the charm of antiquity to render them interesting; and, right before the eye, in the distance, St. Paul's rears its well-known colossal form; a misty line beyond denotes the course of the river, and the range of the Surrey hills forms the background.

A True Philanthropist.—The island of Rona is a small and very rocky spot of land, lying between the isle of Skye and the mainland of Applecross, and is well known to mariners for the rugged and dangerous nature of its coast.—There is a famous place of refuge at its north-western extremity called the "Muckle Harbour," of very difficult access, which, however, strange to say, is easier entered at night than during the day. At the extremity of this harbour is the residence of a poor old widow whose lonely cottage is called "the lighthouse," from the fact that she uniformly keeps a lamp burning in her little window at night. By keeping this light and the entrance of the harbour *open*, a strange vessel may enter with the greatest safety. During the silent watches of the night the widow may be seen, like Norna of the Fitful Head, trimming her little lamp with oil, fearful that some frail barque may perish through her neglect; and for this she receives no manner of remuneration—it is pure and unmingled philanthropy. The poor woman's kindness does not rest even here, for she is unhappy until the benumbed and shivering mariner comes ashore to share her little board, and recruit himself at her glowing and cheerful fire, and she can seldom be prevailed upon to accept any reward. She has saved more lives than Davey's belt, and thousands of pounds to the underwriters. This poor creature, in her younger days, witnessed her husband struggling with the waves, and swallowed up by the remorseless billows—

In sight of home and friends that throng'd to save.

This circumstance seems to have promoted her present devoted and solitary life, in which her only enjoyment is doing good.

Marshal Soult as Picture Dealer.—As a warrior and a statesman, says the Paris correspondent of the *Literary Gazette*, we have little to do with him; but as a renowned amateur of pictures he deserves a niche in your columns. Few private individuals possessed a more costly collection than his, and none assuredly ever got one so cheap. When he was in Spain, he remembered the famous

"Good old rule, and simple plan,
That they shall take who have the power,
And they shall keep who can,"

and so, having the power to help himself to pictures in convents, and noblemen's mansions, and galleries and libraries, he helped himself. An old retired officer of my acquaintance, who served under him, tells with high glee many a queer story of the "artful dodges" which the military picture-fancier employed to obtain possession of any valuable canvass. When, for instance, he had reason to believe that the monks of any convent had secreted a Murillo, or an altar-piece by any less renowned painter, he used to cause the father-prior, and sub-prior, and all the functionaries of the establishment, to be taken one by one to a platoon of soldiers, and there threatened with instant death, in the event of their not producing the coveted picture. In some cases he actually had poor fellows shot for declining to give information, or having none to give; but, generally speaking, the measure produced the wished-for effect. Napoleon more than once called him to account for the pictures which he was known to have thus got, but he cunningly contrived to avoid giving up any of real importance. It was not from any love of art that the bluff soldier pillaged in this way, but from love of money. And it was from the same reason that he subsequently kept his collection together—no one being able or willing to give him the price he wanted. The way in which he imposed (unwittingly, no doubt) on King Louis Philippe is well known; he made his Majesty pay £15,000 or £20,000 for an alleged Murillo, which was now worth a third of the money.

Numerous Correspondents will be answered in our next.

THE PEACEMAKER; OR, LOVE AGAINST LAW.

BY MRS. HARRIET BEECHER STOWE, AUTHOR OF "UNCLE TOM'S CABIN."*

How many kinds of beauty there are! How many even in the human form! There is the bloom and motion of childhood, the freshness and ripe perfection of youth, the dignity of manhood, the softness of woman: all different, yet each in its kind perfect.

But there is none so peculiar, none that bears more the image of the heavenly, than the beauty of Christian old age. It is like the loveliness of those calm autumn days, when the heats of summer are past, when the harvest is gathered into the garner, and the sun shines over the placid fields and fading woods which stand waiting for their last change. It is a beauty more strictly moral, more belonging to the soul, than that of any other period of life. Poetic fiction always paints the old man as a Christian; nor is there any period where the virtues of Christianity seem to find a more harmonious development. The aged man, who has outlived the hurry of passion—who has withstood the urgency of temptation—who has concentrated the religious impulses of youth into habits of obedience and love—who, having served his generation by the will of God, leans in helplessness on Him whom once he served, is, perhaps, one of the most faultless representations of the beauty of holiness that this world affords.

Thoughts something like these arose in my mind as I slowly turned my footsteps from the graveyard of my native village, where I had been wandering after years of absence. It was a lovely spot—a soft slope of ground close by a little stream, that ran sparkling through the cedars and junipers beyond it, while on the other side arose a green hill, with the white village laid like a necklace of pearls upon its bosom.

There is no feature of the landscape more picturesque and peculiar than that of the graveyard—that "city of the silent," as it is beautifully expressed by the orientals—standing amid the bloom and rejoicing of Nature, its white stones glittering in the sun, a memorial of decay, a link between the living and the dead.

As I moved slowly from mound to mound, and read the inscriptions, which purported that many a money-saving man, and many a busy, anxious housewife, and many a prattling, half-blossomed child, had done with care or mirth, I was struck with a plain slab, bearing the inscription, "*To the memory of Deacon Enos Dudley, who died in his hundredth year.*" My eye was caught by this inscription, for in other years I had well known the person it recorded. At this instant, his mild and venerable form arose before me as it used to rise from the deacon's seat, a straight, close slip just below the pulpit. I recollect his quiet and lowly coming into meeting, precisely ten minutes before the time, every Sunday—his tall form a little stooping—his best suit of butternut-coloured Sunday clothes, with long flaps and wide cuffs, on one of which two pins were always to be seen stuck in with the most reverent precision. When seated, the top of the pew came just to his chin, so that his silvery, placid head rose above it, like the moon above the horizon. His head was one that might have been sketched for a St. John, bald at the top, and around the temples adorned with a soft flow of bright fine hair,

> "That down his shoulders reverently spread,
> As hoary frost with spangles doth attire
> The naked branches of an oak half dead."

He was then of great age, and every line of his patient face seemed to say, "And now, Lord, what wait I for?" Yet still, year after year, was he to be seen in the same place, with the same dutiful punctuality.

The services he offered to his God were all given with the exactness of an ancient Israelite. No words could have persuaded him of the propriety of meditating when the choir was singing, or of sitting down, even through infirmity, before the close of the longest prayer that ever was offered. A mighty contrast was he to his fellow-officer, Deacon Abrams, a tight, little, tripping, well-to-do man, who used to sit beside him, with his hair brushed straight up like a little blaze, his coat buttoned up trig and close, his psalm-book in hand, and his quick gray eyes turned first on one side of the broad aisle, and then on the other, and then up into the gallery, like a man who came to church on business, and felt responsible for everything that was going on in the house.

A great hinderance was the business talent of this good little man to the enjoyments of us youngsters, who, perched along in a row on a low seat in front of the pulpit, attempted occasionally to diversify the long hour of sermon by sundry small exercises of our own, such as making our handkerchiefs into rabbits; or exhibiting, in a sly way, the apples and gingerbread we had brought for a Sunday dinner; or pulling the ears of some discreet meeting-going dog, who now and then would soberly pit-a-pat through the broad aisle. But woe be to us during our contraband sports if we saw Deacon Abrams's sleek head dodging up from behind the top of the deacon's seat. Instantly all the apples, gingerbread, and handkerchiefs vanished, and we all set with our hands folded, looking as demure as if we understood every word of the sermon, and more too.

There was a great contrast between these two deacons in their services and prayers, when, as was often the case, the absence of the pastor devolved on them the burden of conducting the duties of the sanctuary. That God was great and good, and that we all were sinners, were truths that seemed to have melted into the heart of Deacon Enos, so that his very soul and spirit were bowed down with them. With Deacon Abrams it was an *undisputed fact*, which he had settled long ago, and concerning which he felt that there could be no reasonable doubt, and his bustling way of dealing with the matter seemed to say that he knew *that* and a great many things besides.

Deacon Enos was known far and near as a very proverb for peacefulness of demeanour and unbounded charitableness in covering and excusing the faults of others. As long as there was any doubt in a case of alleged evil-doing, Deacon Enos *guessed* "the man did not mean any harm, after all;" and when trangression became too barefaced for this excuse, he always guessed "it was not best to say much about it; nobody could tell what *they* might be left to."

Some incidents in his life will show more clearly these traits. A certain shrewd landholder, by the name of Jones, who was not well reported of in the matter of honesty, sold to Deacon Enos a valuable lot of land, and received the money for it; but, under various pretences, deferred giving the deed. Soon after, he died; and, to the deacon's amazement, the deed was nowhere to be found, while this very lot of land was left by will to one of his daughters.

The deacon said, "It was very extraordinary: he always knew that Seth Jones was considerably sharp about money, but he did not think he would do such a right up-and-down

* We are happy to announce that other tales by this talented lady will appear in the WORKING MAN'S FRIEND.

[illegible] thing." So the old man repaired to Squire Abel, to [illegible] his case, and see if there was any redress. "I kinder hate to tell [illegible] it," said he; "[illegible] Abel, you know Mr Jones was—was—*what he was*, you know, he is dead and gone!" This was the nearest approach the old gentleman could make to specifying a heavy charge against the dead. On being told that the case admitted of no redress, Deacon Enos comforted himself with half soliloquising, "Well, at any rate, the land has gone to those two girls, poor lone creatures—I hope it will do them some good. There is Silence—we won't say much about her; but Sukey is a nice, pretty girl." And so the old man departed, leaving it as his opinion that, since the matter could not be mended, it was just as well not to say anything about it.

Now the two girls here mentioned, Silence and Sukey, were the eldest and the youngest of a numerous family, the offspring of three wives of Seth Jones, of whom these two were the sole survivors. The elder, Silence, was a tall, strong, black-eyed, hard-featured girl, verging upon forty, with a good, loud, resolute voice, and what the Irishman would call "a dacent notion of using it." Why she was called *Silence* was a standing problem to the neighbourhood, for she had more faculty and inclination for making a noise than any person in the whole township. Miss Silence was one of those persons who have no disposition to yield any of their own rights. She marched up to all controverted matters, faced down all opposition, held her way lustily and with good courage, making men, women, and children turn out for her, as they would for a mail-stage. So evident was her innate determination to be free and independent, that, though she was the daughter of a rich man, and well portioned, only one swain was ever heard of who ventured to solicit her hand in marriage, and he was sent off with the assurance that, if he ever showed his face about the house again, she would set the dogs on him.

But Susan Jones was as different from her sister as the little graceful convolvulus from the great rough stick that supports it. At the time of which we speak she was just eighteen, a modest, slender, blushing girl, as timid and shrinking as her sister was bold and hardy. Indeed, the education of poor Susan had cost Miss Silence much painstaking and trouble, and, after all, she said "the girl would make a fool of herself; she never could teach her to be up and down with people as she was."

When the report came to Miss Silence's ears that Deacon Enos considered himself as aggrieved by her father's will, she held forth upon the subject with great strength of courage and of lungs. "Deacon Enos might be in better business than in trying to cheat orphans out of their rights—she hoped he would go to law about it, and see what good he would get by it—a pretty church member and deacon, to be sure! getting up such a story about her poor father, dead and gone!"

"But Silence," said Susan, "Deacon Enos, is a good man: I do not think he means to injure any one: there must be some mistake about it."

"Susan, you are a little fool, as I have always told you," replied Silence; "you would be cheated out of your eye-teeth if you had not me to take care of you."

But subsequent events brought the affairs of these two damsels in closer connexion with those of Deacon Enos, as we shall proceed to show.

It happened that the next-door neighbour of Deacon Enos was a certain old farmer, whose crabbedness of demeanour had procured for him the not inappropriate name of *Uncle Jaw*. He was a tall and hard-favoured man, with an expression of countenance much resembling a north-east rain storm—a drizzling, settled, sulkiness, that seemed to defy all prospect of clearing off, and to take comfort in its own disagreeableness. His voice seemed to have taken lessons of his face, in such admirable keeping was its sawing, deliberate growl with the pleasing physiognomy before indicated. By nature he was endowed with one of those active, acute, hair-splitting minds, which can raise forty questions for dispute on any point of the compass; and had he been an educated man, he might have proved as clever a metaphysician as ever threw dust into the eyes of succeeding generations. But, being deprived of these advantages, he nevertheless exerted himself to quite as useful a purpose in puzzling and mystifying whomsoever came in his way. But his activity particularly excercised itself in the line of the law, as it was his theme, and drink, and daily meditation, either to find something to go to law about or to go to law about something he had found. There will always some question about an old rail fence that used to run "*a leetle* more to the left hand;" or that was built up "a *leetle* more to the right hand," and so cut off a strip of his "*medder land*," or else there was some outrage of Peter Somebody's turkeys, getting into his mowing, or Squire Moses's geese were to be shut up in the town pound; or something equally important kept him busy from year's end to year's end. Now, as a matter of private amusement, this might have answered very well; but then Uncle Jaw was not satisfied to fight his own battles, but must needs go from house to house, narrating the whole length and breadth of the case, with all the says he's, and says I's, and I tell'd him, and he tell'd me, which do either accompany or flow therefrom. Moreover, he had such a marvellous faculty of finding out matters to quarrel about, and of letting every one else know where they, too, could muster a quarrel, that he generally succeeded in keeping the whole neighbourhood by the ears.

But good Deacon Enos assumed the office of peacemaker for the village, which Uncle Jaw's efficiency rendered no sinecure. The deacon always followed the steps of Uncle Jaw, smoothing, hushing up, and putting matters aright, with an assiduity that was truly wonderful.

Uncle Jaw himself had a great respect for the good man, and, in common with all the neighbourhood, sought unto him for counsel; though, like most seekers of advice, he appropriated only so much as seemed good in his own eyes.

Still he took a kind of pleasure in dropping in of an evening to Deacon Enos's fire, to recount the various matters which he had taken or was to take in hand; at one time to narrate "how he had been over the mill-dam, telling old Granny Clark that she should get the law of Seth Scran about that pasture lot;" or else "how he had told Ziah Bacon's widow that she had a right to shut up Bill Scranton's pig every time she caught him in front of her house."

But the grand "matter of matters," and the one that took up the most of Uncle Jaw's spare time, lay in a dispute between him and Squire Jones, the father of Susan and Silence; for it so happened that his lands and those of Uncle Jaw were contiguous. Now the matter of dispute was on this wise: on Squire Jones's land there was a mill, which mill Uncle Jaw averred was "always a flooding his medder land." As Uncle Jaw's "medder land" was by nature half bog and bulrushes, and therefore liable to be found in a wet condition, there was always a happy obscurity where the water came from, and whether there was at any time more there than belonged to his share. So, when all other subject matters of dispute failed, Uncle Jaw recreated himself with getting up a lawsuit about his "medder land," and one of these cases was in pendency when, by the death of the squire, the estate was left to Susan and Silence, his daughters. When, therefore, the report reached him that Deacon Enos had been cheated out of his dues, Uncle Jaw prepared forthwith to go and compare notes. Therefore, one evening, as Deacon Enos was sitting quietly by the fire, musing and reading, with his big Bible open before him, he heard the premonitory symptoms of a visitation from Uncle Jaw on his door scraper, and soon the man made his appearance. After seating himself directly in front of the fire, with his elbows on his knees, and his hands spread out over the coals, he looked up in Deacon Enos's mild face with his little inquisitive gray eyes, and remarked, by way of opening the subject, "Well, Deacon, old Squire Jones is gone at last. I wonder how much good all his land will do him now?"

"Yes," replied Deacon Enos, "it just shows how all these things are not worth striving after. We brought nothing into the world, and it is certain we can carry nothing out."

"Why, yes," replied Uncle Jaw, "that's all very right, Deacon; but it was strange how that old Squire Jones did hang on to things. Now that mill of his, that was always soaking off water into those medders of mine, I took and tell'd Squire Jones just how it was, pretty nine and twenty times, and yet he would keep it just so; and now he's dead and gone, there is that old gal Silence is full as bad, and makes more noise; and she and Sukey have got the land; but, you see, I mean to work it yet!"

Here Uncle Jaw paused to see whether he had produced any

sympathetic excitement in Deacon Enos; but the old man sat without the least emotion, quietly contemplating the top of the long kitchen shovel. Uncle Jaw fidgeted in his chair, and changed his mode of attack for one more direct. "I heard them tell, Deacon Enos, that the squire served you something of an unhandy sort of trick about that 'ere lot of land."

Still Deacon Enos made no reply; but Uncle Jaw's perseverance was not so to be put off, and he recommenced. "Squire Abel, you see, told me how the matter was, and he said he did not see as it could be mended; but I took and tell'd him, 'Squire Abel,' says I, 'I'd bet pretty nigh 'most anything, if Deacon Enos would tell the matter to me, that I could find a hole for him to creep out at; for,' says I, 'I've seen daylight through more twistical cases than that before now.'"

Still Deacon Enos remained mute; and Uncle Jaw, after waiting a while, recommenced with, "But really, deacon, I should like to hear the particulars."

"I have made up my mind not to say anything more about that business," said Deacon Enos, in a tone which, though mild, was so exceedingly definite, that Uncle Jaw felt that the case was hopeless in that quarter; he therefore betook himself to the statement of his own grievances.

"Why, you see, Deacon," he began, at the same time taking the tongs, and picking up all the little brands, and disposing them in the middle of the fire, "you see, two days after the funeral, (for I didn't like to go any sooner,) I stepped up to hash over the matter with old Silence; for as to Sukey, she has no more to do with such things than our white kitten. Now, you see, Squire Jones, just before he died, he took away an old rail fence of his that lay between his land and mine, and began to build a new stone wall; and when I come to measure, I found he had took and put almost the whole width of the stone wall on to my land, when there ought not to have been more than half of it come there. Now, you see, I could not say a word to Squire Jones, because he died before I found it out; and so I thought I'd speak to old Silence, and see if she meant to do anything about it, thought I knew pretty well she wouldn't; and I tell you, if she did'nt put it on me! we had a regular pitched battle—I thought the old gal would have screamed herself to death! I don't know but she would, but just then poor Sukey came in, and looked so frightened and scarey—Sukey is a pretty gal, and looks so trembling and delicate, that it's a shame to plague her, and so I came away for that time."

Here Uncle Jaw perceived a brightening in the face of the good deacon, and felt exceedingly comforted that at last he was about to interest him in his story.

But all this while the deacon had been in a profound meditation concerning the ways and means of putting a stop to a quarrel that had been his torment from time immemorial, and just at this moment a plan had struck his mind which our story will proceed to unfold.

The mode of settling differences which had occurred to the good man, was one which has been considered a specific in reconciling contending sovereigns and states from early antiquity, and the deacon hoped it might have a pacific influence even in so unpromising a case as that of Miss Silence and Uncle Jaw.

In former days, Deacon Enos had kept the district school for several successive winters, and among his scholars was the gentle Susan Jones, then a plump, rosy little girl, with blue eyes, curly hair, and the sweetest disposition in the world. There was also little Joseph Adams, the only son of Uncle Jaw, a fine, healthy, robust boy, who used to spell the longest words, make the best snowballs and poplar whistles, and read the loudest and fastest in the Columbian Orator of any boy in the school.

Little Joe inherited all his father's sharpness, with a double share of good-humour, so that, though he was for ever effervescing in the way of the one funny trick or another, he was an universal favourite, not only with the deacon, but with the whole school.

Master Joseph always took little Susan Jones under his especial protection, drew her to school on his sledge, helped her out with all the long sums in her arithmetic, saw to it that nobody pillaged her dinner-basket or knocked down her bonnet, and resolutely whipped or snowballed any other boy who attempted the same gallantries. Years passed on, and as he said, he had "a right to send him; just as good as Squire Abel, or Deacon Abram, to send their boys, and so he would send him." It was the remembrance of his old favourite Joseph, and his little pet Susan, that came across the mind of Deacon Enos, and which seemed to open a gleam of light in regard to the future. So, when Uncle Jaw had finished his prelection, the deacon, after some meditation, come out with—

"Really, they say that your son is going to have the valedictory in college."

Though somewhat startled at the abrupt transition, Uncle Jaw found the suggestion too flattering to his pride to be dropped; so, with a countenance grimly expressive of his satisfaction, he replied, "Why yes—yes—I don't see no reason why a poor man's son has not as much right as any one to be at the top, if he can get there."

"Just so," replied Deacon Enos.

"He was always the boy for learning, and for nothing else," continued Uncle Jaw; "put him to farming, couldn't make nothing of him. If I set him to hoeing corn or hilling potatoes, I'd always find him stopping to chase hoptoads, or off after chip-squirrels. But set him down to a book, and there he was! That boy learned reading the quickest of any boy that ever I saw: it wasn't a month after he began his *ab, eb*, before he could read in the 'Fox and the Brambles;' and in a month more he could clatter off his chapter in the Testament as fast as any of them; and you see, in college, it's just so—he has got up to be first."

"And he is coming home week after next," said the Deacon, meditatively.

The next morning, as Deacon Enos was eating his breakfast, he quietly remarked to his wife, "Sally, I believe it was week after next you were meaning to have your quilting?"

"Why, I never told you so: what alive makes you think that, Deacon Dudley?"

"I thought that was your calculation," said the good man, quietly.

"Why, no—to be sure, I *can* have it, and may be it's the best of any time, if we can get Black Dinah to come and help about the cakes and pies. I guess we will, finally."

"I think it's likely you had better," replied the deacon, "and we will have all the young folks here."

And now let us pass over all the intermediate pounding, and grinding, and chopping, which for the next week foretold approaching festivity in the kitchen of the deacon. Let us forbear to provoke the appetite of a hungry reader by setting in order before him the minced pies, the cranberry tarts, the apple pies, the dough-nuts, cookies, and other sweet cakes of every description, that sprung into being at the magic touch of Black Dinah, the village priestess on all these solemnities. Suffice it to say that the day had arrived, and the auspicious quilt was spread.

The invitation had not failed to include the Misses Silence and Susan Jones—nay, the good deacon had pressed gallantry into the matter so far as to be the bearer of the message himself; for which he was duly rewarded by a broadside from Miss Silence, giving him what she termed a piece of her mind in the matter of the rights of widows and orphans; to all which the good old man listened with great benignity from the beginning to the end, and replied with,

"Well, well, Miss Silence, I expect you will think better of this before long; there had best not be any hard words about it." So saying, he took up his hat and walked off; while Miss Silence, who felt extremely relieved by having blown off steam, declared that "It was of no more use to hector old Deacon Enos than to fire a gun at a bag of cotton-wool. For all that, though, she should not go to the quilting; nor more should Susan."

"But, sister, why not?" said the little maiden; "I think I *shall* go." And Susan said this in a tone so mildly positive that Silence was amazed.

"What upon earth ails you, Susan?" said she, opening her eyes with astonishment; "haven't you any more spirit than to go to Deacon Enos's when he is doing all he can to ruin us?"

"I like Deacon Enos," replied Susan; "he was always kind to me when I was a little girl, and I am not going to believe that he is a bad man now."

"When a woman begins to state that she is not going to believe a

thing, "good judges of human nature generally give up the case; but Miss Silence, to whom the language of opposition and argument was entirely new, could scarcely give her ears credit for veracity in the case; she therefore repeated over exactly what she said before, only in a much louder tone of voice, and with much more vehement forms of asseveration: a mode of reasoning which, if not strictly logical, has at least the sanction of very respectable authorities among the enlightened and learned.

"Silence," replied Susan, when the storm had spent itself, "if it did not look like being angry with Deacon Enos, I would stay away to oblige you; but it would seem to every one to be taking sides in a quarrel, and I never did, and never will, have any part or lot in such things."

"Then you'll just be trod and trampled on all your days, Susan," replied Silence; "but, however, if you choose to make a fool of yourself, I don't;" and so saying, she flounced out of the room in great wrath. It so happened, however, that Miss Silence was one of those who have so little economy in disposing of a fit of anger, that it was all used up before the time of execution arrived. It followed, of consequence, that having unburdened her mind freely both to Deacon Enos and to Susan, she began to feel very much more comfortable and good-natured; and consequent upon that came divers reflections upon the many gossiping opportunities and comforts of a quilting; and then the intrusive little reflection, "What if she should go, after all, what harm would be done?" and then the inquiry, "Whether it were not her *duty* to go and look after Susan, poor child, who had no mother to watch over her?" In short, before the time of preparation arrived, Miss Silence had fully worked herself up to the magnanimous determination of going to the quilting. Accordingly, the next day, while Susan was standing before the mirror, braiding up her pretty hair, she was startled by the apparition of Miss Silence coming into the room, as stiff as a changeable silk and a high horn comb could make her; and "grimly determined was her look."

"Well, Susan," said she, "if you *will* go to the quilting this afternoon, I think it is *my duty* to go and see to you."

What would people do if this convenient shelter of *duty* did not afford them a retreat in cases when they are disposed to change their minds? Susan suppressed the arch smile that, in spite of herself, laughed out at the corners of her eyes, and told her sister that she was much obliged to her for her care. So off they went together.

Silence, in the mean time, held forth largely on the importance of standing up for one's rights, and not letting one's-self be trampled on.

The afternoon passed on: the elderly ladies quilted and talked scandal; and the younger ones discussed the merits of the various beaux who were expected to give vivacity to the evening entertainment. Among these, the newly-arrived Joseph Adams, just from college, with all his literary honours thick about him, became a prominent subject of conversation.

It was duly canvassed whether the young gentleman might be called handsome, and the affirmative was carried by a large majority, although there were some variations and exceptions; one of the party declaring his whiskers to be in too high a state of cultivation; another maintaining that they were in the exact line of beauty; while a third vigorously disputed the point whether he wore whiskers at all. It was allowed by all, however, that he had been a great beau in the town where he had passed his college days. It was also inquired into whether he were matrimonially engaged; and the negative being understood, they diverted themselves with predicting to one another the capture of such a prize; each prophecy being received with such disclaimers as "Come now!" "Do be still!" "Hush your nonsense!" and the like.

At length, the long-wished-for hour arrived, and one by one the lords of the creation began to make their appearance, and one of the last was this much-admired youth.

"That is Joe Adams!" "That is he!" was the busy whisper, as a tall, well-looking young man came into the room, with the easy air of one who had seen several things before, and was not to be abashed by the combined blaze of all the village beauties.

In truth, our friend Joseph had made the most of his residence in N———, paying his court no less to the Graces than the Muses. His fine person, his frank, manly air, his ready conversation, and his faculty of universal adaptation, had made his society much coveted among the *beau monde* of N———, and, though the place was small, he had become familiar with much good society.

We hardly know whether we may venture to tell our fair readers the whole truth in regard to our hero. We will merely hint, in the gentlest manner in the world, that Mr. Joseph Adams, being undeniably first in the classics and first in the drawing-room, having been gravely commended in his class by his venerable president, and gaily flattered in the drawing-room by the elegant Miss This and That, was rather inclining to the opinion that he was an uncommonly fine fellow, and even had the assurance to think that, under present circumstances, he could please without making any great effort: a thing which, however true it were in point of fact, is obviously improper to be thought of by a young man. Be that as it may, he moved about from one to another, shaking hands with all the old ladies, and listening with the greatest affability to the various comments on his growth and personal appearance, his points of resemblance to his father, mother, grandfather, and grandmother, which are always detected by the superior acumen of elderly females.

Among the younger ones, he at once, and with full frankness, recognised old schoolmates, and partners in various whortleberry, chestnut, and strawberry excursions, and thus called out an abundant flow of conversation. Nevertheless, his eye wandered occasionally around the room, as if in search of something not there. What could it be? It kindled, however, with an expression of sudden brightness as he perceived the tall and spare figure of Miss Silence: whether owing to the personal fascinations of that lady, or to other causes, we leave the reader to determine.

Miss Silence had predetermined never to speak a word again to Uncle Jaw or any of his race; but she was taken by surprise at the frank, extended hand, and friendly "How d'ye do?" It was not in woman to resist so cordial an address from a handsome young man, and Miss Silence gave her hand and replied with a graciousness that amazed herself. At this moment, also, certain soft blue eyes peeped forth from a corner, just "to see if he looked as he used to do." Yes, there he was! the same dark, mirthful eyes that used to peer on her from behind the corners of the spelling-book at the district school; and Susan Jones gave a half sigh to those times, and then wondered why she happened to think of such nonsense.

"How is your sister, little Miss Susan?" said Joseph.

"Why, she is here—have you not seen her?" said Silence "there she is, in that corner."

Joseph looked, but could scarcely recognise her. There stood a tall, slender, blooming girl, that might have been selected as a specimen of that union of perfect health with delicate fairness so characteristic of the young New England beauty.

She was engaged in telling some merry story to a knot of young girls, and the rich colour that, like a bright spirit, constantly went and came in her cheeks; the dimples, quick and varying as those of a little brook; the clear, mild eye; the clustering curls; and, above all, the happy, rejoicing smile, and the transparent frankness and simplicity of expression which beamed like sunshine about her, all formed a combination of charms that took our hero quite by surprise; and when Silence, who had a remarkable degree of directness in all her dealings, called out, "Here, Susan, is Joe Adams inquiring after you!" our practised young gentleman felt himself colour to the roots of his hair, and for a moment he could scarce recollect that first rudiment of manners, "to make his bow like a good boy." Susan coloured also; but, perceiving the confusion of our hero, her countenance assumed an expression of mischievous drollery, which, helped on by the titter of her companions, added not a little to his confusion

"Deuce take it!" thought he, "what's the matter with me?" and, calling up all his courage, he dashed into the formidable circle of fair ones, and began chattering with one and another, calling by name or without introduction, remembering things that never happened with a freedom that was perfectly fascinating.

"Really, how handsome he has grown!" thought Susan and she coloured deeply when once or twice the dark eye o

Joseph made the same observation with regard to herself, in that quick, intelligible dialect which eyes alone can speak. And when the little party dispersed, as they did very punctually at nine o'clock, our hero requested of Miss Silence the honour of attending her home, an evidence of discriminating taste which materially raised him in the estimation of that lady. It was true, to be sure, that Susan walked on the other side of him, her little white hand just within his arm; and there was something in that light touch that puzzled him unaccountably, as might be inferred from the frequency with which Miss Silence was obliged to bring up the ends of conversation with, "What did you say?" "What were you going to say?" and other persevering forms of inquiry, with which a regular trained matter-of-fact talker will hunt down a poor fellow-mortal who is in danger of sinking into a comfortable reverie. When they parted at the gate, however, Silence gave our hero a hearty invitation to "come and see them any time," which he mentally regarded as more to the point than anything else that had been said the whole evening.

As Joseph soberly retraced his way homeward, his thoughts, by some unaccountable association, began to revert to such topics as the loneliness of man by himself, the need of kindred spirits, the solaces of sympathy, and other like matters.

That night Joseph dreamed of trotting along with his dinner-basket to the old brown school-house, and vainly endeavouring to overtake Susan Jones, whom he saw with her little pasteboard sun-bonnet a few yards in front of him; then he was *tetering* with her on a long board, her bright little face glancing up and down, while every curl around it seemed to be living with delight; and then he was snowballing Tom Williams for knocking down Susan's doll-house, or he sat by her on a bench, helping her out with a long sum in arithmetic; but, with the mischievous fatality of dreams, the more he ciphered and expounded, the longer and more hopeless grew the sum; and he awoke in the morning pshawing at his ill luck, after having done a sum over half a dozen times, while Susan seemed to be looking on with the same air of arch drollery that he saw on her face the evening before.

"Joseph," said Uncle Jaw, the next morning at breakfast, "I suppose Squire Jones's daughters were not at the quilting?"

"Yes, sir, they were," said our hero; "they were both there."

"Why, you don't say so?"

"They certainly were," persisted the son.

"Well, I thought the old gal had too much spirit for that; you see there is a quarrel between the deacon and those gals."

"Indeed!" said Joseph, "I thought the deacon never quarrelled with anybody."

"But, you see, old Silence there, she will quarrel with *him*, really, that creature is a tough one;" and Uncle Jaw leaned back in his chair, and contemplated the quarrelsome propensities of Miss Silence with the satisfaction of a kindred spirit. "But I'll fix her yet," he continued; "I see how to work it."

"Indeed, father, I did not know that you had anything to do with their affairs."

"Haven't I? I should like to know if I have not!" replied Uncle Jaw, triumphantly. "Now see here, Joseph: you see I mean you shall be a lawyer: I'm pretty considerable of a lawyer myself,—that is, for one not college learnt; and I'll tell you how it is"—and thereupon Uncle Jaw launched forth into the case of the meadow land, the mill, &c., and concluded with, "Now, Joseph, this is a kind of whetstone for you to hone up your wits on."

In pursuance, therefore, of this plan of sharpening his wits in the manner aforesaid, our hero, after breakfast, went, like a dutiful son, directly towards Squire Jones's, doubtless for the purpose of taking ocular survey of the meadow land, mill, and stone wall; but, by some unaccountable mistake, lost his way, and found himself standing before the door of Squire Jones's house.

The old squire had been among the aristocracy of the village, and his house had been the ultimate standard of comparison in all matters of style and garniture. Their big front room, instead of being strewn with lumps of sand, duly streaked over twice a week, was resplendent with a carpet of red, yellow, and black stripes, while a towering pair of long-legged brass andirons, scoured to a silvery white, gave an air of magnificence to the chimney, which was materially increased by the tall brass-headed shovel and tongs, which, like a decorous, starched married couple, stood bolt upright in their places on either side. The sanctity of the place was still further maintained by keeping the window-shutters always closed, admitting only so much light as could come in by a round hole at the top of the shutter; and it was only on occasions of extraordinary magnificence that the room was thrown open to profane eyes.

Our friend Joseph was surprised, therefore, to find both the doors and windows of this apartment open, and symptoms evident of its being in daily occupation. The furniture still retained its massive, clumsy stiffness, but there were various tokens that lighter fingers had been at work there since the notable days of good Dame Jones. There was a vase of flowers on the table, two or three books of poetry, and a little fairy work-basket, from which peeped forth the edges of some worked ruffling; there was a small writing-desk, and last, not least, in a lady's collection, an album with leaves of every colour of the rainbow, containing inscriptions in sundry strong masculine hands, "To Susan," indicating that other people had their eyes open as well as Mr. Joseph Adams. "So," said he to himself, "this quiet little beauty has had admirers after all;" and consequent upon this came another question (which was none of his concern, to be sure), whether the little lady were or were not engaged; and from these speculations he was aroused by a light footstep, and the neat form of Susan made its appearance.

"Good morning, Miss Jones," said he, bowing.

Now there is something very comical in the feeling when little boys and girls, who have always known each other as plain Susan or Joseph, first meet as "Mr." or "Miss" So-and-so. Each one feels half disposed, half afraid, to return to the old familiar form, and awkwardly fettered by the recollection that they are no longer children. Both parties had felt this the evening before, when they met in company, but, now that they were alone together, the feeling became still stronger; and when Susan had requested Mr. Adams to take a chair, and Mr. Adams had inquired after Miss Susan's health, there ensued a pause, which, the longer it continued, seemed the more difficult to break, and during which Susan's pretty face slowly assumed an expression of the ludicrous, till she was as near laughing as propriety would admit; and Mr. Adams, having looked out at the window, and up at the mantlepiece, and down at the carpet, at last looked at Susan: their eyes met: the effect was electrical; they both smiled, and then laughed outright, after which the whole difficulty of conversation vanished.

"Susan," said Joseph, "do you remember the old school-house?"

"I thought that was what you were thinking of," said Susan; "but really you have grown and altered so that I could hardly believe my eyes last night."

"Nor I mine," said Joseph, with a glance that gave a very complimentary turn to the expression.

Our readers may imagine that after this the conversation proceeded to grow increasingly confidential and interesting; that, from the account of early life, each proceeded to let the other know something of intervening history, in the course of which each discovered a number of new and admirable traits in the other, such things being matters of very common occurrence. In the course of the conversation, Joseph discovered that it was necessary that Susan should have two or three books then in his possession, and, as promptitude is a great matter in such cases, he promised to bring them "to-morrow."

For some time our young friends pursued their acquaintance, without a distinct consciousness of anything except that it was a very pleasant thing to be together. During the long, still afternoons, they rambled among the fading woods, now illuminated with the radiance of the dying year, and sentimentalised and quoted poetry; and almost every evening Joseph found some errand to bring him to the house: a book for Miss Susan, or a bevy of roots and herbs for Miss Silence, or some remarkably fine yarn for her to knit; attentions which retained our hero in the good graces of the latter lady, and gained him the credit of being "a young man that knew how to behave himself." As Susan was leading member in the village choir,

our hero was directly attacked with a violent passion for sacred music, which brought him punctually to the singing-school, where the young people came together to sing anthems and fuguing tunes, and to eat apples and chesnuts.

It cannot be supposed that all these thing passed unnoticed by those wakeful eyes that are ever upon the motions of such "bright particular stars;" and, as is usual in such cases, many things were known to be a certainty which were not yet known to the parties themselves. The young belles and beaux whispered and tittered, and passed the original jokes and witticisms common in such cases; while the old ladies soberly took the matter in hand when they went out with their knitting to make afternoon visits, considering how much money Uncle Jaw had, how much his son would have, and how much Susan would have, and what all together would come too; and whether Joseph would be a "smart man," and Susan a good housekeeper, with all the "ifs, ands, and buts," of married life.

But the most fearful wonders and prognostics crowded around the point, "What Uncle Jaw would have to say to the matter?" His lawsuit with the sisters being well understood, as there was every reason it should be, it was surmised what two such vigorous belligerents as himself and Miss Silence would say to the prospect of a matrimonial conjunction. It was also reported that Deacon Enos Dudley had a claim to the land which constituted the finest part of Susan's portion, the loss of which would render the consent of Uncle Jaw still more doubtful. But all this while Miss Silence knew nothing of the matter, for her habit of considering and treating Susan as a child seemed to gain strength with time. Susan was always to be seen to, and watched, and instructed, and taught; and Miss Silence could not conceive that one who could not even make pickles without her to oversee, could think of such a matter as setting up housekeeping herself. To be sure, she began to observe an extraordinary change in her sister; remarked that lately Susan seemed to be getting sort o' crazy-headed; that she seemed not to have any "faculty" for anything; that she had made gingerbread twice, and forgot the ginger one time, and put in mustard the other; that she took the saltcellar out in the tablecloth, and let the cat into the pantry half a dozen times; and that, when scolded for these sins of omission or commission, she had a fit of crying, and did a little worse than before. Silence was of opinion that Susan was getting to be "weakly and narvy," and actually concocted an unmerciful pitcher of wormwood and boneset, which she said was to keep off the "shaking weakness" that was coming over her. In vain poor Susan protested that she was well enough—Miss Silence *knew better*, and one evening she entertained Mr. Joseph Adams with a long statement of the case in all its bearings, and ended with demanding his opinion, as a candid listener, whether the wormwood and the boneset sentence should not be executed forthwith.

Poor Susan that very afternoon parted from a knot of young friends who had teased her most unmercifully on the score of attentions received, till she began to think the very leaves and stones were so many eyes to pry into her secret feelings; and then to have the whole case set in order before the very person, too, whom she most dreaded! "Certainly he would think she was acting like a fool; perhaps he did not mean anything more than friendship after all; and she would not, for the world, have him suppose that she cared a copper more for him than any other friend, or that she was in love, of all things." So she sat very busy with her knitting-work, scarcely knowing what she was about, till Silence called out,

"Why, Susan, what a piece of work you are making of that stocking heel! What in the world are you doing to it?"

Susan dropped her knitting, and, making some pettish answer, escaped out of the room.

"Now did you ever!" said Silence, laying down the seam she had been cross-stitching; "what is the matter with her, Mr. Adams?"

"Miss Susan is certainly indisposed," replied our hero, gravely; "I must get her to take your advice, Miss Silence."

Joseph followed Susan to the front door, where she stood looking out at the moon, and begged to know what distressed her.

Of course it was "nothing," the young lady's usual complaint when in low spirits; and to show that she was perfectly easy, she began an inquiring attack on a white rosebush near by.

"Susan!" said Joseph, laying his hand on hers, and in a tone that made her start. She shook back her curls, and looked up to him with such an innocent, confiding face—

Ah! my good reader, you may go on with this part of the story for yourself. We are principled against unveiling the "sacred mysteries," the "thoughts that breathe and words that burn," in such little moonlight interviews as these. You may fancy all that followed; and we can only assure all who are doubtful, that, under judicious management, cases of this kind may be disposed of without wormwood or boneset. Our hero and heroine were called to sublunary realities by the voice of Miss Silence, who came into the passage to see what on earth they were doing. That lady was satisfied by the representations of so friendly and learned a young man as Joseph, that nothing immediately alarming was to be apprehended in the case of Susan, and she retired. From that evening Susan stepped about with a heart many pounds lighter than before.

"I'll tell you what, Joseph," said Uncle Jaw, "I'll tell you what, now, I hear them tell that you've took and courted that 'ere Susan Jones. Now I just want to know if it's true?"

There was an explicitness about this mode of inquiry that took his son quite by surprise, so that he could only reply,

"Why, sir, supposing I had, would there be any objection to it in your mind?"

"Don't talk to me," said Uncle Jaw; "I just want to know if it's true?"

Our friend put his hands in his pockets, walked to the window, and whistled.

"Because if you have," said Uncle Jaw, "you may just uncourt as fast as you can; for Squire Jones's daughter will never get a single penny of my money, I can tell you that, Joseph."

"Why, father, Susan Jones is not to blame for anything that her father did, and I'm sure she is a pretty girl enough."

"I don't care if she is pretty; what's that to me? I've got you through college, Joseph, and a hard time I've had of it, a you through college, Joseph, and a hard time I've had of it, a delvin and slaving, and here you come, and the very first thing you do, you must take and court that Squire Jones's daughter, who was always putting himself up above me; besides, I mean to have the law on that estate yet, and Deacon Dudley, he will have the law too, and it will cut off the best piece of land the gurl has; and when you get married, I mean you shall have something. It's just a trick of them gals at me; but I guess I'll come up with them yet. I'm just a going down to have a 'regular hash' with old Silence, to let her know she can't come round me that way."

"Silence," said Susan, drawing her head into the window, and looking apprehensive, "there is Mr. Adams coming here."

"What, Joe Adams? Well, and what if he is?"

"No, no, sister, but it is his father—it is Uncle Jaw."

"Well, suppose it is, child—what scares you? suppose I'm afraid of him? If he wants more than I gave him last time, I'll put it on." So saying, Miss Silence took her knitting-work and marched down into the sitting-room, and sat herself bolt upright in an attitude of defiance, while poor Susan, feeling her heart beat unaccountably fast, glided quickly out of the room.

"Well, good-morning, Miss Silence," said Uncle Jaw, after having scraped his feet on the scraper, and scrubbed them on the mat nearly ten minutes in silent deliberation.

"Morning, sir," said Silence, abbreviating the "good."

Uncle Jaw helped himself to a chair directly in front of the enemy, dropped his hat on the floor, and surveyed Miss Silence with a dogged air of satisfaction, like one who is sitting down to a regular, comfortable quarrel, and means to make the most of it.

Miss Silence tossed her head disdainfully, but scorned to commence hostilities.

"So, Miss Silence," said Uncle Jaw, deliberately, "you don't think you'll do anything about that 'ere matter."

"What matter?" said Silence, with an intonation resembling that of a roasted chestnut when it bursts from the fire.

"I really thought, Miss Silence, in that talk I had with you about Squire Jones's cheating about that 'ere—"

"Mr. Adams," said Silence, "I tell you, to begin with, I'm not a going to be sauced in this way by you. You have not got common decency, nor common sense, nor common anything else, to talk so to me about my father: I will not hear it, I tell you."

"Why, Miss Jones," said Uncle Jaw, "how you talk! Well, to be sure, Squire Jones is dead and gone, and it's as well not to call it cheating, as I was telling Deacon Enos when he was talking about that 'ere lot—the lot, you know, that he sold the deacon, and never let him have the deed of."

"That's a lie!" said Silence, starting on her feet; "that's an up and down black lie! I tell you that, now, before you say another word."

"Miss Silence, really, you seem to be getting touchy," said Uncle Jaw, "well, to be sure, if the deacon can let that pass, other folks can; and maybe the deacon will, because Squire Jones was a church member, and the deacon is 'mazing tender about bringing out anything against professors; but really, now, Miss Silence, I didn't think you and Susan were going to work it so cunning in this here way."

"I don't know what you mean, and, what's more, I don't care," said Silence, resuming her work, and calling back the bolt, upright dignity with which she began.

There was a pause of some moments, during which the features of Silence worked with suppressed rage, which was contemplated by Uncle Jaw with undisguised satisfaction.

"You see, I suppose, I should not have minded your Susan's setting up to court Joe, if it had not been for those things."

"Courting your son! Mr. Adams, I should like to know what you mean by that? I'm sure nobody wants your son, though he's a civil, likely fellow enough; yet with such an old dragon for a father, I'll warrant he won't get anybody to court him, nor to be courted by him neither."

"Really, Miss Silence, you are not hardly civil, now."

"Civil! I should like to know who could be civil? You know, now, as well as I do, that you are saying all this out of clear, sheer ugliness; and that's what you keep a doing all round the neighbourhood."

"Miss Silence," said Uncle Jaw, "I don't want no hard words with you. It's pretty much known round the neighbourhood that your Susan thinks she'll get my Joe, and I suppose you was thinking that perhaps it would be the best way of settling up matters; but you see, now, I told my son I really did not see as I could afford it; I took and tell'd him that young folks must have something considerable to start with; and that, if Susan lost that piece of ground, as is likely she will, it would be cutting off quite too much of a piece; so, you see, I don't want you to take no encouragement about that."

"Well, I think this is pretty well!" exclaimed Silence, provoked beyond measure or endurance; "you old torment! think I don't know what you're at? I and Susan courting your son? I wonder you are not ashamed of yourself, now! I should like to know what she or I have done, now, to get that notion into your head?"

"I did'nt suppose you expected to get him yourself," said Uncle Jaw, "for I guess by this time you've pretty much given up trying, ha'n't ye? But Susan does, I'm pretty sure."

"Here, Susan! Susan! you—come down!" called Miss Silence, in great wrath, throwing open the chamber door. "Mr. Adams wants to speak with you." Susan, fluttering and agitated, slowly descended into the room, where she stopped, and looked hesitatingly, first at Uncle Jaw and then at her sister, who, without ceremony, proposed the subject-matter of the interview as follows:—

"Now, Susan, here's this man pretends to say that you've been courting and snaring to get his son, and I just want you to tell him that you have never had any thought of him, and that you won't have, neither."

This considerate way of announcing the subject had the effect of bringing the burning colour into Susan's face, as she stood, like a convicted culprit, with her eyes bent on the floor.

Uncle Jaw, savage as he was, was always moved by female loveliness, as wild beasts are said to be mysteriously swayed by music, and looked on the beautiful, downcast face with more softening than Miss Silence, who, provoked that Susan did not immediately respond to the question, seized her by the arm and eagerly reiterated,

"Susan! why don't you speak, child?"

Gathering desperate courage, Susan shook off the hand of Silence, and straightened herself up with as much dignity as some little flower lifts up its head when it has been bent down by rain-drops.

"Silence," she said, "I never would have come down if I had thought it was to hear such things as this. Mr. Adams, all I have to say to you is, that your son has sought me, and not I your son. If you wish to know any more, he can tell you better than I."

"Well, I vow! she is a pretty girl," said Uncle Jaw, as Susan shut the door.

This exclamation was involuntary. then recollecting himself, he picked up his hat, and saying, "Well, I guess I may as well get along home," he began to depart; but, turning round before he shut the door, he said, "Miss Silence, if you should conclude to do anything about that 'ere fence, just send word over and let me know."

Silence, without designing any reply, marched up into Susan's little chamber, where our heroine was treating resolution to a good fit of crying.

"Susan, I did not think you had been such a fool," said the lady. "I do want to know, now, if you've really been thinking of getting married, and to that Joe Adams of all folks!"

Poor Susan! such an interlude in all her pretty romantic little dreams about kindred feelings, and a hundred other delightful ideas, that flutter like singing-birds through the fairy-land of first love. Such an interlude! to be called on by gruff human voices to give up all the cherished secrets that she had trembled to whisper even to herself. She felt as if love itself had been defiled by the coarse, rough hands that had been meddling with it; so to her sister's soothing address Susan made no answer, only to cry and sob still more bitterly than before.

Miss Silence, if she had a great stout heart, had no less a kind one, and seeing Susan take the matter so bitterly to heart, she began gradually to subside.

"Susan, you poor little fool, you," said she, at the same time giving her a hearty slap, as expressive of earnest sympathy, "I really do feel for you; that good-for-nothing fellow has been a cheating you, I do believe."

"Oh, don't talk any more about it, for mercy's sake!" said Susan. "I am sick of the whole of it."

"That's you, Susan! Glad to hear you say so! I'll stand up for you, Susan; if I catch Joe Adams coming here again with his palavering face, I'll let him know!"

"No! no! Don't, for mercy's sake, say anything to Mr. Adams—don't!"

"Well, child, don't claw hold of a body so! Well, at any rate, I'll just let Joe Adams know that we have nothing more to say to him."

"But I don't wish to say that—that is—I don't know—indeed, sister Silence, don't say anything about it."

"Why not? You are not such a *natural*, now, as to want to marry him after all, hey?"

"I don't know what I want, nor what I don't want; only, Silence, do now, if you love me, do promise not to say anything at all to Mr. Adams."

"Well, then, I won't," said Silence; "but, Susan, if you really was in love all this while, why did you not tell me? Don't you know that I'm as much as a mother to you, and you ought to have told me in the beginning?"

"I don't know, Silence! I could not: I don't want to talk about it."

"Well, Susan, you are not a bit like me," said Silence; a remark evincing great discrimination, certainly, and with which the conversation terminated.

That very evening our friend Joseph walked down towards the dwelling of the sisters, not without some anxiety for the result, for he knew by his father's satisfied appearance that war had been declared. He walked into the family room, and found nobody there but Miss Silence, who was sitting, grim as an Egyptian sphinx, stitching very vigorously on a meal-bag, in which interesting employment she thought proper to be so much engaged as not to remark the entrance of our hero. To Joseph's accustomed "Good evening, Miss Silence," she replied merely by looking up with a cold nod, and went on with her sewing. It appeared that she had determined on

a literal version of her promise not to say anything to Mr. Adams.

Joseph Adams, as we have before stated, was familiar with the crooks and turns of the female mind, and mentally resolved to put a bold face on the matter, and give Miss Silence no encouragement in her attempt to make him feel himself unwelcome. It was rather a frosty autumnal evening, and the fire on the hearth was decaying. Mr. Joseph bustled about most energetically, throwing down the tongs, and shovel, and bellows, while he pulled the fire to pieces, raked out ashes and brands, and then, in a twinkling, was at the wood-pile, from whence he selected a massive backlog and forestick, with accompaniments, which were soon roaring and crackling in the chimney.

"There, now, that does look something like comfort," said our hero; and drawing forward the big rocking-chair, he seated himself in it, and rubbed his hands with an air of great complacency. Miss Silence looked not up, but stitched so much the faster, so that one might distinctly hear the crack of the needle and the whistle of the thread all over the apartment.

"Have you a headache to night, Miss Silence?"

"No!" was the gruff answer.

"Are you in a hurry about those bags?" said he, glancing at a pile of unmade ones which lay by her side.

No reply. "Hang it all!" said Joseph to himself, "I'll make her speak."

Miss Silence's needle-book and brown thread lay on a table beside her. Our friend helped himself to a needle and thread, and taking one of the bags, planted himself bolt upright opposite to Miss Silence, and pinning his work to his knee, commenced stitching at a rate fully equal to her own.

Miss Silence looked up and fidgeted, but went on with her work faster than before; but the faster she worked, the faster and steadier worked Joseph, all in "marvellous silence." There began to be an odd twitching about the muscles of Miss Silence's face; our friend took no notice, having pursed his features into an expression of unexampled gravity, which only grew more intense as he perceived, by certain uneasy movements, that the adversary was beginning to waver.

As they were sitting, stitching away, their needles whizzing at each other like a couple of locomotives engaged in conversation, Susan opened the door.

The poor child had been crying for the greater part of her spare time during the day, and was in no very merry humour; but the moment that her astonished eyes comprehended the scene, she burst into a fit of almost inextinguishable merriment, while Silence laid down her needle, and looked half amused and half angry. Our hero, however, continued his business with inflexible perseverance, unpinning his work and moving the seam along, and going on with increased velocity.

Poor Miss Silence was at length vanquished, and joined in the loud laugh which seemed to convulse her sister. Whereupon Joseph unpinned his work, and folding it up, looked up at her with all the assurance of impudence triumphant, and remarked to Susan,

"Your sister had such a pile of these pillow-cases to make, that she was quite discouraged, and engaged me to do half a dozen of them: when I first came in she was so busy she could not even speak to me."

"Well, if you are not the beater for impudence!" said Miss Silence.

"The beater for *industry*—so I thought," rejoined Joseph.

Susan, who had been in a highly tragical state of mind all day, and who was meditating on nothing less sublime than an eternal separation from her lover, which she had imagined, with all the affecting attendants and consequents, was entirely revolutionised by the unexpected turn thus given to her ideas; while Joseph pursued the opportunity he had made for himself, and exerted his powers of entertainment to the utmost, till Miss Silence, declaring that if she had been washing all day she could not have been more tired than she was with laughing, took up her candle, and good-naturedly left the young people to settle matters between themselves. There was a grave pause of some length when she had departed, which was broken by Joseph, who, seating himself by Susan, inquired very seriously if his father had made proposals of marriage to Miss Silence that morning.

"No, you provoking creature!" said Susan, at the same time laughing at the absurdity of the idea.

"Well, now, don't draw on your long face again, Susan, said Joseph; "you have been trying to lengthen it down all the evening, if I would have let you. Seriously, now, I know that something painful passed between my father and you this morning, but I shall not inquire what it was. I only tell you, frankly, that he has expressed his disapprobation of our engagement, forbidden me to go on with it, and—"

"And, consequently, I release you from all engagements and obligations to me, even before you ask it," said Susan.

"You are extremely accommodating," replied Joseph; "but I cannot promise to be as obliging in giving up certain promises made to me; unless, indeed, the feelings that dictated them should have changed."

"Oh, no, no, indeed," said Susan, earnestly; "you know it is not that; but if your father objects to me—"

"If my father objects to you, he is welcome not to marry you," said Joseph.

"Now, Joseph, do be serious," said Susan.

"Well, then, seriously, Susan, I know my obligation to my father, and in all that relates to his comfort I will ever be dutiful and submissive, for I have no college-boy pride on the subject of submission; but in a matter so individually my own as the choice of a wife—in a matter that will most likely affect my happiness years and years after he has ceased to be, I hold that I have a right to consult my own inclinations; and, by your leave, my dear little lady, I shall take that liberty."

"But, then, if your father is made angry, you know what sort of a man he is; and how could I stand in the way of all your prospects?"

"Why, my dear Susan, do you think I count myself dependant upon my father? No! I have energy and education to start with, and if I cannot take care of myself, and you too, then cast me off and welcome;" and, as Joseph spoke, his fine face glowed with a conscious power, which unfettered youth never feels so fully as in America. He paused a moment, and resumed: "Nevertheless, Susan, I respect my father; whatever others may say of him, I shall never forget that I owe to his hard earnings the education that enables me to do or be anything, and I shall not wantonly or rudely cross him. I do not despair of gaining his consent; my father has a great partiality for pretty girls, and if his love of contradiction is not kept awake by open argument, I will trust to time and you to bring him round; but, whatever comes, rest assured, my dearest one, I have chosen for life, and cannot change."

The conversation, after this, took a turn which may readily be imagined by all who have been in the same situation, and will, therefore, need no farther illustration.

"Well, deacon, really I don't know what to think now: there's my Joe, after all I have done for him, he's been courting that Susan Jones," said Uncle Jaw.

This was the introduction to one of Uncle Jaw's periodical visits to Deacon Enos, who was sitting, with his usual air of mild abstraction, looking into the coals of a bright November fire, while his helpmate was industriously rattling her knitting-needles by his side.

A close observer might have suspected that this was no news to the good deacon, who had given a great deal of good advice, in private, to Master Joseph of late; but he only relaxed his features into a quiet smile, and ejaculated, "I want to know."

"Yes, and really, deacon, that 'ere gal is a rail pretty one: I was a telling my folks that our new minister's wife was a fool to her."

"And so your son is going to marry her?" said the good lady; "I knew that long ago."

"Well, no, not so fast: ye see there's two to that bargain yet. You see, Joe never said a word to me, but took and courted the gal out of his own head; and when I come to know, says I, 'Joe, that 'ere gal won't do for me;' and then I told him all about that old fence, and all about that old mill, and them medders of mine; and I tell'd him, too, about that lot of Susan's; and I should like to know, now, deacon, how that lot business is a going to turn out?"

"Judge Smith and Squire Moseley say that my claim to it will stand" said the deacon.

"They do?" said Uncle Jaw, with much satisfaction; "suppose, then, you'll use, won't you?"

"I don't know," replied the deacon, meditatively.

Uncle Jaw was thoroughly amazed: that any one should have doubts about entering suit for a fine piece of land, when sure of obtaining it, was a problem quite beyond his powers of solving.

"You say your son has courted the girl," said the deacon, after a long pause; "that strip of land is the best part of Susan's share; I paid down five hundred dollars on the nail for it; I've got papers here that Judge Smith and Squire Moseley say will stand good in any court of law."

Uncle Jaw pricked up his ears and was all attention, eyeing the packet with eager looks; but, to his disappointment, the deacon deliberately laid it into his desk, shut and locked it, and resumed his seat.

"Now, really," said Uncle Jaw, "I should like to know the particulars."

"Well, well," said the deacon, "the lawyers will be at my house to-morrow evening, and if you have any concern about it, you may as well come along."

Uncle Jaw wondered all the way home at what he could have done to get himself into the confidence of the old deacon, who, he rejoiced to think, was a going to "take" and go to law like other folks.

The next day there was an appearance of some bustle and preparation about the deacon's house; the best room was opened and aired; an ovenful of cake was baked; and our friend Joseph, with a face full of business, was seen passing to and fro, in and out of the house, from various closetings with the deacon. The deacon's lady bustled about the house with an air of wonderful mystery, and even gave her directions about eggs and raisins in a whisper, lest they should possibly let out some eventful secret.

The afternoon of that day Joseph appeared at the house of the sisters, stating that there was to be company at the deacon's that evening, and he was sent to invite them.

"Why, what's got into the deacon's folks lately," said Silence, "to have company so often? Joe Adams, this is some 'cut up' of yours. Come, what are you up to now?"

"Come, come, dress yourselves and get ready," said Joseph, and, stepping up to Susan, as she was following Silence out of the room, he whispered something into her ear, at which she stopped short and coloured violently.

"Why, Joseph, what do you mean?"

"It is so," said he.

"No, no, Joseph; no, I cannot, indeed I cannot."

"But you *can*, Susan."

"Oh, Joseph, don't."

"Oh, Susan, do."

"Why, how strange, Joseph!"

"Come, come, my dear, you keep me waiting. If you have any objections on the score of propriety, we will talk about them to-morrow;" and her lover looked so saucy and so resolute, that there was no disputing futher, so, after a little more lingering and blushing on Susan's part, and a few kisses and persuasions on the part of the suitor, Miss Susan seemed to be brought to a state of resignation.

At a table in the middle of Deacon Enos's north front room were seated the two lawyers, whose legal opinion was that evening to be fully made up. The younger of these, Squire Moseley, was a rosy, portly, laughing little bachelor, who boasted that he had offered himself, in rotation, to every pretty girl within twenty miles round, and, among others, to Susan Jones, notwithstanding which he still remained a bachelor, with a fair prospect of being an old one; but none of these things disturbed the boundless flow of good-nature and complacency with which he seemed at all times full to overflowing. On the present occasion he seemed to be particularly in his element, as if he had some law business in hand remarkably suited to his turn of mind; for, on finishing the inspection of the papers, he started up, slapped his grave brother on the back, made two or three flourishes round the room, and then seizing the old deacon's hand, shook it violently, exclaiming,

"All's right, deacon, all's right! Go it! go it! Hurrah!"

When Uncle Jaw entered, the deacon, without preface, handed him a chair and the papers, saying,

"These papers are what you wanted to see, I just wish you would read them over."

Uncle Jaw read them deliberately over. "Didn't I tell ye so, deacon? The case is as clear as a bell: now ye will go to law, won't you?"

"Look here, Mr. Adams; now you have seen these papers and heard what's to be said, I'll make you an offer. Let your son marry Susan Jones, and I'll burn these papers and say no more about it, and there won't be a girl in the parish with a finer portion."

Uncle Jaw opened his eyes with amazement, and looked at the old man, his mouth gradually expanding wider and wider, as if he hoped, in time, to swallow the idea.

"Well, now, I swan!" at length he ejaculated.

"I mean just as I say," said the deacon.

"Why, that's the same as giving the girl five hundred dollars out of your own pocket, and she no relation neither."

"I know it," said the deacon, "but I have said I will do it."

"What upon earth for?" said Uncle Jaw.

"To make peace," said the deacon; "and to let you know that when I say it is better to give up one's rights than to quarrel, I mean so. I am an old man; my children are dead" —his voice faltered—"my treasures are laid up in heaven; if I can make the children happy, why, I will. When I thought I had lost the land, I made up my mind to lose it, and so I can now."

Uncle Jaw looked fixedly on the old deacon and said,

"Well, deacon, I believe you. I vow, if you have not got something ahead in the other world, I'd like to know who has, that's all; so, if Joe has no objections, and I rather guess he won't have—"

"The short of the matter is," said the squire, "we'll have a wedding; so come on;" and with that he threw open the parlour door, where stood Susan and Joseph in a recess by the window, while Silence and the Rev. Mr. Bissel were drawn up by the fire, and the deacon's lady was sweeping up the hearth, as she had been doing ever since the party arrived.

Instantly Joseph took the hand of Susan, and led her to the middle of the room, the merry squire seized the hand of Miss Silence and placed her as bridesmaid; and before any one could open their mouths, the ceremony was in actual progress, and the minister, having been previously instructed, made the two one with extraordinary celerity.

"What, what, what!" said Uncle Jaw. "Joseph! Deacon!"

"Fair bargain, sir," said the squire. "Hand over your papers, deacon."

The deacon handed them, and the squire, having read them aloud, proceeded, with much ceremony, to throw them into the fire; after which, in a mock solemn oration, he gave a statement of the whole affair, and concluded with a grave exhortation to the new couple on the duties of wedlock, which unbent the risibles even of the minister himself.

Uncle Jaw looked at his pretty daughter-in-law, who stood half smiling, half blushing, receiving the congratulations of the party, and then at Miss Silence, who appeared full as much taken by surprise as himself.

"Well, well, Miss Silence, these 'ere young folks have come round us slick enough," said he. "I don't see but we must shake hands upon it." And the warlike powers shook hands accordingly, which was a signal for general merriment.

As the company were dispersing, Miss Silence laid hold of the good deacon, and by main strength dragged him aside: "Deacon," said she, "I take back all that I said about you, every word of it."

"Don't say any more about it, Miss Silence," said the good man; "it's gone by, and let it go."

"Joseph," said his father, a few days after, as he was sitting at breakfast with Joseph and Susan, "I calculate I shall feel kinder proud of this 'ere gurl! and I'll tell you what, I'll just give you that nice little delicate Stanton place that I took on Stanton's mortgage: it's a nice little place, with green blinds, and flowers, and all them things, just right for Susan."

And accordingly, many happy years flew over the heads of the young couple in the Stanton place, long after the hoary hairs of their kind benefactor, the deacon, were laid with reverence in the dust. Uncle Jaw was so far wrought upon by the magnanimity of the good old man, as to be very materially changed for the better. Instead of quarrelling in real

earnest around the neighbourhood, confined himself merely to battling the opposite side of the question with his son, which, as the latter was considered a theologician, afforded a pretty good field for the exercise of his powers; and he was heard to declare at the funeral of the old deacon, that "After all, a man got as much, and maybe more, to go along as the deacon did, than to be all the time fisting and jawing; though I tell you what it is," said he afterwards, "it is not every one that has the deacon's *faculty*, any how."

SAGACIOUS BIRDS.

THE subjoined scrap is taken from "A Stroll through the Diggings of California, by W. Kelly, Esq The statement is truly wonderful, but we only present it as we find it, without offering any opinion upon it Having occasion to use the wood of a certain tree, Mr. Kelly says,—

"In stripping off the bark, I observed it perforated with holes larger than those which a musket-bullet would make, spaced with the most accurate precision, as if bored under the guidance of a rule and compass, and many of them filled most neatly with acorns. Earlier in the season I remarked such holes in most of the softer timber, but imagining they were caused by wood insects, I did not stop to examine or inquire. Now, however, finding them studded with acorns firmly fixed in, which I knew could not have been driven there by the wind, I sought for an explanation, which was practically given me by Captain S——'s pointing out a flock of woodpeckers busily and noisily employed in the provident task of securing their winter's provisions. It appears that that sagacious bird is not all the time thriftlessly engaged in "tapping the hollow beech-tree" for the mere idle purpose of making a noise, but spends its summer season in pecking those holes, in which it lays in its store of food for the winter, where the elements can neither affect it nor place it beyond reach, and it is considered a sure omen that the period of snow is approaching when those birds commence stowing away their acorns, which otherwise might be covered by its fall. I frequently paused in my chopping to watch them in my neighbourhood with the acorns in their bills, half clawing, half flying, round the tree, and admired the adroitness with which they tried the nut at different holes until they found one of its exact calibre, when, inserting the pointed end, they tapped it home most artistically with their beaks, and flew down for another But their natural instinct is even more remarkable in the choice of the acorns, which are invariably sound, whereas it is a matter of impossibility, in selecting them for roasting, for a person to pick up a batch the half of which are not unfit for use, the most safe and polished looking very frequently containing a large grub generated within. Even the wily Indian, with all his craft and experience, is unable to arrive at anything like an unerring selection, while, in a large bag'ful that we took from the bark of our log, there was not one containing even the slightest germ of decay The birds never encroach on their store until all on the surface are covered, when they resort to those in the bark, and peck out their contents without removing the shells from the holes."

THE PROCEEDINGS OF THE SOCIETY FOR THE DIFFUSION OF USELESS KNOWLEDGE.

The Annual Meeting of the Society for the Diffusion of Useless Knowledge and the General Confusion of the Human Understanding, was held on Monday last; the President, the Hon. Dr. Bubble, took the chair precisely at seven o'clock, assisted by the Hon. Mr. Fudgefield, and Timothy Tinshins, Esq., Vice-Presidents. The President delivered an introductory discourse on the usefulness of useless knowledge, and the advantages of confusion in the understanding, which elicited the greatest applause from a thronged and delighted audience. The following is an abridged copy of the sapient president's address:—

Gentlemen of the Useless Knowledge Association.

"I have the honour of congratulating you on this anniversary meeting. We are engaged, gentlemen, in a stupendious effort. The object of our endeavours is to place the foundations of the intellectual universe on the highest state of moral elevation. There is a great truth, gentlemen, in the exaggeration, that the intense application of the human intellect in infinitesimal quantities to the analytical pursuit of psychological investigation, leads to the surest mathematical discrimination of moral idiosyncracies. The human mind, gentlemen, I consider as composed of two qualities—ratiocination and immaterial recipiency. Facts are imbibed by the inductive process of mental recipiency, and, being rationally rationated, lead to reason. This we denominate the March of Intellect: and intellect hath three branches, namely, logic, metaphysics, and dogmatics, which being synthetically combined, constitute man a reasoning animal. As the Stagyrite remarks, concerning the method of philosophical induction, "*Omnis ratio de ratione rationans, rationare facit rationaliter rationando omnes homines rationantes,*" an axiom which, I apprehend, no one will deny. In the unenlightened mind, all attempts at reasoning are in the highest degree unreasonable, just as in the dark all cats are grey. Gentlemen, we live in an enlightened age, Peter Parley and the printing press have effected a moral and hypercritical revolution, all men can read the Pandects, the Novum Organum, and Poor Polly Jenkins Instead of the spelling-book and the primer our children have Cudworth's Intellectual System and Adelung's Mithridates Modern intellect may be compared to a magnificent toadstool, which shoots out its head on all sides, the moment it gets an inch above ground Sometimes it has been compared to an overgrown pumpkin-vine, sprouting right and left, and grasping at more than it can hold, but this is a misrepresentation, the mind will hold any quantity of knowledge since the invention of lyceums and enclycopædias, and there is no difficulty in the present day, in getting a quart into a pint pot. Gentlemen, I say to you, go on. Let Useless Knowledge flourish. The world is growing wise. Man is tall in intellectual stature, his heels are on the earth, but his head is in the clouds."

The following report of the standing committee was then read:—

REPORT.

The Standing Committee of the Society for the Diffusion of Useless Knowledge and the General Confusion of the Human Understanding, beg leave to report, that the affairs of the Society were never in a more prosperous and desirable condition They have great pleasure in congratulating the Society upon the encouraging prospects which the present state of the country holds out to them Useless knowledge was never more highly prized or more eagerly sought after; and mortal understandings were never in a more admirable confusion than at present. Your committee beg leave to call the attention of the Society to sundry circumstances which, in their opinion, have had the most powerful effect in bringing about these desirable results.

Your Committee feel bound to distinguish, with the most pointed and laudato y regard, the efforts of the newspaper editors of the metropolis and he provinces, who, in the course of the past year, have laboured with the most disinterested zeal in forwarding the objects of the Society they have constantly shown themselves friends of useless knowledge and confounders of the brains and understanding of mankind Your Committee would particularly call to your approving notice, the unwearied industry of these gentlemen in discovering mares' nests, fighting windmills, basting dead cats, bottling moonshine, catching sea-serpents, peeping through millstones, swallowing earthquakes, gobbling down piacles, and binding their asses at the tail Your Committee recommend that each newspaper editor be presented with an elegant leather medal, bearing the inscription, "*Ex fumo dare lucem,*" in allusion to their wonderful sagacity in sometimes distinguishing smoke from fire.

Your Committee would further point out to the notice of the Society the various quack doctors of Great Britain, and in particular the Vegetable Diet Sawdust Live-for-ever Starvation tribe. Useless knowledge is under infinite obligations to these individuals, though their reward and encouragement would seem rather to belong to that enlightened association, the Society for the Extinction of the Human Species. Nevertheless, considering the immense amount of useless knowledge they have propagated, and its effects in producing confusion not only in the understandings, but in the bodies of men, your Committe do not feel at liberty to pass them by without some adequate notice. They therefore recommend that each of these persons be presented with a medal of the purest and hardest Brass, bearing the inscription "*Stultorum infinitus est numerus,*" in allusion to the very wide field which exists for their praiseworthy and philanthropic labours.

Your Committee further recommend to the favourable regard of the Society that distinguished individual, Dr. Humm, the ingenious reviver of animal magnetism, whose labours in the cause of the Society deserve the highest commendation. Dr. Humm has not only been instrumental in extending knowledge useless, and more than useless, but he has thrown the understandings of many human beings into confusion worse confounded. His success in this particular has been most brilliant, and many individuals under his influence are so far gone in their intellectuals, that they do not show the least glimmer of common sense. Your Committee beg leave to lay before the Society a brief relation of the brilliant and astonishing experiment in animal magnetism performed by Dr. Humm, in the City of London Hall of Charletanism, upon the

person of a full-grown, intelligent, and respectable cat, in the presence of a large number of citizens of the first talent and respectability.

"All things being prepared, the cat was brought into the room and placed in an arm-chair. The cat was a grey tabby, with a black and yellow tail, and sea-green eyes, of a mild and ingenuous expression of countenance, and appeared to be about four years old. Doctor Humm assured us there was no sort of private understanding between him and the cat, as had been suspected by some sceptical persons. Indeed, the cat appeared perfectly innocent, and everybody was quite convinced of her honesty. She stared round at the company with wondering eyes, as if not comprehending the cause of the assemblage, but could not escape from the chair, because she was held down by her paws and tail by five of the gentlemen present. Dr. Humm than began the magnetic operation by placing the fore and middle finger of his left hand over her eyes, so as to keep them shut close, and drawing the fore finger of his right hand in a direct line from the cat's nose across her bosom down to the extremity of her left paw The magnetic effect was immediately apparent Her tail began to wag, so much so that the Hon. Mr Fogbrain, who was holding on by that limb, immediately let it go in order to witness the result of this strange phenomenon. In thirteen seconds there was a sensible vibration of the cat's tail, which waved from side to side, describing twenty-seven degrees of the segment of a circle A general murmur ran throughout the assembly 'It wags, it wags" exclaimed every one—there was no longer any room for doubt, the most sceptical among the spectators was thoroughly convinced that the tail was wagging, and even that arch unbeliever, Simon Sly, was heard to declare he had no doubt of the waggery

"Dr Humm now changed his operation, and commencing as before at the cat's nose, he passed his two fingers up the skull bone between the ears, down the occiput, round under the neck to the tip of the shoulder blade, and thence in a straight line down to the left paw After thirty-one magnetical touches in this manner, the wagging of the tail increased to such a degree as to describe almost a semicircle, and Dr. Humm declared the animal was sound asleep. As the cat gave no evidence to the contrary except by the wagging, there was no doubt of the fact—for the doctor assured us that magnetised cats always wagged their tails when sleeping The cat was therefore declared to be in a fit state for experiments, and Doctor Humm began by willing the cat's tail to tie itself up in a bow knot. the tail immediately twisted itself round, and described the figure of a bow-knot in the air This was witnessed with astonishment by every one in the room. Mr Noddy, seeing the wonderful effect of the experiment, signified a wish to bear a part in the operation, to which Dr Humm very politely consented. Mr. Noddy therefore proceeded to magnetise the cat from the tip to the lower jaw, under the chin, across the trachea and thorax, down to the heel of the right paw the cat immediately gave a loud *mew*, which in a sleeping cat must have been a sure sign that something ailed her Mr Noddy then willed her nose to be a rat-hole, which took immediate effect by the cat's snapping sharply at his fore finger This astonished the company a second time, and Dr. Humm made a third experiment by willing the cat to be thrown souse into Frog Pond. The Rev. Mr. Fogbrain immediately let go her fore paws, and, strange to say, they began pad, padding, as if attempting to swim. The murmurs of admiration that ran round the company at this wonderful sight are not to be described 'She swims!' she swims!" exclaimed every one, the proof was complete, most of the spectators could hear the splashing of the water in the pond, and some even imagined they could see the boys chucking stones at her. After this had been displayed to the full satisfaction of the company, Dr. Humm willed her to come safe ashore, notwithstanding, her paws continued to paddle, but this was easily accounted for, as the doctor assured us she would stand perfectly still as soon as she got her land legs on.

"Various other experiments followed, which we have not space to describe in detail. Dr. Scantiwit willed the cat to be in a mustard pot, whereupon she immediately gave a loud sneeze, and made an immensely wry face. Mr. Milksop willed her to be lapping cream, on which she gave a hearty purr and licked her chops three times. Mr. Dryasdust willed her to scratch his wig, and at the same moment felt a sharp tingling under his skull-bone, by which he was convinced he had something there, &c. &c."

Your Committee, having laid before the Society these wonderful experiments, recommend that Dr. Humm, and each of the individuals who assisted as above, be presented with the Freedom of the Corporation of Fools' Paradise.

Your Committee would recommend to the respectful notice of the Society the various public lecturers on recondite subjects, and, in particular, those who treat of German metaphysics, Coleridgeism, optimism, and similar ultramundane exaltations of the human intellect. Your Committee suggest that a prize be proposed the ensuing year for the best dissertation on the following subject:—"The influence of transcendental Metaphysics on the growth of Cabbages." They also recommend "that each transcendentalist be presented with a broomstick, a thick walnut, and a parachute of paramatta for the purpose of enabling them to fly through the air.

Your Committee would not escape too far upon the time of the Society, were they to enumerate at length all the matters which deserve their attention They are obliged reluctantly, therefore, to pass over with a bare mention the great number of old women, quid-nuncs, schemers, dreamers, steamers, system-mongers, method-mongers, improvers-of-society, &c, who are now exercising so vast an influence over the minds of the weak and the unlearned. They recommend that a medal be struck, emblematical of the whole of this enlightened community, the said medal to bear on one side the figure of a toad just ready to jump, with the legend, "*Sedet, eternumque sedebit,*" in allusion to the march of intellect, and on the reverse, the figure of a corn stalk monument, with the words "*Ære perennius,*" in allusion to the lasting fame of all march-of-intellect people.

SONGS FOR THE PEOPLE.

No. XI—LEND A HAND.

ORIGINAL AND SELECTED.

Working 'mid the world's commotion,
Fighting up life's thorny road,
Patriots, with a high devotion,
Struggle in the cause of God
And to *us* that band is playing—
All their griefs before us laying—
And to *us* that band is saying,
"Brethren! lend a hand!"

Men of freedom! men of daring!
Bless'd with health and strong in youth,
Come, with all your noble bearing,
Fight the battle-fight of truth.
Former friends reject and slight us,
Fiends and men resist and spite us,
Earth and hell combine to fight us—
Heroes! lend a hand!

Men of wealth, and men of station,
Vice has had your aid too long;
Come, then—from their degradation
Help to raise the wretched throng.
Of a doom of woe unthinking,
From a poison cup they're drinking—
In a sea of death they're sinking—
Rich ones! lend a hand!

Men of genius, high and soaring,
Cease your flights past human ken;
Lend your mighty aid in pouring
Knowledge round the paths of men.
Round you is a solitude—
Minds with highest powers endued
Perishing for lack of food.
Genius! lend a hand!

Men of God! whose noble calling
Has come down from Heaven above,
Cease your scheming and caballing,
Preach in truth a Saviour's love.
While but trifles you're decrying,
Millions for the truth are sighing,
And the second death are dying.
Christians! lend a hand!

Men of every mind and station,
Sow the seed, and strike the blow;
Rise in honest indignation,
Rise to fight the common foe.
There's a field for all your working—
Vice is reigning, sin is lurking;
Let there be no dastard shirking.
Patriots! lend a hand!"

He overcometh a stout enemy that overcometh his own anger.

Wrath and revenge take from the mercy of God, and destroy and quench the grace that God has given him

He best keepeth himself from anger that always doth remember that God looketh upon him.

Anger is the most impotent passion that influences the mind of man; it effects nothing it undertakes, and hurts the man who is possessed by it more than the object against which it is directed.

MEMOIR OF THE DUKE OF WELLINGTON.

WATERLOO—THE NIGHT AFTER THE BATTLE.

THE arrival of the Prussians was, as we have seen, the signal for flight on the part of the French, and Napoleon's splendid army experienced the most decided and fatal reverse it had ever encountered. A total route ensued, and as the last gleam of sunshine fell upon the field of Waterloo, it lighted up the victors on the gory way, and helped the vanquished yet a little in their fatal and bloody retreat. No respite for the conquerors or the conquered. The moon uprose, and saw the army of the French a "broken host" upon that bloody plain. No words can give an idea of the horrors of that night. God grant that such another may never be witnessed by men. The Prussians, who had been reinforced by part of Ziethen's corps, to 50,000 men and 123 guns, commenced a fierce pursuit, and gave the utmost license to the animosity they had so long cherished towards the French. Wellington had met Blucher, it is said, by a singular coincidence, at La Belle Alliance, and had commended the chase to him; while he, having bivouacked his own weary troops on what had been the French ground, returned across the battle field to sup at Brussels. It was about to lead his hussars against the French cavalry re serves in the general advance of the English lines. Th Prince of Orange received a musket ball in his shoulder General Cooke, Baron Alten, Sir Colin Hackett, Lord Fitzro Somerset, and Colonel Ponsonby were also severely wounded and, indeed, scarcely one of the staff was unscathed. Toward the close of the day the Duke had only a single attendan left, the Count de Sales, a Sardinian major. His Grace ha many hair-breadth escapes, but received no wound, a fact tha will appear almost miraculous when the extent to which h exposed himself is considered. The manner in which th whole army behaved transcends all praise, the sole exception being a few Belgian regiments, one of which absconded at th commencement of the battle, and threw Brussels into a stat of indescribable alarm and confusion by the reports they sprea of the French successes. Another on being ordered to charge refused on the ground that their horses were their own, an that they might get hurt. The English foot, though many o the soldiers had never been under fire before, won from a enemy (General Foy) this testimony:—"Neither the canno balls of the Imperial Guards, discharged point blank, nor th victorious cavalry of France, could make the least impressio

FARM OF ST. HAGUE, ON THE FIELD OF WATERLOO.

was a melancholy ride, for on an area of little more than two square miles, lay 50,000 dead or disabled men and horses. The conqueror was deeply affected at the sight, and is said to have wept bitterly.

The losses of the British alone were as follows:—

	Officers	Non-commissioned	Rank and File.	Total.	Horses.
Killed	83	82	1252	1417	1319
Wounded	363	271	4289	4923	719
Missing	10	13	569	592	708
	456	366	6110	6932	2746

Most of the men, however, returned missing, having gone to the rear with the wounded, afterwards rejoined their regiments. The total allied loss was 22,469, or about one in three of the whole army. The Prussians also lost about 6000 men. The total losses of the latter, including Ligny and Wavre, were 34,131. Amongst the British slain were Sir Thomas Picton, the hero of the fighting 3rd; Sir William Ponsonby, Colonel Delancy, Sir Alexander Gordon, and many other officers of distinction. The Earl of Uxbridge had his leg shot off as he on the immoveable British infantry. One might have beer almost tempted to fancy that it had rooted itself in the ground but for the majestic movement which its battalions commenced some minutes after sunset."

Nothing could exceed the relentless severity with which Blucher's troops maintained the chase. No quarter was given and thousands perished in addition to those who had fallen on the field. An attempt was made to barricade Genappe, but the passage was soon forced by the Prussian cannon, and 800 French were killed in that village alone. At last they became so terrified, that at the very sound of a hostile trumpe they fled. In this manner the pursuers disturbed no fewer than nine bivouacs. Only 40,000 Frenchmen passed through Charlero on the 19th, many of them unarmed, and scarcely more than hal that number reached Paris, the rest disbanding themselves a soon as they entered France. Napoleon had, on this occasion imitated his conduct in Russia. As soon as he saw the failure of the Guards, he turned to an aide-de-camp, and with a face livid with rage and despair, he muttered in a tremulou voice, "A present c'est fini! sauvons-nous." He then rod off in order to get before the stream of fugitives. At Genapp his coach was surrounded, and he escaped with the greates difficulty. At Charleroi he committed what remained of hi

army to Marshal Soult, and hastened on to Paris, which he reached on the 20th.

A few words must be said here of Grouchy, to whose non-arrival on the field of battle Napoleon ascribed his disaster. In obedience to his instructions he marched against Blucher on the 17th, and halted at Gembloux. The next morning he advanced on Wavre, and drove the Prussian rear-guard from the right bank of the Dyle, but was unable to cross the river, which was obstinately held by Thielman. He did not receive Napoleon's commands from Soult to march on St. Lambert till 7 in the evening, and then he succeeded in passing the Dyle at Limale, where he bivouacked. The next day he was attacked, but he sharply repulsed the enemy, and then receiving intelligence of Napoleon's defeat, made an able retreat by Namur and Dinant to Paris, where he arrived a week after with 25,000 men, having lost about 10,000 men and some cannon. The total amount of artillery captured on the field of Waterloo, was 122 guns, 20 spare gun-carriages, and 207 waggons, but much more fell during the pursuit into the hands of the allies, making a total number of 202 guns. The prisoners probably numbered 10,000.

The famous battle of the 18th is called by the French Mont St. Jean, and was originally intended by the allies to be designated La Belle Alliance; but it eventually received the name of Waterloo from the fact of the Duke's having his head quarters there after the battle. It is an historical fact that the British forces have been twice signally successful over those of the 17th of August, 1705. It is no less a fact that the conquerors of each of those days on the same field, are the only commanders in the British service whose military career brought them to the summit of the peerage—to dukedoms.

GATEWAY OF THE FARM OF HOUGOUMONT.

RUINS OF THE CHATEAU OF HOUGOUMONT.

France on this spot; and that, by the side of the Chapel of Waterloo, which, it may be remarked, was uninjured by shot or shell on the memorable 18th of June, 1815, did Marlborough cut off a large division of the French forces opposed to him on

THE OCCUPATION OF PARIS BY THE ALLIES.

On June 19th the allies were moving in good order towards France, which they entered on the 21st; and on July 3, after some rather sharp encounters with Blucher on that and the previous day, Paris was surrendered. The city was occupied on the 6th, and on the following day Louis XVIII. was replaced on his throne. On the 22nd of June, Napoleon had abdicated in favour of his son, the King of Rome; and on the 29th he had repaired to Rochefort. On the 15th of July, after having made an abortive attempt to procure a passport to America from Wellington, and having formed various idle projects for escaping in spite of the English cruisers, he surrendered to Captain Maitland of the Bellerophon.

Blucher would have assassinated Napoleon, but the Duke refused to be a party to the transaction, and saved the life of his great rival. To appease the Prussians, he procured the appointment of Baron Muffling to be Governor of Paris—of which Blucher immediately availed himself to lay the capital under a contribution of a hundred million francs, to quarter troops upon the inhabitants, and to demand various sums from Versailles and other towns. What to the French was more galling than this, he commenced the destruction of two bridges which Napoleon had built and called after his victories of Jena and Austerlitz. Wellington also put a stop to these gratuitous acts of oppression: the contributions were not levied, and the

bridges had only their names changed by the king to Le Pont des Invalides and Le Pont de la Jardin du Roi.

On the 8th of July, a ministry, at the head of which was Prince Talleyrand, was appointed at the suggestion of the Duke, and on the 15th his Grace, with the grand staff of the British army, composed of 300 generals and other distinguished officers, paid their respects to Louis at the Tuileries. His Majesty, on that occasion, told the British Commander-in-chief that he owed him "a personal obligation for his humanity and the good conduct of his army."

THE NEWS OF THE BATTLE RECEIVED IN ENGLAND.

The news of Waterloo was brought on the 20th by Mr. Sutton, the proprietor of a number of vessels plying between Colchester and Ostend, who made the voyage at his private cost for that special purpose. The Duke's despatches arrived two days later, and were immediately conveyed to the two Houses of Parliament. They produced the most rapturous expressions of joy. A vote of thanks to the Duke and his army was carried by acclamation in the Lords, on the motion of the Earl Bathurst; and in the Commons the minister (Lord Castlereagh) brought a message from the Prince Regent, in consequence of which an additional grant of £200,000, accompanied by the most flattering encomiums, was made, to purchase a mansion and estate for his Grace. Illuminations were general throughout the country, and almost every steeple rang out its merriest peals. A prayer of thanksgiving was said in the churches on Sunday, the 9th of July, and a subscription, amounting to upwards of a hundred thousand pounds, was made for the widows and orphans of the slain. The Duke also generously relinquished for the same purpose half the parliamentary compensation due to him for the Peninsular prize property.

All the regiments which had been in the battle were permitted to inscribe "Waterloo" on their banners, and every surviving soldier was presented with a silver medal, and was allowed to reckon that day as two years' service.

The Rev. John Norcross wrote to the Duke, requesting that he would name a private or non-commissioned officer as most deserving of a handsome donation which he offered His Grace nominated Serjeant Graham of the Coldstreams, whose gallant conduct at Hougoumont is already known to our readers; and warmly eulogised Mr. Norcross's patriotism To the Mayor of Brussels, whose kindness to the wounded was past all praise, he also wrote a grateful letter of acknowledgment. This was signed "Wellington, Prince of Waterloo," which he had been created in July by the King of the Netherlands, who also conferred on him the estate La Belle Alliance.

The victory was mentioned in fitting terms in the Prince Regent's speech at the close of the session on the 12th of July—the corporation of London having, a few days before, presented an address of congratulation to the throne. The City also presented splendid swords to his Grace and the chief allied officers. The distribution was made, at the Lord Mayor's request, by the Duke himself—a circumstance that must have greatly enhanced the value of the donation in the eyes of all by whom it was received.

On the 30th of November his Grace published a general order, in which he took leave of the army, of which he spoke in very flattering terms. He continued, however, to reside in the palace of Elysée Bourbon at Paris for some months longer.

On the 29th of June, 1816, his Grace set out for London; not, however, without experiencing another narrow escape. A few days before he had given at his palace a grand farewell *fête*, to which the younger Bourbon princes, many distinguished members of the government and court, and all the English of rank in the capital were invited. The servant of Mr. Aston happening to be waiting in the street, perceived smoke coming from one of the cellars. He instantly gave the alarm, and a lighted rag was found near a barrel of gunpowder, and two barrels of oil. The cause of danger was quietly removed, and no interruption occurred to the entertainment. It was, however, quite clear that a Guy Fawkes explosion had been plotted.

THE DUKE APPOINTED AMBASSADOR AT PARIS.

On the 18th of June, 1817, the magnificent new Strand-bridge, designed by Mr. Rennie, and called after the glorious victory of that day, was opened by the Prince Regent, who crossed it in state, with the Duke of York on his right hand and the Duke of Wellington on his left—the gorgeous ceremonial being heralded by a discharge of 202 guns in commemoration of the number of pieces captured. During his Grace's short stay in London, on the motion of Lord Castlereagh, carried by acclamation, a committee of the House was appointed to wait on him to offer their congratulations. On the 16th of August he again returned to Paris as ambassador-plenipotentiary; and in the course of the next month he was employed in prosecuting the publisher of the *Flanders Journal* for a libel; and though he failed, he received at the hands of the court ample amends for the slander he complained of—namely, that he had been guilty of misconduct in his diplomatic functions. In the meantime Apsley House, in Hyde-park, was purchased by the British Government and rebuilt by Mr. Wyatt, for the Duke, who had since given in it an annual dinner on Waterloo-day to his brother officers present at the battle. Amongst the objects of interest in it is the magnificent colossal statue of Napoleon by Canova, which Louis sent over to him as soon as it arrived from the artist at Rome. On the 19th of November the Parliamentary Commissioners purchased of Lord Rivers the estate of Strathfieldsaye, in Hampshire, for £263,000, the timber on it alone being valued at £150,000.

On the 11th of February, 1818, as the Duke's carriage was entering the gate of his hotel in Paris, a scoundrel, named Cantillon, fired a pistol at his Grace, but happily missed his aim. The ministers of the allied Sovereigns, as well as the King of France, warmly congratulated him on his escape, and the Prince Regent sent him an autograph letter on the occasion. Lord Castlereagh, in consequence of this atrocious attempt, procured an extension of the Alien Act for two years longer. Cantillon, and another man, named Marinot, were tried during the next year, but were acquitted. Napoleon, who died on the 5th of May, 1821, left this scoundrel Cantillon a legacy of 10,000 francs—a fact that speaks volumes for the "generosity" of his disposition!

THE TREATY OF AIX-LA-CHAPELLE.

On the 25th of April, 1818, the negotiations with France were finally concluded; and on the 9th of the following October, a treaty by the allied Sovereigns was agreed to at Aix-la-Chapelle, for the immediate withdrawal of the army of occupation On the 22nd, there was a grand review and sham fight near Valenciennes; after which the Duke gave a splendid entertainment to the Emperor of Russia and the King of Prussia, and the troops embarked for this country forthwith. His Grace was made a Field Marshal in the Austrian, Russian, and Prussian service immediately after the Congress of Aix; and on the 26th of December he was appointed Master-General of the Ordnance at home.

THE DUKE'S RETURN TO ENGLAND.

In June, 1819, the Waterloo prize money was distributed, the Duke of Wellington's share being £60,000; a general's £1,250; a field officer's, £420; a captain's, £90; a subaltern's, £33; a serjeant's, £9; a private's, £2 10s. About this time, a magnificent dessert-service was presented to the Duke by the King of Saxony. A still more magnificent present was made to the Duke by the King of Portugal. It consisted of a silver plateau, thirty feet long and three feet and a half broad, of beautiful design and workmanship, and lighted by 106 wax tapers. In 1822, the ladies of England having contributed £10,000 towards the erection of a monument to the Duke and his companions in arms, a magnificent cast by Westmacott of the Achilles, on the Quirinal-hill, was erected in Hyde-park, near Apsley House. The statue, which is 20 feet high, and upwards of 36 tons in weight, was made (as the inscription states) of the cannon taken in the battles of Salamanca, Vittoria, Toulouse, and Waterloo. In this year, too, he received from the merchants of London a silver-gilt shield, weighing 300lbs., splendidly designed by Stothard.

BUFFALO HERDS.

THERE was no necessity for again fording the river in pursuit of buffaloes, there being droves both above and below us on our own side, and numbers in the act of crossing; giving us a good prospect of sport and fresh food. Those to leeward of us did not remain long contiguous, crossing over the bluffs in enormous batches, for it is an extraordinary peculiarity of the buffalo, that it will run from the scent of a white man sooner than from his person, while they are indifferent to that of the Indian, though he is more frequently in collision with them; and their sense of smelling is so acute, that a pale-face has not a chance of getting near them, unless he goes right against the wind. We observed a large drove to windward, about midway over the river, and as the reeds along the bank were three feet high, concealment was comparatively easy; so I took with me three of our best marksmen and stole into ambush, taking a position where we supposed they would pass within one hundred yards of us, but in their passage they inclined so much down the stream, that it looked as if they would trample right over us, and as we were hesitating what we should do, a huge, ferocious-looking bull that headed the drove, ascended the bank within thirty yards of us, the rest following in a line, which they generally do when moving of their own accord, without apprehension. The string being long, we waited patiently till a fine cow, now in better season than the other sex, was passing, when two fired, and she fell without a struggle.

The shape and appearance of the buffalo is in nowise symmetrical or sightly at any season, but they now looked particularly ungainly, their coats being for the most part cast along their sides and quarters, their necks and heads alone retaining their shaggy covering, most inappositely like a pet French poodle. In this month (May) they generally shed, and judges say that a November robe is the best; as the new fleece, having six months to grow, becomes in that period sufficiently thick and warm, with all that softness which is conducive to comfort; whereas those that attain a full winter's growth become coarse, bristly, and matted. I read many accounts, and heard divers and sundry stories of the buffalo, and of their marvellous and gregarious propensities, but I always swallowed such yarns *cum grano salis* allowing what I conceived a liberal margin for the exercise of the long-bow which travellers generally use, as poets do their licence However, experience has now satisfied me that in those instances, at least, reality transcends imagination. I can thus profess my faith in previous writers, and reconcile my scepticism to the statement that, in the progress of the army of invasion over the Mexican plains, they were frequently obliged to fire grape shot amongst them to open a way, for I should mention, that when once a herd of buffaloes break, as it is termed, running off in a mass, they are not to be turned aside by common obstacles, but go right ahead, regardless of everything before them, fearing only the cause in their rear that originated their flight. They have been frequently known to burst right through the line of a caravan, trampling the mules to death, and the waggons to pieces, the men escaping with difficulty

We had not travelled many miles after apportioning the cow until we saw a small herd directly in our path, when we halted, and two of our men crept up to shoot at them There was a gorge in the bluffs opposite where they were feeding, through which I knew they would rush in retreat when fired on, and there I posted myself on horseback with a light carbine that I could manage with one hand. I was not deceived, for they made direct for the open plain, when they broke, but my horse became so fretful and fidgety, I could not take aim as they passed. I gave chase, however, and soon got up to and alongside the headmost, down whose shoulder I saw a stream of blood, the effect of a wound He cast his eyes fiercely round occasionally as I came up close to him, showing a disposition to attack, so that it required both my hands in the bridle to prevent my horse from bolting. I persevered, nevertheless, running a neck-and neck race, leaping over rocks and bursting through copses of thick brush, until we came to a dry gully that crossed our path, over twelve feet and as many yards wide, and as in mid-career it was impossible to stop short, down we leaped, landing amidst those brutes, who, jostling each other in the descent, were tumbled at the bottom. It was a fearful moment, and I thought it all up with me, as my horse came to his chest by the shock; but ere he was on his legs, I was again alone with my bleeding companion, who was scrambling up the other bank. I however gained the level first, and before he could get into active motion, fired; but not being over six yards from him, he made an instant rush, and gored my poor horse in the shoulder, coming against him with such force as to throw him clean over, unseating me with extreme violence, and falling himself to his knees in the exertion. The horse jumped quickly up and ran away at full speed, with my foot sticking in the stirrup, and the wounded bull in pursuit A sudden jerk at length caused the boot to pull off, the bull with his impetus over-running me and in attempting to stop falling heavily, and lying unable to rise from loss of blood and exhaustion, while I lay at a little distance, incapable of moving, from the stunning effects of my accident. Seeing my horse gallop back without its rider, several of the men hurried up the ravine, and found me just recovering from a faint. After washing off the blood and giving me a drink, they proceeded to despatch the buffalo, who had not yet yielded up the ghost, for, as they discharged their pistols at him, he made several desperate efforts to rise, glaring fiercely at them, and uttering a low bellowing roar, not so much of pain, I should say, as of madness. He was a very large beast, and loaded the saddle-horses well in bringing him piecemeal to the waggon.—*From Mr. Kelly's new work, entitled "Across the Rocky Mountains."*

THE SEASONS.

Come, sweet ethereal SPRING, with skies of blue
And branches heavy with the pearly dew;
Thy dancing streams and young leaves whispering say—
"Summer is coming soon winter has passed away"

The glorious SUMMER'S come no more
We gaze on leafless trees and gardens drear—
Or listen to the cold monot'nous roar
Of wintry winds the sunshine and the flowers,
And happy looks of Nature, warm and clear,
And skies serene, and holidays, are ours

With sheaves and laden boughs brown AUTUMN comes
Bringing contentment in her smiling face. The day
Is hot with sunshine labour, and the night—
Is merry with the joy of harvest homes.
The year is almost ended 'tis well to be so gay,—
Days darken, shadows lengthen—so pass our lives away.

Stern, and dark, and dismal as thou art,
Oh WINTER, yet I love thee! Midst thy snows
I see the promise of a Spring. Ere thou depart
The halo of a coming brightness o'er thee glows;
And, like the closing of a goodly life, thy day
Shines brighter through the gloom of Time's decay

GEORGE F. PARDON.

LITERARY NOTICES.

JOHN CASSELL'S ALMANACKS FOR 1853.

THE UNCLE TOM'S CABIN ALMANACK; or, THE ABOLITIONIST MEMENTO for 1853, splendidly Illustrated by George Cruikshank, Gilbert, Harvey, "Phiz," and other eminent Artists, price 1s

A Price Sixpence, THE ILLUSTRATED EXHIBITOR ALMANACK for 1853, containing upwards of Fifty beautiful Engravings

Price Twopence, THE POPULAR EDUCATOR ALMANACK for 1853, containing Forty-eight Pages of most interesting and valuable Educational Statistics; including a Comparative View of Education at Home and Abroad; Essays on the Leading Sciences, Brief Notices of Eminent Scholars, Exposition of Technical Terms, &c &c.

Price Twopence, THE TEMPERANCE ALMANACK for 1853, much improved and enlarged, and in which will be inserted a Tale of thrilling interest, from the immitable pen of Mrs Harriet Beecher Stowe, authoress of "Uncle Tom's Cabin," entitled, "THE PLEDGE TAKEN, or, The Husband Saved, and a Family made Happy," with valuable details of the great Temperance Movement, Statistics, &c. With several Engravings.

A Price Sixpence, THE PROTESTANT DISSENTERS' ALMANACK for 1853, with 12 beautiful Designs, by Gilbert, of striking Events in the History of Nonconformity.

CASSELL'S SHILLING ILLUSTRATED EDITION OF "UNCLE TOM'S CABIN," neatly bound in Ornamental Wrapper, is now ready for delivery, foolscap octavo, with Eight beautiful Engravings, forming the cheapest edition yet published

CASSELL'S ELEMENTS OF ARITHMETIC, will be issued in a few days, price 1s. in stiff covers, or 1s. 6d. cloth, uniform with Cassell's Edition of Euclid, edited by Professor Wallace, A.M., of the University of Glasgow, Editor of Cassell's "Euclid," the POPULAR EDUCATOR, &c

CASSELL'S SHILLING EDITION OF EUCLID.—THE ELEMENTS OF GEOMETRY, containing the First Six and the Eleventh and Twelfth Books of Euclid, from the text of Robert Simson, M.D., Emeritus Professor of Mathematics in the University of Glasgow, with Corrections, Annotations, and Exercises, by Robert Wallace, A.M., of the same University, and Collegiate Tutor of the University of London, is now ready, price 1s. in stiff covers, or 1s. 6d. neat cloth.

AN EDUCATIONAL WORK FOR EVERY FAMILY.—Now ready, the First Volume of the POPULAR EDUCATOR. Common Edition, with weekly Headings, 3s. 6d, Extra Edition, without the weekly Headings, 4s 6d This Volume contains Lessons in the French Language, Latin, German, English, Arithmetic, Music, Geometry, Botany, Natural History, Biography, Geography, &c. The POPULAR EDUCATOR is published in monthly Parts and weekly Numbers, both Common and Fine Editions.—Common Edition, 1d. per Number, Fine Edition, 1½d.

THE GATHERER.

"I am but the gatherer of inconsidered trifles."

FEMALE EDUCATION.—No woman is educated, says Burnap, who is not equal to the successful management of a family. Although it does not require so much talent to rule a household as it does to govern a state; still it requires talent of the same kind. As he makes the best general who has begun at the lowest post, and passed up through every grade of office—as he makes the best admiral who entered the navy in the most inferior station, because they, and they alone, are acquainted with the whole compass of a subaltern's duty—so that woman will manage a family with the greatest ease and efficiency who knows experimentally the duties of every member of it.—Daughters who neglect this part of education are entirely without excuse, and mothers are still more to blame. The very apology which is often made for the neglect of it, is the greatest condemnation of those who offer it. It is said by those who are growing in ignorance of these things, "Any one can learn how to keep house when it is necessary. Any one who loves her husband and is devoted to his interests, will make herself accomplished in those things when she is married." As well might the young man say, "Of what use is it for me to learn a profession, or make myself acquainted with the details of any business? When I am married, if I love my wife, it will then be time enough to learn a profession, or to accomplish myself in the details of business." Would there be any surer omen of total failure and discomfiture? That which a woman can learn to do in a few months under the tuition of love, can certainly be learned to much greater advantage under the tuition of a mother. If it is all so easy to learn, then certainly they are utterly inexcusable who neglect it. It is no degradation to the finest lady to know all the details of domestic affairs. It is honourable, and ought to be her pride

HOMER, DANTE, AND SHAKSPERE.—Plunge in the sea where you will, it is everywhere salt. Take these great poets where you will, though they may vary in tone and colour, they everywhere savour of themselves. Whether he stoop or rise Shakspere is always Shakspere, and Dante still himself, and Homer is Homer throughout. Illustration, however, is often more impressive than precept. Take the last of these at random. The Iliad is before us, lying open at the third book. Observe of this book, how naturally it grows out of the incidents of the preceding. The hostile armies in face of each other, the beautiful episode of the single combat of Paris and Menelaus, with the circumstances attending it, including Helen's description of the various chiefs that Priam asks her about, (one of the sweetest incidents, by the way, and most picturesque of the kind to be met with anywhere) are all made to succeed each other in the most natural way possible. And here it behoves young poets to take especial note that there is nothing forced, nothing arbitrary about Homer everything arises as of itself—nothing lugged in. They, therefore, if ever tempted to stick incidents in, whereby, as on pegs, to hang what they think some delicious writing, would do well to pause. They are on a road which leads not to poetic excellence, and, whatever else may be said of it, of this they may be sure, that such handling is no mark of power. And in poetry, especially be it remembered, that "to be weak is to be miserable."

SMOKING IN THE EAST.—Smoking in the east is practised two ways. the common tobacco from the chibouk. Tobacco is found in many parts of this vast empire. The tobacco smoked at Constantinople comes from Samsun, and the adjacent parts; it is strong, of a light colour, and dried in the sun. The tobacco smoked in Egypt comes principally from Latakia, and the mountains near. Of this there are several sorts. Besides those which bear the greatest reputation, other tobacco is grown and smoked locally. The sticks of which the pipe is composed are of various sorts; the best are the cherry-sticks, which are found finest in Constantinople. The young sticks are trained up straight and strong, but most of those that are largest and handsomest are joined, which is done so neatly that, till smoked, it is impossible to detect the joining, these last a considerable time, and are elegant. Others are made of jessamine, rose, in fact, of any wood, and some are ornamented with silk and embroidery. The bowls are made in all the towns, but the best come from Constantinople The mouth-pieces are of all sorts; amber is the most valuable, and the colour most prized varies, as do all fashions. Many adorn their mouth-pieces with diamonds. Men come round who clean the pipe with wire and cotton, but this is a thing few Orientals think about. They smoke on, clean or dirty. It would be a long list were I to give all the names for what we call a chibouk; there are, perhaps, a hundred and fifty; I myself know upwards of fifty. It is generally known by a different name among every different people. The water-pipe is of different kinds; first, the long, upright tubes, supporting a clay bowl, filled with tobacco, which fits into a round ball of brass, or cocoa-nut; from this comes a reed of bamboo. This is the ordinary pipe. When riding, it is taken to pieces and hung in a leathern bag, at the saddle. The tobacco smoked in this is tombac; the best comes from the province of Shiraz, in Persia; but much is grown of an inferior sort in Egypt and elsewhere. It is used dry, and broken with the hand; when wanted, enough is put into a bit of rag, and water poured over it; it is then wrung, and this process is repeated three times, more or less, according to the taste of the smoker. Much art ought to be shown in charging them, as, without it is done *secundem artem*, the thing is a failure. A servant is required, and, if you smoke much and have guests, it is no sinecure for him. There is also another sort of water-pipe, where, in lieu of a bell of brass or a coca-nut, there is a common native-made bottle. The better ones have handsome bottles; the stems and pipes of these are of pear, which are considered as sweeter and nicer; these are rather Persian.—*Walpole's Ansayrii or Further East.*

REVENUES OF THE CHURCH OF ENGLAND.—From the reprint of a parliamentary return of the "gross and net incomes of each archbishopric and bishopric in England and Wales," some important inferences may be drawn. During three years the following incomes were received from the twenty-six sees.

	1837.	1840.	1843.
Canterbury	£23,307 15 5	£32,719 18 6	£27,705 13 10
York	13,988 9 6	10,366 7 6	20,141 14 4
London	15,754 9 7	12,429 15 5	13,519 5 0
Durham	19,677 13 10	29,906 12 1	22,416 0 2
Winchester	12,102 19 10	16,283 7 4	11,599 0 10
St. Asaph	8,387 13 4	8,510 2 5	8,084 14 8
Bangor	6,744 18 2	8,187 19 9	7,467 5 5
Bath and Wells ..	6,537 3 1	6,304 15 11	4,667 2 5
Carlisle	3,806 13 1	2,911 17 3	2,476 18 7
Chester	1,695 1 4	1,901 1 2	1,893 13 2
Chichester.....	5,563 0 9	5,083 14 5	6,519 13 3
St. David's.....	4,510 6 5	3,302 2 5	4,752 13 8
Ely	8,290 3 3	14,738 14 10	6,486 16 0
Exeter	2,241 0 9	1,092 0 9	1,092 0 9
Gloster and Bristol,	5,221 1 11	5,837 10 2	5,226 16 1
Hereford	3,739 16 1	7,915 11 8	5,936 3 5
Lichfield.....		No return.	
Lincoln	2,980 11 9	4,419 16 0	5,610 0 2
Llandaff.....	796 13 1	687 10 7	890 15 8
Norwich.....	5,295 1 9	5,586 14 5	8,765 3 3
Oxford	3,199 13 6	2,295 0 6	2,506 12 6
Peterborough	2,897 16 0	4,756 9 1	4,060 15 11
Ripon.....	3,480 16 2	8,356 19 11	4,563 18 4
Rochester	3,489 3 1	1,254 2 1	1,102 2 1
Salisbury	5,352 2 11	3,664 19 5	12,879 0 0
Worcester.....	6,313 1 2	8,649 17 0	7,294 13 0

From the above it will be seen that in the year 1843 the incomes of the twenty-five bishops—the see of Lichfield making no return—amounted to more than £197,490, while at the same time, church accommodation is provided for only 6,500,000 out of 17,000,000 hearers. The enormous excess in incomes of the bishops may be seen by reference to the average incomes of the clergy elsewhere A French archbishop is content with £1,041 a-year, and a French bishop can live on an income of £625; a cardinal in Rome the next in rank to the pope, has only about £500 annually. Surely these are fitting successors to the humble fishermen of Galilee who not only inculcated the virtue of poverty, but practised what they taught!

TRANSMISSION OF NEWS IN FORMER DAYS.—The *Nottingham Date Book* gives an amusing instance of the slow and incorrect manner in which news was formerly transmitted, and shows us, by an extract from a newspaper of 1777, how much in actual advance we are of the "good old times." On Nov. 8th of that year a report reached Nottingham of the total defeat of Washington's army in America, by the British forces under Sir William Howe. Great was the rejoicing thereat, the church bells were rung, the people met in crowds in the streets and congratulated each other speeches were made; guns were fired; and some enthusiastic spirits, not content with these demonstrations, procured an ass and sat a effigy of Washington upon it; which, after being ridiculed and pelted at, was finally burnt with great triumph at night." The "glorious news" was further confirmed by a gentleman who had heard a letter read at the duke of Newcastle's house at Clumber-park, and a Glasgow newspaper also added the weight of its authority to the current rumour. "No *Extraordinary Gazette* has yet arrived with the news," says the journal of 1777; and it is almost needless to add, that a *Gazette* was quite unnecessary, seeing that there was no foundation for the total defeat."

Printed and Published by JOHN CASSELL, La Belle Sauvage Yard, Ludgate-hill, London.—October 23, 1852.

WORKING MAN'S FRIEND

AND FAMILY INSTRUCTOR.

NEW SERIES.—VOL. III., No. 57.] SATURDAY, OCTOBER 30, 1852. [PRICE ONE PENNY.

MEMOIR OF THE DUKE OF WELLINGTON.

THE WARRIOR IN THE SENATE.

THE general peace was hailed by all parties, at home and abroad, as the one great end and triumph of Wellington's victories "To all appearance," says Mr. Dod, "the desperate game had been at length decided in favour of the party of resistance, against the party of progress, and an undisputed sway might now have been anticipated for the ancient traditions of government. Yet the echoes of the cannon had scarcely ceased, when the clamours of the people began, and political agitation was commenced with such advantage, popularity, and success as it had never enjoyed during the ascendancy of revolutionary France. The explanation of this phenomenon is simple enough. The cessation of war and its vicissitudes had left a void in the popular mind. National spirit required new occupation, and the creation of some new interest to satisfy the desires which had been called into being by so exciting a struggle. But with this tendency to agitation in general was combined a decided bias in the direction of liberalism. Much of the work of the French revolutionists was imperishable, and many of their maxims survived the scaffolds of the Republic and the wars of the Empire. Topics, moreover, and novelties of all kinds had been tossed up by the political storm, discussion had been earnest, and sovereigns, in the exigencies of a struggle for life and death, had been induced to concede something and promise more to the reasonable claims of their subjects. Moreover, the pressure of taxation was severely felt, and there was a natural desire to direct again to the proper objects of peace those energies of government which had been so long absorbed in the prosecution of war. The Duke of Wellington himself, in advocating certain measures of European policy at this period, observed, with his unerring sagacity, that what was needed by the several governments was such a peace as would give them "the power of reducing their overgrown military establishments and the leisure to attend to the internal concerns of their nations, and to improve the situation of their people."

These conditions of society determined the character of European history during what has been termed "the thirty years' peace," and through which period we shall now have to follow the subject of our memoir. At the outset it appeared as if sovereigns were not indisposed to share with the people that freedom to which the exertions of the latter had restored them, but whether scared by visions of reviving Jacobinism, or spoiled by the sweets of power, they speedily renounced their views, and concerted a common policy of repression throughout the whole of Europe. With the events which ensued, we are no further concerned than in so far as they illustrate the position and conduct of the great Duke in mitigating or controlling them. In Germany and Italy the fires of discontent smouldered, with occasional outbreaks, until the conflagration of 1848. In France the process was so much more rapid, that within twelve years of the evacuation of the

VIEW OF NIVELLES, A TOWN NEAR THE FIELD OF WATERLOO

country by the allied forces, the Duke lived to see flying on the Thames, in harmony and concord with the flag of England, that very tricolour which his whole military life had been devoted to debasing.

THE CIVIL ADMINISTRATION OF THE DUKE.

The civil career of the Duke of Wellington divides itself into two portions, in one of which he co-operated with foreign governments for the general settlement of Europe, and in the other he took more than what might be considered his own personal share.

The condition of the country, at the moment of which we are writing, had been disturbed and feverish in the extreme Those public discontents which on the Continent had taken the form of military insurrection, in England assumed the shape of political agitation. George IV., who in 1820 had exchanged the title of Regent for that of King, was in no favour with the people. He had so long anticipated the position of royalty that his actual accession to the throne brought with it none even of those indefinite expectations which usually make a new reign popular. Though personally connected with the Whig party in times past, he had promptly confirmed the ascendancy of the Tories on coming to the crown, and while his more attractive qualities had gradually given place to the morosity of age, the known selfishness of his disposition appeared only to be aggravated by power. His personal character, indeed, figured largely in the complaints of the people, who described their sovereign as absorbed in the luxurious enjoyments of a misanthropic seclusion, while his subjects were suffering the utmost extremities of pressure and want There was great reason for these murmurs. Though the state of the country imperatively needed reform, the great policy of the ministry was that of repression alone. While new ideas were fermenting among the people with the diffusion of political knowledge and the growing conviction of misgovernment, the cabinet policy was that of twenty years before, with its rigorous maxims of resistance and severity. The consequences were nothing but natural. The people were seduced by demagogues into wicked excesses and extravagant demands. They held nightly gatherings in the large towns and manufacturing shires, hatched chimerical plots of marching on the metropolis, talked plain treason at public assemblies, and proposed the forcible overthrow of the government. A conspiracy for the assassination of the ministry in a body was actually formed, and was not defeated by any want of resolution or earnestness on the part of the conspirators. On the other hand, the government was confirmed by these very excesses, both in its own repressive policy and in the support of the well-affected part of the population. They spared, therefore, neither the law nor the sword They sent artillery into one county, and special commissions into another; they charged public meetings with cavalry, and strung up rioters and sheepstealers on the same gallows. Their names were saluted with cries of execration, and their persons made the object of incessant hostility, but they paid spies to worm out the secrets of the seditious, and pursued their unswerving course in reliance on principles which had carried England, as they imagined, through worse storms than these.

In this unpopularity of the administration, the great Duke participated. Though it was impossible to overlook his transcendant claims to respect, and though he had not as yet taken any very active part in domestic politics, yet he was known to be of the Tory school, and connected, indeed, by ties of the closest sympathy with the hated Castlereagh Even his military eminence was no recommendation in the eyes of those who denounced soldiers as the instruments of tyranny, and who had scarcely been brought even by a galaxy of victories to approve of an anti-democratic war The indications, too, which he had given of his sentiments were not of a tendency to conciliate a suspicious public As Master-General of the Ordnance he had taken a seat in the cabinet, had concurred in the prosecution of the Queen, and had spoken in terms of soldier-like bluntness about certain proceedings of the opposition. He was, however, to do more. He was to become an influential member of the administration, and to bear his part, for good or evil, in the important changes which were to convert the British government from what it was under George IV. to what it is under Queen Victoria.

For two or three years affairs proceeded without the occurrence of any remarkable conjuncture. The foreign policy of England had been conclusively severed from that of the allied courts of the Continent, and a few steps were taken in the direction of commercial emancipation; but the political crisis was still suspended. Mr. Canning and Mr. Huskisson were looked upon with no kindly eyes; but, though the wedge had been effectually inserted, no further impulse was given to it for some time. Lord Eldon croaked and prophesied, Lord Liverpool looked doubtingly a-head, and the Duke, perhaps, saw further than others; but the old administration remained in outward form substantially the same, and the catastrophe was yet to come. At length, in February, 1827, Lord Liverpool's faculties suddenly failed him, and his fall left the government not only without a head, but without that influence which had hitherto kept it together. Its constituents were divided among themselves on all the great questions coming on. The old shell of the administration was anti-Catholic and anti-Liberal, but its vital elements represented emancipation and progress. The Duke had not yet discerned the necessity of the latter doctrines, but he was too sagacious to consort with dotards or bigots, and allied himself rather with Mr. Peel, who had succeeded to Lord Sidmouth's office of Home Secretary in 1822. Thus, beside the old Tory staff and the new leaven, there were the great Duke and his friends, who, if open to conviction, were not yet prepared for change.

ACCEPTS OFFICE AS PRIME MINISTER.

At the time of Lord Liverpool's illness there were two important subjects before the legislature. The Roman Catholic question created a violent debate and a close division, while Mr Huskisson's doctrines had taken the substantive form of a Corn-bill, intended to relax the restrictive system in force. The former subject came on under Canning's direction, while the government was still without a head; but the motion was lost in the Lower House, and was, consequently, not discussed in the Lords. After a few weeks, however, when it became evident that Lord Liverpool's recovery was beyond hope, the formation of a new ministry became indispensable, and on the 10th of April the king sent for Mr Canning. The claims of this statesman to the premiership, both from official services and popular favour, were incontestable; but his opinions represented only a minority of the cabinet, and it had now to be seen whether those who could co-operate with Mr. Canning under the conciliatory presidency of Lord Liverpool would be content to acknowledge his control as leader of the administration. As far as Catholic emancipation went, no great difficulties need have intervened, for, though the new premier's disposition in favour of Ireland was well known, the question was left an open one. But Mr. Canning, though not a Whig by profession, was a Liberal by principle, and his ministry, under whatever title, must be a Liberal ministry. For this the Duke was not prepared, and when the new appointment was duly communicated to the members of the late government, he, like the majority of his colleagues, sent in his resignation. Nor did he stop here, for he laid also at the king's feet the Master-Generalship of the Ordnance and the Commandership-in-Chief, to which, at the Duke of York's death, he had naturally succeeded. Moreover, when in the ensuing June the Corn-bill of Canning and Huskisson came before the House of Lords, he moved and carried an amendment destructive of the measure, although it had been prepared by a government of which at the time he was a member.

These remarkable circumstances occasioned an extraordinary agitation in the public mind. It was asserted that the coincidence of the resignations, which all reached Mr. Canning within a few hours of each other, disclosed a combination of their writers against the independence of the sovereign and the success of the new administration; and as the Duke, though not the foremost statesman of the party, was the most distinguished personage concerned; and as he had taken what appeared to be the gratuitous step of retiring even from the Commandership-in-Chief, it was alleged that he desired the premiership for himself, and had adopted these measures to disconcert and embarrass the government. On these points he delivered himself of an elaborate exculpation from his place in the House of Lords, averring, among other declarations, that so far from seeking to conduct a govern-

ment, he was "sensible of being unqualified for such a situation," and that he "should have been mad to think of it,"—words which were not forgotten in subsequent times. No reader will now suppose that the Duke of Wellington ever entertained the idea of dictating to his sovereign, or of combining with others in the spirit imputed to him; nor is there, in fact, any need of such a forced hypothesis in explanation of the facts. What the Duke felt at the new appointment, all felt, and all were ready to mark their disapprobation. They did not desire a Liberal government; they did not admire "political adventurers," and they were unprepared for a cabinet in which the premier was committed to the emancipation policy, however open the question might be considered. There is no doubt that, besides all this, the Duke was personally adverse to an intimate connexion with Mr. Canning, and this feeling induced him to discover hostility in the premier's communications, and to decide against retaining an office which, though unpolitical in itself, would require a certain cordiality of co-operation with the head of the government. As to his conduct on the Corn-bill, he disavowed amid angry bickerings, any intention of annoying the ministry, or even defeating the measure, by the amendment which he suggested.

The whole episode, however was of brief duration. Exhausted by toil, deserted by those who should have supported him, and relentlessly persecuted by all who distrusted his politics or envied his elevation, Mr. Canning expired in the fourth month of his office, and left the king and the government in worse perplexities than before. An administration was then formed under Lord Goderich, who, as Mr. Robinson, had succeeded to the Chancellorship of the Exchequer at the time that Mr. Canning became Foreign Secretary. The new cabinet closely resembled the last in its constitution, but its leader was wholly incapable of impressing any unity of purpose upon a ministry in times like these. Mr. Canning died in August, and before the end of the year Lord Goderich had resigned his office in despair. Thus there appeared to be no chance of a good working ministry under the Canning policy, while the true days of the old Tories were already past, and those of the Whigs not quite come. In his embarrassments the king did what kings and queens have so often done since,—he sent for the Duke of Wellington. The Duke repaired to the royal closet, and, to the surprise of some, the amusement of many, and the satisfaction of more, was gazetted as Prime Minister of England within eight months after his own declaration that the office was beyond his powers.

CATHOLIC EMANCIPATION.—REFORM.

Since Canning's death he had so far qualified his recent secession from public affairs as to return to the command of the army; and he had just gratified his countrymen by a series of visits to the aristocracy in a progress which fell little short of the splendours of royalty. He was now to charge himself with the formation of a cabinet and the responsible direction of public business, under circumstances found impracticable by those who had preceded him in the attempt. Perhaps both the king and the Duke would have preferred an administration constructed wholly on the principles entertained by the premier; but of this there appeared no acceptable chance. So the Duke took Mr. Huskisson, whom he disliked, and four more "Canningites" besides, but he still retained Peel at his side, and it was evident that the soul of the administration resided here.

Before the eyes of the great Duke and his colleagues there still loomed the three great questions of the time—questions on which neither all Liberals nor all Conservatives thought alike, but which the force of opinion was clearly pressing onwards for a decision. There was the question of religious disabilities, sometimes under the form of Corporation and Test Acts, but ultimately shaping itself into Irish emancipation. There was the question of free trade, sometimes in the guise of Spitalfields or Navigation Acts, sometimes involved in corn averages or warehousing regulations, but always tending to untaxed bread; and finally, under motions for disfranchising one constituency and enfranchising another, appeared the mighty question of parliamentary reform. On all these the Duke held opinions which were probably averse to material change.

The very first business of the session brought these principles on the table. Lord John Russell moved for a repeal of the Corporation and Test Acts—the first step towards that religious freedom which Catholic emancipation would manifestly consummate. Government opposed the measure; but the reformers were too strong for them, and the motion was carried, in a full house, by a majority of 44. Moreover, although the Duke did not approve of this policy, there were some of his colleagues who did, so that he had to encounter, with a divided cabinet, the declared resolution of the Commons. The times, indeed, were such that unanimity was scarcely attainable; for the old party could hold no longer, and no new formation had been made. These difficulties had demolished Lord Goderich; but they were not too great for the Duke, though his policy may at first sight appear not heroic. He yielded, took up the bill with a good grace, and, against the desperate resistance of his old friend Lord Eldon, and of all who thought the church and the constitution veritably at stake, carried it, under his own auspices, through the House of Lords.

A month afterwards came a corn-bill of Mr. Huskisson's again, and the Duke again compromised his private resolutions by accepting it as a government measure. Later still, as if the session was to test the new ministry on every vital point, the question of parliamentary reform was brought under discussion upon a motion to disfranchise the two boroughs of Penryn and East Retford, and invest Manchester and Birmingham with the electoral privileges thus vacated. In the course of the contest a division was taken on the particular substitution of Birmingham for East Retford. Government said "no" to the proposal, but Mr. Huskisson, though still Colonial Secretary, had managed to commit himself to an affirmative vote. Confused at his position, he sent the Duke what was either a resignation or an offer of resignation, and what the Duke chose to think was the former. There was, in plain truth, but little cordiality between them. In vain did the common friends and colleagues of the two statesmen endeavour to "explain" the unlucky communication. The Duke, in terms which passed into proverbial use, replied that there "was no mistake, could be no mistake, and should be no mistake." Mr. Huskisson therefore retired, and with him retired not only Lord Dudley, Mr. Lamb, and Mr. Grant, but even Lord Palmerston. Of the Canningites, Lyndhurst alone remained, and the substitution of Lord Aberdeen, Sir Henry Hardinge, and Sir George Murray, for the seceding malcontents at length gave consistency to the Wellington ministry; and formed, with the names of Peel and Goulburn, a party which has not yet perished. And what, now, did the Duke, with his solidified cabinet and his unshackled policy? He gave up the principle of religious disabilities once and for all, and carried by main strength the great measure of Catholic Emancipation!

It was upon the grounds of the incurable anarchy of Ireland, the interminable division of cabinets, the distraction of imperial councils, and the utter impossibility of maintaining the then state of affairs, that the Duke resolved on conceding to the Roman Catholics the emancipation they desired; nor can we now err in ascribing a material share in the decision to the co-operation of Robert Peel. There was no very cheering prospect before the two colleagues. That the influence of the ministry and the example of the Duke would carry the measure as a Government question through the legislature could hardly be doubted, but other and serious considerations were in the way. The Wellington cabinet had been carried to power on the presumption, whether sound or otherwise, that they would maintain Protestant ascendancy; this opinion was strongly felt by the electoral constituencies of the kingdom, and the conviction was generally understood to be shared in its fullest extent by the most exalted personage in the realm. Moreover, the question, though essentially one of progress, differed from all political questions of the like character in the reception it experienced among the people at large. In point of fact, it may be doubted whether, to this day, the majority of the people were ever really favourable to Catholic Emancipation.

THE DUEL BETWEEN THE DUKE AND THE EARL OF WINCHILSEA.

On the 5th of February, 1829, the policy of the government was plainly announced in the speech from the throne; and

when the field had been once taken, the Duke made short work and sure. His grace in the Upper House, and Mr. Peel in the Lower, met the exigencies of their respective positions by manful acknowledgments and unanswerable reasoning. It was on this occasion that the Duke, having demonstrated the positive necessity of either advancing or receding, dismissed the latter alternative with his celebrated declaration:—"My lords, I am one of those who have probably passed more of my life in war than most men, and principally, I may say, in civil war too, and I must say this, that if I could avoid by any sacrifice whatever even one month of civil war in the country to which I am attached, I would sacrifice my life in order to do it." There was no rebutting such arguments, although the opposition was most determined; but the Duke carried his point, and in little more than a month the Relief Bill passed both houses by large majorities, received the Royal assent, and became the law of the land.

Yet the success was not without its cost. Protestant societies wept over the "lost consistency" of the great Duke—the king was angered—Tories stood aloof from the government—the ministry was modified, and there was talk even of strengthening the Wellington cabinet by the admission of Earl Grey. One episode of the history is too remarkable to be omitted. The Duke had been chosen patron of the new collegiate institution in the Strand, which, under the name of King's College, was destined to combat the rival seminary in Gower-street. On the disclosure of the ministerial policy, Lord Winchilsea, writing to a gentleman connected with the new establishment, spoke of the Duke and his patronship in these terms —"Late political events have convinced me that the whole transaction was intended as a blind to the Protestant and high Church party; that the noble Duke, who had for some time previous to that period determined upon breaking in upon the constitution of 1688, might the more effectually, under the cloak of some outward show of zeal for the Protestant religion, carry on his insidious designs for the infringement of our liberties and the introduction of Popery into every department of the state." These expressions, coming from such a quarter, appeared to [illegible] to call for personal notice, and, after a vain essay of explanations, the Prime Minister of England, who was attended by Sir Henry Hardinge, and the Earl of Winchilsea, seconded by Lord Falmouth, met in Battersea-fields, on the 21st of March, in full session, to discharge loaded pistols at each other on a question concerning the Protestant religion. The life of the great captain, however, was not exposed to danger. Lord Winchilsea, after receiving the Duke's shot, fired in the air, and then tendered the apology in default of which the encounter had occurred.

THE FRENCH REVOLUTION OF 1830.

Of the three great questions which the times were maturing for solution, the Duke in his ministerial capacity had now practically disposed of two. In the matter of free trade he had given as much as was yet asked for, and in that of religious freedom he had even outstripped the desires of the public. But the third question—that of parliamentary reform—still remained for consideration, and it was upon this rock that his hitherto infallible sagacity was at length to make shipwreck.

In the summer of the year 1830, Europe—our authority goes on to state—once more experienced the shock of a French revolution; a shock which was transmitted instantaneously from the Seine to the Vistula, and which this time lost little of its force in crossing the British Channel. Its operation was greatly facilitated by a demise of the crown. George IV. had expired just at this period, and with him had gone all that the Tories relied on and the Liberals feared, in the personal influence of the sovereign. On his throne there was now seated an affable and conciliatory monarch, known to be generously inclined, and believed to be well disposed towards the advocates of constitutional reforms. He had acted like his predecessor in confirming the existing ministry in office, and he had even been at pains to dispel a prevalent assumption of his personal dislike to the premier. But the plot was now thickening rapidly, and events for once left the great Duke behind. Throughout the length and breadth of the land there spread rapidly a feverish sympathy with the French, an ardent desire for improved institutions, and a resolute determination to attain an end, however imperfectly conceived. The Duke did not comprehend this movement, and, as he was not for it, he was against it. He could not tolerate disorder, and so he turned to measures of repression. He had committed himself by injudicious proceedings against the press, and he now damaged his credit still further by his attitude of unyielding and peremptory resistance to public feeling. At the present moment of national regret it will hardly appear credible that England's hero should ever have fallen into such popular discsteem as was then exhibited, but the conjuncture was exceptional, and circumstances combined strangely against his credit with the nation. He had offended his old colleagues by his Liberalism, and his new allies by his Conservatism; he had scandalised "staunch Protestants" by surrendering his position; and he was now to offend the unreasoning multitude by making a stand. Even the professional renown of the great captain rather injured than helped him at this gloomy crisis, for he was regarded as the personification of that force which might be employed against liberty, to the possible destruction of popular hopes. Stories went abroad of military preparations, special musters, and significant appointments; and even the cleansing of the Tower ditch, under the directions of the Duke as constable of that fortress, though suggested simply by the removal of old London-bridge, was represented as a menace against the citizens of London. Though twenty years of better feeling have since elapsed, it is not without shame that we record the ebullitions of discontent which ensued. It was pretended that the Duke's life would not be safe in the city at the Lord Mayor's feast, and it is certain that the conqueror of Waterloo was hooted through Piccadilly, and that the windows of his residence were protected by casings of iron.

The Whigs now saw that their time was come, nor did the Duke refuse the battle. He knew that the fight was for parliamentary reform, and he brought the point to an issue without the delay of an hour. It surprises observers of our own generation to conceive how such a man at such a crisis could ever have been so mistaken. To all appearances the conjuncture of affairs fell peculiarly within the range of his statesmanship. It was a question of yielding or resisting; of assigning a due and proper value to the reality of the grievance, the demands of the times, and the force of opinion. The duke had understood such questions in the cases of free trade and Catholic emancipation, and it is astonishing that he should have stumbled at a case which was clearer than either. No politicians of the day could read signs around him better than he, and yet for this once he utterly failed. The new parliament met in November, and at the very opening of the session the Duke delivered his memorable declaration, "that the country already possessed a legislature which answered all the good purposes of legislation, that the system of representation possessed the full and entire confidence of the country, and that he was not only not prepared to bring forward any measure of reform, but would resist such as long as he held any station in the government of the country." These few words decided in five minutes the destinies of the government and the country too. Radical reform became an immediate certainty, and away went the Tories for ever, and the Wellington party for ten long years.

Thus terminates the great Duke's ministerial career. When his party, after so protracted an eclipse, re-appeared in 1841 under the new title of "Conservatives," he resumed, indeed, his place in the cabinet, but without special office or active political duty. From this time his capacity in the administration of the state acquired those peculiar features with which we are now so familiar. Without being professionally a member of government, his aid was understood to be always available for ministerial councils, and the command of the army, which he had resigned on accepting the premiership, but which had reverted to him in 1843, supplied a pretext, if any were wanting, for investing him with this exceptional function. Perhaps no position could have been better suited to his political abilities. That he was not a great statesman in the proper acceptation of the term, we need scarcely remark; and he evinced, in fact, no less than his usual sagacity when from his seat in parliament he made the candid but exaggerated avowal of his incompetence for high civil office. The declaration was apparently contradicted by subsequent events, but it was, in reality, founded upon sound self-knowledge and a distinct perception of affairs. There is little more to tell; but that little we shall reserve for our next number.

TRIALS OF A HOUSEKEEPER.

BY HARRIET BEECHER STOWE, AUTHOR OF "UNCLE TOM'S CABIN"

"Pon!" says one of the lords of creation, taking his cigar out of his mouth, and twirling it between his two fingers, "what a fuss women make of this simple matter of *managing a family!* I can't see as there is anything so extraordinary to be done in this matter of housekeeping only three meals a day to be got and cleared off, and it really seems to take up the whole of their mind from morning till night. *I* could keep house without so much of a flurry, I know."

Now prithee, good brother, listen to my story, and see how much you know about it. I came to this enlightened West about a year since, and was duly established in a comfortable country residence within a mile and a half of the city. I had been married about three months. My family consisted of myself and husband, a female friend as a visitor, and two brothers of my good man, who were engaged with him in business.

I pass over the two or three first days spent in that process of hammering boxes, breaking crockery, knocking things down and picking them up again, which is commonly called getting to housekeeping. As usual, carpets were sewed and stretched, laid down, and taken up to be sewed over; things were *re*formed, *trans*formed, *con*formed, till at last a settled order began to appear.

But now came the great point of all. During our confusion, we had cooked and eaten our meals in a very miscellaneous and pastoral manner, eating now from the top of a barrel, and now from a fireboard laid on two chairs, and drinking, some from teacups, and some from saucers, and some from tumblers, and some from a pitcher big enough to be drowned in, and sleeping, some on sofas, and some on straggling beds and mattresses thrown down here and there, wherever there was room. All these pleasant barbarities were now at an end. the house was in order, the dishes put up in their places, three regular meals were to be administered in one day, all in an orderly, civilised form, beds were be to made, rooms swept and dusted; dishes washed, knives scoured, and all the *et cætera* to be attended to. Now for getting "*help*," as Mrs Trollope says, and where and how were we to get it? We knew very few persons in the city, and how were we to accomplish the matter? At length the "house of *employment*" was mentioned, and my husband was despatched thither regularly every day for a week; while I, in the meantime, was very nearly *dispatched* by the abundance of work at home. One evening, as I was sitting completely exhausted, my husband made his appearance at the door: "There, Margaret, I have got you a couple at last—cook and chambermaid!" So saying, he ushered in a little, snuffy-looking old woman, and a great staring Dutch girl, in a green bonnet with red ribands, with her mouth wide open. I however addressed a few words of encouragement to each, and proceeded to ask their names, when the old woman began to snuffle and to wipe her face with what was left of an old silk pocket-handkerchief, preparatory to speaking; while the young lady opened her mouth wider, and looked around with a frightened air, as if meditating an escape. After some preliminaries I found out that my old woman was Mrs. Tibbins, and my Hebe's name was *Kotterin*, also, that she knew more Dutch than English, and not any too much of either. The old woman was the cook. I ventured a few inquiries:

"Had she ever cooked?"

"Yes, ma'am, sartin; she had lived at two or three places in the city."

I said no more, but determined to wait till morning. The breakfast, to be sure, did not do much honour to the talents of my official, but it was the first time, and the place was new to her. After breakfast was cleared away, I proceeded to give directions for dinner: it was merely a plain joint of meat, I said, to be roasted in the tin oven. The *experienced cook* looked at me with a stare of entire vacuity. "The tin oven," I repeated, "stands there," pointing to it.

She walked up to it, and touched it with such an appearance of suspicion as if it had been an electrical battery, and then looked round at me with a look of such helpless ignorance that my soul was moved "I never saw one of them things before," said she.

"Never saw a tin oven!" I exclaimed. "I thought you said you had cooked in two or three families."

"They does not have such things as them, though," rejoined my old lady. Having spitted the joint myself, and given numberless directions, I walked off to see after Kotterin, to whom I had committed the up-stairs work, it never having come into my head that there *could be* a wrong way of making a bed, and to this day it is a marvel to me how any one could arrange pillows and quilts to make such a nondescript appearance as mine now presented One glance showed me that Kotterin also was "*just caught*," and that I had as much to do in her department as in that of my old lady

Just then the door-bell rang. "Oh, there is the door-bell!" I exclaimed; "run Kotterin and show them into the parlour."

Kotterin started to run, as directed, and then stopped, and stood looking round on all the doors, and on me with a wofully puzzled air "The street-door," said I, pointing towards the entry. Kotterin blundered into the entry, and stood gazing with a look of stupid wonder at the bell ringing without hands, while I went to the door and let in the company before she could be fairly made to understand the connexion between the ringing and the phenomenon of admission.

As dinner-time approached, I sent word into my kitchen to have it set on, but, recollecting the state of the heads of department there, I soon followed my own orders. I found the tin oven standing out in the middle of the kitchen, and my cook seated *a la* Turk in front of it, contemplating the roast meat with full as puzzled an air as in the morning. I once more explained the mystery of taking it off, and assisted her to get it on the platter, though somewhat cooled by having been so long set out for inspection. I was standing holding the spit in my hands, when Kotterin, who had heard the door-bell ring, and was determined this time to be in season, ran into the hall, and soon returning, opened the kitchen door, and politely ushered in three or four fashionable-looking ladies, exclaiming "Here she is!" As these were strangers from the city, who had come to make their first call, this introduction was far from proving an eligible one the look of thunderstruck astonishment with which I greeted their first appearance, as I stood brandishing the spit, and the terrified snuffling and starting of poor Mrs Tibbins, who again had recourse to her old pocket-handkerchief, almost entirely vanquished their gravity, and it was evident that they were on the point of a broad laugh; so recovering my self-possession, I apologised and led the way to the parlour

Let these few incidents be a specimen of the four mortal weeks that I spent with these "*helps*," during which time I did almost as much work, with twice as much anxiety, as when there was nobody there; and yet everything went wrong besides. The young gentlemen complained of the patches of starch grimed to their collars, and the streaks of black coal ironed into the shirt fronts, while one week every pocket-handkerchief in the house was starched so stiff that you might as well have carried a sheet of brown paper in your pocket. The tumblers looked muddy; the plates were never washed clean, nor wiped dry, unless I attended to each one; and as to eating and drinking, we experienced a variety that we had not before considered possible.

At length the old woman vanished from the stage, and was succeeded by a knowing, active, capable damsel, with a temper like a steel-trap, who remained with me just one week, and then went off in a fit of spite. To her succeeded a rosy, good-natured, merry lass, who broke the crockery, burned the dinner, tore the clothes in ironing, and knocked down everything that stood in her way about the house, without at all discomposing herself about the matter. One night she took the stopper from a barrel of molasses, and came singing up stairs, while the molasses ran soberly out into the cellar all night, till by morning it was in a state of *universal emancipation*. Having done this, and also despatched an entire set of tea-things by letting the waiter fall, she one day made her disappearance.

Then, for a wonder, there fell to my lot a tidy, efficient-trained, pretty-looking girl, knowing how to do everything and with the sweetest temper in the world. "Now," said I to myself, "I shall *rest* from my labours." Everything about

the house began to go right, and looked as clean and genteel as Mary's own self. But, alas! this period of repose was interrupted by a clever trim-looking young man, who for some weeks could be heard scraping his boots at the kitchen door every Sunday night; and at last Miss Mary, with some smiling and blushing, gave me to understand that she must leave in two weeks.

"Why, Mary," said I, feeling a little mischievous, "don't you like the place?"

"Oh, yes, ma'am."

"Then why do you look for another?"

"I am not going to another place."

"What, Mary, are you going to learn a trade?"

"No, ma'am."

"Why, then, what do you mean to do?"

"I expect to keep house *myself*, ma'am," said she, laughing and blushing.

"Oh ho!" said I, "that is it;" and so, in two weeks, I lost the best little girl in the world: peace to her memory.

After this came an interregnum, which put me in mind of the chapter in Chronicles that I used to read with great delight when a child, where Baasha, and Elah, and Tibni, and Zimri, and Omri, one after the other, came to the throne of Israel, all in the compass of half a dozen verses. We had one old woman who stayed a week, and went away with the misery in her tooth; one *young* woman who ran away and got married, one cook, who came at night and went off before light in the morning; one very clever girl, who stayed a month, and then went away because her mother was sick, another, who stayed six weeks, and was taken with the fever herself, and during all this time, who can speak the damage and destruction wrought in the domestic paraphernalia by passing through these multiplied hands?

What shall we do? Shall we give up houses, have no furniture to take care of, keep merely a bag of meal, a porridge-pot, and a pudding-stick, and sit in our tent door in real patriarchal independence? What shall we do?

HYMN.

BY JOHN GREPT.

Great God! a canticle of praise
My faltering, feeble, powers would raise,
For all thy kind donations sent,—
Choice love-drops from yon firmament

For solar rays that fain embrace
The lily's all-surpassing grace,
And give to Beauty all her dyes,
When fair Cyllene leaves the skies

For plenteous showers that promptly yield
The verdant scarf that clothes the field,
Where antlers skip in guileless glee
Or list the forest's litany.

For buds and bourgeons that inspire
Redundant hope, and high desire,
For laughing hills, and golden grain,
That anthems waft from plain to plain

For vernal skies serenely blue,
For summer slopes of emerald hue,
Where Flora holds her gay campaign,
And brooklets weave their crystal strain

For fruits that charm the rosy hours,
And glad Pomona's luscious bowers,
Where thrifty bees reload their wain,
And hum their drowsy quatorain.

For herald songsters that implead
Man's cause in every vale and mead,
Which, oft as he refuseth praise,
To thee their loud thanksgivings raise.

Great God! an hymn of greatful praise
My languid powers would willing raise.
For aught of earth, and aught of heaven,
Thy kind peternal hand hath given.

Leamington Spa, August, 24th, 1852.

The Number of Collieries in Great Britain, and the Area of the Coal Fields in the United Kingdom.

A correspondent to the *Mining Journal* on this subject, says —In an excellent letter on "Government Inspection of Collieries," it is stated, on the authority of Mr. Braithwaite Poole, that there are 12,000 collieries in Great Britain, and that Mr. Dunn estimates the number of coal mines in his district of inspection at 2,000. Unfortunately the statistics of this important subject are so imperfect and suppositious that no certain information can be obtained; recourse, therefore, is necessarily had to conjecture But even with such a guide, the foregoing estimates are untenable, for it is generally admitted by good authorities that the total annual production of coal in Great Britain does not exceed 34,000,000 tons; and this by some persons well versed in the subject is considered as exceeding the actual consumption. Taking it, however, as correct, and presuming that there are 300 working days in the year, if there were 12,000 collieries, each mine would only produce 9⅓ tons per day; whereas 800, 500, 200, and 100 tons per day are ordinary productions, and 50 tons per day is worked even in small collieries Taking the collieries throughout Great Britain, 75 tons per day may be taken as a fair average production for each mine, and this would make the number of collieries only 1,511, instead of 12,000. Even if we take 50 tons only as the average quantity raised in each mine, the number of collieries in England, Wales, and Scotland, is 2,266, it may, therefore, serve ordinary purposes if the number of coal-mines in Great Britain be taken at 2,000, although this number may be in excess of the apparent reality, so far as it can be ascertained. Taking 2,000 as the number of collieries, if equally divided, each of the four inspectors will have 500 under his charge, and as he cannot inspect more than three in a week, at the most, it will take him three years to examine all the coal-mines under his superintendence Annexed is a list of the principal coal fields in the United Kingdom, with the areas of each in square miles, which probably may be of use to some of your readers, it has been computed from the Ordnance and other geological maps—the discrepancies in which have been corrected as far as possible by inquiries and personal knowledge —

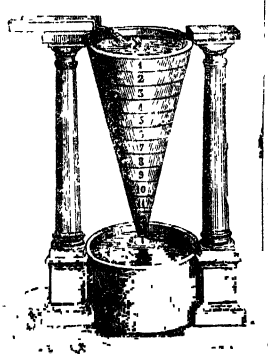
Ashe that loveth quietness sleepeth secure, so he that delights in strife and anger passeth his days in great danger.

It is good for a man to abstain from anger, if not for wisdom's sake, yet for his own bodily health's sake.



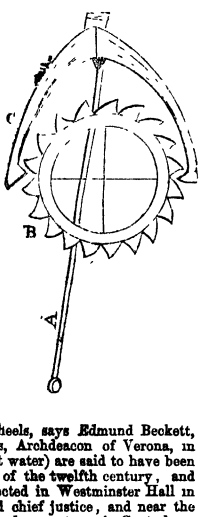
Hasty and froward speeches beget anger; anger, being kindled, begetteth wrath, wrath seeketh greedily after revenge, revenge is never satisfied but in blood-shedding.

Let not the sun go down upon your wrath.

A GOSSIP ABOUT CLOCKS.

HAVING had occasion lately to visit the clock factory of Messrs. Moore and Son—an account of whose establishment will be found in No. 43 of the ILLUSTRATED EXHIBITOR—we have naturally had our attention drawn to the subject of clocks; and from the rough notes we made, we extract the following "gossip."

To begin at the beginning, we may inform the reader—though perhaps the information is somewhat trite—that the art of constructing machines for measuring the course of time is scientifically known by the word Horology—a word derived from a Greek compound, signifying *an hour* and *point out* or *read*, our English term reaching us hence through the Latin *Horologium*. Of course, as soon as men began to perceive the difference of the seasons and the division of the hours into night and day—the only real and natural divisions of time, by the way—some arbitrary method of measuring time began to be necessary, and instruments whereby such measurement could be made apparent were no doubt invented at a very early period. Read, in his treatise on clockmaking, says that clepsydræ, or water-clocks, were in use long before the invention of sun dials, and that they were common in China, India, Egypt, Chaldea, and Greece from the remotest antiquity,—an assertion which is only true in part, for every tall tree which cast its shadow on the ground was a natural sun dial, even in the days of Adam and Eve. Clepsydræ have been made in various ingenious ways to mark an approximation of the mean time. The clepsydræ consisted simply of a vessel into which a stream of water was made to run continually, so that its escape into another vessel, which might have its side graduated, would mark the hours, and even, perhaps, minutes. The engraving below will give a tolerably-correct idea of the kind of instrument alluded to. This consisted of "two inverted cones. One was hollow, and perforated at its vertex, the other was solid, and made to fill the former with the greatest exactness. The aperture made in the one was so adjusted to its size, that, when filled with water, it emptied itself in the course of the shortest day in winter. As the length of the cone was divided into twelve equal parts, the hours, as they elapsed, were indicated by the descent of the fluid, or the same result was secured by divisions marked on the vessel into which the water flowed. Another arrangement of the cones was adapted to the varying length of the day."

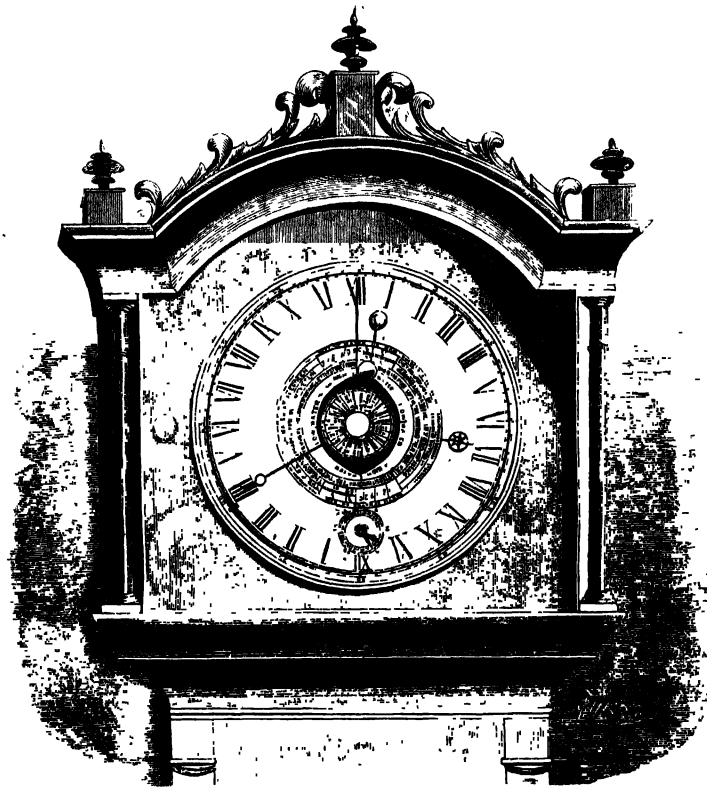


ANCIENT CLEPSYDRÆ.

Sand or hour glasses were the next inventions, and for many years were the only, or rather, the principal, means of marking the course of time. We have, to be sure, the stories of our king Alfred's candle clock, and of various others equally apocryphal, but probably the first actual clock—that is, an instrument with toothed wheels—was made at Paris by Henry Vick, or de Wyck, by command of Charles the Wise, King of France, about the year 1366. This artist was brought to France from Germany, and his clock was erected in the tower of the royal palace in the year 1370. But as the instrument attributed to Vick was one of some importance as a time measurer, and contained several important principles, there must have been several existing clocks even at that early period. In fact, the invention of clocks, like that of many other valuable improvements in art and science, has been attributed to various persons and to various epochs. The first sun dial is said to have been set up in Rome 300 years before the birth of Christ, by Papirius Cursor, and nearly a hundred and fifty years later we find the Roman time measured by clepsydræ of similar structure to the one we have mentioned.

Much interesting matter might be adduced in favour of the antiquity of wheel clocks—from the supposition that Archimedes was acquainted with their construction, and that the first clock with metal wheels and pinions was made in Italy about the year 500; but for our present purpose it will be sufficient to say that in the eleventh century the first idea of measuring time by toothed instruments appears to have been entertained, and that from that time to the present successive improvements have been made, which enable us to produce horologes of such excessive nicety that a variation of a single second in a year can be at once detected.

With regard to the *motive power* of clocks, the pendulum, Professor Cowper, in a lecture delivered at the Society of Arts, explained it in nearly the following words:—"As the pendulum A performs its vibrations in equal time, it is employed to regulate the descent of a weight or the uncoiling of a spring, the weight or spring keeping the pendulum in motion. This is effected by connecting two hooks with the top of the pendulum, as is seen in the diagram below. The hook C extends over a toothed wheel B, so that, as the pendulum vibrates, the right-hand hook falls into the right-hand side of the wheel, and the left-hand hook falls into the left-hand side of the wheel. The weight has a constant tendency to pull the wheel round, but it cannot turn while the hook is between the teeth. Now, as the pendulum vibrates, the hook (suppose the right hook) which detains the wheel is lifted up, and the tooth *escapes* past the hook, and the wheel moves on—but only a little way, for now the left hook comes between the teeth, and the wheel is again stopped, and cannot move another step until the left hook, in its turn, is lifted up by the swinging of the pendulum, when another tooth escapes. The wheel moves one tooth at each two vibrations of the pendulum, therefore, if the pendulum measures seconds, and there are thirty teeth in the wheel, it moves once round in one minute. The hooks above described are technically called the *escapement*, and the wheel the *escape-wheel*; the ends of the escapement are called the *pallets*, and are shaped as inclined planes, against which the teeth of the wheel press and give impulse to the pendulum, so that in all escapements there are three motions, viz., *locking* the wheel, by the pallet coming against a tooth; *unlocking* the wheel by the vibration of the pendulum lifting the pallet away from the tooth, *impulse* to the pendulum, by the tooth pressing against the pallet as the tooth is escaping. Be merely bearing these three operations in mind, it will be easy to understand any escapement, whether it be the vertical, horizontal, lever, pin, or duplex."



The invention of clocks with wheels, says Edmund Beckett, Denison, "is ascribed to Pacificus, Archdeacon of Verona, in the ninth century. Clocks (without water) are said to have been set up in churches towards the end of the twelfth century, and there is a story of a clock being erected in Westminster Hall in 1288, out of a fine levied on a lord chief justice, and near the same time a clock is said to have been put up in Canterbury Cathedral, and one in Wells Cathedral in 1325. Mention is also made of a clock, apparently of some new construction, invented by Robert Wallingford, Abbot of St. Albans, in 1326, and which was going in Henry the Eighth's time. From these and other notices it seems pretty clear, that, though the earliest clock of which the actual construction happens to have been preserved, was that made by Henry de Wick for Charles the Fifth, in 1369, yet he is not to be looked upon as the inventor of them. According to the description given of that clock, it differed in nothing except in having a horizontal balance instead of a pendulum, from many old church clocks still in existence, being merely a thirty hour clock with one hand, and the striking part was exactly the same as is still used, in fact in some respects it exhibited a more advanced state of mechanical art than the clock (I do

not know of what date) not only in existence, but in action, in Peterborough Cathedral; which has a wooden frame instead of an iron one, and instead of being wound up by a key or winch, is wound up by long handles or spikes stuck into the barrels. It has however a pendulum. The going part of the clock has indeed lately been superseded by a modern one which is far less creditable to the mechanical skill of the time at which it was made than the old one, especially considering that it has no dial to work, a circumstance which affords unusual facilities for a good clock. The old striking part still does the striking on a bell of considerable size."

From these old church clocks have descended all the modern race of smaller clocks and watches, which have arrived at a degree of perfection which seems truly wonderful, when it is considered that, though there is no such thing in nature as a perfectly isochronous pendulum (one which vibrates different arcs in the same time), and no such thing as a train of wheels with perfectly uniform action, yet pendulums can be kept vibrating with no greater deviation from isochronism than one beat in half a million. In the meantime the church clocks themselves have descended, in the hands of all but a few makers, into little better than ironmongery; and many of them display the grossest ignorance, not only of horological, but of the commonest mechanical principles

Perhaps the most striking instance of neglect of horological principles is the practice, of which Mr. Vulliamy, in his 'Considerations on Public Clocks,' gives several instances, of putting fans or wings to the pendulum, I suppose, for the purpose of preventing it from occasionally swinging so far as to drive the pallets into the scape wheel under the influence of such a weight as was found necessary to carry the train through all the occasional impediments arising from bad cutting of the wheels, dirt, the force of the wind upon the hands, and all kinds of mechanical defects. It is remarkable that, until lately, the French have been much in advance of us in this largest kind of horological engineering, and have spent much larger sums upon their public clocks. Mr.

ASTRONOMICAL CLOCK, BY W. WRIGHT, OF ABERDEEN. SHOWN AT THE GREAT EXHIBITION OF 1851.

Vulliamy mentions no less than four in Paris, which appear each to have cost about £1,000, exclusive of some other expensive appendages, such as enamelled dials, and the bells. There is not a clock in England which has cost anything near that sum, exclusive of chimes and other appendages, which do not strictly belong to the clock. The estimates for the Great Clock for the New Palace at Westminster indeed exceed that amount; but that is to be a perfectly unique specimen, combining unusual size and unusual provisions to secure accuracy of 'performance,' as the clock-making phrase is.

With reference to the project lately set on foot for hoc ning

uniform Greenwich time all over Great Britain, by means of electric communication, the idea is so entirely in its infancy, as to preclude the necessity of any lengthened notice in this place.

The following observations on the subject of public clocks (particularly church clocks), are founded on the presumption that these machines are important objects of public utility. This supposition will not appear too hastily formed, upon consideration of the inconvenience which would result in the mutual intercourse of life, particularly in reference to public meetings, the service of the church, and commercial transactions, were there not other standards for the measurement of time besides the watches of individuals, since it may be easily inferred, from considering the expense of a good watch (independent of any external cost), that although few persons are to be found in the present day unfurnished with a watch of some description, yet a very small portion of the watches now in use measure time with any degree of accuracy. The standard to which we must refer, therefore, are the public clocks, of which by far the greater number are church clocks. To enquire how far these, as at present constructed, are calculated to answer their immediate object, is the present purpose.

It is an observation which has often been made by those who have paid attention to the subject, that if a watch, keeping time correctly, were to be set by a public clock—take, for example, that of St. Paul's Cathedral,—and the same day to be compared with a number of others of the same description, it would be found that scarcely two of them agreed together—some would be faster, others slower, and the extreme difference consequently considerable, it therefore follows that the greater number of these clocks must be wrong That of St. Paul's is taken, not as a standard on account of the accuracy with which it measures time, but from its local situation.

Many of the church clocks of the present day are in no one respect better made than they were fifty years ago, but the contrary, for in some particulars the new clocks are inferior, especially in the quantity and quality of metal employed. Some clocks of the present time are made of cast-iron, but of the durability of such clocks it is very doubtful, the object of the parties employing such materials is accomplished by being able to produce an article at a lower rate, and with much greater profit than those who employ the best material, such as gun-metal or brass (the former is by far the most durable)

The three principal considerations in making a church clock are as follows —1st, the durability of the work; 2nd, the accuracy of its performance, and 3rd, that the clock should be as little liable to be damaged by external causes as possible. These ends can only be obtained by making use of proper materials, by constructing the machine on mathematical principles, and by executing the work with great accuracy and precision. In public buildings of every description, durability is universally acknowledged to be the principal object, and the permanency of such an appendage as the clock is surely a matter of considerable importance.

Many curious specimens of ingeniously made clocks appeared in the Great Exhibition of last year Like all other kinds of

seemingly surprising offices. In the Exhibition there were clocks which besides showing the time of the day, gave the minutes, hours, days of the months, months of the year, the rising and setting of the sun, the diurnal revolutions of the sun and moon, the mooh's age, phases, time of her meridian passage and position relative to the sun; the time of high water at Aberdeen, and the principal seaports of Great Britain, Ireland, France, America, Spain, Portugal, Holland, and Germany. The clock shown in the engraving goes for a year without winding up. We understand that the inventor of this clever instrument is a working tailor, but whether that be so or not, the clock shown at the Exhibition is worthy all commendation. An examination of the handsome skeleton clock in the preceding page, exhibited in the Crystal Palace, will convey to the reader a good general idea of the course of movement in large horologues.

Clock-makers have, at all periods, exerted their ingenuity in contrivances for causing then clocks not only to strike the hours, but even the half and quarter hours, play chimes or tunes, show the moon's age and phases, the time of high water, and many astronomical phenomena. When these are of regular occurrence at equal intervals of time, they are easily indicated on the dial by the simple addition to the train of the requisite number of extra wheels and pinions, as *any* regular motion in any velocity can be produced by such means. But when the phenomena to be recorded are *irregular* in their recurrence, more complicated mechanism, consisting of what are termed *eccentric movements*, is required.

Still all additional works and contrivances are serious injuries and drawbacks towards effecting the great aim of all clocks or time-measurers, that of true and constant motion. It is obvious that the more complicated any machinery is, the greater the friction to be overcome by the moving power, and the more liable to derangement it consequently becomes, and the more irregular its action at all times, owing to the unavoidable imperfection of even the best workmanship With increasing knowledge and skill, therefore, it has been the constant object of our most celebrated modern clock-makers to simplify as much as possible the works of a time-keeper, and at the present day no striking movements even are ever admitted in astronomical clocks, the simplest works with the plainest dial being put into simplest cases, while the beauty of such a machinery—that which excites the admiration of the man of taste and intelligence—is the superior theory of escapement and compensations, and the extreme accuracy and finish of the workmanship.

LETTERS TO WORKING MEN.

No. III.

POLITICAL ECONOMY

The importance of a right knowledge of Political Economy will be acknowledged by every thinking man among our readers. Any apology, therefore, for the introduction of what may at first sight appear rather a dry subject is quite unnecessary.

There is scarcely any science of modern times that has drawn forth more numerous treatises in elucidation of its utility than that of Political Economy; and yet its limits and extent have not been accurately defined. Those who have, from time to time, written upon it, cannot agree in its correct adaptation to the welfare of society, notwithstanding that the elements of the science may experience unanimity of opinion; and the community at large, with regret be it said, neither study the subject, or have hitherto shown much disposition to become acquainted with its importance, not to speak of its relationship to man and his daily pursuits.

It cannot, however, be wondered at, if a science, the knowledge of which would teach us to perform by rule what we frequently do by hazard, both in our worldly affairs and domestic comforts, has not been made available to man in his education, when it unfortunately occurs that no fixed or definite law has been laid down for its application, notwithstanding the phalanx of writers that have appeared in support of different theories, from the period when Gasparo Scaruffi flourished, to the time of the late Frederick Basirat, whose remains have been only lately consigned to their final resting place. The difference of opinion which has existed, nay, does exist, between the French, and English, and Italian economists, on what may be termed the correct application of the four great divisions of the science, namely, production, exchange, distribution, and consumption, has, it cannot be denied, contributed, in no small degree, to retard a settlement of its true definition, power, importance, and utility.

It is not our intention to investigate its limits; our object is of a different description It will be, simply, to treat of the elements of Political Economy, without reference either to administrative or domestic applications, without reference to free-trade or protection, or any other political topic; rather leaving to the reader the choice of application of his views, should he found any upon a perusal of the series of papers, for, after all, once truth is established, it is not very difficult to apply it to anything.

Political Economy, whether we view it in the light of a science, or as a mere natural feeling in its hold upon man, in his effort for national prosperity, and upon which the science, such as it is, has been built, must, in idea, have been known to the ancients as well as ourselves, for, the abstract meaning of the word, 'Political Economy,' falls little short of a desire to promote wealth and happiness amongst a people, and it will scarcely be contended, that the people of the earlier ages were not as desirous of upholding the dignity, independence, and commercial greatness of their respective countries, as those of the nineteenth century, nor will it be controverted that, from time immemorial, a disposition has ever existed to place society upon a sound footing, through the medium of such laws and institutions, political, social, or military, as the exigencies and circumstances of a case may have required.

When it is considered that it was rivalry, founded on a desire to promote each nation's greatness, that was instrumental in causing the Egyptian to be overthrown by the Persian, the Persian to succumb to the Greek, the Greek to fall beneath the Roman sword, and the Roman himself to yield, in his turn, to a daring band from his own burning deserts, in all this will be clearly traced national ambition, and national ambition, to a very great extent, gave the stimulus to those who, by their investigation, founded the science of Political Economy. War seems to have been the unwritten chief feature in the system of Political Economy, which characterised the earlier ages, and before it became a science, as industry is the axis upon which it now turns; and much surprise as it may create in the mind of the reader, at such an avowal, war appears, on a careful analyzation, not to have been more detrimental to some nations, than the vanities and luxuries of peace to others Speaking, however, of Political Economy as a science, the ancients knew little of it. They had little disposition to employ themselves in the observation of those laws which regulate the distribution of wealth amongst the different grades of society which existed in their time, nor were they accustomed to investigate the source from whence a nation's wealth was derived. Granting that the idea of *the soil being the source of all wealth* may have occurred to many, yet the results in war of the great nations of former times, and in the earlier ages of Christianity, were themselves, apparently, of too much value to the victors, in the shape of spoils, to create a stimulus in the conquering nations to investigate the principles upon which the *internal* wealth of a country could have been based.

In one or two instances it has transpired that, during certain periods, war, which, as we before observed, seemed to be the chief unwritten fundamental principle of the Political Economy of past ages, gave place to the blessings of peace, and agriculture and commerce were encouraged. In the earlier part of the history of the Roman kingdom, for instance, we are informed that Numa Pompilius, the second king of Rome, endeavoured to soften the growing warlike manners of the Romans, and encouraged agriculture, to no limited extent. But the good which this monarch had effected through industry was, on the accession of his successor, Tullus Hostilius,

to the throne, superseded by the cultivation of the art of war, in the same manner as we might now, if inclination or our passions prompted us, turn the ploughshare into a scimitar, the farm-labourer into the slinger.

The desire of raising Rome to the acme of greatness may have, no doubt, actuated both Numa and Tullus to pursue their respective courses; but the monarch who encouraged agriculture and commerce, on the one hand, and the king whose sway in Rome depended on the issue of the well-known Horatii-Curiatii combat, on the other, knew little of Political Economy as a science. The notion of wealth certainly existed; and they simply adopted different means for the advancement of their country, leaving to posterity the decision as to whose, Numa's or Tullus's, principles were most in accordance with the laws of nature. Posterity has, through its various writers on what may be called a modern science, founded upon ancient ideas, affirmed that the source of all wealth is the soil, and incline, consequently, to the principle which guided Numa's government, and also that one of the other sources of revenue which the soil creates, commerce, tends more in itself to the advancement of a nation's prosperity, than could the warlike propensities of Tullus Hostilius, that the stocking-loom is more productive in its agency than was the sword of the third King of Rome, and that the spinning-jenny is of more utility to the prosperity of modern nations than was to that city the battering-ram of Vespasian.

All philosophical sects owe their origin or creation to some great truth, and perceiving that the internal resources of a country influenced more or less its prosperity, the economists have agreed that the source of all wealth is the soil, and that the labour of its cultivation produced not only the means of subsisting the labourer, but that it would, also, leave a surplus which went to the increase of the existing stock; while, on the other hand, the labour applied to the productions of the earth—the labour of manufactures and commerce, can only add to the material a value exactly equal to that expended during the execution of the work; by reason of which, in the end, this species of labour operates no real change on the total sum of national riches. They established the principle that the landed proprietors are the first receivers of the whole wealth of the community; and that whatever is consumed by those who are not possessed of land, must come directly or indirectly from the former, and hence, that these receive wages from the proprietors, and that the circulation of national wealth is, in fact, only a succession of exchanges between these two classes of men, the proprietors furnishing their wealth, and the non-proprietors giving as an equivalent their labour and industry.

There have been multifarious works connected with Political Economy published. In the middle of the sixteenth century is traceable the first essay bearing upon its principles, and with the exception of the works of Adam Smith, and one or two others, the knowledge a person could derive in connection with the science, is confined chiefly to what he might gather from what may be termed contributions towards the elucidation of different points in its working. But, perhaps, on consideration, the existence of this fact is for the better. The task of investigating the principles by which the wealth of a country may be administered, or rather increased, the regulation of its expenditure, the provisions for the want of a people, with a view to create and sustain their comforts, with the innumerable other points which should be considered by a Political Economist, has been found, by experience of the past, an undertaking of too great a magnitude, too comprehensive in its details for the application and industry of any one writer, not excepting even Dr. Smith himself.

The earlier Continental writers, laboured assiduously to place the whole system in a form that might earn for themselves the honour of having laid down the limits of the science upon a safe basis; but they were only partly successful even amongst themselves. In Great Britain and Ireland, however, those who have written upon Political Economy, instead of endeavouring to limit the bounds of the science, have simply and in general limited their inquiries to the production and accumulation of wealth, and its distribution and consumption alone.

Next week we shall resume this subject.

CHARACTER AND TENDENCIES OF AMERICAN SOCIETY.

Translated for the Working Man's Friend, by Walter Weldon.

EMIGRATION—CONTINUED.

We write in the face of an objection which people will not fail to make to us —namely, that equality exists in America, has passed into the manners of its people, and is recognised by their laws. Yes, without doubt it is so; only, that which the Americans understand by this word "equality," in the United States, is just the opposite of that which *we* understand by it. Equality, in the United States, is only the weapon of liberty, its means of defence and security; while that which we understand here by equality is neither more nor less than a dead level. The equality, so called, which exists in the United States, gives to every citizen the right of being no more impeded than his neighbour in whatever enterprises he may choose to undertake, the rights of braving the same dangers, and of daring as much or more than him, if he should choose to do so, and of giving as free a development to all his faculties; the right of acquiring as much or more wealth of every kind than he has acquired, if it is in his power, and the right to forbid any intermediary to place himself between him and his neighbour, for the purpose of protecting one against the other. Thus to comprehend equality, is simply, one sees, to leave the field open to liberty, to competition, and to war and to transport the policy of neutrality as regards international relations into civil life. It is, in a word, to give to individuals *eux luttes*, that which is called in the political language of America *fair play*, and to leave them to show the relative value of their forces. It is not thus that we comprehend equality, the word always calls up with us a thought, in the first place, of protection, and thus, as a consequence, implies the necessity for an intermediary and a supreme judge, which under the name of king, of dictator, or of the state, will interfere to prevent, to stop, to punish, and to thwart the encroachments of individuals upon each other. These two different manners of translating the word equality are two results necessarily opposed and inimical to each other, the one that, inherent in us Frenchmen, teaches us to admit that the faculties of the individual appertain not to himself, but to society, that his talents and services constitute to himself no *privilege* or *right*, and that he simply fulfils a *function* in exercising his talents; the other teaches the Anglo-Saxons to consider the exercise of these talents as constituting a right, and it is easy to see of what service will be to America an army of three or four millions of adventurers, who are ready for anything, capable of anything, but little scrupulous respecting the choice of means, and eager to riddle human breasts with bullets, for the satisfaction of their ambition. The rancour and hatred which many emigrants feel, naturally enough, against the lands they came from, serve marvellously well to aid the American propaganda,* and in time they will serve as powerful means of conquest. This result, however, lies as yet but in the future, but emigration is producing another result more actual and more easily to be perceived, for its effect is not merely that of clearing and peopling the prairies, but also that of raising, and to an immense extent, the population of the towns. We hear much said respecting the multiplication and rapid foundation of cities in America, but this rapidity is less great than one would at first imagine, considering the immense territories comprised within the Union. Taking this circumstance into account, the number of new cities founded in America appears very inconsiderable, but the rate of increase observed by the cities already in existence is extraordinarily rapid. Take, for instance, the towns in the state of New York, the nine or ten hundred towns of the West, and the cities like Chicago, the capital of the prairies. But very few years ago, the wolves were wont to howl around the scattered houses which were seated upon the banks of the Illinois, and now these few houses have so multiplied themselves as to give shelter to the nearly 25,000 inhabitants of Chicago. It is above all in the West that this rapid increase of population is observable, and why is this? Lieutenant Colonel Arthur Cunynghame,* who, in his rapid excursion through the United States, managed to perceive with perfect clearness the causes of many of their peculiarities, has given us the reason. Formerly, the emigrants disposed themselves upon the prairies quite by chance, and without troubling

* "A Glimpse of the Great Western Republic," by Lieutenant Arthur Cunynghame." London Richard Bently, 1851.

themselves much respecting either the position or the worth of the lands they purchased, taking the lot which they could get for the least money. In time, however, they found themselves—when thus isolated and far from towns—without help or succour in cases of need, without support of any kind, and entirely destitute of markets for their produce. They thus found that the low price of their piece of prairie, instead of enriching had ruined them. They have therefore now learned to seek the lots of land which lie the nearest to the towns, although the government makes them pay a higher price for them; and this preference of the emigrants for settling near the large towns of the West is the secret of the enormous rate of increase of the population of the latter. What results will this rapid increase produce upon the future political condition of the Union? It is easy to see. In proportion as democracy concenters itself in the towns, the power will pass from the rural to the urban populations, and the state will thus transform itself. In our Europe, the aggrandisement of the cities has caused the fall of the feudal aristocracy, and given birth to democracy; in the United States it will have almost the opposite effect, and will forcibly destroy the present ultra-democratic régime, and replace it by a system more restrained, creating a kind of civil and military aristocracy

The influence which emigration exercises over the increase of wealth in the United States has also its importance. All the little savings amassed by Europeans for the purpose of rendering practicable a flight from the misery which is entailed upon them in the Old World, are expended in the United States. The journey from New York or from Buffalo to the "Far West," the forced sojourn in towns and cities on the route, the buying of articles of the first necessity, and the money paid for the purchase of their land, rapidly impoverish the most economical emigrants, and the greater part of them arrive at the places of their destination in the west with their purses and their pockets completely empty. Happily, however, when once there established, they have only need, to enable them to prosper, of energy and determination. Nevertheless, the fact remains the same, and these savings, these little fortunes, which are carried by emigrants to the United States, are to the latter a capital acquired without the slightest labour or expense So to speak, America is the universal legatee of all the poor in Europe, and, not content with profiting in the manner which we have spoken of by the emigrants, she still finds the means of enriching herself at their expense, by speculating in their labour, and gaining from them freely what we in this part of the world should call usury At Chicago, for example, the emigrant—relieved of most of his gold and silver by the expenses of his journey thither—encounters a speculator who has made his fortune by lending to the farmers of the neighbourhood at one per cent per month, not giving them gold either, but merely paper "bills." The emigrant has, perhaps, a sufficient sum remaining to enable him to cultivate an estate, but not enough to purchase one. The Yankee, "'cute" and rapacious, presents himself and buys fifty acres of prairie from the government for 62½ dollars; then he sells this land to the emigrant, who enters into an agreement to pay for it within three years, at two and-a-half dollars per acre, thus stipulating for a handsome enough profit. If all goes well, the contract is fulfilled; but if any accident or misfortune happens to the new farmer, he loses his time, his labour, and the capital which he has sunk in clearing and in building. As for the Yankee, he cannot fail to make a good profit by the transaction. If the land is paid for, his capital has been gaining 30 per cent. interest, if it is not paid for, he seizes the farm, and finds himself in consequence the proprietor, for an insignificant sum, of an estate well cleared, well cultivated, and laden with crops, instead of the fifty acres of wild prairie land which he had bought These sort of bargains, so profitable to the Americans, are often death to the emigrants, many of whom, however, enter into them, and ruin themselves in order to enrich their new compatriots.

We cannot abandon the interesting subject of emigration without noticing an extremely curious phenomenon which is presented in connection with it, and which exercises influence in America over the relations between the two sexes, over marriage, and civil society in general. If our readers smile, let them remember that in America there is always a something comic, which introduces itself in spite of everything, in things the most serious as well as in things the most futile. We will leave Mr. Johnson to express in his own language the singular fact which we allude to. "For two hundred years," says he, "a current more or less strong, of emigration, composed in a great measure of individuals belonging to the male sex, has been running constantly from Europe to America. As soon as these male emigrants have become established, they have looked out for wives, and as women have been rare, they have been greatly sought after and perfectly smothered with gallantry and homage. This has been the case for two centuries, and it is so still; for even at the present day, when the facilities for crossing the sea are so much greater, and the practice of emigration by families so much more general, than they have been hitherto, the disproportion between the numbers of the male and female emigrants to America is most enormous. During the last three years these numbers have been respectively as follows:—in 1847, men 138,939, women 99,357; in 1848, men 136,198, women 92,892; and in 1849, men 179,353, and women 119,945; the total difference between the number of male and that of female emigrants during the three years being thus 142,150. These emigrants, then, who have brought no female companions with them from beyond the sea, aspire to the hands of native American ladies, but these last generally prefer choosing their husbands from amongst their fellow-countrymen. Women are therefore very highly prized by these emigrants,—their value varying according to their greater or less rarity in the different states, and rising to its highest pitch in the Far West, where they are scarcest, and where ladies attain to truly fammie prices Here is the veritable paradise of women."

In other words, the demand for women is greater than the supply Is it necessary to attribute to this circumstance the deep respect which is paid to the female sex throughout the Union? Is it requisite to see in this courtesy, of which the Americans are so prodigal towards females—and towards females *only*—a sentiment nearly analogous to that which is entertained everywhere for rare objects? Mr. Johnson seems to think so, but for our own part we prefer to attribute it to other and different causes. It appears to us that the women of America form a veritable aristocracy. They are the rulers of society—indeed its very founders—and it is they who introduce into it elegance and politeness. They are, from causes already named, the objects of a veritable worship, and the independent Yankees, who bow only to the Bible (and not much to it) and shudder at the very idea of a *master*, grow tame before their wives and daughters, who know their power, and use it or abuse it according to the caprices of their sex. Divorces are also more frequent in North America than anywhere besides, and this circumstance can only be attributed to feminine caprices and the extreme *faiblesse* of the public opinion which is so tyrannic in America. It very often happens that whole states, and their legislators, take part in a question of divorce. Mr Johnson gives some curious instances. During the time that he was in Boston, it happened that a certain Mr. Lawrence, an inhabitant of that city, inserted in the newspapers a declaration to the effect that he should refuse in future to liquidate the debts contracted by his wife. The lady in question was of a family of considerable consequence in Kentucky, and "it is an insult to the whole state," was the general cry of its inhabitants, "and we shall see what will result from it." That which did result from it was a law, which was promulgated soon after by the legislature of Kentucky, making the husband's refusal to pay his wife's debts a legal ground for her divorce from him. The consequence of this law has been the production of a state of things which was never before equalled, making all the ladies of Kentucky as capricious, tyrannical, and extravagant, as it is possible for them to be, but it also has its good effects, for it is easy to see that it is some restraint upon, and forms a tie of association among, a people whose every tendency is towards the most lawless independence, who have pushed the (practice of the) principle of moral isolation to its last limits, and who still confound respect and deference with servility The tyranny of public opinion and the *toute-puissance* of the women of America are the two great moral forces which restrain and control the almost untamable character and the wild blood of the Americans.

III. RELIGIOUS TENDENCIES.

We have but little to say respecting the interior progress of the United States, which is a progress entirely of an industrial nature. We all know what the Americans are capable of doing in the application of human energy to the accomplishment of the conquest over matter, witnessed by their railways, their canals, their steamers, their electric telegraphs, and machinery of all kinds. Their activity is prodigious. Their progress is real; but if it has a fault, it is that of being precipitate and feverish. Nothing that they establish has stability; everything is precarious. Their railways are only as it were provisionary, temporary; and their farms and landed estates

are not so much establishments as a kind of caravansaries, places where they gather harvests of gram in haste, and soon afterwards abandon. The too great richness of their soil is one occasion, not of their idleness, but of their nomadism and vagabondage. They think less of cultivating a farm and putting it into good condition than of bringing out of it everything that it can possibly be made to give. The agriculturalist does not remain fixed upon one estate, for when he has exhausted its first fecundity, he finds it more profitable to turn to another than to renovate the old one. It is the same with all the other professions. A man tries all the quarries within his reach, and transports himself from one to the other with most marvellous rapidity, and with an inconstancy unequalled. He is, by turns, both farmer, lawyer, clergyman, and magistrate. In the same way, as far as his religious belief is concerned, he remains not, as in England, firmly and obstinately attached to one sect, but, according to his impressions of the moment and the progress of his mind, he is now a Catholic, then an Unitarian, then a Methodist, and all without transitions. This nomadism, this energetic vagabondism, is one of the greatest characteristics of the United States, and it is the stimulant, the spur of their progress It precipitates this progress, but one day will become a cause of ruin and disorder. The Americans have perseverance, but they have not its correlative virtue, patience; they have not that deliberation which is necessary to the accomplishment of great things, which preserves the freshness of the soul whilst increasing strength, and which prevents the weakness produced in the end by fever. This precipitation, which pushes for ever towards the morrow, is at present one of the safeguards of the Union, it prevents the Americans being too much afraid of difficulties, and causes them to avoid intestine quarrels The Union, for example, would have been long ago dissolved, had the Americans been determined to settle definitely the question of slavery, but they had not the patience and perseverance necessary to enable them to do so Nevertheless, this nomadism—moral and physical—is a real vice, and it appears to us to be, after slavery, the greatest spot upon the Union If slavery is the dissolvent of the Union, nomadism is the great obstacle to the organisation of society within its territory, it aids the outward progress of the Americans, but hinders and prevents their inward moral progress; and it is this great reason why they always march without organisation, and aggrandize themselves without being able to pass from the condition of a confused agglomeration of men to that of an organised people, of a nation

We will leave this subject, and proceed to the consideration of a more important one, and one more *morally* important. Of all the actual tendencies of the Americans, none are more interesting than their religious tendencies Protestantism is going through a crisis, in our opinion, but little observed, and very wrongly judged of, even by men who are in general most sagacious. The anomalies of the general character of the Americans astonish the European philosopher, but without, in any great degree, troubling or alarming him It is not so with their religion A great part of the emigrants from Europe, whether it be from scepticism or indifference, or an inability properly to understand it, interpret to themselves incorrectly the religious state of the country, while the other part feel born again within them all European prejudices at the sight of sects which rise and vanish so rapidly one after another, and which always are more numerous than even the multitude of separate states which compose the Union This is the only point upon which Mr Johnson manifests alarm, and he expresses very earnestly his fears, lest infidelity should shortly become general in the United States. It is clear that these fears are not without foundation. Protestantism in America tends more and more every day to destroy the spirit of sect, and merge into a sort of ill-defined Catholicism, which we will call simply by the name of Christian Theism. The religion of Dr. Channing, the philosophy of Emerson, the theology of Theodore Parker are not, as one would at first believe, the pure caprices of Protestant Rationalism, the simple manifestations of individual inspiration and metaphysical fantasies, they are not isolated, unimportant facts, but the manifestations of the universal tendency of all religious sects among the Americans, which are all ready to abdicate into the hands of one another, and are all willing to be mentally absorbed into one great body Religious sects in England have a persistency which is utterly unknown amongst them in America, and the cause of this is the maintenance of the Anglican Church as that of the state. Each of the sects which find themselves excluded thereby from power, and whose existence is scarcely acknowledged by the state, endeavour to prove that it still really exists, and that, although it may not possess any official influence, it possesses an influence which is more important, and reigns supremely over hearts and consciences. Rivalry and emulation are thus added to fanaticism, and the religious sects wrestle with one another with an ardour which would not exist but for the state religion. But in the United States there is no religion established by the state, all are equally beyond the pale of its protection, and every sect alike sustains itself by its own resources. This indifference of the state involves, as a necessary consequence, this result:—that every sect must be tolerant of all others. Hence comes also the, to us, strange sight of a sect admitting, when *les fidèles* abandon it, that it was because its doctrines were not sufficient to satisfy them and to appease their doubts.

LYING IN STATE.

BY A CRABBED PHILOSOPHER.

"*Sub tegmine fati, I*"—I fag in the shadow.—VIRGIL

AMONG all the different kinds of lying, there is none more characteristic than that of *lying in state*. Although it is a part of education all over the world to lie gracefully and plausibly, although men are bred to it from their youth up—making a profession of it, as in law, in politics, in business, and in literature, and although most persons lie, now on this side and now on that, and not unfrequently on both sides, within the course of a single hour, as among auctioneers, old bachelors, horse-dealers, hack-writers, new police, and attorneys,—these, after all, are but plebeian accomplishments compared with those of the upper ranks, who are allowed to lie in state. From the lowliest of those who hawk patent medicines, or Warren's blacking, about the streets, or chalk advertisements on the garden walls, in letters three feet high, for thirty miles out of London—up to the reporters of Parliamentary speeches, and the getters-up of British travels in America, there is nothing to be compared with the dignity and importance of what is called lying in state. Liars by trade, though they may be—lying on paper, and lying off—all their lives a lie—their death a lie, and their very epitaphs a lie,—there are multitudes of the great, who reserve themselves to the last, when the breath is out of their bodies, for lying the whole world out of countenance, and this they call *lying in state*

Go to Greenwich fair, and circulate awhile among the booths, and then take up a newspaper, an English History, or a book about any other people on the face of the earth, and judge for yourself. "Here's a wild Indian! here's a North American! white Indians, all alive! a penny a-piece, all alive! Two white Indian boys from St. Kitts—one a Circassian! Walk in, gentlemen! walk in! Here's the Spanish sisters, and the Chinese lady, with silver hair! penny a-piece, gentlemen, all alive! Walk in, ladies, walk in!" What are all these but humbler imitations of "*Just published*, a new work, by the author of Little King Pepin, Jacob Faithless, Miss Fusbosko's Notions of America, or Jack the Giantkiller! *In the press*, a new novel! astonishing production!—eloquence! poetry!—passion!—truth!—graphic delineations! and characters from fashionable life, with a key! Here's a poem of three-and-twenty lines, by the Right Honourable the Marchioness of Cock-a doodle-do; supposed to be founded on a recent transaction at Timbuctoo, and to refer to the well-known A, B, C,—X, Y, Z, & J."—And again, why not acknowledge, that the fellow who stands on the platform of a travelling managerie, about the size of a baggage waggon, with the portrait of a white bear on one side, which he calls a catamount, and a pair of elk's horns on the other, which he is ready to swear, grew on his grandmother's cow—shouting at the top of his voice to all that come near, "Walk in, ladies! walk in! here they are!—live mermaids, white elephants, and whales a hundred and fifty feet long! Here they are!—Here's a lion worth having!—big as a cart-horse—mouth like a turnpike gate—every tooth like a mile stone—every hair as big as a broomstick!" &c. &c, Why not acknowledge this fellow to be just as respectable in his way, and full as trust-worthy, as ninety-nine-hundredths of the Diddlers, Fiddlers, and Tridlers, who run about the world, hawking their wares after a similar fashion, with just about as much regard for the truth?

You may tell us, to be sure, that we take things too seriously; that among the people where lying is but another name for adroitness, genius, and thriftiness—where none but fools, madmen, and children are ever supposed to speak the truth—where even the state papers and histories are lies, to say nothing of the caricatures, the sea-songs, the police reports, the parliamentary speeches, the novels, the poems, and the newspapers—but different names, after all, for the same thing; or different preparations of that which the people of England are fed with, from the cradle to the grave; that where the countenances of men, their looks, their tones, their whole intercourse with one another, are a lie, that we are to be pitied for expecting the truth, under any circumstances, even upon the threshold of another world; that in a country and among a people, where to speak the truth is looked upon as unequivocal evidence, not of simplicity only, but of a neglected education and a want of acquaintance with the usages of society, where to be frank and open, to talk as you think, and to think as you talk, is to be *ungenteel*, where to be natural and true is to be ill-bred; where the tone must be subdued, the step qualified, the countenance forged, the heart quelled, the whole bearing of a man cast off, and the whole nature of a woman changed, or they are looked upon as little better than barbarians—nobody is fool enough to put faith in anything he sees or hears, however solemnly published or pompously authenticated, and that in point of fact, nobody is deceived even by that loftiest of all manifestations, which we have chosen to regard as a national pastime, the Lying in State. And what then? Does that change the character of the transaction, or help that of the people?

A monarch, or a prince, nay, even a peer, has but to give up the ghost, in purple and fine linen—to stretch himself out, after possibly a profligate and shameless life, and a brutal death, amid the gorgeous blazonry of rank, and let himself be seen of the multitude, with sconces and wax lights about him, and cumbrous drapery darkened with the shadow of Death—and mutes and muffled hangings, and pictures and looking-glasses turned to the wall; and hearses and plumes, and all the pomp of heraldry; he has but to lie stiff and stark within the hollow of a vast chamber, like the nude effigies on the tombs of Westminster Abbey,—to have all his doings on earth forgotten and forgiven: his virtues abundantly magnified, and all his vices buried, for a month or so, and himself canonized until the next change of the moon—in other words, he has but to *lie in state*, after death; and the ten thousand times ten thousand, who may have cursed and hated him while he lived, are all agog with admiration, and overflowing with charity.

But, then, he must lie like a prince. There must be no paltriness, no shabbiness in the arrangements, or the people have no sympathy with him, and his brethren, who have held themselves aloof, while star after star was dropping from his coronet, will be sure to pass by on the other side.

Take an example; and that we may not be charged with dislike to royalty, let us have nothing to do with that household of princes, who have gone down to their graves, one after another, with such frightful unexpectedness, within the last thirty or forty years. Let us betake ourselves to one, who for a season was what may be truly called, a man of the world—the foremost of all the world in fact, after the death of Napoleon Bonaparte. For many years he stood like a pyramid among the monuments of a buried nation. The past, the present, and the future did homage to him. The greatest of the earth stood fixed and motionless in the worship—like so many sculptured sovereigns about his rocky pedestal. He overtopped the mightiest—he overshadowed the most glorious, even as Napoleon Bonaparte himself overtopped and overshadowed the towering sovereignties of earth, when kings thronged his ante-chamber, and nations prostrated themselves in his path. Well—he died. And when he was dead and gone, dead as a door-nail, his worshippers waked up, and beginning to rub their eyes and look about them, found out that he was only George Gordon, Lord Byron, after all. And so they washed themselves, one by one, of his iniquities; and picked up the crumbs, which they had been casting at his feet, and gathering their robes about them, and clearing their skirts from the dust of the retiring multitude, they marched off with a regenerated look, a haughty step, and a Scotch bag-pipe droning in their ears—wondering as they went, how they could have been so much mistaken.

Well, he died—died just when the great and good public had come to the knowledge that he was poor; that, after abusing Walter Scott for making poetry to order, at half a crown a line, he had been obliged to make poetry himself, for about the same price;—to abandon the immutabilities, and wreaths, and crowns of inextinguishable fire, and a harp that thundered like a tempest among the mountains—for pounds, shillings and pence, and the echoes of Albemarle Street; nay, worse—much worse—that he had already begun to write for nothing—and for a *newspaper!* and that Murray had been obliged to cast him off. Poor Byron!—Well, and so, although he had been their idol so long as he wrote mysteriously and afar off, without the inspiration of "half a crown a line;" and while they, in their hearts, believed him to be one of the greatest scoundrels on earth, and the original of every cut-throat he had painted; and although he had now the reputation of being at least an altered man, having forsworn poetry, and devoted himself to the war that Greece had been waging, as with lighted thunderbolts, against the "gorgons, hydras, and chimeras dire," that were mustered along her borders—yet, the moment he was dead—the moment it was all over with him, and it was known that he died poor, and that his heart had been bequeathed to his country—the "altar and the god sank together in the dust!" And although he *lay in state*, few, indeed, were they "so poor to do him reverence."

A motley crowd, just such as you may see at the opening of parliament, by the Lord Chancellor in person, being furnished with tickets, poured into the house day after day, and being informed by the chief personage in attendance, that his "*lordship had been salted down two days before*," walked round the chamber where he lay, flourished their pocket handkerchiefs, examined the furniture, lifted the hanging (rather unluckily in one case, for a friend of mine assured me that he saw, with his own eyes, one of the mourners lunching there with a pile of bread and cheese before him, and a pot of beer,) let them fall in a hurry—walked out, dropped the shilling or the half-crown, as the case might be, and returned to their homes, all the better for having wiped off a long score—discharged a solemn duty without much loss of time, and got their money's worth, and not a few, perhaps, to look into Lara, Beppo, Don Juan or Childe Harold, for the first time Was not this lying in state—and lying to some purpose?

The body—or, as the newspapers had it—his *lordship* lay in Sir Edward Knatchbull's, M.P., in George Street. There was rather a pressure for two or three days. But of the many that were there, by far the greater number appeared to be quite as much taken with the furniture, the crimson and gold drapery, the coronet lying upon the coffin—the room hung with black, and the candles burning dismally enough—as with the presence itself, and the awful inscription upon the urn, which held the heart, brains, &c. Some wondered at the plainness of the show—some at the tawdry coronet and escutcheons—which, sooth to say, were strangely of a piece with the counterfeit melo-dramatic representations at a trumpery theatre. Others were greatly moved that he should have come into the world in January, 1788; and there were two or three ugly women, evidently crying for effect. They were all of a size—hideously alike, with red noses and goggle eyes. They made a business of it; walking about like a family of old maids gone to seed, and sopping their faces with their handkerchiefs, like so many hired mourners. Perhaps they were a part of the "*performance*"—furnished mourners in a country where such things are done by the job, and the sign of a regular undertaker is—"Funerals *performed* here." Why not—"Funerals *perpetrated* here!"

Judging by the funeral that followed, the latter were a much more suitable sign. There were mutes, and a few shabby pages—Oliver Twistish looking boys, chartered by the lump, a small procession a-foot; an old grey-headed man with a white wig, bearing a coronet on a crimson velvet cushion; a stately black charger richly caparisoned—mourning-coaches with six horses each, a very few private carriages, and half a score of empty hacks. And this was the end of George Gordon, Lord Byron! this! in the very heart of the British Empire!

EXERCISES FOR INGENUITY.

A MEDIUM OF INTERCOMMUNICATION FOR ALL READERS.

UNDER this title it is proposed to extend the usefulness of the page we have been in the habit of presenting to our readers once a month. Instead of, as hitherto, confining the "Exercises for Ingenuity" to questions in arithmetic and geography, it is thought that a larger number of subscribers would be interested if the field of inquiry were widened. With this view we have laid our friends under contribution, and the following notes and questions are the result. Some of them have appeared in print, and we are indebted to the interesting periodical called "Notes and Queries" for one or two of the literary and antiquarian exercises. Each question will be distinguished by reference figures and the initials of the proposer, and should no answer appear in the next monthly page, it is to be concluded that no satisfactory one has come to hand. To make this department of the *Friend* at once interesting and valuable, we invite the cordial co-operation of our readers; and to distinguish the questions from those of mere ordinary correspondence, letters addressed to the Editor for this purpose should be endorsed *on the outside* "Exercises for Ingenuity." Many of the questions we are in the ordinary habit of answering in the last page of our weekly issue will naturally come under this designation; but it must be understood that we reserve to ourselves in all cases the right of selection in reference to the most correct answers to the several question. Our readers will perceive that in the following questions a wide margin is allowed, and that all kinds of queries which may be considered to possess a general rather than a personal interest are acceptable. We shall be glad if any of our readers will forward us such illustrations of folk lore and ancient customs as may happen to fall within the compass of their reading or observation. Curious receipts, the origin of popular sayings and quotations, illustrations of national peculiarities, &c &c., will also be welcome. We may hint, too, that our friends will do well to introduce their *Friend* into company where it may hitherto have been a stranger, and thus will it become as commercially prosperous as it is useful. *Write plainly, briefly, and on one side of the paper only.*

1. What is the origin of the phrase "by Hook or by Crook?"
2. Whence comes the oft-quoted line—

"Praise undeserved is censure in disguise"

3. Is a man taller in the morning than at night; and if so, why? What is the average annual term of sickness in the human adult? Can any one explain the reason why, in middle life, the lean man gets fat, and the fat man thin?—H. W.
4. Why is the Archbishop of York styled "Primate of England," and the Archbishop of Canterbury "Primate of *all* England?"—H. M. B.
5. What was the crest and motto of John of Gaunt?—REUBEN.
6. What is the best method of preserving the larvæ of moths and buttterflies, so that the colours may be retained?—W. W. R.
7. Would a magic lanthorn lens do for taking portraits by the photographic process?—A. W. E.
8. What king of England conquered Wales? Where was he born, and when, and where did he die? Who was the first prince of Wales, and under what circumstances was the title first given? J. W.
9. What is the origin of All Fools Day, and why is the First of April so called?—J. W.
10. What are the names of those two men who left the largest fortunes to their families?—J.
11. Briefly describe the various kinds of dress, &c., worn by various nations as mourning for the dead.
12. Why does a blacksmith seem the most dissatisfied of all mechanics?
13. How did Canada obtain its name?—R. P.
14. In what reign were the Commons first called to sit in Parliament?
15. What was the wittenagemote of the Saxons?
16. In what battle were cannons first used?—T. W. SMART.
17. How many triangular files 5½ inches long, and ⅜ inches breadth of side, can be made from 736½ lbs. of steel, ½ part being allowed for waste in making?—ROBERT MIDDLETON.
18. If a penny had been invested at 5 per cent at the birth of Christ, what sum would it amount to, compound interest, in 1853?
19. Can four 9's be so placed, as when added together, they shall make 100, and, if so, how?—R. W.
20. What is the cause of the red appearance of the sky at sunset? sometimes we see red clouds over our heads, while others near them are black. Why is this?—HARRY.
21. If a ball of marble 37·6992 inches circumference be reduced to one third its size, what will its circumference then be, and its weight, the specific gravity of marble being 2 838?—ROBERT MIDDLETON.
22. What are the physical causes of rain, snow, sleet, hail, and fog?
23. What is the best powder for cleansing the teeth?—R. V.
24. Can any of our readers furnish cheap receipts for making the sympathetic inks of secret writing?—P. A.

LITERARY NOTICES.

JOHN CASSELL'S ALMANACKS FOR 1853.

UNCLE TOM'S CABIN ALMANACK

THE unprecedented success attained in this country by Mrs Harriet Stowe's remarkable story, has re-enlisted, as it were, the sympathies of the English people for the American slave. In no volume that was ever written has so much of truth, pathos, and genuine nature been exhibited, and it is creditable to our common nature that the universal publication of this and similar stories has been hailed by hundreds of thousands, who had before considered the "peculiar institution" of the United States as an unalterable fact, as one of the best and most decided means of abolishing for ever that disgusting traffic in human flesh which tarnishes and disgraces the character of the Anglo-Saxons in America. To put down a confessed evil—no matter whether it be personal or national—we must not content ourselves with simply denouncing it; we must expose it and its abettors to the gaze of the whole world, we must determine to let no stone remain unturned, no argument unanswered, no falsity unreproved, but by night and by day, in all companies and in all places, in season and out of season, we must continually agitate till the evil be removed. We have no quarrel with the Americans, and, in our endeavours to abolish slavery within their dominions, we must never forget that it was we, the English, who forced the curse of man-dealing on our, then, unwilling colonies. For this reason, if for no other, and that we may do tardy justice to the three millions of our coloured brethren who pine in the shadow of wrong and woe, we call upon every inhabitant of our free and happy land to add his voice to the triumphant cry—"There shall be no more slavery in all the world!" To aid, by ever so small an effort, in the good cause of the negro's liberation, is the wish and object of every philanthropist, and that the British public may become fully acquainted with the horrors of that abominable traffic called the slave trade, we have gathered together the principal known facts concerning it, and, by aid of literary and artistic talent, these facts will appear under the title of UNCLE TOM'S CABIN ALMANACK, or, THE ABOLITIONIST MEMENTO for 1853. This work is splendidly illustrated by George Cruikshank, Gilbert, Harvey, "Phiz," and other eminent Artists. Published with the Magazines. Price 1s.

THE ILLUSTRATED EXHIBITOR ALMANACK for 1853, containing upwards of Thirty beautiful Engravings. Price Sixpence.

THE POPULAR EDUCATOR ALMANACK for 1853, containing Forty-eight Pages of most Interesting and valuable Educational Statistics, including a Comparative View of Education at Home and Abroad, Essays on the Leading Sciences, Brief Notices of Eminent Scholars; Exposition of Technical Terms; &c. &c. Price Twopence.

THE TEMPERANCE ALMANACK for 1853, much improved and enlarged, and in which will be inserted a Tale of thrilling interest, from the pen of Mrs. Harriet Beecher Stowe, authoress of the inimitable "Uncle Tom's Cabin," entitled, "THE PLEDGE TAKEN, or, the Husband Saved, and a Family made Happy," with valuable details of the great Temperance Movement, Statistics, &c. With several Engravings. Price Twopence.

THE PROTESTANT DISSENTERS' ALMANACK for 1853, with Twelve beautiful Designs, by Gilbert, of striking Events in the History of Nonconformity. Price Sixpence.

UNCLE TOM'S CABIN,

Illustrated with Twenty-seven Engravings,

BY GEORGE CRUIKSHANK,

In weekly Numbers, price Twopence each. The First Number was published on Saturday, November 23, containing Thirty-two well printed pages, with three elaborate Engravings, from Designs by the above-named Artist.

CASSELL'S SHILLING ILLUSTRATED EDITION OF "UNCLE TOM'S CABIN," neatly bound in Ornamental Wrapper, foolscap octavo, with Eight Engravings, forming the cheapest edition yet published, continues on sale.

CASSELL'S ELEMENTS OF ARITHMETIC is now ready, price 1s. in stiff covers, or 1s. 6d. cloth, uniform with Cassell's Edition of Euclid, edited by Professor Wallace, A.M.

GLEANINGS

FROM ALL KINDS OF FIELDS.

THE FIRST ENGINE DRIVER.—It was little thought, says Mr. Francis in his "History of the English Railway," by those who wondered at the rapid movements of the "Rocket," that on it as driver sat one whose name, nearly a quarter of a century later, would be identified with the great triumph of the year 1851. Son of a medical practitioner, destined for the same profession, marrying for love at an early age, and immediately finding that "fathers have flinty hearts," Charles Fox, the future builder of the Crystal Palace, determined, if he could not gain his living by his head, to earn it with his hand, and greatly to his honour is the fact that he guided the engine which Stephenson built, and aided to win the prize which Stephenson received

THE "NOBILITY" OF THE SAVAGE.—The cant about the trammels of civilisation, and the perfect liberty and independence of the savage in his native state, roaming where he listeth, is all humbug, nobody in reality has less liberty than the savage Indian He cannot say, "This country and manner of life does not suit me, I will go and live elsewhere." The instant he sets his foot out of his own country he knows he will be scalped. His position realises to the letter "In the sweat of thy brow shalt thou eat bread." His every moment is taken up by his exertions to procure food. The laws even of the society he exists in render him anything but a free agent. Witness the young warrior whose lodge was slit up on a cold winter's night, and his gun broken, because he had hunted without leave—game-laws with a vengeance! The more civilised and enlightened a country becomes, the greater liberty of thought and action its inhabitants enjoy. The honest labourer or sweeper of crossings in London has more real freedom than the proudest chief that ever hunted a buffalo on the prairie.

FINE TALKING.—We are indeed, says an American, a happy, elegant, moral, transcendent people. We have no masters, they are all principals, no shopmen, they are all assistants, no shops, they are all establishments; no servants, they are all "helps", no gaolers, they are all governors; nobody is flogged in bridewell, he merely receives the correction of the house, nobody is ever unable to pay his debts, he is only unable to meet his engagements; nobody is angry, he is only excited; nobody is cross, he is only nervous; lastly, nobody is drunk, the very utmost you can assert is that "he has taken his wine."

"WHERE there's a will, there's a way," says the old proverb, and Shakspeare's marriage was a curious proof of this, for in the days of the great poet it might have been said, Shakespeare is the *Will*, and his wife *Hath-a-way!*

TOUGH MEAT.—Meat, if naturally tender, will be made as tough as may be desired by putting a little salt upon it, "just to keep it till wanted." Salt is an excellent hardener If the tenderness is to be preserved as well as the purity of the meat, a "dust of pepper" will do all that is needful. By-the-bye, where can pepper be obtained now? Not the pretty-looking white stuff, one-half of it ground rice, but the good natural black pepper, the best seasoning in the world, driven out of fashion because it didn't look pretty.

HE who reads with discernment and choice, says Bolingbroke, will acquire less learning, but more knowledge.

SUSPENDED ANIMATION.—It is stated in an American paper that an important discovery was recently made in Copeley, Medina co., by a lady. Mr. Vial, his son, and another person were digging a well, and the son having gone down first was prostrated on breathing the noxious vapour or "damps" below His father descended to his relief, and fell also the third started for a physician In the meantime several ladies assembled at the place, and one threw down a pail of water, most of which fell on the face of Mr. V., who caught breath, rose, seized the senseless body of his son, got into the tub, and was drawn up by the ladies. Water was immediately applied to the young man, which in a short time produced symptoms of returning life. Mr. Vial, in a few hours, attained his usual health and strength, and the young man, by medical aid, had so far recovered as to be able to walk about on the following day. The experiment of letting down a candle was then tried, which went out at the depth of six feet from the top of the well, a live chicken was also let down, and at the depth of six feet animation became suspended; but by pouring water down on it, animation was immediately restored From these experiments it appears that on inhaling this gas, life is suspended only, and that the application of water will restore it—either by conveying atmospheric air, contained in the water, to the sufferer, or from some other cause

AN APPROPRIATE PRESENT FROM THE DIGGINGS.—A poor but respectable tradesman in Gloucester whose brother emigrated to Australia a few years ago, has received from him a very agreeable token of fraternal regard, in the shape of a lump of gold. A letter which accompanied the present stated that the brother had made his way to the diggings, and had there picked up, among other similar "trifles," the enclosed lump, which he begged his brother to accept, and use its value in making the necessary preparations for transferring himself and his whole family to the great golden land of the south The lump thus sent has sold for not less than £400 Enabled by this princely gift, the Gloucester tradesman is about to join his brother, and has taken steps to dispose of his business,

PERPETUAL LIGHT.—A most curious and interesting discovery, says the *Mining Journal*, has just been made at Langres, in France, which we have no doubt will cause a searching scientific inquiry as to the material and properties of the perpetually-burning lamps, said to have been in use among the ancients. Workmen were recently excavating for a foundation for a new building, in a *debris* evidently the remains of Gallo-Roman erections, when they came to the roof of an underground sort of cave, which time had rendered almost of metallic hardness. An opening was, however, effected, when one of the workmen instantly exclaimed that there was a light at the bottom of the cavern. The parties present entered, when they found a bronze sepulchral lamp of remarkable workmanship suspended from the roof by chains of the same metal. It was entirely filled with a combustible substance, which did not appear to have diminished, although the probability is that combustion had been going on for ages This discovery will, we trust, throw some light on a question which has caused so many disputes among learned antiquarians.

EDUCATION is the proper employment, not only of our early years, but of our whole lives.

IVORY.—The value of the annual consumption of ivory in Sheffield is about £30,000, and about 500 persons are employed in working it up. The number of tusks to make up the weight consumed (about 180 tons) is 45,000. According to this, the number of elephants killed every year is 22,500; but supposing that some tusks are cast, and some animals died, it may be fairly estimated that 18,000 are killed for the purpose. This is a matter not generally known, it being a prevalent opinion that the tusks used for ivory are cast by the elephants when alive.

NOTICES TO CORRESPONDENTS.

J BRABNER, and several other Correspondents.—You may obtain a neat cover for binding the two volumes of the "Working Man's Friend" (new series) in one, at our publisher's, for 1s. 6d.

A FRIEND.—"Clerks in mercantile offices" will *not* be exempt from the ballot for militiamen

THOMAS PHILLIPS.—We must decline furnishing receipts for making skyrockets.

GEO DREW.—You may purchase a galvanic battery at any philosophical apparatus maker, there are several in Fleet-st., Messrs. West, &c.

S. GODSTONE.—There are seven volumes of the first series of the "Working Man's Friend," at 1s. 6d. each The History of Ireland is now completed, in three volumes; the three are usually bound in one.

JOHN.—You had better consult some geographical grammar; an answer to your inquiries would occupy more space than we can spare

E. J JONES.—Your article on Phonetic Writing is not suitable for our pages.

C. L.—We believe "ventriloquism" to be "a gift of nature," though it may doubtless be modified and improved "by art." We know of no book which professes to teach the art, *Mr. Love*, one of the most popular ventriloquists, says that it cannot be communicated by teaching.

A TEETOTALER.—You are correct in your belief that the "bitter ales" contain alcohol; and we can assure you that, so far from containing *less* alcohol than the ordinary malt liquors, they contain a *larger* portion. We have seen "stout" and "Alsopp's pale ale" subjected to a test by an eminent chemist, and the result was that the ale contained nearly two per cent. more alcohol than the stout.

B. W. S.—We believe John Bright, Esq., one of the representatives of Manchester, was born in 1811; and Richard Cobden, Esq., one of the members for the West Riding of Yorkshire, in 1804.

YOUNG CHARLES.—The word "*manse*" means, literally, a mansion, or house, but as used in Scotland it means the house provided for the parish minister to reside in, a parsonage, or clergyman's house.

TYRO.—*Pandora*, according to fable, was the first mortal female that ever lived. Vulcan made her from clay, and she was animated by fire taken from the sun. The gods and goddesses then vied in making her presents. Jupiter gave her a box which contained all sorts of evils, with *Hope* at the bottom; intimating that whatever evils might come to the lot of mortals, there was yet Hope to sustain and cheer them.

C. THOM.—Irish emigration is called the "Irish *Exodus*," because the word Exodus means a *departure*, or *going forth*. Thus the second book of Moses is called Exodus from the principal event recorded in it, namely, the *departure* of the Israelites from Egypt.

A YOUNG PAINTER.—*Gold size*, or the size used for *oil* gilding, is made of drying or boiled oil thickened with yellow ochre or calcined red ochre, and carefully reduced to the utmost smoothness by grinding. It may be thinned with oil of turpentine. *Water size*, the size used in *burnished* or *distempered gilding*, is parchment or isinglass size mixed with finely-ground yellow ochre.

ELIZA B.—You will find some valuable lessons in music and singing in the numbers of Mr. Cassell's "Popular Educator."

All Communications to be addressed to the Editor, at the Office, Belle Sauvage Yard, London

ROUEN.

WHO amongst us has not read, with a mixed feeling of curiosity and surprise, of the journeyings up and down and hither and thither of the present ruler of France? At one time he makes almost royal progress to the Rhine, under the pretence of inaugurating the birth of the Paris and Strasbourg railway — country and the people,—and upon each and every occasion returning to the Tuilleries with the air of a man who has accomplished a victory; attended by troops and martial music; receiving deputations, bowing to the well-dressed crowds at windows and on house-tops, and condescending even to notice

VIEW OF ROUEN.

not yet fully opened, by the way, and so far from completion as to possess at the present moment only a single temporary line of rails for a great many miles over the level plain of Alcase;—at another going like a conqueror into the sunny south, just, as he declares, to see for himself the state of the with smiling face the packed and struggling mass of "common people" on the footways and wide places of the city; riding through thousands of well-armed soldiers—under triumphal arches, and past flying colours, and every other demonstration of popular enthusiasm—to the welcome music of the cry "*Vive*

Napoleon III !" "*Vive l'Empereur !*" from ten thousand willing throats, ten thousand times repeated.

Into the principal cities and towns of France has his *highness* citizen Louis Napoleon, "President of the French republic, and nephew of the Emperor," thus made public entry · Angouleme, Bourdeaux, Chalais, Dijon, Lyons, Rouen, Strasbourg, Paris ! Everywhere have the "authorities" met him with willing and obsequious ceremony ; and everywhere has *his highness* acknowledged their devotion to his person and authority. And why not? seeing, that in the Empire which "looms in the future," the excitement-loving and inconstant Frenchman discovers another revolution, and consequently another chance of theatrical display and grandeur,—while the home-keeping and timid agricultural Frenchman remembers that the Empire promises peace and plenty ! which will be right.

Time, the great discoverer, alone can answer this question. Meanwhile, as the future Emperor—as we suppose we must call the escaped of the Fortress of Ham and the beloved of Gore House and "a certain set" in the English metropolis—is making glorious passage through the beautiful but impoverished cities of France, we will linger in his track, and seek among the antecedents of Rouen, some small matters of interest for an English public.

Of all the towns of La Belle France, Rouen possesses for the Englishman the greatest historical interest—for here, in the ancient capital of Normandy, William the Conqueror—*our* William—died, a broken hearted man, deserted and despised by his own kindred and friends, and becoming indebted for a grave to the kindness of strangers ! Here, in the Place de la Pucelle, at the hands of our own countrymen, the brave, simple, and deserted Joan of Arc was barbarously murdered. We all know the dismal story—how, in 1431, the heroic Maid of Orleans, after having been flattered by Charles VII., and after having led the soldiers of France to victory upon victory ; and after having assisted to place the crown upon the head of Charles, in Rheims, she was taken by the English, and without remonstrance or protest from the king, was burnt at the stake ! After her death her ashes were collected by the hangman and thrown into the Seine, by order of the meek Cardinal of Winchester ! Betrayed by her own countrymen, accused and condemned by an unjust judge, deserted by the monarch she had served, she may well have exclaimed, as the flames reached her head, and licked with their fierce tongues her noble features—"There is no justice or goodness in man : I rely upon my Saviour for pardon and pity !" It was but sorry recompence, that twenty-four years after her death, her innocence was proclaimed, and that statues were erected to her memory !

In Rouen also the fires of superstition, which have at different times shone red and dismally over all the, now, civilised countries of the world,—burnt with a fierceness hitherto unknown ; and poor old women had need only to be blind or lame, or deaf, or silly, to be caught at the corners of streets, dragged before the miscrably superstitious magistrates, and in the next hour given over to the maddened multitude. In Rouen Cathedral is buried the "lion heart" of Richard the First, which he bequeathed to the citizens on account of his great love for Normandy ; beside it lie the bodies of Richard's brothers. To this same old picturesque French town the great Lord Clarendon retired after his disgrace, and died in poverty and neglect.

A thoughtful wanderer through Rouen has little need of guide books or company ; for the past speaks out to him from many a quaint old dwelling-place ; and gabled roof, and tarraced wall and ivy-curtained archway, tell, each in its own peculiar fashion, of the time when, from those windows and those walls, fierce eyes looked down on stalwart hosts, who longed to meet the English invader in the field of battle.

In the present day, however, Rouen, despite the quaint appearance of many of its churches, streets, and houses, is a place of considerable trade and importance. Situated on the Seine, and being connected by railway with both Havre and Dieppe, it is on the great highway to the capital from its two sea-ports ; and contains upwards of ninety-two thousands inhabitants—four cities only in France possessing a large number. The modern, or manufacturing, quarter of the town has been called, somewhat pompously, the French Manchester, from the fact of several cotton factories having been established there.

At a short distance from Rouen stand the ruins o Château Gaillard, the most picturesque object on the Seine, both from its situation and associations. This was begun and finished in one year by King Richard Co Lion, in defiance of his rival Philippe Augustus, and face of the treaty of Louviers, by which he had bound self not to fortify Andelys, the little town on the str the river side. He thus broke it in substance, while he to the letter. Exulting in his stronghold, as he first l down from its commanding battlements on the defen town and exposed river below him, he named it, in the of his heart, his "Saucy Castle." Even now that it is re to a mouldering ruin, one cannot look up to its tow battlements, or gaze down from them upon the sunny scape below—the glassy Seine flowing close at the foot c castle rocks, then girdling the peninsula in front, and re ing vine and corn clad slopes, trees, spires, and cottages surface—without sharing in this feeling of exultation o fierce soldier king, in the possession of a stronghold v enabled him to defy his enemies, and overawe the co around, with the terror of his armed bands and unc archers.

The eminence on which it stands projects forward, iso from the neighbouring hills on all sides but one, where connected by a narrow tongue. This was cut through deep fosse skirting the outer line of wall. On all the sides deep escarpments rendered the height inaccess towards the river, indeed, it presents a vertical prec Yet even along the edge of the cliff tall flanking towers raised, some of which have long since toppled over, others are tottering to their fall. But these were only outworks, within them rose a citadel of singular form strength—a huge circular drum tower, having a wavy su alternately projecting and receding, like a frustum of a f column. The circle is broken by the insertion of a r tower shaped externally like a dice-box on the side hanging the Seine. This was the *Donjon*, and contained royal apartments ; its walls are 14 or 15 feet thick. A sc deep fosse surrounds this citadel, cut in the chalk rock, interspersed with flints which were used in the building thus it served at once as quarry and defence. Exte caverns, supported by piers of the rock left standing, bi off from one side of this fosse ; they probably were use stables. The original gateway into the citadel is no l accessible, but entrance may be gained by clambering thr a small sallyport in the corner. It is to be feared that o small part of the existing ruins belonged to the castle of Richard. At his death Philippe Augustus, waging war a champion of Prince Arthur with John, laid siege to this c It was bravely defended by Roger de Lacy for six mo when he was finally starved into surrender. He had viously expelled from its walls the useless mouths, the men, women, and children, to the number of 400 or 500 the French king, wishing to distress the garrison, drove back and refused them passage ; so that the poor wret denied admittance into the castle, perished of famine in ditches between the two armies ! Château Gaillard conti to be the chief bulwark of Normandy down to 1606, v Henry IV. demolished it along with other castles as dange to the royal authority. In 1314 two frail queens immured within its walls, and one of them, Marguerite, of Louis X., was strangled here by order of her husb David Bruce found an asylum here 1334, when an exile Scotland, the castle having been ceded to him by Philip Valois. With a small garrison of 120 men it resistec sixteen months the forces of Henry V., and yielded at le because cut off from a supply of water by the wearing o the ropes by which the buckets were let down into the we

---

NOT AT HOME.—When Cibber once went to visit Booth, knew that he was at home, a female domestic denied him. Ci took no notice of this at the time, but when in a few days afterwa Booth paid him a visit in return, he called out from the first that he was not at home. "How can that be," answered Be "do I not hear your voice ?" "To be sure you do," rej Cibber ; "but what then ? I believed your servant maid, as is hard, indeed, if you won't believe me."

MEMOIR OF THE DUKE OF WELLINGTON.

In his military character the Duke had achieved greater fame than had been vouchsafed to any commander since Marlborough; in his civil capacity, he commanded the respect of his king, and the confidence of his coadjutors. His life affords one of those few specimens in history—a career thoroughly developed—a thread spun out to its full and natural length. "Many great original men," says a public writer, "have been cut off in their activity—thwarted by extraordinary obstacles, and so compelled, in divers ways, to leave imperfect images of themselves in their deeds and in their personal accessories. Wellington leaves a full-length portrait of himself in human history." He had his due and his entire influence, in his generation, at every stage of his life. He entered early on the course for which nature had peculiarly intended him; had, in due time, his task put upon him; achieved everything that he undertook, and was, in the best sense, a successful man. His reputation, to the last, was the paramount reputation of his day. When he fought a battle, he generally won it, and always made a successful campaign, when he spoke in the House of Lords, his words were received and repeated throughout the country with a peculiar interest such as attached to few other men. As "the Duke," he was in himself an institution, and to praise him was one of the natural ways in which many men showed their patriotism.

It is necessary here to follow the course of events which preceded the death of the great Duke. Suffice it, that no history of England, of Europe, or the world, can henceforth be written which does not assign a prominent place to the hero of Spain and Waterloo. The private life of the Duke is almost as well known as that of any prominent man among us it was of the simplest and most unpretending style. His personal piety and habits of business are universally acknowledged, while his punctuality and economy were of a perfectly military character. In the House of Lords the Duke was a regular attendant, and not unfrequently a speaker, but the journals of that august body supply few testimonies of his excellence. His opinions and votes were rarely otherwise than soundly given, but his motives were often imperfectly expressed. It has been said that a collection of Cromwell's speeches would make the most nonsensical book in the world, and though such a remark is certainly not warranted by the orations of Wellington, yet on this point a certain resemblance is discoverable between the two great soldiers. The Duke allowed himself, in addressing the House, to be carried away, not, perhaps, by his feelings, but by the impetus of a delivery which, without being either fluent or rapid, was singularly emphatic and vehement. He magnified his own opinions in order to impress them upon his hearers. If he recommended, as he did with great alacrity, a vote of thanks to an Indian general, the campaign was always "the most brilliant he had ever known;" if he wished to stigmatise a disturbance of the peace, it was something transcending "anything he had ever seen in all his experience," though such a quality could hardly be predicated of any disorders under the sun. One of the best chroniclers of his deeds has attributed this precipitate bestowal of praise and censure to a natural failure of character, but we suspect that in many cases the error of the opinion was due to the manner of its delivery alone. Few men have been intrusted with more delicate missions in the distribution of rewards, and none could have discharged such duties with more unimpeachable discrimination. The Duke could appreciate events with unfailing nicety, but he failed in the capacity to describe them, and of late years his speeches, where they were not tautology, were often contradictions. Nor could the failing be traceable to age alone, for it was observed, though in a less degree, during the earlier stages of his career, and is the more remarkable from the contrast presented by his despatches. No letters could ever be more temperately or perspicuously expressed than these famous documents. Even as specimens of literary compositions they are exceedingly good—plain, forcible, fluent, and occasionally, like those of Napoleon, even humorous withal.

The Duke of Wellington, after leading an irreproachable life, died suddenly, at Walmer Castle, at a quarter-past three, in the afternoon of Tuesday, September 14th, 1852, in the 84th year of his age.

Preserving to the last those temperate habits and that bodily activity for which he was so remarkably distinguished, on Monday, the 13th of September, 1852, he took his customary walk in the grounds attached to the castle, inspected the stables, made many minute inquiries there, and gave directions with reference to a journey to Dover on the following day, where Lady Westmoreland was expected to arrive on a visit to Walmer. His appetite had been observed to be keener than usual, and some remarked that he looked pale while attending Divine service on Sunday, but otherwise nothing had occured to attract notice or to excite uneasiness, and after dining heartily on venison he retired to rest on Monday night, apparently quite well. Lord and Lady Charles Wellesley were the only visitors at the castle.

Early on Tuesday morning, when Mr. Kendall, the valet, came to awake him, his Grace refused to get up, and desired that the "apothecary" should be sent for immediately. In obedience to his master's orders, Mr. Kendall despatched a note to Mr. W. Hulke, the eminent surgeon at Deal, who has been attached to the family for many years, and whom he desired to repair at once to the castle, and to make a secret of the summons. So great had for many years past been the public interest in the Duke's health, that rumours and fears magnified his most trifling ailments, and the news of his desire for medical aid was consequently suppressed. Mr. Hulke hastened to the castle, where he arrived at about 9 o'clock. He found the Duke, to all appearance, suffering from indigestion, and complaining of pains in the chest and stomach. He was in the full possession of his faculties, and described his ailment very clearly. This his last conversation on earth related entirely to his state of health; and so slight and seemingly harmless were the symptoms that Mr. Hulke confined himself to prescribing some dry toast and tea. He then left, promising to call at about 11 o'clock, but at Lord Charles Wellesley's request he said he would come at 10. Mr. Hulke, on leaving, called upon Dr. M'Arthur, and told him what he had done, which the latter approved of. Neither of the medical gentlemen appear to have been present when the fatal attack commenced—an attack to which the Duke's constitution has for years been liable, and which, a year and a half ago, had been conquered by a successful treatment. His Grace, when seized, lost the power of speech and of consciousness. On the arrival of the medical attendants emetics were administered, which, however, produced no effect. Every effort was used to afford relief, but in vain. His Grace was removed from bed into an arm-chair, were it was thought he would be more at ease; and the attendants of his dying moments stood in a group around him, watching the last efforts of expiring nature. On one side were Lord Charles Wellesley and Dr. M'Arthur, on the other, Mr. Hulke and the valet. As the time passed on and no sign of relief was visible, telegraphic messages were despatched, first for Dr. Hume and then for Dr. Ferguson, who, however, were unfortunately both out of town. Finally, Dr. Williams was sent for, but he did not arrive at the castle till 11 o'clock at night, when all earthly aid was useless. About noon, a fresh attack, shown in the exhausted state of the patient by shivering only, came on, and from that time hardly any sign of animation could be detected. Mr. Hulke could only ascertain by the continued action of the pulse, the existence of life. He felt it from time to time till about a quarter past three, when he found that it had ceased to beat, and declared that all was over. Dr M'Arthur tried the other arm, and confirmed the fact; but Lord Charles Wellesley expressed his belief that the Duke still breathed, and a mirror was held to his mouth by the valet. The polished surface, however, remained undimmed, and the great commander departed without a struggle or even a sigh to mark the exact moment when the vital spark was extinguished.

The Spartan simplicity of the Duke's habits was maintained to the last, and the only relaxation which he permitted himself was an occasional extra hour's rest at Walmer. In his 84th year, he was still the same abstemious, active, self-denying man he had ever been, rising early, never latterly tasting wine or spirits, taking regular exercise on foot and on horseback, sleeping on a hard uncurtained couch, and rejecting even the luxury of a downy pillow. The Duke used a pillow, but it

was an exceedingly hard one, stuffed with horsehair and lined with wash-leather, and he carried it about with him wherever he went. His life had for years been a steady system of defensive warfare against the approach of disease, and death overtook him at last from sheer exhaustion, without being preceded by a single day's illness. On the very morning of his fatal attack it was much feared that he would persist in going to meet Lady Westmoreland at Dover; and not long ago, when suffering from a severe cold, he could not be persuaded to keep his room, but joined the dinner circle in his great coat. His habits certainly throw a striking light on his whole character; and when we learn that to the last his daily toilette was performed without the slightest assistance, we can appreciate how fully he acted up to a favourite motto of his own—that if a man wanted to have anything properly done, he must do it himself. It took him from half-past six o'clock till nine every morning to dress; but even to the operation of shaving he did all himself; and at his age that must have been nearly as difficult a feat as winning a battle in early life. Though in his 84th year, he still wrote a firm hand and carried on a large correspondence—curious confirmations of the strength of nerve required to form a great commander.

To the last his powers of memory and the cheerfulness of a well-balanced mind remained unimpaired. A day or two before his death, referring to the subject of civic feasts, he told an incident in the life of Pitt which is worth recording. The last public dinner which Pitt attended was at the Mansion-house, when his health was proposed as the saviour of his country. The Duke expressed his admiration of Pitt's speech in reply, which was in substance, that the country had saved herself by her own exertions, and that every other country might do the same by following her example. A pleasing trait in the Duke's character is the long periods during which a large proportion of his dependents have been connected with or served him, and the unvarying testimony which they bear to his good and kind qualities as an employer, a landlord, and a master. Exact and punctual in the management of his private affairs, up to the last moment his weekly bills were discharged by him as usual; and this precision, which he carried into everything, made him easily dealt with. Amid the splendour of his public achievements, his conduct as a landed proprietor is apt to be forgotten. Yet was he one of the most liberal and improving landlords in the country. The estate of Strathfieldsaye, which, he used to say, would have ruined any man but himself, has had more done for it in the shape of permanent improvement—of draining, of chalking, of substantial farm premises and such like, than perhaps any other single property in the south of England. It was a wretched investment of the public money, but the Duke, true to his usual maxim, did the best he could with it, and the annual income for a long series of years has been regularly laid out upon it. As to his household, even the French cook, overlooking Waterloo and his Grace's indifference to the science of gastronomy, mourns for his death. He had exhausted all the efforts of his art in vain to elicit commendations from the Duke, who showed no preference for a good dinner over a bad one. This troubled the *chef du cuisine*, but he admits that his master was a very great man notwithstanding

We might lengthen our biography considerably by the insertion of various anecdotes and personal traits; but we content ourselves with a simple notice of his personal representatives. As has already been stated, the Duke was married, in 1806, to the Hon. Catherine Pakenham, by whom he had issue—

I Arthur, Marquis of Douro, who succeeds as second Duke of Wellington His Grace is a Colonel in the army. He was born 3rd February, 1807, and married, 19th April, 1839, Lady Elizabeth Hay, fourth daughter of the Marquis of Tweeddale, which Lady was born 27th September, 1820

II. Lord Charles Wellesley, M P for Windsor, a Colonel in the army, born 16th January, 1808, married 9 h July, 1844, Augusta Sophia Anne, only child of the Right Hon Henry Manvers Pierrepont, brother of Earl Manvers, and by her (who was born 30th May, 1820) has had three sons—Arthur, born 5th May, 1845; died 7th July, 1846; Henry, born 5th April, 1846; Arthur Charles, born 15th March, 1849, and two daughters, to the eldest of whom, Victoria Alexandrina, her Majesty stood sponsor in person.

The nephews and nieces of the Duke were:—

William, present Earl of Mornington,
Lady Mary Charlotte Anne Bagot, who died in 1845,
Lady Emily Harriet, wife of Lord Fitzroy Somerset,
Lady Priscilla Anne, married to the Earl of Westmoreland.
} Children of Wm Wellesley Pole, third Earl of Mornington.

Charles Wellesley,
George Grenville Wellesley,
Emily Anne Charlotte, wife of the Hon. and Rev. Robert Liddell,
Georgiana Henrietta Louisa, wife of the Rev. George Darby St. Quintin,
Mary Sarah, Viscountess Chelsea,
Cecil Elizabeth, wife of the Hon. G. A. F. Liddell.
} Children of the Hon. and Rev. Gerald Valerian Wellesley, D.D.

Henry Richard Charles, second and present Lord Cowley,
The Hon. William Wellesley,
The Hon. and Rev. Gerald Wellesley, Rector of Strathfieldsaye,
The Hon Charlotte Arbuthnot, wife of Lord Robert Grosvenor,
The Hon. Georgiana Charlotte Mary, wife of the Right Hon. Sir Henry Lytton Bulwer, G C.B.
} Children of Henry, First Lord Cowley.

Georgiana-Frederica (only daughter of Lady Anne Wellesley, his Grace's sister, by her first husband, the Hon. Henry Fitzroy), married, 25th July, 1814, to Henry, Marquis of Worcester, now Duke of Beaufort

Frederick Smith, Esq., son of Lady Anne Wellesley, by her second husband, C. Culling Smith, Esq.

Emily-Frances, Duchess of Beaufort, daughter of Lady Ann Wellesley, by her second husband, C. Culling Smith, Esq.

The following chronological record of the great Duke presents, in brief, the principal events of his life:—

Born	1 May, 1769
Ensign	7 Mar. 1787
Lieutenant	25 Dec. 1787
Captain	30 June, 1791
Major	30 April, 1793
Lieutenant-Colonel	30 Sept. 1793
Colonel	3 May, 1796
Major General	29 April, 1802
Lieutenant-General	25 April, 1808
General, in Spain and Portugal	31 July, 1811
Field Marshal	21 June, 1813
Died	14 Sept. 1852.

The following verses, by Thomas Edward Clark, of the Ordnance Office, in the Tower, of which the Duke was Constable, convey, in good language, the feelings of the people of Great Britain, at the loss of their greatest commander:—

Farewell to the chief, who with triumph defended
The ark of his country when empires assailed
With the storm they had gather'd he bravely contended,
Thro' perils unnumber'd he fought and prevail'd.

Rest be to his ashes, and peace to his spirit!
O'er Wellington chaunt a dirge due to the brave,
His country for ages to come shall inherit
The fruits of his valour, and hallow his grave

O England! lament for the hour that hath reft thee
Of him—whose existence was raised for thine own —
Without him—thy glory for ever had left thee—
The tyrant of Europe had trampled thy throne.

In the morning of life, over all that impeded,
At once, he arose to the zenith of fame.
The vast and the mighty before him receded,
The brave of the past were eclipsed by his name.

Before him the armies of India were routed;
The strength of her bulwarks before him gave way:
No longer the banners of England were flouted—
The contests of ages were won in a day.

He turn'd to new triumphs, when India had yielded,
While victory's laurels were fresh on his brow
From slaughter and ruin his country he shielded,
And gather'd the glory which covers him now.

Not the danger which threaten'd all Europe appall'd him,
Prepared half the world and its warfare to meet—
He came, and he conquer'd, where duty had call'd him;
The power of Napoleon was laid at his feet.

He is gone—full of honours and cover'd with glory—
In camp and in council the first of his day;
But his name shall still live in the world's brightest story,
Till the nations themselves shall have all passed away.

UNCLE JOHN'S VISIT.—A TALE FOR THE TIMES.

BY MARTHA RUSSELL.

CHAPTER. I.

It came at last—what the fire, Cassandra-like, had muttered of for several days past—what people prophesied to each other on the street—what Bill Lyman, the stage-driver, had foreseen that morning, when he called for his heaviest pea-jacket—what young maidens and schoolboys had looked for with such impatient longings—what the houseless and homeless had anticipated with anxiety and dread—the snow-storm.

And a right brave storm it was; none of your light, trifling affairs, that merely cover the earth with a thin frosting, like that on a bridal loaf, but a regular old-fashioned snow-storm. To be sure, it was rather coquettish at first, like a young horse at starting, but soon it settled down, and went to work in good earnest. It wove dainty coverlids for the violet beds in the deep old woods, and covered them over like a careful mother; it powdered the heads of the cedars, until they looked like white-haired giants, and wrapped alike the graves of rich and poor, in shrouds of dazzling whiteness

Oh! very impartial were those same little white feathery flakes, that came dancing down at the bidding of the storm, edging alike the blue cloth cloak of Judge Edmonds and the ragged garments of the begger with

"Ermine too dear for an Earl."

Then they made a league with that cool-headed old tactician, the North Wind, and together they went skirring through the streets, heaving up embankments here, and digging trenches and forming curves there, rushing round corners, to attack stout, rosy-cheeked gentlemen, who fought and sputtered and dashed the snow from their eyebrows, to see what awaited them next, while the thinly-clad shop girls drew their shawls closer about them, and scudded in troops, like little snow-birds, close under the lee of the houses, to escape their boisterous greetings. In the space of an hour or so, the storm had the city pretty much to itself, for whoever had a shelter was glad to get beneath it, and stay there.

On the corner of C and D streets was a spacious wholesale clothing store, upon which, in hurrying up and down the streets, after the last stragglers, the storm seemed to bestow particular attention. It tried to shake the mahogany-cased windows, and find some crack in them, or in the heavily panelled door, by which it could gain ingress, but baffled here, it contented itself with wrapping a white covering over the gilded signboard, darkening the windows, muffling the steps, and piling up a barricade against the door, as if it said—"Never mind! I'll be ready for you when you do open!"

Now, it was very provoking, no doubt, but none of these manœuvres seemed to disturb the equanimity of Mr D. Orestes Jimps, the owner of the store. All the clerks had gone to tea, and, while waiting their return, he sat before the stove, with his heels resting upon a high stool, rather above the level of his head, and his eyes fixed upon a lamp hook in the wall, as a kind of tether to his imagination, as he counted up the profits of the day's sales—a very necessary and commendable process, seeing next day was New Year's, and he anticipated several extra demands upon his purse. Perhaps we should not be far from the truth, if we said that, at the same time, he gave a sort of rough guess at his neighbour Jumper's profits, and wondered *just* how *much* and *what* he would give at their pastor's donation party the next evening, for Mr. D Orestes Jimps did not like to be cast in the shade by any one, especially by a rival house; besides, we are all, at times, so remarkably disinterested, that we take more interest in other people's concerns than our own.

But, hurrah! the storm has triumphed! Through the open door falls the barricade of snow, followed by the wind, that sends the glittering particles dancing through the whole length of the store, and raises such a commotion among the various garments, mentionable and unmentionable, suspended overhead, that it is some time before the astonished Mr. Jimps is aware of the cause of this disturbance.

But there she stands—a little, shrinking, hollow-eyed girl, with a cheek almost as white as the snow matted in her abundant hair, and clinging to the folds of her miserable dress.

"Well, what's wanting, my girl?" asked Mr. Jimps, as the thin, wan face, scarcely higher than the level of the counter, was turned up to him with a timid, appealing glance.

"Please, sir," began a little trembling, piping voice, "I have brought some shirts, and mother wants to know if you will be kind enough to let her have the money for them."

Mr. Jimps took the packet which the child drew from under her shawl, and deliberately counted the coarse garments it contained, while the little one edged timidly toward the stove.

"Three, four, five, six. Why, child," exclaimed the gentleman, as he finished counting, "how is this? Here is but half the lot we gave out to your mother!"

"No sir," returned the child, as she edged back to her first stand, "mother knew that—but little Jennie has been so sick, sir, that we could not get any more done; and—and—it is so cold, and the coal is all gone. Mother hoped sir, you would be kind enough to pay her for these, and we will finish the others as soon as we can."

"I thought your mother understood our terms. I told her, when she took the work, that we made it a rule to pay only when the lot was done, returned Mr. Jimps "There are plenty of people glad to work for us on these terms, and your mother cannot expect us to make an exception in her favour."

"But please, sir," pleaded the little one, "little Jennie is so sick, and"——

But Mr. Jimps did not stay to hear her out, for, just at that moment the outer door again opened, and a person entered, who slammed it to, right in the face of the storm, and began to stamp his boots and shake his garments in a way that gave strong proofs of their firm texture. As soon as Mr. Jimps caught sight of the high nose that peered like a projecting battlement over the folds of the red worsted comforter, which enveloped the lower portion of the new comer's face, he sprang round the counter, and seizing his hand, shook it heartily, as he exclaimed—

"Why, Uncle John Markham! where *did* you come from? Did you snow down?"

"No, Dimmie," returned the old man, taking off his low-crowned hat, and shaking a miniature snow storm from its broad prim; "but I'd like to been snowed *under* Who'd a thought it would have come by such handfulls? I told mother, when I started, I guessed there would be more snow before I got back, but I did not think of its coming so like a judgment. Black Simon and I have had a time of it, I tell you, Dimmie. Whew! my fingers ache like the toothache!" he added, drawing off a thick pair of blue and white yarn mittens, and spreading his hard palms to the fire.

"It is the worst storm we have had yet," returned Mr. Jimps, wincing slightly at the apellation by which the old man addressed him. In his native village, he had always been known as Dimmie Jimps, it being a sort of abbreviation of the classical cognomen, Demosthenes Orestes, bestowed upon him by his father which he had ignored ever since his establishment in the city, signing his name D Orestes Jimps, Esq But he knew there was no use in arguing the case with Uncle John. He would always remain Dimmie with him, so he smoothed his brow, and said heartily—

"Come, Uncle John, take a seat, and make yourself comfortable, if you can, until some of the boys get back then we will go up to the house Julia will be delighted to see you. You will stay over to-morrow night with us of course. To-morrow night is Mr. E.'s Donation Party, and you must certainly attend that. He asks after you always, when he calls" Then chancing to let his eye fall on the waiting child, whom he had quite forgotten, he said, with a gesture towards the door—

"You had better run home, little girl. Your mother knows my terms—can't vary for any one. A man must have some rules, and stick by them, if he intends to do anything," he added turning to Uncle John.

"Aye sound doctrine that, Dimmie But what is this? Who could send a child out in such a storm?" said the old man, hastily rising, and striding forward to open the door, the knob of which the child was vainly trying to turn "There, run home, little girl, if you dont intend to be buried," he cried, "your folks are crazy to send you out in such weather"

For a second, ere she crossed the threshold, the little pale face was turned up to his, as if to thank him, and he saw that it was wet with tears

"What—what?" he muttered; and was about to follow her, when he was recalled by the voice of Mr. Jimps—

"Come in, uncle; you will catch your death standing in that draft;" cried the little man.

"Who was that child, Dimmie? and what possessed her friends, if she has any, to send her out in such a storm?" asked the old man, as he again seated himself by the fire.

"Oh, she don't mind it. She is one of the thousands you will find in the city—one scarcely knows who or what they are. Her mother came here for work, and, as she was recommended by one of our hands whom we could trust, we let her take some. I should think I had heard some one say that her husband was a dissipated sort of a fellow. The city is full of such people."

"But what sent her here to-day? Do you owe them anything, Dimmie?"

"Owe them!" returned Mr. Jimps, laughing. "You must think me hard run, not to be able to pay for a half dozen shirts I always make it a rule to pay for each lot of work when it is brought in and answers inspection; and that is what I call fair on all sides. But this woman wants me to do more—she has sent in half her lot, and wants me to pay her for these before the rest are done."

"And you didn't do it, Dimmie?" said the old man.

"Not I. I should never get my work done at that rate. If she does not like the terms, she must look elsewhere for work."

"I s'pose there are people who would have been foolish enough to have one it, or, perhaps, given her a little something out of their own pockets," observed the old man, watching the face of Mr. Jimps with a very peculiar expression.

"Yes, and foolish enough they are, as you say. Now, I claim to be as liberal and benevolent as most men; but I act upon system in this, as well as everything else. I pay my taxes promptly, and subscribe liberally to several benevolent societies; besides, my wife devotes half her time to their management. If these people really are worthy, and need aid, let them apply to some of these, or to the city authority. Casual charity only encourages street begging and idleness."

"But—but—I s'pose there are some among them so proud that that they would rather starve than beg," returned the old man, with the same searching glance. "I dare say there are a good many just in our neighbourhood, at home, who would rub pretty close before they would do it."

"No doubt of it. You would be surprised at the degree of pride manifested by the people who work for me, though many of them are poor as Job. These people are doubtless of the same stamp. Lewis," he added, addressing a young clerk, who entered, out of breath with facing the storm, "put down those half-dozen shirts to the credit of Mrs Ives."

"Miss Sarah Ives, George-street?" queried the boy.

"No; Mrs Mary Ives, Bingham Crossing, York road," was the reply, as Mr. Jimps deliberately encased his dapper person in a wadded overcoat, and enveloped his throat in the voluminous folds of a costly merino scarf.

While he was drawing on his over-shoes, his guest took from his pocket a large pocket-book, and wrote a few words on a blank leaf

They were soon ploughing their way in the direction of Mr Jimps's residence, Uncle John looking the storm square in the face, as if it were an old friend, and Mr. Jimps trying to give it the cut by turning sideways It bore this a while, but at last, as they turned a corner, it sprang out upon him, and flapping the long ends of his scarf in his face, suddenly lifted his shining beaver from off his head, and lodged it in a snow-bank, which it had been piling up right under the windows of Governor B——'s mansion, as if for the special amusement of a group of curly-headed children and a lovely young lady, who were watching the process with delight

"Oh, if it had only happened anywhere else!" thought Mr Jimps, as, with one glance at the mischievous face of Miss Eva B—— and the laughing little ones, he picked up his beaver and disappeared round the corner. Uncle John followed with steady steps. No danger of the storm playing tricks with his apparel His hat was jammed down upon his bald crown as if he meant it to *stay* there; and we have a suspicion that he rather enjoyed the disasters of Mr Jimps.

"I say, Dimmie," he remarked, seeing that gentleman pause and turn his back to the storm to get breath, "that little girl must have a hard time of it getting home, won't she?"

"Yes, her people were crazy to send her out at such a time Ugh! the snow almost blinds one!"

"Very likely," returned the old man, with a peculiar smile, replying to the first part of Mr. Jimps's remark; "poor people are apt to do a great many strange things But here we are at the door, and there is your wife at the window," and, with a nod to the rather pretty-looking lady who looked down upon them, the old man followed his nephew into the same house.

Uncle John Markham was warmly received by his nephew's wife He was a bit of a humorist—"odd as Dick's hat-band," the people said in his village, (and, by the way, we should very much like to know in what the peculiarity of the said Richard's hat-band consisted.) *Eccentric*, Mrs. Jimps whispered to her friends, as she introduced him but then he was rich and childless, and rich folks can afford to be "odd."

His visits were ever welcome among his nephews and nieces, not merely because of his wealth, for though they were keen-sighted business people, and perhaps did not entirely put *that* out of the question, yet they had sense enough to love and respect the old man for his intrinsic goodness.

Tea being over, and little Augustus Adelmar, Mr Jimps's son and heir, having been sent to bed, after making several journeys to "Danbury Cross" on the old man's foot, the conversation turned upon the approaching Donation Party.

"Simpson sent home the stand to-day, dear," said Mrs. Jimps, turning to her husband. "It is a love of a thing. Uncle John, you must see it—my gift for Mrs. E——, our pastor's wife. I do not believe there will be anything half so pretty sent in;" and, running into the opposite parlor, she returned with a beautiful *papier mache* work-stand.

"Why, it is a pretty thing enough," said the old man, looking at it with a good deal of interest, as his niece explained the material and the process of manufacturing it. "That butterfly hovering over the rose, there, is as natural as life. But, what's it for, Julia? It is hardly strong enough to hold a mouse"

"Oh, it will hold light things; and then, it is such a beautiful ornament in a parlor."

"And what might it have cost, niece?" he asked.

"Five pounds. Orestes, how I wish your vases had been sent home, so that Uncle John could have seen them, too. They are such beauties—the real Bohemian glass, and no mistake."

"And what do they cost?"

"Five more," was the reply.

"Well, Dimmie, you said you was liberal, to-day, and I do not dispute it; but it does seem to me, children, with my old-fashioned notions, that you might have laid out your money more wisely, considering your minister's wife and children. But you mean well, doubtless, and cannot fail to be benefited by it yourselves, whatever your friends may be; for no one ever opened their purse-strings out of kindness, without being the better for it."

"In that case, Uncle John, you will return a much better man than you came, for I intend to make a draft on you," said Julia, blushing and laughing. "We are getting up a Society for the suppression of idolatry among the Chinese in California, and I must have you down for a good round sum."

"Stay a bit, niece. Chinese—I heard they were coming over there by thousands, but I don't know as they are much worse idolaters than our folks are there Besides, I have one or two claims of the Society to which I belong to settle, before I can think of yours."

"Your Society! Why, I did not know as you belonged to any one, uncle!"

"You were mistaken, then," returned the old man, gravely. "For many years, I have been a member of the oldest Society in the world—the same of which our Saviour was a distinguished member while on earth—the Society of Human Brotherhood, which has for its aim and object all the poor, oppressed, fallen, and down-trodden beings upon God's earth. I must attend to this first, niece, and then I will see about yours."

There was silence a few moments, before the old man, who had risen and walked to the window, added, gaily—

"By the by, children, I guess I'll just step round to the hotel, and take a look at 'Black Simon.'"

"Not to-night—you surely need not go out to-night;" cried Mr. and Mrs. Jimps in the same breath.

"Why not? See, it has stopped snowing, and I am not quite so frail as Julia's stand there. Simon had a hard time of it, getting here, and the hostler may neglect him, poor fellow You need not think I am lost, if I am not back in an hour or two," he added, as he passed through the hall, "I may find some old friends down there, and chat awhile."

CHAPTER II.

"Black Simon" was looked after, and talked to for a few moments, as much as if he had been a child; and then, instead of returning to the warm sitting-room of the hotel, or the elegant parlour of Mr. Jimps, the old man sturdily ploughed his way along the snowy streets, until he reached the suburbs of the city.

Here he slackened his steps, and paused occasionally to decipher by the dim light of the lamps the numbers on some of the dilapidated buildings which lined the street. At last, he approached one, from which issued the sounds of music and dancing, and knocked loudly at the door. It was opened by a rosy-cheeked Irish girl, in a gay ball costume and dirty white slippers.

"Is there a family of the name of Ives living in this house?" asked the old man.

"Yes there be—the poor craythers; but not in there, sir," was the reply, as she saw Mr. Markham about to lay hold of the latch of a door near by. "That is Teddy Mc Guire's room. The Ives are above, sir. I will be afther showin' ye the way, an' ye please."

Uncle John followed the girl up the gloomy dirty stairs, asking by the way, (for the old man was a bit of a Yankee), what was the cause of the festivity below.

"A wedding, sir. Mikey Flaherty is married to Tim Doolans Bridget to night," returned the girl, with a smile; adding, as she pointed to a door at the extreme end of the passage, "It's there ye will find them ye seek."

The old man turned to thank her, but she was already half way down stairs, stepping to the lively measure of an Irish jig; so he walked on, and knocked gently at the door which the girl had pointed out It was opened by the same pale-faced child whom he had seen in his nephew's store. She looked up to him with a quick glance of recognition, mingled with surprise, and then glanced toward her mother, who sat leaning over a miserable bed, on which lay a little child, over whose face the ashen hue of death was

already stealing. Seeing that her mother did not observe the stranger, she said:

"It's the gentleman who opened the door for me to-day, mother."

Thus disturbed, the woman looked up, questioningly, almost impatient, at the intruder.

"Excuse me, ma'm," began the old man, in an apologetic tone, but deliberately shutting the door behind him. "I fear I intrude; but the little girl is right. I am glad to find she got home safe. My nephew, Mr. Jimps did not quite understand the child, it seems, and I have come to make it all straight." And he handed out a five dollar bill as he spoke.

The woman took the bill looked at it a moment, and returned it with a heavy sigh

"I cannot change it, sir. I have not a cent of money in the world."

"It's all right, ma'm. I don't want any change—I mean Mr. Jimps don't, he isn't at all particular—that is—I say, keep it, ma'm; you need it all, and more too, in such weather as this."

The woman looked at him with mingled wonder and suspicion. At length she said

"There is some mistake, sir. Mr Jimps is a very particular man. He owes me but one dollar, and it may bring both of us into trouble if I keep the money."

"Take it, I say. Zounds! have not I a right to do as I please with my—I mean hasn't Mr Jimps a right to do what he pleases with his money? Take it, and make yourselves comfortable"

The woman waited to be urged no more, she eagerly clutched the money, and burst into tears, as she cried—

"The blessing of those ready to perish be upon you both, sir I should not have sent out to-day, but we have neither food nor fuel, and little Jennie dying!"

"Have you no one whom you can send out after food and fuel?" asked the old man, with a glance toward the farther corner of the room, where, from beneath a pile of rags, came the heavy breathing of a man.

"Yes, returned the woman, as with a troubled expression her eye followed his, "but William, poor fellow, is not well He is worn out," she went on, with a sigh, "with care, and want, and trouble. If you will be kind enough to stay with Ellen, sir, I will run down myself, and get what we want It's only two doors from here," she added, seeing the old man about to remonstrate.

There was something in her manner that recalled to the old man Mr Jimps's remark about her husband's intemperate habits. She fears to trust him with the money, and perhaps she is right, thought he, as he drew the scanty covering over the dying child, and began to look about for something to kindle a fire with, against the mother's return

The little girl had down the coarse shirt sleeve she was stitching, and came to his aid, but they could find nothing but a few bits of paper

"That is Willie's kite, sir," whispered she, as the old man laid his hand on that article. "He brought it with him when we moved from the country, but I don't know as he will mind it much if we do take it, if he can only be warmed"

As she spoke, a curly head peered out from beneath the rags in the corner, and, presently, a little boy of five or six years old crept to her side.

"Willie, don't wake father!" she whispered, hushing his exclamation of surprise at the sight of the stranger. "We are going to have a fire, and something to eat, Willie," she added. "Mother has gone after the things. Mr. Jimps sent the money by this gentleman, and now it's all right."

The little boy's sleepy eyes flew wide open at the mention of food and fire, and he whispered, with a shy look at Uncle John—"But will he take us away from this hateful place, sister, and give us dinners every day, just as we used to have them in the country? When I was so hungry, and cried, last night, you said mebby some one would bring me a whole pocketfull of cakes, if I would go to sleep. Has he brought them, sissie?"

"Mother has gone after them," said the little girl, while Uncle John took him upon his knee, and warmed his little red hands between his great palms. Ellen drew close to him, too, and he took her on the other knee, as he asked—

"How long has the little one been sick, dear?"

"Mother says she has never been well; but she ran about, and played with Willie and me, until we came here. Ever since, she has been poorly, and we have had to hold her all the while. Sometimes she laughs when I show her my rosebush, and puts her hands to catch the leaves. Biddy Flaherty gave it to me, sir; but lately she does not seem to notice anything, and mother thinks she will die."

"And then she will go up to God, away above the clouds, where the cold weather never comes," said little Willie, lifting his sober eyes to Mr. Markham's face. "It's a nice place up there, sir. Wouldn't you like to go, too?"

Before the old man could reply, the mother entered followed by a man bearing food and coals.

We do not know whose pleasure was the greatest, the hungry-eyed children as they ate their food by the glowing fire, or old John Markham's, as he sat by and looked on. We think the children's however; for he could not but be saddened by the tale which he heard from the lips of the poor mother, as she hung over her child. It was the old story, which has blotted so many of the fair pages of the book of life. Poverty had followed sickness, thrown out of work, strangers in a strange place, disappointed and despairing, the husband and father had yielded to temptation, and tasted of the accursed cup, until he no longer cared for aught save the gratification of his brutal appetite. For some time passt they had depended solely upon the earnings of the mother and little Ellen for support; and these had, of late, been much curtailed by the illness of little Jennie. "I could not let her lie and die before my eyes, even though we were all starved," said the weeping mother

Uncle John Markham was not an eloquent man—he never made a speech in his life, yet somehow the words which he spoke to that fallen, discouraged husband, that night, awoke feelings of hope and courage and self-respect in the poor fellow's heart, to which he had long been a stranger,

CHAPTER III.

It was quite late when the old man reached his nephew's house that night, and Mr Jimps and his wife were too sleepy to ask many questions, but next morning, at the the breakfast-table, they were disposed to be quite curious on the subject of his late hours.

"Fie, Uncle John," began Mrs Jimps, smiling, as she handed him his coffee, "this never will do. I shall have to write to Aunt Sarah about it"

"I think I shall write to her myself this morning," returned the old man, in the same light tone.

"But Uncle these must be very interesting people, these friends of yours, to keep you up so late," said Mr. Jimps,

"They are, so much so, Dimmie, that I must introduce them to you Will you call with me some time in the course of the day?"

"With great pleasure, Uncle."

It being New Year's Day, however, Mr. Jimps, amid calls and business, quite forgot Uncle John's proposal—the more readily as that old gentleman was absent most of the day on business of his own, and it was not until he was about to dress for the donation party in the evening that the old man saw fit to remind him of his engagement

"Why it is too late, now, Uncle John. Julia has already commenced dressing for the party," said the little man

"Well I can't go to this party with you until I have called on these friends, that's certain," said the old man "If you are minded to go with me, I'll have black Simon and the sleigh at the door by the time you are dressed, and we can be there and back again by the time Julia gets rigged, if she is like most women folks."

Black Simon was at the door in time, and bore them with flying steps along the crowded streets. On, on they went, past brilliantly lighted parlors, from whence came the sounds of music and laughter—on, to where the streets began to narrow, and the lights to dwindle, until, with a suddenness that almost took Mr. Jimps's breath from his body, the old man drew up before a ricketty old building.

"Uncle John, you must have mistaken the place! your friends surely cannot live here!" cried Mr. Jimps, from beneath the many folds of his scarf

"May be so—we'll see," was the reply, as the old man sprang out, and taking a rope from the sleigh, fastened black Simon securely to a post.

It was too cold for Mr. Jimps to remonstrate; his teeth chattered, and his scarf was almost frozen to his lips, even then so, stepping carefully in his dainty, glistening boots, he followed the old man through the gloomy hall and up the dirty stairs. Mr Jimps was a somewhat fastidious person, and might, more than once, have taken exception to the various smells that, coming from the different rooms, seemed to congregate in that hall, had he not fortunately, been too well wrapped up to be aware of them.

Uncle John rapped softly at the Ives's door, and, after waiting a few moments, as no one came, opened it himself. One glance around the apartment taught him the cause of that silence. Near the stove, with his little boy in his arms, who was sobbing in that peculiar, spasmodic manner that indicates the utter exhaustion of the physical frame, sat William Ives, with his eyes fixed upon the bed which had been arranged as decently as possible, to receive the dead body of little Jennie. The mother had done all her scanty means allowed. She had parted the soft hair on the little brow, straightened the shrunken limbs, and robed them in a pretty white frock, the last relic of happier days. The dainty edgings with which it was trimmed were in strange contrast with the miserable bed coverings—edgings wrought by her busy fingers in those happy

days when a mother's glad anticipations first stirred her heart. Then she had flung herself on her knees by the side of the bed, and with her face buried in the clothes, neither wept nor moved.

The grave-eyed Ellen stooped over the bed, and was trying to place a poor, sickly-looking rose in the cold hand of the little one. Uncle John glanced at the bush she had showed him the night before, and knew at once from whence it came. It was her all, poor thing!

She was the first to observe their entrance; and soon, both parents were mingling words of deep gratitude with their tears.

"I shall never, never forget your kindness, sir, to the day I die!" exclaimed the mother, turning to Mr. Jimps. "Much as we needed the money, starving as we were, we thought not less of your confidence in us than we did of that. It was so kind, so noble in you, to trust us! But you shall be repaid, sir; William and I are determined to do it, if we work our fingers to the bones! And this gentleman, to come as he did through the snow to aid us! Oh, how can we ever be grateful enough?"

"My kindness! repay me! you here!" exclaimed the bewildered Mr. Jimps, turning to Uncle John, and rapidly unwinding the folds of his scarf, as if pressed for breath

"Yes, Dimmie, I was certain you did not quite understand the errand of that little girl, yesterday, so I followed her home, and settled your bill myself. It was well I did, for the poor things needed it very much"

"Save a bit of bread for the children, and a spoonful of milk for——for"—and the poor mother glanced sadly at the white-robed little figure on the bed—"for *her*, sir, we had not tasted food for two days."

Mr. Jimps was neither an unjust nor hard-hearted man, he had simply been guided by the current custom of the day, and, when he had subscribed his quota to any benevolent object, allowed himself to consider his responsibility at an end. Now, a new light broke in upon him, he turned to his old relative and said earnestly

"Thank you, thank you, Uncle John! you could not have done me a kinder deed; or," he added, in a lower tone, "taught me a better lesson. It is one which I shall never forget"

And, to do Mr. Jimps justice, he never did He told the story to Julia when they got home, and bravely took his share of the blame, while the tears gathered in her pretty eyes, and she almost forgot her present and the donation party in her interest in the Ives

They assisted the father in finding employment, aided and encouraged him in his struggles to overcome his evil habits, and even did not grumble when Uncle John took little Ellen Ives to live with him and Aunt Sally, and be a daughter to them in their old age, though they knew that the inheritance of their darling, Augustus Adelmar, would be much curtailed by the deed

LETTERS TO WORKING MEN.

No. IV.

POLITICAL ECONOMY.—II.

MUCH difference of opinion exists among the modern writers of Italy and France and England. The Italian and French writers, for instance, maintain that a Political Economist is concerned, not with the aggregate production of wealth, but united to which they advocate its most beneficial distribution among individuals,—not only with wealth, in fact, but with happiness also. On the other hand, the majority of modern English Economists advocate the principle, that the appropriate subject upon which the Political Economist should dilate is, not happiness, but wealth; that such wealth is confined to material objects, such as the produce of land and industry; that no writer on the science should assume to explain the phenomena of the production of wealth, without laying down the principles on which wealth is produced, as they are from actual facts deducible. The general tone of the "Wealth of Nations" bears out the latter fact, and though some of the most distinguished writers of the present day may, in some instances, differ with Dr. Smith in his views; yet, we may safely affirm, (without lessening the high opinion in which known living writers are held), that the important work referred to is the grammar of the system, and acknowledged as the principal work upon the science extant. The majority of the doctrines Adam Smith advocated, particularly with regard to labour, may be looked upon as a perfect illustration of the views of the English Economists.

Whilst, however, we express the foregoing opinion as to the merits of Dr. Smith's "Wealth of Nations," and the antagonistic position in which we place it by our avowing it, as an illustration of the views chiefly held by many modern English Economists, much difference of opinion still exists amongst them upon certain points in the science. Political Economy, as the term is understood by them, according to the views of some writers, may be deduced with the certainty of a mathematical illustration; whilst others are of opinion that in this science there are many important propositions which require limitations and exceptions.

Malthus, in the Introduction to his Political Economy, remarks, perhaps not unjustly, that "the desire to simplify and generalize has occasioned an unwillingness to acknowledge the operation of more causes than one in the production of particular effects, and if one cause would account for a considerable portion of a certain class of phenomena, the whole has been ascribed to it, without sufficient attention to the facts which would not admit of being so solved." He quotes the controversy on the Bullion Question as an instance of this kind of error, and subsequently says, "Adam Smith has stated that capitals are increased by parsimony, that every frugal man is a public benefactor,* and that the increase of wealth depends upon the balance of produce above consumption."† "That these propositions," observes Malthus, "are true to a great extent is perfectly unquestionable."

No considerable and continued increase of wealth could possibly take place without that degree of frugality which occasions annually the conversion of some revenue into capital, and creates a balance of produce above consumption; but it is quite obvious that they are not true to an indefinite extent, and that the principle of saving pushed to excess, would destroy the motive to production. If every person was satisfied with the simplest food, the poorest clothing, and the meanest houses, it is certain that no other sort of food, clothing, and lodging, would be in existence; and as there would be no adequate motive for the proprietors of land to cultivate well, not only the wealth derived from conveniences and luxuries would be quite at an end, but if the same division of land continued, the production of food would be prematurely checked, and population would come to a stand, long before the soil had been well cultivated.

"If consumption exceed production, the capital of the country must be diminished, and its wealth must be gradually destroyed, from its want of power to produce; if production be in a great excess above consumption, the motive to accumulate and produce must cease, from a want of will to consume.

"The two extremes are obvious; and it follows, that there must be some intermediate point, though the resources of Political Economy may not be able to ascertain it, whereby, taking into consideration both the power to produce and the will to consume, the encouragement to the increase of wealth is the greatest.

"The division of land-property presents another obvious instance of the same kind. No person has ever for a moment doubted, that the division of such immense tracts of land as were formerly in the possession of the great feudal proprietors, must be favourable to industry and production. It is equally difficult to doubt, that a division of landed property may be carried to such an extent as to destroy all the benefits to be derived from the accumulation of capital, and the division of labour, and to occasion the most extended poverty.

"There is here, then, a point, as well as in the other, though we may not know how to place it, where the division of property is best suited to the actual circumstances of society, and calculated to give the best stimulus to production, and to the increase of wealth and population."

We have already observed that the ancients had, to a certain extent, ideas upon what we now designate Political Economy.

The Greeks and Romans sought to increase their wealth chiefly by war, conquering and plundering nations of inferior power than themselves. Both countries, but the Romans in particular, considered trade and handicraft as unworthy the attention or position of a citizen, and, consequently, left to slaves and menials the working of the soil. Occasionally, indeed, during the reign of Tullius, there are evidences sufficient to justify us in saying, that the Romans held agriculture in good esteem; but, from the period when their conquests

* Wealth of Nations, B. II. C. III. † Ibid, B. IV. C. III.

extended beyond Latium, it can scarcely be said that the soil claimed any great attention. The love of war superseded that of home industry, and the proprietor's interest, in his agricultural position in the state, was confided to the care of menials. The result arising from this indifference on the part of the owners of the soil seems to have had its baneful results; for we find, in many instances, it is recorded in history, that the people of this great state were reduced to the brink of starvation, from the too great negligence of the soil, and that they were compelled, from the pangs of hunger, occasioned by internal scarcity, to seek corn from the provinces. The Romans considered gold, not as the representative of wealth, but as wealth itself; and the State, for a lenghtened period, forbade its exportation.

After the fall of the Roman Empire, little notice can be taken of the progress of agriculture and commerce for a lengthened period, its prostration having being succeeded by internal conflicts in various states, encouraged by the barbaric feelings of the different settlers intermingling with one another to a greater degree in countries than had taken place previously.

The first development of what may be called the Mercantile System took place in the middle ages, at that epoch when Venice, Florence, Pisa, and other free towns, sprang up; so that a lengthened era intervened between the fall of Rome and the first establishment of that system.

The policy pursued by the people of those towns, in their commercial capacity, was chiefly illustrated in their desire to seek foreign trade; as they considered that principle was the source of trade—selling at high prices, and buying low, realising to them, by exchange, a surplus in bullion, or, as they recognised it, revenue.

As in modern days, emulation in trade after a short time became discernible, and the consequence was, not a creation of friendly intercourse with mercantile nations, amongst themselves, or a desire to foster an honourable rivalry, as that proposed for an approaching epoch, but the foundation of wars, which have but partially expired up to the present day. Not a few of those countries which were conquered by other nations, in the middle ages, could attribute the source from whence issued their downfall to any other causes than those which arose from competition in trade. Monopoly in trade was sought, to render justice to some classes, and restrictions were resorted to, for the purpose of protecting the commercial produce of each nation, and to impede or frustrate in its operations that of others. It cannot, therefore, be a matter of surprise, that the aid of the warrior was occasionally called in to effect objects by force, which could not possibly take place through a fair competition in mercantile pursuits. A writer in a popular cyclopædia remarks, that "this system was narrow and exclusive; it considered only one state, and built the prosperity of that state on the depression of others. It was affected by the same error as the military system of conquerors, who wish to exalt and enrich one country by subjugating and plundering another, overlooking the fact, that the prosperity of other countries is part of the general prosperity of the world, in which our own country must share."

TRIBUTE TO THE GREAT AND GOOD.

BY A. T. BANKS.

Deep, deep to his mother earth,
Which late he nobly trod,
They'll bear him 'midst the anthem's peal,
While the death plumes mournful nod!

The poorest mortal who departs,
To 'scape from trouble here,
Leaves his trace on friendly hearts—
On some fond cheek a tear.

Such is the history of all,
Yet circumscribed their lot,
Each mortal has his hallowed grief,
Nor honours stranger spot

The great and good have wider fame—
The hearts of nations bleed!
On many a stone inscribes the name,
For future men to read.

THE CLOISTERS OF NOTRE-DAME AT PARIS:

THEIR ORIGIN, IMMUNITIES, AND PRIVILEGES.

The church of Paris, which has given so many learned doctors to religion, illustrious cardinals to Rome, and eminent juris-consults to Parliament, was celebrated throughout the Christian world not only by the science of its bishops, its dignitaries, and its chapter, but also by the importance and singularity of the immunities and privileges granted to the cloisters of Notre-Dame by the Carlovingian kings, which were recognised and extended by Hugh Capet and his successors, and abrogated or abolished only in the 17th century, under the reign of Louis XIV.

The inflexible will of the "Grand Monarch," who destroyed, by a stroke of his pen, the 72 civil and religious jurisdictions which shared amongst them the territory of the capital, in order to reunite them in the paramount jurisdiction of the *Châtelet*, were sufficient to destroy the diplomas and records of the heirs of Charlemagne, the aulary notes of Robert, or the pious concessions of Philip Augustus and Saint Louis.

The cloisters, it is well known, were the symmetrical assemblage of many houses or cells, destined for the dwellings of the regular clergy or monks, and also of some sections of the secular clergy, called canons, who submitted to the yoke of a monastic life. The confinement of the cloisters of the different religious orders was perpetual, that of the canonical cloisters, or of the canons, was only nocturnal—that is, they were open to all comers during the day-time, and were only closed at sunset for the night.

The most ancient privilege, or, at least, the most authentic and ancient title still extant touching the cloisters of Notre-Dame of Paris, emanated from King Charles III., called "*the Simple*," * who, upon the petition of Thioul, Bishop of Paris,† permitted the Chapter to sell to each of the canons, for the necessity and use of the church, the houses of the cloister. Mention is made of this privilege in the register of the church of Paris, which also records the decease of Thioul, Bishop of Paris, in the following terms:—"8 Kalend. man, obit dominus Theodulphus, qui primus firmavit claustrum nostrum sub rege Carolo Simplice, Engus firmitatis datis est congiaci 15 Kalend. junii indictione, 15 anno incarnationis dominicæ 911."

This privilege was the fruitful source of perplexity; many of the canons from 911 to 1791 made it a case of conscience to receive their portion of the distribution of the money, the proceeds of the sale of these canonical houses, vacant by the death of their members, and still a sum was deducted from each sale, to found masses for the repose of the soul of those who did not resign, *in articulo mortis*, the houses of which they were the possessors, to the Chapter.

The privilege granted by Charles the Simple was confirmed by King Lothaire and his son, in the year 986, in the following terms:—"Claustrum congregationis Sanctæ Mariæ, sicut ab avo nostro Carolo præcibus Theodulphi. Episcopi confirmatum fuerat nostra præceptione confirmanius."

Louis VII ratified this same privilege in the year 1127, and, having entered the bosom of the Chapter, caused to be engrossed by the chancellor, and signed, at a sitting held, the celebrated charter which commences in these words:—"In nomine sanctæ et individuæ Trinitatis, et dilectio et reverentia quæ a nobis, more prædecessorum, nostrorum, ecclesiis, regni nostri et Parisiensi ecclesiæ, etc.," which the Chapter regarded, with good reason, as one of the most precious and honourable monuments of its archives.

The jurisdiction of the Chapter of Notre-Dame extended not only over the canonical cloister, but also over the lands within bow-shot around it, and it was the canons who built over these grounds—then barren, and covered three-fourths of the year by the waters of the Seine—the first houses, and laid out the first streets The court of the cathedral was dependent on the episcopal jurisdiction, and the two authorities, although ticklish

* Charles III., the posthumous son of Louis le Bigne (the stammerer), ascended the throne in 893, through the influence of Fulke, Archbishop of Rheims, who aided him to overcome those who during his minority had usurped the throne of his grandfather, Charlemagne Charles the Simple did not long enjoy his victory, and having drawn upon himself the hatred of both the nobles and the people, he was dethroned by Robert, Count of Vermandois, and confined in the tower of Peronne, where he died at the age of fifty years, in 929, after seven years of the most grievous and ignominious captivity.

† Thioul, called also Theodulphe in some chronicles, had been an advocate, and had practised with distinction in the litigious discussions which the unhappy disputes of the descendants of Charlemagne unceasingly fomented in the councils of the nation. Thioul was a clergyman, and consecrated himself wholly to the service of the altar at the age of forty. He was elected Bishop of Paris, and was, by his intelligence, science, and piety, worthy of that eminent station. Thioul called his canons *consodales meos*. He died at an early age, but ripe in virtues, in 914, a few months only after having obtained from Charles the Simple the favour which he had petitioned of the royal power for his beloved Chapter.

enough in regard to their respective rights, lived side by side in perfectly good understanding.

If the Bishop of Paris had his officiality, his provost, his officers, his prisons, and his ecclesiastical court, the Chapter had its bailiff, its sergeants, its ushers, its night or vesper officers, and those of the day. It had also its prison, and it may be recognised even at the present day in that dilapidated lodge situated in front of the side gate on the north of the metropolis This prison, in other respects, had nothing very frightful about it, since, in the fourteenth century, the poor scholars of Montaigne were benevolently shut up in it, to "eat bread with all their soul," and to drink the *Topette* of Orleans wine which the canons daily allowed to their captives. Acts of violence, blasphemies pronounced with a loud voice, an immodest demeanour, or acts of cynical indecency, involved an arrest, when they, or any of them, were committed to the cloister or to places within its jurisdiction.

The ancient statutes of the Chapter, confirmed by many sentences of their bailiff, and by writs of parliament, forbade the canons to lodge strangers in the cloister. Yet it is believed that this clause of the statutes was not carried out with much severity. Louis XI., then Dauphin, and sequestered at the court of the Duke of Burgundy after having revolted against his father, came secretly to Paris in 1460, and met with a hospitality, as noble as it was magnificent, from the Canon Andre du Moulinet.

The Dauphin remained a whole month in the cloister of Notre-Dame, sleeping during the day, and playing at chess at night with his host, or receiving in the vaults of the canonical house one or other of his trusty friends, who arrived by the street Saint Christopher, which was then rebuilding, and the deep excavations of which served for a gallery to the visitors, reaching even to the well-furnished vaults of the canons, where King Louis XI. never forgot the stay, which he had made under proscription, in the shade of the tower of Notre-Dame de Paris; and his favourite promenade, when he resided at the palace, was the cloister and the Garden of the Canons, situated on the very bank of the river, and to the bolster of the church.

The church of Notre-Dame de Paris had eight dignitaries, exclusive of the archbishop. These were, the dean, the chantor, the archdeacon of Paris, the archdeacon of Josas, the archdeacon of Brie, the sub-chanter, who usually fulfilled the functions of knight; the chancellor, who was also chancellor of the university,* and the grand penitencer.

There were fifty canons;† and amongst these, there were found at least twenty-five who were counsellors' clerks to parliament, and wore the scarlet robe (the distinctive attribute of the counsellors of the grand chamber) in the choir on the days of solemn feasts; two canons, and two perpetual vicars of St Aignau, six grand vicars, one of the abbey of Saint Victor, one of the monastery of Saint Martin-in-the-fields, one of Saint Denis of the Unuch, one of the abbey of Saint Maur-des-fosses, one of Saint Germain l'Auxerrois, and last, of Saint Marcel de Paris

Ten canons of Saint Denis-du-Pas. Eight canons of Saint Jean-le-rond.‡ The chaplains, to the number of one hundred and twenty. Twenty-two children of the choir and other officers, as well of matins, revenue, and sacristy, as of the lesser and greater bell-ringing.

Many other dignities and prerogatives were indirectly attached to the church of Paris. The abbey of Saint Maur-des-Fosses, the priors of Saint Eloy, near the palace, of Saint Magloire, in the faubourg Saint Jacques, and the temporal seignorie of Saint Cloud, which was erected by Louis XIV. with a ducal pecrage, formed the appanage of the Archbishop of Paris. The Chapter, for its part, possessed great wealth. In the seventeenth century it enjoyed the revenue from 191 houses in Paris, and 43 farms, distributed in La Beance, La Brie, L'Orleannais, La Perche, La Maine, and in L'Isle de France, without reckoning many seignories, a great number of privileges, and many important donations, amongst others, that of Louis XII., who founded in that church an anniversary which is celebrated every year on the 1st of January.* †

Four public solemnities bind still further the Chapter of Notre-Dame to the moral and political constitution of the State.

The confraternity of Saint Anne, erected, with the consent of the bishop in 1449, by the merchant goldsmiths of Paris, held its celebration every year on the 1st of May. These rich citizens, who, from the year 1137, presented a tree, called May, to the Virgin, replaced that tree, at the end of the 10th century, with small paintings or *ex voto*, which were not all master-pieces. But, at the commencement of the 17th, zeal, or the love of the art increasing with intelligence and talent, the goldsmiths offered very large paintings, the execution of which they intrusted to the most skilful painters of the age. It was thus that the metropolitan church was enriched with the immortal works of Juvenot, La Hire, Lebrun, and Lesueur, which to this day ornament the choir of the venerable cathedral.

The first Friday after Easter the whole corporation go to hear mass at Notre-Dame, and at the commencement of the office they sing a *Te Deum* for the deliverance of the city of Paris from English domination. We know that Paris and the Bastille were surrendered to Charles VII in 1437.

The 22nd of March, in each year, they celebrate also at Notre-Dame the surrender of Paris to Henry IV., a ceremony which the good Henry had himself instituted in 1594. The Chapter went in procession, accompanied by the corporation, to the church of the little Augustines, and all the parishes of Paris went also in procession to Notre-Dame in the morning, with the same object.

Lastly, on the day of the assumption of the Virgin, after vespers, a very solemn procession took place, which had been instituted in 1638 on the 10th of February, in all the churches of the kingdom, to return thanks to God for the *grossesse* of the Queen, Anne of Austria, after 23 years of sterility At this procession assisted the archbishop with the Chapter, the parliament, the chamber of finance, the court of aids, the governor of Paris, and the corporation.

The day on which this procession took place the first time was signalised by a debate, which bordered upon scandal, for the precedence in rank between the parliament and the chamber of finance The first president of the parliament, says an eye-witness, not being willing to allow that the first president of the chamber of finance should cross with him on leaving the choir, as had always till then been the practice, there was a war of words in the church, and even violence on both sides, and the officers of the chamber of finance were obliged to yield, having against them the governor of Paris with the three hundred city archers.

Since that time neither the parliament nor the chamber of finance assisted any more at this procession, until in the year 1672, when the king, in order to reconcile them, ordered that, hereafter, neither one nor the other should enter the choir or go out together, that messieurs, the parliament, the king's people, and the advocates, should assemble themselves in the hall of the Chapter of the church of Paris, and come to join the clergy at the door of the choir in the right nave, where they should walk in file; whilst that, on the other side, messieurs of the chamber of finance should come in the official form in which they should have assembled, to join also the clergy in file, the same as the parliament, so that the first president of the chamber of finance walked to the left of the first president of the parliament on the same line, and so of the others. The king, at the same time, ordered that when the procession terminated, the parliament should go out of the choir by the door which is under the crucifix, and that the chamber of finance should leave by the door of the choir on the right, opposite to the archiepiscopal chair. This programme was adhered to till 1789

The Chapter of Paris was often annoyed by the ambition, or the empty pretensions of the archdeacon, or the *grand archdeacon*, thus denominated to distinguish him from the archdeacon of Josas, or Brie. On more than one occasion, the bishops of Paris found in that dignitary an adversary and enemy But the bishops, in concert with the Chapter, usually animated with feelings less hostile to the episcopal supremacy, abated, with the assistance of the parliament, the exorbitant prerogatives of the archdeacons; and the jurisdiction of these dignitaries was even regulated by a writ of

---

* The chancellor presented the caps to the doctors of the superior faculty. The chancellor, differing from the archdeacon of Paris, the dean and the grand chanter, who, at the solemn feasts, were clothed with a scarlet cassock, wore a purple robe.

† The canons of Paris swore on their installation *that they had not been monks*, and that they would preserve the immunities of the cloister. The Chapter has at no period perjured itself, but, sustained by the Parliament, has defended the rights of religion and the church.

‡ Saint Denis-du-Pas was a little church in the city, celebrated, like its neighbour, Saint Denis of La Chatre, by the torture and the martyrdom of Saint Denis, first Bishop of Paris, under the reign of Aurelius. Saint Jean-le-Rond, another little church near Notre-Dame, was only remarkable for its *jurisdiction spirituel*, which extended over the cloister of the cathedral. With the exception of the canons, all those who dwelt in the cloister, domestics, or tenants of the chambers, were parishioners of St. Jean-le-Rond. It was upon the path within the gate of this church that Madame de Teucin, sister of the cardinal of that name, abandoned her infant, which was picked up by a poor widow of a glazier of the street Saint Christopher. This infant was afterwards the philosopher, Jean-le-Rond d'Alembert.

---

* All the canons were bound to assist at that mass which is called "*The Salt Obit*," because the contribution granted to each canon consisted of two minots (six bushels) of salt. The dignitaries of the Chapter received three minots, and the grand chanter four. It is not amiss to state here, that if the chancellor of the Chapter possessed the privilege of decreeing the bonnets of the doctors, the grand chanter had, for his part, the right of nominating the masters of the schools in Paris, the faubourgs and the banlieu, after examination, and maintained over these humble institutions of the people a necessary, a permanent, and salutary control.

the grand chamber, issued at the request of Pierre de Gondi, Bishop of Paris. The following is this writ, which ought to occupy a high place in the archives of the church of Paris, and which supremacy established the ecclesiastical hierarchy :—

"The parliament, in satisfaction of the demands respectively made by the parties, has prohibited, and forbids the said archdeacons of Paris, Josas, and Brie, and their officers, to take any cognisance of matrimonial causes, circumstances and dependencies, to decree monitories or absolutions, without express permission of the said Bishop of Paris, nor even to take cognisance of civil causes of importance; *sans* (but) has permitted them to take cognisance only of civil causes of a light kind, the knowledge of which may belong to ecclesiastical judges. And in regard of criminal causes, the said court has likewise forbidden the said archdeacons, and their officers, to take any cognisance or jurisdiction of them, except in making their visitations; and in the course of them, if any causes of *riotter* (quarrels) should arise, and heat for injuries or excesses which might be promptly redressed by some recompence or pecuniary fine, reprehensions, or slight corrections; it is enjoined upon the said archdeacons, at the termination of the said visitations, to repeat their *proces-verbals* to the registrar of the officiality of Paris, charges and informations, if any have been made in the said course of visitations, without expense. Given, the 9th of January, 1609. (Signed) VOISIN."

In a monumental point of view, the cloister of Notre-Dame presents nothing very remarkable, with the exception of some houses with high roofs, which bear the seal (very rare in the present day) of the fifteenth and sixteenth centuries In a religious sense, these dwellings, so simple, so modest, so silent, still please the imagination, but it is, above all, in the judicial and literary point of view, that the cloister of Notre-Dame de Paris ought to be still held dear by the magistracy, the bar, and all writers who regard literature as a priesthood, and not as a school of perversion; as a means of moralising the masses, and not as a means of corrupting the people by perfidiously insinuating among them fallacious eulogies, the poison of immorality, irreligion, and rebellion.

Towards the close of the 16th century, and about the commencement of the 18th, by a capitulary act, styled *consensu omnium*, the Chapter decided that it would be lawful for every canon possessing a house in the cloister, to underlet to studious persons, discreet and quiet, by virtue of their occupations, one or several rooms attached to their houses; provided that these persons were not engaged in the ties of marriage, and had only male servants

From that moment a great number of counsellors of parliament who were celibates, advocates, men of letters, and artists, also unmarried, went to lodge in the cloister of Notre-Dame

In the number of celebrated advocates who dwelt in the cloister of Notre-Dame are reckoned, Laroche Maillet, the judicious commentator of Fontanon, Loyseau, the learned author of the treaty of the *Seigneuries de Village*, and of the *Guerantie des Rentes*, Pierre Pithou, the immortal author of "The Liberties of the Gallican Church," Gabriel Gueret, fellow-labourer of Blondeau, editor and founder of the "Journal of the Palace," Guillet de Blaiert, a learned canon; Olivier Patree, the great, the wise, the judicious Patree, who dwelt two years in the cloister, Notre-Dame, before consigning himself to a desert street of the faubourg St Merceau.

Bolleau Despreaux also lodged in the cloister before he resided in the inclosure of La Sainte Chapelle, and Nericault Destouches, the dramatic poet, had a footing there, where he was attached to several French embassies in Germany and England, Vade, the poet of the markets, but a man as wise in his conduct as he was bold in his burlesque rhymes, lodged six years in the house of the canon Mandeville; and Marivaux, embroiled with his father, took refuge in the cloister, where he traced the first acts of his romance of the *Paysan Parvenu*, a charming work, full of point and knowledge of the world, but unhappily very little known in the present day, in which the phases of a devout life are traced with the pencil of Gerard Douw and Rembrandt.

Lastly, Gilbert, the unfortunate poet Gilbert, was received for some months in the cloister by a canon of Paris, and the generous writer, the Catholic Juvenal to whom the church and its princes ought to have given a palace, found a momentary resting-place in the shade of those splendid towers which he wished to save, the shelter of those holy walls he desired to preserve from the encyclopedic battle axe and mine. The residence of Gilbert in the cloister was short; it was his first halt in his passage to the Hotel Dieu, where he died, like Tasso, mad, desperate, abandoned, even by the church in defence of which he fell a martyr.

The artists were not less numerous in the cloister of Notre-Dame de Paris than the celebrated advocates and illustrious writers. The sculptor, Sarrazin; the painter, Norbert, the engraver, Nanteuil, the architect, Le Vau, and a hundred others, renowned from their skilfulness, their labours, and their genius, found in their last days, in the cloister, Notre-Dame, the calm repose of old age, from that mundane weariness produced by the embraces of glory which intoxicate, and implacable envy which destroys.

The cloister of Notre Dame was, therefore, at once a retreat for talent, a chapel for piety, an oasis for extreme sorrow At the present time this cloister is a street, its houses like those of other parts of the city, with the exception of a few, which have been able to preserve, in front, the sign of the faith and the peace of former times; and more rarely, you may meet, here and there, a solitary canon entering his dwelling The revolutionary level has passed over it, and if a burgess of Paris of the seventeenth century were to return to the world, he would with difficulty recognise the old cloister of Notre-Dame.

SONGS FOR THE PEOPLE.

ORIGINAL AND SELECTED.

No. XII.—THE GOLDEN AGE WILL COME.

Work on, work on for ever, in the good old cause of right,
With truth and justice hand in hand, oppose resisting might;
With a firm faith in the cause, and a firmer faith on high,
Work manfully and hopefully, till comes the victory
And, oh! be sure, my brothers, in the golden days to come,
This grand old earth will revel in the great work's harvest home.

Though for a time the lowering clouds may o'er the sun have sway,
The coming brightness brings at last the full meridian day,
Though winter hold the lovely flowers deep in the heart of earth,
The sunny smiles and showers of spring will call them into birth,
And manfully and hopefully work for the better time,
And spite the winter's barren hour will come the glorious prime.

For the golden age that's promised is not an age of dreams,
Even now its welcome dawning upon us brightly gleams,
The age that has been heralded by anthem and by song,
Will bless at last the sons of toil, though oft deferred long;
And the glad earth, full of joy, will receive with grateful heart,
The blessings, love, and peace, and plenty, will to her age impart.

There is a ray of golden light beams in the eastern sky,
That only shines at present on the upward gazing eye;
But unto each horizon soon that golden ray will spread;
The light of truth and freedom over all the earth will shed;
The voice of God revealed it, and his prophets sang the strain,
Of the blissful coming-time when the Lord of Life should reign.

Then work, and hope for ever, for the good old cause of right,
With truth and justice, hand in hand, oppose resisting might;
With a firm faith in the cause, and a firmer faith on high,
Work manfully and hopefully till comes the victory!
For, oh! be sure, my brothers, that the golden days will come,
And earth will revel, full of joy, in the great work's harvest home.

JOHN ALFRED LANGFORD.

EVIL SPEAKING —The delusive itch for slander, too common in all ranks of people, whether to gratify a little ungenerous resentment, whether, oftener, out of a principle of levelling from a narrowness and poverty of soul, ever impatient of merit and superiority in others, whether from a mean ambition, or the insatiate lust of being witty, (a talent in which ill-nature and malice are no ingredients,) or, lastly, whether from a natural cruelty of disposition, abstracted from all views and considerations of self, to which one, or whether to all jointly, we are indebted for this contagious malady, thus much is certain, from whatever seeds it springs, the growth and progress of it are as destructive to, as they are unbecoming, a civilised people. To pass a hard and ill-natured reflection upon an undesigning action, to invent, or what is equally bad, to propagate a vexatious report, without colour and grounds, to plunder an innocent man of his character and good name, a jewel, which perhaps he has starved himself to purchase, and probably would hazard his life to secure, to rob him, at the same time, of his happiness and peace of mind, perhaps his bread—the bread, maybe, of a virtuous family—and all this, as Solomon says of the madman, who casteth fire-brands, arrows, and death, and sayeth, "Am I not in sport?" All this out of wantonness, and oftener from worse motives; the whole appears such a complication of badness, as requires no words or warmth of fancy to aggravate Pride, treachery, envy, hypocrisy, malice, cruelty, and self-love, may have been said, in one shape or other, to have occasioned all the frauds and mischiefs that have ever happened in the world; but the chances against a coincidence of them all in one person, are so many, that one would have supposed the character of a common slanderer as rare a production in nature, as that of a great genius, which seldom happens more than once in an age

CHARACTER AND TENDENCIES OF AMERICAN SOCIETY.

Translated for the Working Man's Friend, by Walter Weldon.

RELIGIOUS TENDENCIES—CONTINUED.

We find Dr. Wayland, one of the authorities of the college which was founded by the Baptists of Rhode Island, and which now is in full decadence, writing respecting its decline:—"It is doubtless in consequence of our not having given the public the education which it demanded. *We have not seen what kind of intellectual merchandise was demanded by the moral market of our time.*"

Thus, religious doctrines are, we see, become simply matters of *opinion*, like opinions upon tariffs and free-trade, which people must change according to the progress of the age. Formerly, when a Christian, it mattered not of what communion, had his doubts, he strove to overcome them, and sought to obtain grace by prayer and abstinence; but now, the Americans have invented a new means of appeasing these interior anguishes.—If you have doubts, say they, change your religion; if the new religion does not appease you, pass to another; and so on, till you have found peace. The effect of this mode of proceeding has been to cause the Americans to exhaust all kinds of religious scepticism, without, however, falling into that of Rationalism. The principal cause of the preservation of Christianity in the Protestant Calvinistic States, has been the fact of the schools of philosophy having always been represented by some church of religious sect. The Americans, in travelling from church to church and doubt to doubt, have arrived at the last doubt possibly for them to entertain and remain Christians. Jesus Christ, is he God? If you admit this divinity, though you examine or even reject all other mysteries, you cease not to be Christian; if you reject it, you reject that Christianity of which the belief in the Divinity of its Founder is the grand cornerstone.

The spirit of liberty which prevails so in the minds of all Americans, united to their Protestant spirit of free enquiry, has found its religious ideal in the doctrines of the sect called Unitarians, a sect which at the present day enjoys a great preponderance throughout the Union. Their doctrine is, that, the Divinity of Jesus Christ being excepted, all other mysteries may be submitted freely to examination, all other dogmas receive individual interpretations, and all the facts and recitals of both the Old and the New Testaments be regarded as myths and symbols of supernatural realities. This, we see, is a doctrine as wide as possible, and one which essays to establish a compromise between revelation and reason, between the contemporary rationalistic spirit of the Americans and the Christian spirit of their forefathers. It is a doctrine which may be also stated thus—Jesus Christ has revealed the truth to men for them to interpret its spirit for themselves, men have not been able to discover the truth, but they are able to comprehend it; and those who adore Jesus Christ in spirit will always do so and it is a doctrine which is so well fitted to agree with the American character that it spreads in the United States with a most remarkable rapidity. All the other sects, Methodists, Baptists, &c, melt themselves into that of the one professing it. They abjure, almost universally, their old faith, and take up this new one; and when they do not do this, they force themselves to introduce into their own creeds and liturgies as much as is possible of the spirit of Unitarianism.

Behold, then, the commencement of a religious revolution, the foundation of a system of Protestant Catholicism, of which the end will be evidently the absorption of one sect only of all the others. One grand principle undeniable, and then all differences of religious opinion legitimate,—such is the principle of this audacious sect; but even this seems not sufficient for the Americans, for in their turn has arisen another and still more liberal sect,—that of the Universalists, whose tendency is to absorb the Unitarians, as theirs is to absorb all other sects. Already very powerful, the Universalists number in the various states 1200 churches, 700 ministers, and 60,000 communicants. Their doctrine is a compromise which singularly resembles the political constitution of the Union; it takes no account of the truth or falsity of the dogmas and principles taught and promulgated by the other sects, any more than the constitution troubles itself respecting the justice or the injustice of the peculiar institutions which prevail in the various states which compose the Union. There are amongst them members of all the sects who agree respecting the necessity of Union amongst all men, whatever be their creeds; and the different sects, according to their belief, are only purely arbitrary delineations of the truth, which men may adopt indifferently; while the doctrines of one sect are not purely saving, and those of another purely damnatory, as has been too long believed. According to them, too, the only thing absolutely necessary for the attainment of eternal life, is a moral life here on earth. We shall be all saved, say they, some more slowly, some more rapidly, according to the degree of our virtue and the sanctity of our inclinations. We shall all go to knock at the door of heaven with the inclinations we have cherished upon earth, and each will be judged and be rewarded according to the ideal of happiness which he formed in this life. One sees, by this simple exposition, from whence this doctrine is derived. It is the offspring of the two strangest sects that Protestantism has given birth to—Unitarianism and Swedenborgianism. All in it that relates to the Union of sects and the inutility of their particular dogmas, is derived from Unitarianism; all that speaks of the soul's welfare and the future life from Swedenborgianism.

Thus, from deduction to deduction, the Protestant sects arrive at these conclusions; namely—that their obstinate separation from each other is occasioned by an evil principle in the human heart, that this separation is arbitrary and useless, and that it would be a great deal more religious to unite themselves together. The difficulty is to find a common point upon which all sects and denominations can reasonably agree For the moment, as we have seen, they content themselves with a vague Theism. This tendency towards moral unity in a country so free as the United States is a fact to meditate upon. The indifference of the State with respect to matters of religion is there a means of drawing its citizens together and bind them all in one great bond of unity, and the universal tolerance which prevails, instead of preserving to each individual his faith intact, tires him of his creed and makes him feel his isolation Opposition, hostilities, and intolerance bind together men of the same communion, but tolerance dissolves the association, and under the pretext of establishing peace, realises literally the words of Tacitus *Ubi solitudinem faciunt, pacem appellant.* Religious liberty, then, is only an instrument in the hands of God for re-establishing that peace and unity amongst mankind which have been so long absent from the earth; for tolerance, by throwing down the barriers which have separated men, and mixing together all idioms and all dialects, establishes a universal confusion, which can only be terminated by one of these two phenomenas,—either a universal indifference, a universal distaste, dragging along with it a veritable moral overthrow; or by a resurrection of the religious sentiment, and a unity newly established upon the basis of a cordial and sympathetic understanding of the hopes and the instincts which are common to all men. Towards the last is the manifest tendency of all the sects of the United States. As for this Theism, which is no other thing than the entire separation of temporal form spiritual things, we may remark that it is equally, although under a different form, the foundation whereon rest the various religious beliefs which prevail in Russia There, also, things spiritual are separted from things temporal, not, as in America, by the spirit of civil liberty, but by the *toute-puissance* of the civil authority. "Your kingdom is not of this world," says the Czar to the Russian State Church, "and my people only owe obedience to me," just as the Unitarians and Universalists say to the American Sectarians, "God is of no sect, and the faithful do not adore him by following the rites and liturgies about which you are so particular."

When Bossuet wrote the "*Histoire des Variations,*" alarmed at the audacity of the spirit of inquiry and examination, he assigned no boundaries to the follies which might be engendered by the human soul, and saw before him only an indefinite and constantly receding horizon, peopled with never ending chimeras, whimsical dogmas, and sects without number; he believed in the omnipotence of this spirit, and predicted from it the most evil consequences. These predictions, however, do not seem to have been fulfilled. The actual state of Protestantism by no means corresponds with them. At the present moment, the human mind, in all Protestant countries is seeking after unity; nothing can equal the eagerness with which Protestantism has repudiated and is repudiating the spirit of sect. It has rendered to humanity this signal service,—it has made the minds of men travel over and through all systems of philosophy without departing from within the pale of Christianity; it has made them go hand in hand with Rationalism, it has caused them

to drain to the dregs the cup of religious liberty. Everywhere to-day, the souls which found a gloomy happiness in the free search for truth, whose moral isolation had in it nothing disagreeable to them, and who contented themselves with but a few companions, united together by one communion, feel a chilness gathering over them, and a desire to enter into closer union with their fellow creatures. The sectarians are everywhere demanding air and light, they offer the hand of fellowship and sympathy to their ancient adversaries, and seek to enter into the bosom of the great human family, instead of striving—as of old—to draw its members into their temples. This sentiment longing for a spiritual union, for a universal religious communion, enables us to comprehend many of the great movements which the world is witnessing to-day. It aids us to explain the language more and more catholic which is being made use of by the German Lutherans, and to understand the doctrines of Puseyites in England, those of the Unitarians and Universalists in America, the singular doctrines common to all the Sclavic races, and derived from the Revelation of Saint John, and the progress accomplished by the Swedenborgians in all Protestant countries. It accounts alas for the rapid increase of the numbers of the Roman Catholics in the United States. Very numerous already even in the States of Puritan origin, as in Massachusetts, where they have 80 churches, they prevail almost absolutely in the States of the North, and above all in those joining the Canadian frontier. Roman Catholicism is an element of dissolution for the United States, but it is also a powerful instrument of propagandism and civilisation. Thus—we obtain for our religion that preponderating influence in Congress which it has hitherto failed to obtain—the Catholics of Canada desire nothing more earnestly than that their country should be annexed to the Union. Nevertheless, Catholic propagandism, save in the instance just mentioned, has but little to do with political affairs. It follows the manners of the country, and meddles only with those circumstances which are most favourable to its aggrandisement. It deserts the state in which civilisation is triumphant, seeks the barbarian, follows in the tracks of the emigrants across the prairies, and addresses itself above all European populations. Roman Catholicism is installed in the bosoms of the deserts, and by the banks of the great rivers, in the valley of the Mississippi for example It has there established its churches, its hospitals, its congregations, and there, in the midst of silence and of solitude, it waits with patience the arrival of new populations. It precedes the emigrants, and receives them into its bosom as soon as they arrive.

In the meantime, in spite of these desires for and aspirations toward moral union, the spirit of sect resists powerfully all attempts at its establishment. It strives, sometimes by bringing forth novelties and sometimes by making concessions, to the manners and the passions of the age, to preserve its empire over the American mind. But its tactics are mistaken; it rests its hopes upon foundations which have but few days to exist. The spirit of sectarianism is manifestly reduced to its last straits; and its most recent demonstrations prove it. What is Mormonism, for example, that most odious of sects, but an attempt to perpetuate the spirit of sect by accommodating it to the taste and manners of the day? Mormonism recedes not before any of the popular passions of the Americans It pushes religious fanaticism to its last limits, in order to be able to agree with their revolutionary passions; it incorporates the license of the popular manners into its laws and maxims, in order to be able to extend itself along with modern corruption, it pushes patriotism to such an extent as to admit a revelation made specially for the Americans, and to propagate a belief in an American Christ, in order to make itself in unison with the national spirit of the Yankees, and it gives an utilitarian and mercantile turn to all its practices, in order to make itself acceptable to an age above all positive and materialistic. Mormonism is the last attempt of any importance made by the spirit of sectarianism, and, like all the other latter ones, excites but pity and is struck with imbecility. This spirit, having no longer within itself either genius or inspiration, knowing not what fresh novelty to invent, addresses itself only to things exterior, and employs itself in creating temples of a form *bizarre*, and in building creeds which are *outre* and ridiculous. The last sect of which we have received any account is that of the Davidites, established at Sharon, upon the frontiers of Canada, and founded by a certain David Wilson, a dissenter from a Quaker sect. "These Davidites," says a New York journal, "have erected two of the most singular edifices imaginable. The one is an imitation of the Temple of Jerusalem, and is 60 feet wide and 24 feet high. Above the temple is a gallery for musicians, and above this gallery a tower-shaped steeple. The roof of the temple is sustained by 12 columns, upon each of which is written in letters of gold the name of one of the twelve Apostles. Between every two of these 12 pillars are four others, upon each of which are written the names of the four virtues—Faith, Hope, Charity, and Love; and each four of these pillars enclose a kind of small Chinese pagoda. The whole temple is richly illuminated on the first Wednesday in each September." The journal gives a further description of this building, and adds, that "its founders have shown their wisdom and sagacity by the choice which they have made of the most fertile portion of the country for the location of the nucleus of their sect." Thus we see the spirit of sect to-day can invent nothing but outward and material forms and singularities. It is struck with paralysis and powerlessness, and it will not be revived.

We do not wish to draw conclusions from all that we have laid bare respecting religious movements in America; it is enough to have indicated their actual tendencies; but we would add, that people would do well to observe closely, and to follow with a most attentive eye, the singular evolutions of the human mind at the present epoch. Its peculiar tendencies prophesy of revolutions which all those are expecting who know that the destinies of the world are not shut up within the walls of a single city, or within the hands of a few crafty politicians. The world, at the present hour, is upon the eve of most remarkable events of all kinds; and amongst these events those which concern religion are by far the most numerous, the most characteristic, and the most striking.

IV.—MANNERS OF THE AMERICANS.

Many pages would not suffice for a *resume* of the strange facts which recent travellers have gathered respecting the manners which prevail in the United States, or for the striking reflections which they naturally suggest. Mrs Trollope, Miss Martineau, and Charles Dickens have made books, and large enough books too, in which nothing of the Americans but their manners is examined; and more recent travellers, in spite of their desire to remain strictly geological, or strictly agricultural, have been unable to avoid filling large portions of their books with eccentric anecdotes, *bon mots*, and traits of character. But if it is difficult to recapitulate the facts, it is still more difficult to classify them—so contradictory, so changeful, and so incongruous are all the traits which have been described to us of American manners. Such a fact may appear extremely curious, but these traits and episodes seem to have no relationship to, or any connection with, one another, or with the general manners of the country. The manners of one state are not those of another, and the customs of the people are alike in no two places. No kind of settled manners exist in the United States; there are only attempts and essays at their establishment. The moral life of the Americans has as yet only progressed slowly, and the slowness of its advancement has been only a result of the precipitation and rapid progress of their outward and material life.

It is curious to observe how in America manners form themselves in virtue of the moral and political principles which exist. This spirit of liberty, of personality, repelling and unsocial, could not fail to engender civil war and anarchy, if it persisted obstinately in its pretensions, but of these necessity compels it to give up and cede a part. Of individual liberty is born the spirit of association, which engenders in its turn the despotism of public opinion. The individual finds entire multitudes arrayed against him, and, surrounded on all sides by this invisible despotism, sees himself compelled to submit or to succumb. The victims of public opinion are innumerable in the United States; and as this kind of tyranny is as yet but in its infancy, it will become much more powerful, and will have given to the world, in the course of a few years, a martyrology of a new and a strange kind. In the land, *par excellence*, of illimitable liberty, we shall see appear martyrs of liberty as well as in the despotic states of Europe. Already there exists in the minds of all the higher and better-educated classes of Americans a feeling of contempt towards the multitude, and of anger against the false judgments of public opinion. Every aristocratic instinct that exists in human nature rebels against the domination of the masses, and refuses to acknowledge their right to rule and govern; but in their turn the multitudes reply to the individual, that they alone are able to defend him, and that misfortunes cannot but happen to those who submit not to their authority. Already

it would be hard to count the numbers of this new body of martyrs.

We will only name the Mormons, driven from state to state, and compelled to retire into the bosom of the desert, after having witnessed the massacre of their chief; and the brave Lovejoy, treated as a wild beast, and assassinated in the south, for having preached against slavery. The tyranny of which these have been some of the victims does not, however, always exercise itself in a manner so direct. It oftentimes contents itself with proscribing and insulating the individual, and rendering him as it were an outlaw and an outcast. The poor romancist, Edgar Poe, it is said, shared such a fate. In the land which, above all others, is the land of liberty, to a greater extent almost than in any other country, unfortunate indeed is the individual who cherishes other ideas than those cherished by the masses; who dares to attempt to carry into society another spirit than the one by which such society is influenced, and whose vices are other than the vices of the multitude!

The unlicensed liberty of the individual, which we have so often alluded to as being one of the chief features of the social and political institutions of the United States, engenders all that is both good and evil in the mental attributes of the Americans—their energy, their self-confidence, their cunning, and their curiosity. In the same way that public opinion wrestles with the individual, the individual battles against public opinion, and as the contest must be naturally unequal, he takes care not to attack openly his all-powerful opponent, but makes use of round-about means in order to gain his end, concealing the ground on which he takes his stand, and making it as it were his business to question and keep watch over his fellow-citizens. Thus all travellers in America have made the declaration that nothing is so importunate as Yankee curiosity This curiosity proceeds not, as ours does, from a love of novelties, from social habits and customs, or from a vivacity of imagination, it does not exercise itself upon matters of a general and neuter interest; upon political affairs, literature, or the history of absent persons; but it is, on the contrary, direct and brutal, addressing itself to persons present, inquiring into their tastes and prying into their characters.

From among the mass of anecdotes which have been related by recent travellers relating to this subject, we will take one, which we think will enable the reader to judge somewhat of the tenacity and obstinacy of this new species of curiosity. At Jamaica, Mr. Henry Coke, occupied in the digestion of his dinner, and in making preparations for his departure, encountered a Yankee in a room in a public inn. "Good day, sir, good day," commenced the states-man, eyeing me, with a calculating glance, from head to foot; "you come from America, I presume?" "No, sir, I do not," replied I, "you are mistaken." "You have but recently arrived here I suppose?" "Very recently" "Ah! ah! from England doubtlessly—native of London, sir?" "I am an Englishman, but not born in London." "Officer in the army, sir?" "No, sir, I do not belong to the army." "Ah! engaged in commerce, perhaps?" "No, sir, I travel merely for amusement." "Comfortable and pleasant that, I guess then, very. You have not visited yet many parts of the island?" "No, not many, sir." "You have been in the East, I suppose?" "Yes, sir, I have travelled much in India" "I didn't mean that east, I meant the other side of the island." "Oh, I see, yes, I came last from St. Thomas." "By which route, sir, if I may presume so far?" "By Golden Grove," &c, &c. Neither coldness of manner nor even silence can preserve the patient from this importunate curiosity. The best way is for a person to answer, in imitation of his questioner, *de répondre avec ruse, et d employer le mensonge.** If the theories of the casuists were ever legitimate anywhere, they surely must be so with such a people, with whom it would seem truly to be honesty to lie. A war of individuals, one against the other, is thus the result of this despotism of public opinion, and of the stratagems which people are forced to make use of in order to defend and to protect themselves. In the United States liberty is unrestricted; but, at the same time—a striking contradiction—each individual is obliged to defend and maintain his rights *a la force du poignet;* and it is by no means difficult to see the truth of the words made use of by an American functionary to Lord Carlisle—"America is the country of all the world in which there is existing the least misery and the least happiness."

* This half sentence we dare not translate.

THE CICADA SEPTENDECIM.

In the fifth volume of the first series of the "Working Man's Friend," page 97, we gave an account, at some length, of this very curious insect, one peculiarity of which is that it makes its appearance in some parts of America, in countless hordes, *every seventeenth* year. A correspondent has written to us to inquire whether it made its appearance according to prediction, or expectation, in May, 1851. We have the means of answering this inquiry. A correspondent of a paper published in Philadelphia, writes as follows:—

In fulfilment of the predictions, on the 3rd of May in last year, 1851, the locusts were first observed in this city (Philadelphia,) emerging from the earth They were completely formed, and enveloped in shells, which fit them closely. They crawled immediately up the trunks of trees, or fences, or walls, and in a short time managed to disengage themselves from their sheaths At first they are weak, and their wings are soft and pulpy; a few hours harden them, and they then betake themselves to the trees. They remain above ground about six weeks, and then their bodies are found by thousands under the trees. In the meantime they have performed the work of reproduction; the females are armed with sharp ovipositors, with which they pierce the young twigs and green branches, and there deposit their eggs The eggs ripen in a short time, and the young larvæe, in size almost infinitesimal, fall upon the earth in myriads, and commence their journey "into the bowels of the land" How far they go, or how they exist during the seventeen years of their entombment, is a mystery which naturalists cannot answer. Towards the end of the seventeen years farmers meet with them when digging deep ditches, or making excavations several feet below the surface.—They came up where they took to the earth, and in this city last year many of them emerged in the cellars of houses which have been built since their former visit upon ground where there had been trees. They do not prey upon the herbage whilst above ground, and it is believed that they do not eat anything In appearance they differ materially from the common locust, and their notes are not so shrill or prolonged There are so many thousands of them, however, that the sound of their songs unite in one great, and at times almost deafening chorus I well remember their appearance in 1841, and the boyish curiosity with which I looked for the coming of the insects, concerning which I had heard many predictions. I never saw any of the species again until 1851, and have no doubt that the citizens of Philadelphia, who are living in 1868, will notice the re-appearance of these mysteries of entomology about the 3rd or 4th day of May

---

Tom Moore and his Mother.—The mother's care of Moore early years, and unabated love through her advanced age, were truly beautiful They were requited, too, with the fullest measure of grateful affection and undying respect by the son. When Mr Moore (the father) died, having held for years a government appointment as Barrack-master, friends sought to secure for his widow, but Moore claimed the privilege of her support, and declined the kind agency which would have debarred him of a son's greatest pleasure His habit was to write twice a week, at least, to his mother, and the postman's knock at the expected period was an anxiously-watched moment in the old woman's fleeting hours Any visitor could tell, on entering her drawing-room, as she sat in winter by the fire, or in summer at her window, whether the bi-weekly want was supplied. A shade upon the aged brow told either that the letter had not come, or the news was not good, whilst a radiant smile proclaimed that she had got "Tom's letter" These letters, short though they might be, often but a line, were the cherished treasures of her old age. How beautiful—and the more beautiful because true—are the lines which he wrote in her pocket-book in 1822.—

"This tell n of an Indian tree,
Which, howsoe'er the sun and sky
May tempt its boughs to wander free,
And shoot and blossom, wide and high,

"Far better loves to bend its arms
Downward again to that dear earth
From which the life that fills and warms
Its grateful being first had birth

"'Tis thus, though woo'd by flattering friends,
And fed with fame (if fame it be),
This heart, my own dear mother, bends,
With love's true instinct back to thee"

With what fond pride were those hues exhibited to those who had won the mother's confidence! A willing listener—one who did not soon tire of "Tom's" repeated praises—was sure of such a mark of favour.—*Dublin University Magazine.*

EMIGRATION TO AUSTRALIA.

THE following letter, which has been addressed to the proprietors of the *Times*, by their accredited agent in Sydney, may be relied on as containing the most correct information relative to the rate of wages, &c., in New South Wales :—

As the question of emigration is beginning to attract attention, and is the only measure that can be adopted by the labouring classes in England that will afford them permanent benefit, and as several schemes of emigration and colonisation are under discussion, permit me to make a few remarks on the subject, and to enclose a statement of the various rates of wages given in this colony.

I need scarcely tell you that, so badly are we off for labour, that an emigration of 30,000 souls during this year would scarcely be sufficient for our wants. Building is nearly at an end, and every other industrial pursuit is considerably embarrassed; our resources are permitted to remain undeveloped, our flocks and herds (to the deterioration of our wool) but partially tended, and, for want of mouths to consume them, many thousands of sheep will this year be killed for the sake of the fat alone, in order that it may be rendered into tallow for exportation.

The experience of ten years, and the formation during that period of nearly 60,000 engagements, enable me to affirm that there is no place in the world where the labouring classes are so well off as in New South Wales, good wages, constant employment, no short winter days, and the finest climate under the sun, are temptations that, I am surprised your half-starved, ill-paid redundant population can resist, when coupled, too, with the fact that the industrious and thrifty soon become employers in their turn.

I am surprised that in England no steps have been taken to establish an extended system of emigration, either by a Parliamentary grant or by parochial funds. The saving of poor-rates, county-rates, police and gaol expenditure, &c., that would result, would be immense, and, in the absence of government assistance, a fund could easily be raised by the contribution of either all or a portion of the amount of one year's poor-rates by each union or district, the sum so contributed to be placed in the English funds, and the interest accruing therefrom would form a perpetual emigration fund sufficient to pay for the passages to Australia of from 20,000 to 30,000 yearly. This plan, if carried out, would cost nothing either to England or the colony, would materially lessen the burden of parochial taxation, and would transform the half-employed labourer, who cannot maintain himself and family without parochial assistance, into an industrious and thriving colonist, and do more towards the suppression of crime than a brigade of police or the admonitions of all the judges in the land.

Poverty is oftentimes the cause of crime. A wretched half-starved being, to satisfy the hunger of himself or family, commits some trifling depredation, or an offence against the game laws, for this he is sent to gaol, there to become the associate of older and more hardened villains. At the expiration of his sentence it is in vain for him to seek employment in his native parish. The felon's mark has been set upon him, and he is shunned by all, but live he must, his gaol associates are become his most intimate friends, and, step by step, he plunges into crime, and after repeated and expensive prosecutions, being considered too vicious, and his example and habits too pernicious to remain in his native land, he is sentenced to transportation, as a fit and proper personage to assist in the formation and foundation of a British colony, a free passage to which, when virtuous and free, was withheld from him. There surely must be something wrong in this, and England has much to answer for. The transit of an emigrant costs less than that of a convict, accompanied, as he must be, by guards, &c., independent of the cost of police and gaols, and all the expensive paraphernalia attending the administration of justice. Why does it appear to England's advisers that a man is not fitted to be a colonist until stamped with crime? His self-respect gone, he becomes a loathsome, degraded, convicted felon, still requiring coercion and restraint. To prevent is better than to cure, a national system of emigration would gain for England more glory, more renown, and secure her the gratitude, esteem, and support of her important colonial possessions, would check the tendency to crime, and greatly improve the demand for British manufactures.

The rates of wages given in rural districts to farm labourers are from 12s. to 15s. per week, and board and lodging, shepherds from £28 to £35 per annum, with house-room and rations, consisting, where the man is single, of 10 lb. of meat, 10 lb. of flour, 2 lb. of sugar, and ¼ lb. of tea weekly, where the man is married, and his wife employed as hut-keeper, which any woman can do, twice the above rations, and from £35 to £40; gardeners, £35 to £52 per annum, with provisions; grooms, coachmen, and domestic male servants, from £35 to £50; mechanics, such as bricklayers, carpenters, masons, &c., are obtaining from 8s to 10s. per day; blacksmiths, tinmen, and wheelwrights are procurable at paying rates; for shoemakers and tailors the demand is great, and remuneration excessive. Of book-keepers, clerks, and tutors, there are sufficient for the present wants of the colony. With respect to female servants, &c., I think an almost indefinite number could procure good situations at high rates of wages; but the demand is greatest for what in England is styled a "servant of all work," to such we are now paying from £15 to £20 per annum, plain cooks, £25 to £30, housemaids £14, laundresses and nurses £16 to £23, to female servants for the country, the majority being Irish orphans, we are compelled to pay £16 16s. a year; good needlewomen 12s to £1 a-week, and board and lodging. Female servants, especially during these golden times, get married so quickly, it is almost impossible to overstock the market.

Governesses are just now much wanted; they should be capable of teaching the accomplishments and music perfectly, and, if possessed of prudence and good temper, speedily form engagements for life.

Much prejudice may exist in the female mind as to the desirability of selecting a colony the origin of which was penal as the future home, but you can assure your fair readers, whether of humble pretensions or otherwise, that in no portion of the world is a respectable, well-behaved woman treated with more respect, a virtuous woman more secure or more highly thought of, or the prospect of her advancement more certain than in New South Wales.

With these few words to intending emigrants, "Take the first reasonable offer you have of employment, and do not suffer the allurements of the town or the statements you may hear against the bush, to prevent you from proceeding thither."

I beg to subscribe myself, Sir,

Your most obedient servant,

J. FREDERICK JOHNSON.

General Agency office, 319, Castlereagh-street, North, Sydney, New South Wales, *May* 24.

LITERARY NOTICES.

CASSELL'S ELEMENTS OF ARITHMETIC.

In a commercial country like ours, a good knowledge of figures is of the last importance, but to become completely master of the "Science and application of Numbers" it is necessary that something more than the mere routine system should be acquired. Notwithstanding the almost universal aptitude of Englishmen for calculation, it is nevertheless the fact, that a perfect acquaintance with the *principles* of arithmetic is a very rare quality amongst even those whose business or profession calls for the free[illegible]. It is common to find young men engaged in the various departments of a counting-house, who do not possess the faintest idea of the general principles and philosophy of book-keeping, and it is no less common to discover among clerks—nay, even among schoolmasters and teachers—a good general knowledge of the ars[illegible]methods, and upon[illegible] the reasoning[illegible] the practical arithmetician on the subject. It is more rare to find [illegible] acquainted with the first principles and operations [illegible] to comprehend the action, motive-[illegible] which the importance of [illegible] a series of Rules; to [illegible] which would lead to [illegible] and exercises [illegible] which, while [illegible] the exceptional [illegible] of the [illegible] would enable them to [illegible] It is of little use to be enabled to work out a particular rule by educational dogma, without at the same time understanding its reason and application to the ordinary operations of business and commerce. "Cassell's Euclid" has, the[illegible], been properly followed by "The Elements of Arithmetic," edited by Professor Wallace, A.M., and published, in paper covers, for one shilling. JOHN CASSELL'S ALMANACKS FOR 1853.

THE UNCLE TOM'S CABIN ALMANACK, or, THE ABOLITIONIST MEMENTO for 1853, splendidly illustrated by George Cruikshank, Gilbert, Harvey, "Phiz," and other eminent Artists. Price 1s.

THE ILLUSTRATED EXHIBITOR ALMANACK for 1853, containing upwards of Thirty beautiful Engravings. Price Sixpence.

THE POPULAR EDUCATOR ALMANACK for 1853, containing Forty-eight Pages of most Interesting and valuable Educational Statistics, including a Comparative View of Education at Home and Abroad, Essays on the Leading Sciences; Brief Notices of Eminent Scholars; Exposition of Technical Terms; &c. &c. Price Twopence.

THE TEMPERANCE ALMANACK for 1853, much improved and enlarged, and in which is inserted a Tale of thrilling interest, from the pen of Mrs. Harriet Beecher Stowe, authoress of the inimitable "Uncle Tom's Cabin," entitled, "THE PLEDGE TAKEN; or, the Husband Saved, and a Family made Happy;" with valuable details of the great Temperance Movement, statistics, &c. With several Engravings. Price Twopence.

THE PROTESTANT DISSENTERS' ALMANACK for 1853, with Twelve beautiful Designs, by Gilbert, of striking Events in the History of Nonconformity. Price Sixpence.

GLEANINGS

FROM ALL KINDS OF FIELDS.

HAPPINESS is a roadside flower, growing on the highways of usefulness.

IN modern mythology, the three graces are L.S.D.—the three furies I.O.U.

A MONK is a man who commits himself to prison for being religious; a nun, an unhappy girl who fears to appear in open day, lest her sins should find her out.

"OLD AGE is coming upon me rapidly," as the urchin said when he was stealing apples in an old man's garden, and saw the owner coming, horse-whip in hand

FOUND.—The key to the trunk of an elephant. A hair from the head of a river. A dozen feathers plucked from the "wings of the wind." A drop of blood from the heart of a stone. The nail from the finger of scorn. The diary of the "man in the moon." A boot from the foot of a mountain. The owners are requested to call, prove property, pay expenses, and take them away.—*American Paper.*

BOTH WITTY AND TRUE.—A blacksmith brought up his son, to whom he was very severe, to his trade. One day the old man was trying to harden a cold chisel, which he had made of foreign steel, but he could not succeed. "Horsewhip it, father," exclaimed the young one; if that will not *harden* it, I don't know what will."

BLINDNESS IN PERSIA.—Blindness is very common in Persia. Six or eight blind men are often seen walking in a string, each with his right arm on the shoulder of his precursor; partly caused by ophthalmia produced by the dust, and partly because the Schar has it in his power to inflict the punishment of pulling both or one of the eyes out. It is stated in the "Household Words" that "the great-grandfather of the present Schar, Aga Mahommed, the founder of the Kujur dynasty, had large basketfuls of the eyes of his enemies presented to him after his accession to the throne!"

A RAPPIST AT FAULT.—The *New York Independent* narrates the following incident, illustrating the mistakes that will sometimes happen, even among the best regulated Spirit-rappers:—"A gentleman was a few weeks ago interrogating the invisible author of certain raps as to the disease of which he (the rapper) died. With considerable natural difficulty and delay, the reply was spelled out "Consumption." The questioner looked a little dissatisfied; and a physician in the company, who was jealous in the faith, hastened immediately to explain that there are a variety of forms of disease, either of which may well enough come under the general name consumption. 'That's all very well,' said the questioner; 'but it hardly applies to this case, for the man he professes to be *was blown up in a steamboat!*' The rapper was too indignant to make any further revelations to *that* medium."

A JACK OF ALL TRADES.—In the course of talk with a partial acquaintance the other day, I casually asked him his occupation. He replied that he did not know what it was, for the reason that he was brought up a farmer until nineteen years of age, and then went to keeping district school days, and writing school nights three years. From that, taught select school, two terms, grammar-school one, and speaking one. He then hired out at ten dollars a month and board, to work in a carriage shop, and continued until they raised his wages to twenty dollars, at which time he was a member of the Eastern Christian Conference, and went to preaching. In 1848 was elected delegate to a State Convention at Utica. Has just completed a carriage worth one hundred and twenty-five dollars, having done the wood-work, ironing, and painting himself. Preaches regular to a church once a week, and lectures on temperance, slavery, and on other subjects on Sabbaths, and has his goods partly packed, purposing to try his fortune in Illinois. "And now, sir, as I work at any or all of these as they come in my way," said he, "you can tell as well as I what my occupation is, or whether I really have any. I have had wages and passed muster at all of them, as many living witnesses can attest, and was, the 2nd day of November last, just thirty years of age."

SENSIBLE ADVICE.—When the Duke of Wellington took office, he wanted the aid of his veteran friend, then Sir Harry Hardinge, and, sending for him, he expressed his wishes on the subject. "But," interposed the practical soldier, "I shall never be fit for official work in the House of Commons." "Pooh, pooh," was the Duke's reply, "you will manage the Parliamentary work very well. The only rule you must follow is this—Never speak about anything you do not understand, and never quote Latin."

WITH every exertion, the best of men can do but a moderate amount of good, but it seems in the power of the most contemptible individual to do incalculable mischief.

IF you desire to be wiser, think not yourself wise enough He that instructs one that thinks himself wise enough hath a fool to his scholar, he that thinks himself wise enough to instruct himself hath a fool to his master.

I WILL HOPE.

I will hope, I will hope,
Though my pathway be set
With the darkest of sorrows,
And deepest regret.

I will hope, I will hope,
Though youth's visions may flee;
I'll believe there is something
In future for me

I will launch my frail bark,
I will breast every gale,
Though my rudder be riven,
And shattered my sail

Hope's anchor shall guide me,
And bring me aright,
When the world's fleeting shadows
Shall fade from my sight

OLD DRINKING HABITS IN IRELAND.—If on any occasion a guest left the room, bits of paper were dropped into his glass, intimating the number of rounds the bottle had gone; and on his return he was obliged to swallow a glass for each, under the penalty of so many glasses of salt and water. It was the practice of some to have decanters with round bottoms, like a modern soda water bottle, the only contrivance in which he could stand, being at the head of the table, before the host. Stopping the bottle was thus rendered impossible, and every one was obliged to fill his glass at once, and pass the bottle to his neighbour, on the peril of upsetting the contents on the table. A still more common practice was to knock the stems off the glasses with a knife, so that they must be emptied so fast as they are filled, as they could not stand Sometimes the guests as they sat down pulled off their shoes, which were taken out of the room; and the emptied bottles were broken outside of the door, so that no one could pass out till the carouse was over.—*Ireland Sixty Years ago.*

NOTICES TO CORRESPONDENTS.

NUMEROUS CORRESPONDENTS have made inquiries concerning the daily pay allowances to the officers and men in the New Militia. We there fore subjoin the following from official papers:—

	£	s.	d.
Colonel ..... and 6d. a day per company	1	2	6
Lieutenant-Colonel	0	15	11
Major	0	14	1
Captain, including non-effective allowance.....	0	10	6
Lieutenant	0	6	6
Ensign	0	5	3
Adjutant	0	8	6
Surgeon	0	11	4
Surgeon's Mate	0	5	0
Ditto, if holding another appointment in the regiment	0	3	6
Sergeant-Major	0	2	0½
Quartermaster-Sergeant	0	2	0½
Paymaster Sergeant	0	2	0½
Sergeant	0	1	6½
Corporal	0	1	2½
Drummer	0	1	1
Private	0	1	1

In cases where the ballot is resorted to, substitutes will be allowed as before. The only persons exempted from the ballot are those who suffer from physical debility, who hold government appointments, or are apprentices, ministers of the gospel

COLUMBUS.—You should write to the Secretary of the Admiralty for the particulars you require. But we doubt whether you will succeed.

RICHARD GEORGE has in his possession a farthing coin with the heads of William and Mary, date 1691 Can any correspondent inform him, through our columns, whether it is scarce or valuable.

NPO PHILOSOPHUS.—You will obtain "the most correct information regarding the art of photography," by taking lessons of some eminent practitioner. A valuable article on the subject will be found in "The Illustrated Exhibitor," No 7 (new series), pages 106—110. Most of the "Manuals" and "Handbooks" published, contain chiefly recommendations of the plates, acids, &c, manufactured by the respective publishers.

A V. P. (Poole).—Our views of the character of Charles I. and Oliver Cromwell accord fully with yours. The article, to two or three lines in which you take exception, is from the pen of an eminent contemporary. We gave it insertion as containing a just tribute to the memory of our great epic bard, and, in our haste, neglected to draw our pen over the exceptionable expressions.

A TOTAL ABSTAINER.—You will find the "government returns as to spirits, malt, hops, &c.," in the "Temperance Almanack for 1853," which will be published by the time you receive this No.

JOHN SMAILS.—We are obliged to you for the puns you have taken about your have misunderstood our correspondent Mr. McWalter's question. What he wanted to know was the quantity of *intoxicating drink* sold *in the Exhibitors' room* during the Exhibition.

J. A. LANGFORD.—Your lines will appear shortly.

JANET HAMILTON.—We have transferred your verses, "The Plague of our Isle," to the pages of the "Temperance Almanack for 1853." Your other piece will probably appear shortly in the "Working Man's Friend."

T. Y.—Your payment or non-payment of rates depends entirely on the terms of the agreement made with your landlord.

F. B. S.—The best book for your purpose is one which we shall publish very shortly—"A Complete Manual of the French Language, by Professor De Lolme."

A READER.—"*Palmer*" is an ecclesiastical term: it is the name given to *a pilgrim*, so called from the staff of palm-tree which he carried in his hand.

T. M.—We believe the Earl of Derby was born in the year 1799, and his son, Lord Stanley, in 1826.

JEMIMA.—In your choice of "tooth powder," be careful not to use anything hard or gritty, as that will injure the enamel of the teeth The best dentifrice is charcoal finely powdered; but it should be *newly burnt*, and kept in well-closed vessels, as by exposure to the air it soon loses its peculiar virtues.

THE SLAVE TRADE IN AFRICA.

IN this year of grace 1852, the slave trade in Africa is a thriving and profitable one. This assertion may sound strangely to ears accustomed to hear the praises of Wilberforce, Clarkson, and Brougham; and it may startle eyes in the habit of looking on the question of negro slavery only in its American aspect; but it is nevertheless true. According to Sir E. F. Buxton, there are throughout the world, at this present moment, nearly seven millions of our coloured brethren in a state of slavery! Every year there are from four to five hundred thousand negroes exiled from their native shores in Africa, to minister to the wants of luxury, or to the so-called necessities of commerce, in other lands. Nearly *two-thirds* of these, however, are destroyed in the process of this infernal traffic. Immense numbers are killed in the slave-catching expeditions of the native chiefs in Africa; others die of weariness and privation in their journey from the interior to the coast; while whole hordes perish in that fearful voyage called the "Middle Passage;" that is to say, in their transport from Africa to the Brazils, the Island of Cuba, &c. Previous to the year 1820, the slave trade was a legal traffic for the ships of Great Britain, the United States, Austria, Prussia, Russia, Spain, and Portugal; at present it is confined principally to the annual, nay, constant, export of negroes from the coast of Africa to Brazil and Cuba. From 1842 to 1850, there have been received into the Brazils not fewer than 480,000 slaves—an average of 60,000

DAHOMAN WARRIOR.

THE FAVOURITE QUEEN OF DAHOMEY.

Great Britain,—by treaties and remonstrances with Brazil, and by an active and expensive blockade of the African coasts,—this average number is said to be yearly declining. The slave trade in Africa is still an established and profitable one; and nothing but the good sense and humanity of mankind can ever put it down.

To convince the nations who profit by the trade, that it is a bad and unjustifiable one is, however, by no means an easy task. It may be, that the course pursued by our government is the right one; but we have, every one of us in our own private circle, the means of accomplishing, eventually, the black man's deliverance. We must make ourselves acquainted with the whole case; we must read, and talk, and write about it, till every man, and woman, and child, in England, and America, and continental Europe is fully alive to the abomination which exists in the very heart of our boasted civilisation. We live in an anti-slavery nation, let us try if we cannot live in an anti-slavery world. The publication of Mrs. Stowe's admirable tale is one means—and a great one—of bringing about the negro's deliverance; for nothing can better tend to the removal of an evil than its denunciation and exposure. The public mind is at this moment prepared to admit the immensity of the evil called slavery, and every fact which bears on this question is an arrow from the shaft of truth, destined to pierce the heart of that false philosophy which declares man-dealing to be an institution of God. How are the slave markets of Brazil supplied? We will endeavour to answer this question.

If you look into the map of Africa, you will perceive on the western side of it, between the first and tenth degrees of east longitude, a small country just withinside the Guinea coast, and bounded by the rivers Niger and Volta. This is the military kingdom of Dahomey, the focus and grand depôt of the slave trade in Africa. It is difficult to define its exact limits, but it may be considered to be about 200 miles long by about 180 broad. Its only port is Whydah; but the king of Dahomey claims the sovereignty of the sea coast, and from this port are exiled the miserable natives whom the annual slave-hunt has brought into the power of the Dahomans. It must be explained that the only actual revenues of this kingdom arise from the sale of slaves, and from the tribute which is enforced from European vessels which visit the coast. The government is an absolute monarchy, and the people inhabiting the country are described to be the most cruel, rapacious, vindictive, and blood-thirsty of any in Africa. In future for king proclaims a slave hunt into the [illegible] will [illegible]ica. Every year the terror with which the name [illegible] interior; and such is the regularity by the neighbour[illegible]. A general interrogation Gézo, the present king, is was a few [illegible] received [illegible]ther of certain neighbouring states of Ashantee, Yorohbah, &c., that tribute is sent and the monarch appeased by the present of large numbers of slaves.

Owing to the ravages of its devastating wars, the population of the kingdom of Dahomey does not exceed 200,000 of both sexes, and Abomey, the capital, has not more than 30,000 inhabitants.* Of the whole population, not more than 20,000 are free, the remainder are slaves. The regular army consists of about 12,000, and of these 5,000 are amazons, or female warriors. When the king goes to war, he levies in all about 24,000 men, and an equal number of commissariat followers. Thus he moves on his war march with nearly 50,000 of both sexes, or one-fourth the whole population of his kingdom. It is scarcely necessary to state that Dahomey is under a military rule and government, and has no parallel in history. The time is thus yearly divided between war and festival. The subjects attend at the Great Festival, the See-que-ah-hee, with presents or tribute. If unable to be present in person, each must send a gift, according to his rank and pretensions.

In the month of November or December, the king commences his annual wars. For three successive years his people have asked him for war upon a particular place, and he marches forth, concealing, until within a day's march, the name of the place against which he has brought them. Against the devoted city his troops march, whilst the king, nobles, and royal family remain encamped. Daylight is generally the time of onset, and every cunning, secrecy, and ingenuity is exercised to take the enemy by surprise.

"At Okeadon, in 1848, a chief turned traitor, and introduced the Dahomans at daylight. They had made a feint on Abeal Keutah, and in the night fell back upon Okeadon. On the opposite side to that attacked ran a rapid river, and in crossing this many were drowned, and but few saved. Although there was no resistance, all the aged were decapitated on the spot to the amount of thousands, and the strength and youth of the city sold into slavery.

"The Attahpahms, in the early part of 1840, aware of the Dahoman march, sent every article from their town, with all the aged, youths, and females. Unfortunately the preparations of the Dahomans struck terror into the minds of the soldiers of the Attahpahms, who, knowing their fate if conquered, excepting about 400, fled from that city. Yet these 400 resolute men kept the Dahomans in check, killed many, put the males to the rout, and, had it not been for a rally of the Amazons, would have discomfited the Dahoman army. Had the Attahpahms stood, they would, with ease, have conquered the merciless invaders.

"After the destruction of a town, notice is sent to all neighbouring caboceers, or chiefs, calling up them to swear allegiance to the conqueror. Many do so at once, and receive their original rank, with an equal, a Dahoman, to act as coadjutor the remainder are persecuted until subjugated.

"On the return from war in January, the king resides at Cannah, and makes what is termed "a Fetish," i. e., sacrifices largely, and gives liberal presents to the Fetish people, and, at the same time, purchases the prisoners and heads from his soldiers. The slaves are then sold to the slave-merchants, and then blood-money wasted in the ensuing custom, Hwanoooewha, as the great annual feast is entitled in Dahoman parlance.

"Of these customs, the most important is that held in March, and called the See-que-ah-hee, at which the king's wealth is profusely displayed. That which is held in May and June is in honour of trade, with music, dancing, and singing. A small schooner on wheels, laden with gifts, is then drawn round the capital, and the cargo afterwards scrambled for by the Dahoman army.

"In July, on an appointed day, the soldiers are planted along the road from Abomey to the beach at Whydah, a distance of ninety miles. At the moment when the king drinks, its announcement, by the first gun of a royal salute fired at Abomey, is carried by the musketry to Allahdah, whence the first of the salute there is conveyed similarly by sound to the [illegible] ocean at Whydah, intended as a [illegible] salute to the Fetish of the Great Waters, or God of Foreign Trade. The boom of the first gun fired by the foreign forts at Whydah is echoed back through Allahdah to Abomey, whence another salute finishes this extraordinary custom. August and September are occupied by preparations for war, serving out powder, balls, or gun-stones (small ironstones), and much palaver on war subjects. Before going to war, the king makes a custom to the memory of his father, which generally lasts a month. And thus ends the year; keeping the nation in a fever of excitement, dancing, singing, haranguing, firing, and cutting off heads, thus demoralising more and more the nature of a people already among the most barbarous of the African nations."*

The Amazons who accompany the army on their slave-hunting expeditions, according to the testimony of Commander Forbes, are not supposed to marry, and, by their own statements, they have changed their sex—"We are men," say they, "and not women." All dress alike, diet alike, and male and female emulate each other. They all take great care of their arms, polish the barrels, and, except when on duty, keep them in covers. There is no duty at the palace, except when the king is in public, and then a guard of Amazons protect the royal person. The Amazons are in barracks within the palace inclosure, and are under the care of the eunuchs and the treasurer. In every action with males and females there is some reference to the cutting off of heads. In their dances—and it is the duty of the soldiers and Amazons to be proficient dancers—with eyes dilated, the right hand is working in a sawlike manner for some time, as if in the act of cutting around the neck, when both hands are used, and a twist is supposed to finish the bloody deed.

In the years 1849 and 1850 there were sent to this country of

* The Uncle Tom's Cabin Almanack, or Abolitionist Memento for 1853.

* Dahomey and the Dahomans, by Frederick E. Forbes, R.N.

slave-hunters two several missions from the British Government. These missions were conducted by Mr. F. E. Forbes, Commander in the Royal Navy, and Captain Winniet, Lieutenant-Governor of Her Majesty's settlements on the Gold Coast; and then purpose was to induce the king of Dahomey to give up the slave trade, or in some measure alleviate the condition of the miserable natives by whom his country is surrounded. This mission of Captain Winniet was reported to the British Cabinet by Mr. B. Cruickshank, and from the published accounts we gather some interesting facts concerning Dahomey and its nearly-savage king.

After describing his journey, the author goes on to say that for a period of twelve years the annual exportation of slaves from the territory of the king of Dahomey has averaged nearly 170,000! besides about another thousand brought every year from the towns and villages on the coast. This supply is mainly kept up by a systematic custom of slave-hunting, in which the king joins his subjects, for about three months in every summer. The people against whom these hunting expeditions are undertaken are weak and detached tribes, living at distances varying from twelve to twenty-four days' march from Abomey, the capital of Dahomey. A battle rarely occurs, and the loss in killed is usually not great, the African princes preferring craft and subtlety rather than open force. The plan usually adopted is to send out traders as spies, from whom the king receives such information as enables him to gather together his army and surround his unresisting victims in the night, who, it is needless to state, are his slaves by the morning.*

It is only when the subjects of a king of nearly equal power are attacked, that anything like a battle is fought, but even then the slaughter is not very great.

The king's entire revenue is derived from the sale of slaves, an export duty being paid upon each slave, the property of a private individual, shipped in his dominions, producing an annual income of upwards of fifty or sixty thousand pounds!

But even this does not give a correct notion of the advantages this savage monarch derives from the sale of his fellowmen; as, by the laws of this country, he inherits the property of his deceased subjects, leaving the heir only a very small portion, to serve as a kind of capital, so that by this system, and the frequent bestowal of offices of trust and profit upon his favourites, his sable majesty contrives to hold pretty much his own way in his little kingdom.

Another dreadful circumstance, which Mr. Cruickshank learned through De Souza, an European resident at the slave coasts, is, that slaves are extensively sacrificed in the performance of certain rites and superstitious observances peculiar to the religion of the tribe.

With these facts before him, and with scarcely any hope of success, the ambassador sought an interview with the savage king, bearing with him certain presents from England. He was well received, and, finding the king not quite so barbarous as he had anticipated, he soon introduced the object of his mission, and urged him to give up the traffic in slaves and forego human sacrifices, assuring him of the protection and friendly feeling of the British Government, should he comply with their desire. Upon being requested to ratify a treaty previously brought under his notice by Captain Winniet, the lieutenant-governor, he appeared at a loss to reply. There was an apparent struggle taking place in his mind; his friendly disposition to Her Majesty's Government, and a desire not to give offence by a positive refusal, combating for a time his feelings of self-interest. In such a contest, however, the victory could not be long doubtful; and it was evident that his hesitation arose not from any wavering in his determination respecting the slave trade, but from his difficulty in choosing the least offensive manner of expressing his negative.

His chiefs had had long and serious consultations with him upon the subject; and they had come to the conclusion, that the government could not be carried on without it. The state which the king maintained was great; his army expensive; the ceremonies and customs to be observed annually, which had been handed down to him from his forefathers, entailed upon him a vast outlay of money. These could not be abolished. The form of his government could not be suddenly changed, without causing such a revolution as would deprive him of his throne, and precipitate his kingdom into a state of anarchy. He was very desirous of acquiring the friendship of England. He loved and respected the English character, and nothing afforded him such high satisfaction as to see an Englishman in his country, and to do him honour. He himself and his army were ready at all times to fight the Queen's enemies, and to do anything the English Government might ask of him, but to give up the slave trade! No other trade was known to his people. Palm oil, it was true, was now engaging the attention of some of them; but it was a slow method of making money, and brought only a very small amount of duties into his coffers. The planting of coffee and cotton had been suggested to him; but this was slower still. The trees had to grow, and he himself would probably be in his grave before he could reap any benefit from them. And what to do in the meantime? Who would pay his troops, or buy arms and clothing for them? Who would buy dresses for his wives? Who would give him supplies of cowries, of rum, of powder, and of cloth to perform his annual customs? He held his power by an observance of the time-honoured customs of his forefathers; and he would forfeit it, and entail upon himself a life full of shame, and a death full of misery, if he neglected them It was the slave trade that made him terrible to his enemies, and loved, honoured, and respected by his people. How could he give it up? It had been the ruling principle of action with himself and his subjects from their earliest childhood. Their thoughts, their habits, their discipline, their mode of life had been formed with reference to this all-engrossing occupation; even the very songs with which the mother stilled her crying infant told of triumph over foes reduced to slavery. Could he, by signing this treaty, change the sentiments of a whole people? It could not be! A long series of years was necessary to bring about such a change. He himself and his people must be made to feel the superior advantages of another traffic in an increase of riches, and of the necessaries and luxuries of life, before they could be weaned from this trade The expenses of the English Government were great, would it suddenly give up the principal source of its revenue without some equivalent provision for defraying its expenses? He could not believe so. No more would he reduce himself to beggary. The sum offered him would not pay his expenses for a week; and even if the English Government were willing to give him an annual sum equivalent to his present revenue, he would still have some difficulty in employing the energies of his people in a new direction. Under such circumstances, however, he would consider himself bound to use every exertion to meet the wishes of the English Government.

Such were the arguments which the king of Dahomey used in justification of his refusal to sign the treaty, and much regret did he express that the object which the English Government had in view was of such vital importance to him that he could not possibly comply with its request.

Although inwardly acknowledging the force of these arguments, the ambassador did not give up the subject, but in repeated interviews attempted to show that it would be more profitable to the king to develop the resources of his own country, by means of his own people, than by selling them to foreigners. This argument was strengthened by the fact that, if a slave were worth so much in Brazil for the mere purposes of labour, he must be equally valuable at home, if he were similarly employed. The king admitted the truth of the argument, and while acknowledging the favour of the English Government, said he despaired of soon bringing about so desirable a change in his dominions. The length of time required, the whole process of a new system, and the want of skill among his subjects, appeared to him immeasurable difficulties: and, in fact, he politely declined the question.

At last, says Mr. Cruickshank, the king appeared anxious to escape from this harassing position; and, by way of closing the interview, invited me to accompany him to witness a review of his troops. "What principally struck me on this occasion was the animus displayed by every one present, from the king to the meanest of his people; every word of their mouths, every thought of their hearts, breathed of defiance, of battle, and

* Copies of Despatches received from Captain Winniet, Lieutenant-Governor of her Majesty's settlements on the Gold Coast, relating to missions to certain princes in the vicinity of those settlements.

slavery to their enemies; his principal captains, both male and female, expressed an anxious hope that I would remain in their country to witness their first triumph, and to behold the number of captives they would lead back to Abomey; and, that I might be in no doubt that the general mass participated in these sentiments, such an assenting shout rent the air as must have often proclaimed the victory. A quiet smile of proud satisfaction passed across the king's face as he regarded me with a look which said, 'These are my warriors!' and when I heard the loud rattle of their arms, and saw the sparkle of their delighted eyes gleaming with strong excitement as they waved their swords and standards in the air, I fully acknowledged the force of the king's question, 'could he, by signing the treaty, change the sentiments of a whole people?' The sight which I was witnessing was to me a stronger argument

AMAZON, OR FEMALE WARRIOR OF DAHOMEY.

than any the king had yet used; here there was no palliating, no softening down, no attempt to conceal their real sentiments under the plea of necessity for undertaking their slave-hunting wars, but a fierce, wild, and natural instinct, speaking in language that could not possibly be misunderstood."

And so concluded the mission. The King of Dahomey is described as far less of a savage than he had been represented to Mr. Cruickshank. He listened to the ambassador's arguments with respectful attention; and the conviction was forced upon the Englishman that he was a man of superior intellect, and endowed with an extraordinary capacity for government. To strangers he is hospitable and kind; to his subjects, equitable and generous. Impressed with the dignity of his station he maintains great frugality and temperance in his persons habits, and rarely gives way to sudden ebullitions of anger. His mind is active and inquiring, and he betrays a laudable anxiety to be made acquainted with the laws, manners, and customs of foreign nations. Like all uneducated Africans, he is strongly attached to the customs of his fathers, and regards with much suspicion any attempted innovation; hence the uneasiness which he displayed in his conversations upon the slave trade We must look at it with his eyes, however; and as soon may we expect the English Government to be carried on without its Army and Navy Estimates and Civil Lists, as to convince him that he could give up one item of his expenditure. It is much easier to deplore the existence of this horrible traffic than to devise efficient means for its total abolition.

It is rarely that Europeans are called upon to believe in the

MUSICIANS OF THE AMAZONIAN ARMY.

existence of Amazons,—fighting women, prepared to do battle on all around, the terror of the neighbouring tribes, dressed in the attire of male soldiers, armed with muskets and swords. These sable ladies perform prodigies of valour, and not unfrequently, by a fortunate change of fortune, the honour of the male soldiers, by bearing down [illegible] them, discovering themselves to the astonished [illegible] prisoners to be women, exceeding their male [illegible] in cruelty and all the stronger passions.

Excited by the hopes of reward, the evil passions of man are fearfully developed in Dahomey. Blood money is the sure reward of valour, the price of blood the only fee; and it matters not if the prisoner be brought alive to the monarch, as his

destroyers of this fearful evil, many in the main correct, yet differing sufficiently as to render them apparently opposed! All men of education must be moral haters of the iniquitous traffic; but it is not always that education can carry a man's ideas above the advantage of his own interest; and no doubt the interests of this country—the monied interest of the manufacturing portion—are for the time better answered by the existence of the slave trade than they would be by its repression. Such, however, would not be the case on the consequence of its failure, and the rise of legal trade, the extension of commercial intercourse, the civilization of Africa. "The multiplicity of wives enjoyed by the king and his officers, and the selection and separation of thousands of maidens as Amazons, leave but few females wherewith to increase the population; whilst the hundreds of thousands of skulls that ornament the palaces, the annual introduction of 60,000 slaves into Brazil, at an exportation of at least 180,000 from Dahomey, unite in tending to decrease the numbers of the people rapidly, and thus render the demand for manufactured goods, or, in other words, for trade, less than it would otherwise be. Look at the method employed to feed this traffic. A war of extermination is decided on by a giant army on an unoffending town. We all know by histories of recent wars with civilised troops what are the horrors of a protracted siege, or of the excitement incidental to a mortal conflict. How can we wonder then at the fearful tragedies constantly enacted by the Dahoman armies, when the price is honour or disgrace; a head or a prisoner, or to be publicly spat upon by some self-lauding Amazon in the ensuing council?"

These wars are directly and instrumentally the acts of the slave-merchants of Whydah and its neighbouring ports; but have they no higher parties on whom to lay the blame of their actions? are these the agents of larger houses, the instruments in the hands of parties who have other means of disposing of their goods, to bear the whole blame? Truth is strange, but a truth it is, says Mr. Forbes, that the slave trade is carried on in Dahomey and the neighbouring kingdoms with British merchandize; and, at Porto Novo, the residence of the monarch of slave dealers, by British shipping direct. "I do not mean to say, that if British goods were not obtainable, the traffic would cease to exist; but the taste for British goods runs high, and if these could not be purchased with slaves, palm-oil would be manufactured to obtain them."

That the discontinuance of trading with the slave ports would afford most important aid in the reduction of the horrors of the slave trade, there can be no doubt. Except with the natives for palm-oil or other native produce, the system of trading with the interior kingdoms is in pawns, or domestic slaves, saleable on the seacoast to the highest bidder. But with these pawns a dawning of civilisation has illustrated that the African is not even by nature the brute he is generally believed to be. Should the pawn become a parent, neither the parent nor the child can be forcibly expatriated.

Our author thinks it is by no means impossible to stop the slave trade, but the means to be employed must, he declares, be unceasingly applied. Blockade is one of the means, a portion of one system; and, by its increase and the adoption of steam, a mighty one. "Under the term blockade, I include the whole coercive actions of the British fleet against the Brazilian slave trade, whether on the coast of Africa or Brazils. But the blockade, as it was two years ago, with one third more extent of coast, and more than a third less in number of vessels, only a small portion of which (in comparison the opposite) were steamers, was a very inefficient organ of an unconnected system, that left it obvious to those most interested, that it would be almost impossible to check even a contraband traffic open to so extensive a demand."

The blockade by British ships is only a portion of the system that might and would overthrow the slave-trade. As now worked, with increased efficacy, the blockade renders the price of slaves high and the market precarious. But the slaves, already so dear in the Brazils, might be rendered considerably more expensive by the withdrawal of trade from the slave dealers, and the prevention of the sale of slave-grown produce in this country, and by enacting treaties of commerce with the chiefs themselves; thus bringing into the market desirable articles of trade, requiring the extension of labour to produce, and consequently pointing out to the naturally cunning African monarch, that in order to be rich he must increase the number of his subjects, and not sell the source of his wealth the labour of his people.

One-third at least of the extent of the slave coast has been already conquered by civilisation and legal traffic, and it requires perseverance alone to reduce the remainder. All the high roads to Central Africa, the Delta of the Niger, in which are included the Benin, the Camaroons, the Calabars, &c., have submitted to the laws of civilisation, and the inhabitants accept with disgust the idea of selling their fellow-men. Nor is this all; the heathen superstitions of the land are fast receding before the steps of Christianity. Between this Delta and the other portions of reclaimed Africa, Liberia and Gallinas, is the extent of the coast of which Dahomey is the central and all powerful kingdom, open to social and moral or coercive conquest, or both. The former would effect its object by intercourse and trade together, aided by the morals and example of the settlers and traders; the latter would exact treaties requiring the expulsion of an evil at once disgraceful in the sight of God and man. The two means of conquest, if combined, would first destroy the evil, and then set up such a demand for the produce of the land as would, as it has in the rivers above quoted, render it impossible that the slave trade should ever again offer its present powerful temptations. The lovers of peace may quarrel with the term coercion, but in its African sense there is no display of military cruelty. Those portions of Africa whose inhabitants have seceded from the slave traffic have done it partly from coercive measures, and partly from moral effect, but the former measures have been simply used to the foreign slave-dealer, and the latter to the native, whose benefit has been materially studied, although perhaps not so satisfactorily to his grasping nature as at once to be developed.

With one other extract from Commander Forbes' admirable volumes we conclude. —"There is," says he, "one last and strong reason why a conquest of slavery should be effected by moral, rather than physical force; civilisation must precede any decided check unassisted by education. The slave-hunting monarchs claim an equal position with Great Britain as the greatest of white nations. How often have I been told in Dahomey, 'You make war on the Portuguese and beat them, we on the Attahpahms and others with equal success. These,' said the mayo, pointing to two tumblers on the table, 'are alike in size, in make, in shape; this is Dahomey, that England. See, I turn round, and, looking again, I cannot distinguish, they are coequal, the greatest white and the greatest black nations. Your queen can conquer all white nations, Gézo can take all blacks.' Such is their idea, gathered from the reports of the slave-dealers, who cause them to believe that we are a nation of pirates—water gods, in short. But, though feared for our power, we leave no moral impression upon the natives, by plundering, as they imagine, our Portuguese and Brazilian neighbours. All that we arrive at is, that the highest nation of Africa owns a respect, which may be also termed a fear, for the nation that can do to the whites what they can do to the blacks. What is wanted is education: 1st, to give the African an idea of the great moral force intended, at an enormous expense, to free him from the chains of foreign slavery, and to cause him to believe (what in his uneducated state he has no conception of) that Great Britain disburses an enormous sum to effect that object. 2nd. To enable him to understand the sacrifice he is making in selling labour from a country capable of providing for four times its population. 3rd. To put a stop to the fearful sacrifices of human life, and the devastating wars consequent on the slave trade."

Having thus prepared the African mind, the slave trade could not exist, even on demand from the Brazils; as, if the kings of Africa forbade the embarkation of slaves in their territories, the slaver could not trade, the slightest delay on the coast would be fatal, and the slave trade at an end. The measures recommended here may appear to require much time to develop, but such would not prove the case if once set in force. The extinction of the slave trade without educational assistance, may be possible; experience, however, seems to combine in proving the improbability of such a result.

In our next we shall endeavour to give a picture of slavery as it exists in America.

THE AMERICAN CANAL-BOAT.

BY MRS. HARRIET BEECHER STOWE, AUTHORESS OF "UNCLE TOM'S CABIN."

Of all the ways of travelling which obtain among our locomotive nation, the canal-boat is the most absolutely prosaic and inglorious. There is something picturesque, nay, almost sublime, in the lordly march of your well-built, high-bred steamboat. Go, take your stand on some overhanging bluff, where the blue Ohio winds its thread of silver, or the sturdy Mississippi makes its path through unbroken forests, and it will do your heart good to see the gallant boat walking the waters with unbroken and powerful tread, like some fabled monster of the wave, breathing fire, and making the shores resound with its deep respirations. Then there is something mysterious, even awful, in the power of steam. See it curling up against a blue sky some rosy morning—graceful, fleeting, intangible, and to all appearance the softest and gentlest of all spiritual things—and then think that it is this fairy spirit that keeps half the world alive and hot with motion, think how excellent a servant it is, doing all sorts of gigantic works, like the genii of old; and yet, if you let slip the talisman only for a moment, what terrible advantage it will take of you! and you will confess that steam has some claims both to the beautiful and the terrible. But in a canal-boat there is no power, no mystery, no danger; one cannot blow up, one cannot be drowned, unless by some special efforts one sees clearly all there is in the case—a horse, a rope, and a muddy strip of water—and that is all.

Did you ever try it, reader? If not, take an imaginary trip with us, just for experiment. "There's the boat!" exclaims a passenger in the omnibus, as we are rolling down from the Pittsburg Mansion House to the canal. "Where?" exclaim a dozen voices, and forthwith a dozen heads go out of the windows. "Why, down there, under that bridge—don't you see those lights?" "What, that little thing?" exclaims an inexperienced traveller; "dear me! we can't half of us get into it!" "We indeed!" says some old hand in the business, "I think you'll find it will hold us and a dozen more loads like us." "Impossible!" say some. "You will see," replies the old traveller; and, as soon as you get out, you *do* see, and hear too, what seems like a general breaking loose from the Tower of Babel, amid a perfect hailstorm of trunks, boxes, valises, carpet-bags, and every describable and indescribable form of what a Westerner calls "plunder."

"That's my trunk!" barks out a big, round man. "That's my bandbox!" screams a heartstriken old lady, in terror for her immaculate Sunday caps. "Where's my little red box? I had two carpet-bags and a—" "My trunk had a scarle—" "Halloo! where are you going with that portmanteau?" "Husband, husband! do see after the large basket and the little hair trunk—oh! and the baby's little chair!" "Go below—go below, for mercy's sake, my dear; I'll see to the baggage." At last, the feminine part of creation, perceiving that, in this particular instance, they gain nothing by public speaking, are content to be led quietly under hatches, and amusing is the look of dismay which each new-comer gives to the confined quarters that present themselves. Those who were so ignorant of the power of compression as to suppose the boat scarce large enough to contain them and theirs, find, with dismay, a respectable colony of old ladies, babies, mothers, big baskets, and carpet-bags, already established. "Mercy on us!" says one, after surveying the little room, about ten feet long and six high, "Where are we all to sleep to-night?" "O dear me! what a sight of children!" says a young lady, in a despairing tone. "Poh!" says an initiated traveller, "children! scarce any here; let's see: one—the woman in the corner, two—that child with the bread and butter, three—and then there's that other woman with two—really, it's quite moderate for a canal-boat: however, we can't tell till they have all come."

"All! for mercy's sake, you don't say there are any more coming!" exclaim two or three in a breath; they *can't* come; *there is not room!*"

Notwithstanding the impressive utterance of this sentence, the contrary is immediately demonstrated by the appearance of a very corpulent elderly lady, with three well-grown daughters, who come down looking about them most complacently, regardless of the unchristian looks of the company. What a mercy it is that fat people are always good natured!

After this follows an indiscriminate raining down of all shapes, sizes, sexes, and ages—men, women, children, babies, and nurses. The state of feeling becomes perfectly desperate. Darkness gathers on all faces. "We shall be smothered! we shall be crowded to death, we *can't stay here!*" are heard faintly from one and another, and yet, though the boat grows no wider, the walls no higher, they do live, and do bear it, in spite of repeated protestations to the contrary. Truly, as Sam Slick says, "there's a *sight of wear* in human natur'."

But, meanwhile, the children grow sleepy, and divers interesting little duets and trios arise from one part or another of the cabin. "Mamma, I'm tired!" bawls a child. "Where's the baby's night gown?" calls the nurse. "Do take Peter up in your lap, and keep him still." "Pray get out some biscuits to stop their mouths." Meanwhile, sundry babies strike in "con spirito," as the music-books have it, and execute various flourishes, the disconsolate mothers sigh, and look as if all was over with them; and the young ladies appear extremely disgusted, and wonder "what business women have to be travelling round with babies!"

To these troubles, succeeds the turning-out scene, when the whole caravan is ejected into the gentlemen's cabin, that the beds may be made. The red curtains are put down, and in solemn silence all, the last mysterious preparations begin. At length it is announced that all is ready. Forthwith the whole company rush back, and find the walls embellished by a series of little shelves, about a foot wide, each furnished with a mattress and bedding, and hooked to the ceiling by a very suspiciously slender cord. Direful are the ruminations and exclamations of inexperienced travellers, particularly young ones, as they eye these very equivocal accommodations. "What! sleep up there! *I* won't sleep on one of those top shelves, *I* know. The cords will certainly break." The chambermaid here takes up the conversation, and solemnly assures them that such an accident is not to be thought of at all; that it is a natural impossibility—a thing that could not happen without an actual miracle, and since it becomes increasingly evident that thirty ladies cannot all sleep on the lowest shelf, there is some effort made to exercise faith in this doctrine; nevertheless, all look on their neighbours with fear and trembling, and when the stout lady talks of taking a top shelf, she is urgently pressed to change places with her alarmed neighbour below. Points of location being after a while adjusted, comes the last struggle. Everybody wants to take off their bonnet, to look for their shawl, to find their cloak, to get their carpet-bag, and all set about it with such zeal that nothing can be done. "Ma'am, you're on my foot!" says one. "Will you please to move, ma'am?" says somebody, who is gasping and struggling behind you. "Move!" you echo. "Indeed I should be very glad to, but I don't see much prospect of it." "Chambermaid!" calls a lady, who is struggling among a heap of carpet-bags and children at one end of the cabin "Ma'am!" replies the poor chambermaid, who is wedged fast, in a similar situation, at the other. "Where's my cloak, chambermaid?" "I would find it, ma'am, if I could move." "Chambermaid, my basket!" "Chambermaid, my parasol is lost!" "Chambermaid, my carpet-bag!" "Mamma, they push me so!" "Hush, child, crawl under there, and lie still till I can undress you." At last, however, the various distresses are over, the babies sink to sleep, and even that much-enduring being, the chambermaid, seeks out some corner for repose. Tired and drowsy, you are just sinking into a doze, when bang! goes the boat against the sides of a lock, ropes scrape, men run and shout, and up fly the heads of all the top shelf-ites, who are generally the more juvenile and airy part of the company.

"What's that! what's that!" flies from mouth to mouth, and forthwith they proceed to awaken their respective relations. "Mother! Aunt Hannah! do wake up! what is this awful noise?" "Oh, only a lock!" "Pray be still," groan out the sleepy members from below.

"A lock!" exclaim the vivacious creatures, ever on the alert for information; "and what is a lock, pray?"

"Don't you know what a lock is, you silly creatures? Do lie down and go to sleep."

"But say, there is not any *danger* in a lock, is there?"

respond the quarists. "Danger!" exclaims a deaf old lady, poking up her head, "what's the matter? There ha'n't nothin' burst, has there?" "No, no, no!" exclaim the provoked and despairing opposition party, who find that there is no such thing as going to sleep till they have made the old lady below and the young ladies above understand exactly the philosophy of a lock. After a while the conversation again subsides; again all is still; you hear only the trampling of horses and the rippling of the rope in the water, and sleep again is stealing over you. You doze, you dream, and all of a sudden you are started by a cry, "Chambermaid! wake up the lady that wants to be set ashore." Up jumps chambermaid, and up jumps the lady and two children, and forthwith form a committee of inquiry as to ways and means. "Where's my bonnet?" says the lady, half awake, and fumbling among the various articles of that name. "I thought I hung it up behind the door." "Can't you find it?" says the poor chambermaid, yawning and rubbing her eyes. "Oh, yes, here it is," says the lady; and then the cloak, the shawl, the gloves, the shoes, receive each a separate discussion. At last all seems ready, and they begin to move off, when, lo! Peter's cap is missing. "Now, where can it be?" soliloquizes the lady, "I put it right here by the table-leg; maybe it has got into some of the berths." At this suggestion, the chambermaid takes the candle, and goes round deliberately to every berth, poking the light directly in the face of every sleeper. "Here it is," she exclaims, pulling at something black under one pillow. "No, indeed, those are my shoes," says a vexed sleeper. "Maybe it's here," she resumes, darting upon something black in another berth. "No, that's my bag," responds the occupant. The chambermaid then proceeds to turn over all the children on the floor, to see if it is not under them, in the course of which process they are most agreeably waked up and enlivened; and when everybody is broad awake, and most uncharitably wishing the cap, and Peter too, at the bottom of the canal, the good lady exclaims, "Well, if this isn't lucky! here I had it safe in my basket all the time!" and she departs amid the—what shall I say?—execrations?—of the whole company, ladies though they be.

Well, after this follows a hushing up and wiping up among the juvenile population; and a series of remarks commences from the various shelves of a very edifying and instructive tendency. One says that the woman did not seem to know where anything was; another says that she has waked them all up; a third, adds that she has waked up all the children too; and the elderly ladies make moral reflections on the importance of putting your things where you can find them—being always ready; which observations, being delivered in an exceedingly doleful and drowsy tone form a sort of subbass to the lively chattering of the upper shelf-ites, who declare that they feel quite wide awake—that they don't think they shall go to sleep again to-night—and discourse over everything in creation, until you heartily wish you were enough related to them to give them a scolding.

At last, however, voice after voice drops off; you fall into a most refreshing slumber; it seems to you that you sleep about a quarter of an hour, when the chambermaid pulls you by the sleeves: "Will you please to get up, ma'am; we want to make the beds." You start and stare. Sure enough, the night is gone. So much for sleeping on board canal-boats.

Let us not enumerate the manifold perplexities of the morning toilet in a place where every lady realizes most forcibly the condition of the old woman who lived under a broom: "All she wanted was elbow room." Let us not tell how one glass is made to answer for thirty fair faces, one basin and jug for thirty lavations; and, tell it not in Gath! one towel for a company! Let us not intimate how ladies' shoes have, in the night, clandestinely slid into the gentlemen's cabin, and gentlemen's boots elbowed, or, rather, *loed* their way among ladies' gear, nor recite the exclamations after runaway property that are heard. "I can't find nothing of Johnny's shoe." "Here's a shoe in the water pitcher—is this it?" "My side-combs are gone," exclaims a nymph with dishevelled curls! "Massy! do look at my bonnet!" exclaims an old lady, elevating an article crushed into as many angles as there are pieces in a minced pie. "I never did sleep *so much together* in my life," echoes a poor little French lady, whom despair has driven into talking English.

But our shortening paper warns us not to prolong our catalogue of distresses beyond reasonable bounds, and therefore we will close with advising all our friends who intend to travel this way of travelling for *pleasure*, to take a good stock both of patience and clean towels with them, for we think that they will find abundant need for both.

PROFESSOR COWPER.

The following particulars relating to the late Professor Cowper, who died on Sunday, October 17, have been supplied to us by a correspondent who knew him well and valued him highly:—

"The death of Mr. Cowper is another and heavy item in the account of losses which the country has lately sustained from the inroads of the grave. In the general application of science to the practical purposes of life few men stood higher than Professor Cowper; but his most distinguished success was as an inventor and improver of machinery. For the printing machine, indeed, which had so powerful an effect in cheapening literature and the graphic art, and in placing them, with their ennobling influences, within reach of the masses of the population, Mr. Cowper accomplished that which Watt did for the steam-engine:—and, as with that yet more eminent man, while few things were too great to daunt him with their difficulties, none were small enough to be deemed unworthy of his notice.—Thus, almost everything which presented itself to his active and fertile mind was in some way improved.

"With the possession of great stores of knowledge Mr. Cowper combined, in a remarkable degree, the power of communicating knowledge to others; as must have been felt by all who were fortunate enough to attend his classes at King's College, or his more general lectures, or, indeed, who under any circumstances, and in whatever rank of life, applied to him for mental aid, or had the pleasure of meeting him in society. A friend of ours, himself of no mean standing, either as a philosopher or philanthropist, lately remarked, that he was never in Mr. Cowper's company without being the better for it; and this gentleman does not stand alone in the feeling. Mr. Cowper was, indeed, ever bountiful with his knowledge,—and as eager in extending it to others as he was industrious in its acquirement for himself. Not a few men of humble origin have been enabled by his assistance to raise themselves into a sphere which they could not otherwise have reached,—but where they now find an appropriate field for their talent, and in turn assist in the great work of dissemination. Even during the intervals of his last illness Mr. Cowper was employed in preparing, at the request of the Principal of a college near Bombay, a series of models to enable the native inhabitants to improve their implements of husbandry and manufacture; and some such work of benevolence he had almost always on hand.

"One great cause of Professor Cowper's success as a lecturer was, his adoption (whenever practicable) of the Pestalozzian principle of exhibiting things themselves, instead of giving mere descriptions, or even drawings or models. Thus, in a lecture on the art of Pottery, he would have before his audience a potter, with his wheel, to go through the very process of which he was speaking,—a mode of proceeding which, aided by descriptions at once lively and perspicuous, gave unusual clearness to the ideas that he wished to impart, and pleasure in their reception.

"Leaving to others the easy task of finding differences and flaws in conduct and religious opinions, Mr. Cowper's delight was, to discover in men points of sympathy and accordance, and to bring into friendly co-operation on some subjects at least those who had hitherto been separate in all. In a word, his province was not to attack or to destroy,—but to defend and invent.

"Measured by mere space of time, his life was not long; but computed by the work which he accomplished, few men have had a greater term of existence than Professor Cowper. We rejoice to think that his life was as happy as it was beneficent; and it is consolatory to add, that its termination was collected, serene, and even cheerful."—*Athenæum.*

LETTERS TO WORKING MEN.

No. V.

SOME THOUGHTS ABOUT LABOUR.

Some people seem to think that gentility and refinement consist in having nothing to do: that your true gentleman is a white-handed, helpless specimen of humanity, who never did, and is not doing, and never means to do, anything in the way of labour; who rises with no object, and retires nearly dead with *ennui*; whose perpendicular and horizontal life are equally valueless; who having nothing in the world to do, accomplishes his mission with great exactness; whose existence is a huge negative, and an absolute vacuity.

That this is the proper definition of a gentleman would be by some denied; they would talk about true gentility consisting in the mind and in the manners, not in property qualification or release from common drudgery; but all this would be ungrounded, hypothetical, visionary, a strutting on our neighbours' stilts,—for a gentleman is not a natural but an artificial production; and, while a MAN is the work of GOD, a gentleman is the production of society.

Your lazy yawning drone, your gentleman bee, who sits at home blinking at the mechanic porters crowding in, gets tumbled out at last as being neither fit for use or ornament. Men of old were sent to learn wisdom from the ant, and the idea was incorporated in the law of Palestine, that every citizen should be a workman, that if any man would not work neither should he eat, for you never hear of a human drone in the land that flowed with milk and honey.

"*In the sweat of thy face thou shalt eat bread*," is man's warranty for labour—herdsmen and tillers of the soil were the first great necessary workmen, it was something very different from a curse that made men tend their flocks of browsing sheep, or delve the earth in sowing time; Cain, for that frightful crime that dashed the page of history with blood, was not condemned to labour, but to be the first idler on the face of the earth.

Men learned the concord of sweet sounds from Tubal, and the mystery of brass and iron work from Tubal Cain; the dignity of idleness was a philosophical theory unknown to Jewish Patriarch—who even went to service and made no secret about the matter—the great Lawgiver tended Jethro's flocks—David followed the same pursuit, and exchanged it for court minstrel. The men who revolutionised the world left fishing boats to do it, and even HE who for a little season trod the "Valley of BACA," HE who only knew the meaning of "everlasting" and "eternal," consented to follow a humble occupation, and thought it no degradation to be recognised as "*the carpenter*."

Consider what a world this would be if it were made up of those who do nothing. Your Regent-street beau would have no coat to his back, if there were no weaver's shuttle to manufacture cloth; no shearers to plunder docile bleaters; no vats of chemical dye-stuff to give the fashionable tinge; no shears; no pattern book; no Whitechapel needles. He would have no coffee-house to lounge in, no brick-kilns, no busy bricklayers to pile the manufactured article, no carpenters, no sturdy woodmen to fell the stately tree, no enterprising speculator to lay on the water, no plumber to fashion leaden pipes for its conveyance, no sturdy colliers to descend dark unhealthy mines in search of fuel for light and warmth; no active waiter to preserve an almost ubiquitous existence, and with stirring volubility to cry out "Coming, sir." He would have no delicately flavoured coffee; no means of roasting it, or of boiling it; no ships to bring it hither from the golden Indies; no planters to attend its growth, no sugar, moist or lump; no mill to grind the yellow corn; no cunning baker and no baker's oven; no country milkmaid; no dairy-work; no cheese, or butter; Imagine all the shops, and churches—manufactories, and cultivated lands swept clean away;—imagine all bridges, wharves, and ships buried 'five fathoms deep'—this boasted city of London a marshy swampy country, with a tangled mass of trees, and the cry of the bittern disturbing the solitude that is resting upon all things—and then we should have a picture of what the world would be without it working men.

Work! why men were sent into the world to work, for the world is not a playground, and time is not a holiday. St. Paul's Cathedral was not the result of idleness; books, with their great thoughts deep as the sea, strong as the rock, beautiful as the sky, were not the production of uncultivated minds. With sweat of the brow they piled stone on stone until the massive structure was complete; with sweat of the brain, thought upon thought was reared and made immortal; for greatness is no holiday pastime, but a stern business full of toil and trouble.

Sir Fopling Flutter may bask in the sunshine for his little day, may cull the summer sweetness, content to live on other people's labours; but to the man who understands his true position in the world—the actual worth of life, such delights, if possibly attainable, possess no relish; he must live with a purpose—must struggle in the arena—must enter on the strife, undismayed by winter's cold, unimpeded by the summer's warmth, strong in his belief that life is not a bubble on the stream of time, a vapour of the morning, or a dull worthless inanity; he lives and labours, taking for his motto "better to wear out than rust out," and leaves behind some lasting memorial, that others in days to come may say he was a MAN.

There are wayside voices undetected and unnoticed in the noise and bustle of the world astir; they are hidden like the wheels of clocks and watches, and a clean well-figured dial-plate covers up mechanical intricacies; they are the voices who keep the Psalm of Life in tune, and the steady progress of society. The men and women who make Sir Fopling's life so joyous—are they to be pitied and mourned over in solemn dirge and lachrymose weakness?—no—in every stroke of the hammer, in every movement of the saw *they* are doing God's work in the world—even though the world heed not their labours

Sometimes those wayside voices grow louder. George Fox, surrounded by strips of leather, awls and bristles, seated amongst his paste and rosin, cobbling hob-nailed shoes and patching up worn-out slippers, chanted a tune and woke up joyful echoes that have never died away

James Barry, a hulking foolish lad, who, in an Irish smack did strangely bewilder honest mariners and make the skipper cross himself, picturing shaggy, uncouth, demonish heads upon the vessel's deck—he left behind him something that, like a Dantean incarnation, pictures Heaven and Hell in frightful reality.

Burns caught inspiration from the plough, and courted the muse amidst a busy toiling life of poetry and beer-gauging.

Chemists, Mechanists, Engineers, Painters, Poets, dissimilar in professional occupations, are yet all apprenticed to the same stern master, their indentures signed and sealed by LABOUR; learning from his rugged teachings the fundamentals of greatness—*perseverance and activity* rendering them fit for any sort of work or enterprize, fit to encounter the dangers of travels, the constant toil of the artisan, or the hard struggle of greatness in the loftier flights.

Some people groan and sigh and dawdle all their lives away in wishing they were something else. If they had enjoyed the happy shades of academic bowers; if they had but been instructed in mathematical mysteries; if they had but a more intimate acquaintance with classical horticulture, and understood the nature of those hard dry plants the Hebrew roots; or if they had but a large fortune; if they had but a Banker's book, a long account at Child's or Coutts'; if they had but some broad acres; if they had but more time to devote to mental culture or benevolent exertion,—then the world might expect something of them.

Good things these valuable acquisitions, but not man's mission in the world. WORK, WORK; his existence is the true Battle of Life—a combat against discouragement, penury, weariness, and all the pains and penalties of being very poor; his name inserted on no long subscription list, but legibly inscribed on the books of the great society for the Amelioration of Human Woe; a member of the universal club for helping everything and everybody; who, if he never leaves behind him a stately mausoleum, or has his tombstone adorned with classic grief chiselled in marble; if, when the decease of Sir Fopling Flutter is so solemnly announced in daily papers, he quits the busy scene of life, and "dies and makes no sign," his monument is ever with you in your costly furniture, your fashionable chariots, your noble structures and your printed books—on the very tombstone of Sir Fopling the graver carves his own *memento mori*,—an honourable testimony to honourable industry.

I once saw the letter of a working man to a certain noble author:—"Picture to yourself," he wrote, "a man sensible that he is made for something better than to labour and die,"—the man had much to struggle with, from day to day battling against to-morrow; with debts unpaid, and bills discredited, recoiling alike from amusement and knowledge,—but in the bare statement that man was born to labour and die, is conceded the true dignity of manhood; to be *idle* and die, to make a foe of time, to watch his march and count it slow

is the true calamity: and he who is awake to his own responsibility need never let a deep and crushing melancholy rest upon his spirit. Man is sent here to labour and to die, and whether he labours in the dark factory, the busy town shop, or works in country parts amongst the golden harvests and the browsing flocks, he only it is that can lay claim to honest manhood, and can claim unblushingly, for the exertion of his brains or sinews, a living from the world.

A DAY AT THE GIANT'S CAUSEWAY.

In the latter part of July, in the present year, I was walking from a dinner party, late at night, along a retired road near Londonderry. I was accompanied by a friend, who was in truth a *terræ filius*, a genuine son of the soil, who knew every inch of the country from Gweedore to Fairhead, and who felt surprised and vexed if he met anyone on the road whom he did not recognize at a glance. The weather had for some days previous been wet and gloomy, with loud thunder at intervals, followed by high wind. The spirits of pleasure-seekers were damped, and many who were longing to escape from the turmoil and uproar of the contested elections, to roam along the headlands of Donegal, and drown unpleasant thoughts in the blue waters of the Atlantic, had been obliged to postpone their trips. But on the evening in question a change had come over the atmosphere. The night air was soft and balmy, a breeze from the north-east sighed gently through the trees, and the stars twinkled with a mellow and tender light through the thin haze which had overspread the sky. All gave promise of glorious weather on the morrow, and when my friend Smith proposed a trip to the Giant's Causeway, within seven miles of which, at Portstewart, he had hired a house for part of the summer season, I heartily acquiesced. It was arranged that we should meet on board the *Thistle* steamboat, at one o'clock on the following day I was there at the time appointed, and so was Smith. The wharf was gained through a dirty low gateway, leading into a dirtier yard. And what a scene was there! Sacks, casks, cases, loads of cabbage, of fish, of potatoes, and eggs, baskets of fowl, waiting for embarkation, and hundreds of individuals of all ages and sexes, in every variety of costume, from the threadbare frize coat, out at elbows, down to the indescribable coat of many colours, that peculiarly Irish coat which so many tourists have attempted to depict, presenting no definite shape to the eye, and apparently but a mass of rags. The latter species abounded, and it always struck me that in a poor country they are invaluable, as no one will ever attempt to steal them Not because they are worthless, as they are in reality a heavy and compact covering, in which the wearer might fairly bid defiance to wind and weather, but because they are of no use to any person but the owner. He alone has watched its gradual decay from "bran newness" to "hoary holeyness," till at last it became a bundle of tatters fastened strongly together by a thousand stitchings He it is who knows the precise history of each patch, the period of its addition to the groundwork of the garment, the intricate windings by which the sleeves have to be reached ere it can be put on, and in short all the "ins and outs of it." I may add, that knowledge like this, which is largely made up of experience, can rarely be acquired under a year's training

There were bold looking fellows, of small stature and hard features, from Innishowen; curious looking old women from the same locality, without bonnets, but with clean caps, and red handkerchiefs fastened over them; some with bare feet, others with brogues, and others with a lighter description of shoes, which are generally to be had at the small sum of three shillings and sixpence on the "stannins," and which the younger women generally aim at, as "more ginteeler." The females had mostly baskets of fowl or eggs; the men short sticks or bundles, and in many cases small droves of sheep or pigs; the latter animals, whenever they gave any evidence of disinclination to expatriate themselves, being forced on board by a simple and speedy process. The refractory porker was seized by the tail and dragged shoreward, whereupon he with mighty roars, as all pigs go by "the rule of contrhary," rushed in exactly the opposite direction, and as this led him on the gangway, he speedily found himself "cabin'd, cribb'd, confin'd" on the deck of the vessel. And all this was accomplished amidst a noise and uproar which baffles description. The steamer was advertised to sail at one. At three it started. The boat is Scotch, the company which owns it Scotch, and consequently all its faults and failings are fairly chargeable on Scotland. At all events, about five or six hundred passengers, composed chiefly of the "vile rabble," which we have attempted to describe, embarked, with the intention of proceeding as steerage-passengers to Glasgow, which an opposition between rival companies enabled them to do at the small charge of sixpence for the whole distance. The cabin fare is six shillings; but as our intention was to get out at Portrush, where the boat touched, we paid but two shillings. We were of opinion that the payment of this sum entitled us to the use, in common with the other cabin passengers, the small and more and more refined body who could muster the six shillings or the two shillings, of that portion of the vessel called the quarter-deck, the saloon, and the appurtenances thereunto belonging. But it was evident before we had gone one hundred yards down the Foyle, that we were labouring under a miserable delusion. The cabin passengers were the intruders, and the vessel was for the present in possession of those who honoured the company by going to Glasgow for sixpence. They occupied every part of the boat, fore and aft Did any one desire to promenade up and down the quarter-deck? Impossible, it was covered with fowls, and chests, and boxes, and old women. The steward, we observed, feebly remonstrating, once or twice, with the invaders, but he was speedily snubbed, and retired in high dudgeon to his pantry. Did any one wish to go forward to the bows, to enjoy the fresh breeze, ere it was tainted by passing over the boisterous cargo with which the good ship was freighted? Impossible; the lower deck was crowded densely with pigs, and sheep, and men, and women, except in two small circles, where two couples were dancing reels, each to the groaning of two bagpipes. One spot only was clear, and this was the gangway between the paddleboxes, and to this we mounted, and from this we had a full view, not only of the curious scenes beneath, but of some of the finest river scenery in the world. We were in the bend of the stream, immediately below the town, which rises, house above house like an amphitheatre, from the water's edge, crowned by the old cathedral, and the pillar erected in memory of George Walker, the governor of the city during the siege in 1689. On the other side were hills, half-wooded and higher still, and the banks of the stream, on each side, as we dashed along, were covered with villas and lawns, sloping gently to the river. Sweeping round a curve somewhat resembling Hogarth's line of beauty and grace, we reach the spot across which King James's army drew the boom to prevent the passage of the English ships, which were bringing relief to the city. There is still an iron ring in a huge stone, to which, it is said, the chain was fastened, but, with what truth I know not; but it is certain that neither ring nor chain could stay the advancing tide of William's fortunes, and that this little Protestant town, in a remote corner of the kingdom, decided, by the unconquerable valour of its inhabitants, the fate of a mighty empire.

Dashing swiftly onwards, we reach Culmore, where a tongue of land runs out into the river, leaving but a narrow passage for the steamer, and at the extremity stands a little fort, five hundred years old. Nothing now remains of it but a square tower or keep. It was once an important post, and the possession of it was keenly contested by the English, and the sept or clan of the O'Dohertys, who inhabited the adjacent territory of Innishowen. It has, we believe, a governor still, but his office is, of course, a sinecure; and, if we are not greatly mistaken, we were informed that the shoulders are worn out of his coat, in consequence of his leaning, with his hands in his pockets, against the wall of the fort, watching the vessels passing and re-passing up and down the river.

We were now in the open Lough Foyle into our left were the hills of Innishowen dimly seen, and to the right the low shore of the county Derry. There was now nothing better to attract my attention than the lights and shadows of Irish life, which were being exhibited in the little world below us. Immediately under the gangway, an admiring crowd were watching the gyrations of a little tailor, as he pranced through a reel, in company with a wild damsel from the mountains, rejoicing in the possession of a flaunting dress of dirty muslin, and a blank cashmere jacket through which her plump body was

bursting, like a floury potatoe through its peel. Where she came from, or whither bound, I believe not one of the motley group which surrounded her had the remotest idea, but by unanimous consent they called her "Judy." "Musha, more power to you, Judy! you're the girl that can do it anyhow in nate style!" "Keep it up, acushla, it's not often ye'll git as good music," were amongst the bursts of admiration which her performance from time to time elicited, as, with arms a-kimbo and downcast eyes, she rapped her heels against the deck, in harmony with the bagpipes, whilst her partner, the little tailor, already the worse for liquor, executed *pas* that might put many an artiste to the blush, accompanying every wild fling with a crack of his fingers and a whoop that woke echoes from the surrounding waters. And as he seized his partner's hands, and swung her round in obedience to the laws of the dance, he came up to his place, giving the deck alternate raps of his heel and toe with surprising rapidity, his little yellow face grown sallow with triumph, and his eye glancing scorn upon the pig-jobbers, as much as to say, "It'll be a long time before heavy, clumsy, crathurs like yez, can aiqual that!"

At length, exhausted, they sat down, and every eye was now turned towards a brawny fellow with a waggish leer about his eye, who had mounted a cask, holding up two ducks and a hen fastened together by a cord passed round their legs, and was proclaiming his intention of selling them by auction. After sundry jokes and a good deal of clamour, they were knocked down to the purchaser at sixteenpence-halfpenny.

About six in the evening we emerged from the lough into the open sea, and in a short time swept into the rocky bay in which lies the little sheltered nook which the Portrush people dignify with the name of a harbour. The whole population of the town turned out on the pier to see us, temporary sojourners at the shore expecting friends from Derry, and the ragamuffins of the locality looking out for an opportunity of rendering some service to the passengers The clamour that ensued baffles description. Amidst a babel of voices calling on Paddy to do this, and heaping reproaches on Jack for not doing that, and replies from Paddy and Jack couched in all possible phraseology, from the retort courteous to the he direct, —we seized our carpet bags and went on shore in a rush, much in the manner in which we are told Her Majesty's troops stormed Rangoon.

After tea and a walk along the cliffs, we, as may be supposed, went to bed.

On the following morning a party was made up for a trip to the Giant's Causeway, lying about five miles distant along the coast. So many other pleasure-seekers being abroad as well as ourselves, cars for the whole party were not available. Four of the gentlemen started to walk along the coast, in a sort of ambling gait, and keeping in as direct a line as the sea would permit. An hour's walk brought us to Dunluce Castle, the ancient stronghold of the Macdonalds, Earls of Antrim. We turned aside to inspect it.

It is one of the finest of those ruined fortresses, of which Ireland contains so many. The keep, or tower, stands on a rocky cliff, separated from the mainland by a chasm several hundred feet deep, and all around, except on that one side, are beetling crags, that might safely defy the quickest eye and surest foot, and against those black grim rocks, the sea rolling in one unbroken swell from icy regions of the pole, beats with an everlasting roar, and in stormy winter weather, when roused by a northwest gale, it often flings its spray, as if in mockery of man and his works, upon the grass-grown floor of the ancient hall. The walls are still nearly all standing. Hall and kitchen, and courtyard, tower and battlement, are still distinctly marked; the stone stairs, in some of the towers, being still perfect. One little nook, projecting slightly over the cliff, our guide—a facetious fellow—pronounced to be a watercloset, notwithstanding our repeatedly expressed doubts. This is, however, a knotty point, worthy the notice of the British Association, which this year meets at Belfast, within an easy drive of Dunluce.

Returning through the ruined courtyard and out-offices to the road, the headland, behind which the Causeway lay, was pointed out to us, stretching out boldly into the bright and sunny waters of the ocean. A rapid walk of about half an hour, sometimes along the strand, sometimes through the fields, passing by numerous little cottages, occupied by bathers, close to the shore, the inmates lounging at open windows, or strolling along the beach, cooled by the sea-breeze, and lulled by the rumbling hollow sound with which the surf beats upon the sand, brought us at last to the Causeway Hotel, where our friends with the cars had already just arrived.

(*To be continued.*)

CHARACTER AND TENDENCIES OF AMERICAN SOCIETY.

Translated for the Working Man's Friend, by Walter Weldon

MANNERS—CONTINUED

THAT some men *may* be naturally good, and that others may be tyrannous by instinct, we have never doubted, but let those—and they are at the present day very numerous amongst us—who believe in the innate goodness and perfection of human nature, just cast their eyes upon America, the freest (!) country in the world. They will see that there every individual is a tyrant, seeking to make others submit to his authority. There does not, it is true, exist there any official or rather governmental tyranny, because all office is dependent upon universal suffrage. No one in Europe is so timid or so fearful as an American judge, administrator, or government officer of any kind. Perpetually in fear of losing his situation, an American official adjusts his actions, not according to justice, but in the manner which will best please the public; he uses his eyes and ears merely to discover that which will most gratify the electors who hold his office at their disposal But it is not so in any other cases, with the administrators of particular functions, or with the officers of financial companies. These owe not their positions to the will of the multitude, and they take care to make the multitude *feel* their domination and authority; and they have in reality the opportunities of exercising more tyranny than has a magistrate, or even the president himself. Mr. Arthur Cunnyngham* had many opportunities of experiencing this. One day, especially, at one of the railway stations in the State of New York, was it made evident to him The clerk who gave the tickets to, and received the money from, the passengers, after having examined the two bank notes which Mr. Cunnyngham presented to him, returned them to him, and cried, "You are a cunning fellow, you are a cunning fellow, upon my word." "I replied," says Mr. Cunnyngham, "that he himself no doubt possessed a fair share of the finesse which was so habitual to his compatriots. He then repeated his first expression, and asserted that my notes were forgeries, and that he should not take them. 'Forgeries or not,' I answered, 'I received them as change at the last railway station that we stopped at, from one of your own colleagues.' But it was of no use talking to him, and I soon gave over. He was only a specimen of his class, every member of which, placed, I suppose they imagine, in superior positions, takes upon himself the manners of a petty despot. It is impossible to make an European, who has never been in America, comprehend the tone of contemptuous insolence with which railway passengers are universally treated in the United States by all the officials along the line. It is very rarely that they will deign to even answer one of their questions." This coarseness and rudeness of manner, common to almost all Americans, who seem to believe that they would be degraded by expressing themselves with politeness, proceeds simply from the fears which they entertain of giving themselves masters. So great are these fears that the most gentle counsel, the most delicate advice, is looked upon by the Americans with distrust, and they seem to see in it the commencement of, and a desire for, despotism. Those fears are arousing every moment their democratic susceptibilities, and they redouble the rudeness and brutality of Yankee manners, and prevent the formation or generation of more gentle ones. It is, however, perhaps, between superiors and subalterns, and between masters and domestic servants, that the jealous spirit of equality engender the most remarkable relations.

It is difficult to obtain from domestics in America anything approaching to the habitual marks of respect—that is exterior marks—which we expect from them in Europe, and the logic of democracy often reduces to silence the man who is so audacious as to demand

* A Glimpse of the Great Western Republic. Bentley, 1851.

politeness and courtesy from those who serve him. "A gentleman of Boston," reports Mr. Johnson,† "related to me that having engaged a *valet-de-ferme*, he found him perfectly to his liking in all points besides one; this point was that he always entered his master's room with his hat upon his head. 'John,' said his master to him one day, 'you always keep your hat on when you come into my room.' 'Well, sir,' was the reply, 'and have I not a right to do so?' 'Yes, certainly, you have an abstract right.' 'And if that, then, is the case, sir, why should I not exercise it?' This was a rather difficult question to reply to. After a moment's silence, however, the gentleman went on,—'I tell you what, John,—how much greater wages should you require were you to take your hat off always when in my presence in my house?' 'You must give me time to consider, sir,' was the response. 'Well then,' replied the gentleman, 'take the matter into consideration before to morrow morning, and give me an answer then.' The morning came, and the gentleman inquired—'Well, John, have you reflected on the proposition that I made last night?' 'Yes, sir,' replied John, 'and I shall be glad to comply with your demands for an extra dollar per month.' 'You shall have it, then,' was the answer, and so the matter was concluded." Thus there is nothing which will quiet this democratic arrogance and suspicion besides money. In the United States, people *purchase* deference and courtesy as they purchase beef and bread. The first are moral, the latter are material, matters of merchandise; that is all the difference between them.

Another anecdote, related by Lady Wortley,* of a domestic belonging to a certain Colonel Talbot, may be here related "One morning the Colonel called to his servant to bring him his hot water for shaving. The servant did not answer, and the Colonel, after having called vainly for some time, recollected that the servant in question had often shown signs of discontent, and naturally concluded that he was gone away Some years afterwards, as the Colonel was again calling for his hot water, the same rascal entered the room, with the bason in his hand, and began resuming his domestic functions as though he had only been away an hour. He made no allusion at all to what had happened, and neither did the Colonel." This anecdote recals to our memory another very similar, but of much graver character A father, having commanded his son, quite a child, to go and fetch a log of wood, and the latter not choosing to obey him, administered to him a beating. The child thereupon ran away, and did not come back again for a long time. Thirty years after, however, he did come back; his old father, as he was sitting by the fireside, saw his son come in with a log of wood, of gigantic size, upon his shoulder. The old gentleman looked at him tranquilly, examined the log of wood, and then, throwing it upon the fire, exclaimed, "It is just such a piece as I commanded you to fetch me, but you have been a very long time over obeying my orders!"

Thus, in the United States, this democratic tyranny is exercised even by the beings who in Europe we consider to be entirely powerless. The tyranny of women, of children, and of servants has no bounds; and we can scarcely form any idea of the infinite pains which the Americans are obliged to take in order to escape the resentments of these capricious and irritable beings; the Yankees live in fear of even their own children, to say nothing of that which they entertain of women and domestics. Mr Johnson tells a story of a child of twelve years old, who was often employed to carry to him books and letters from a friend. While Mr. Johnson was answering the letters of his friend, the child turned over, with the utmost *sang froid*, the books and papers upon the table, read them, and then, placing himself before the glass, arranged his hair and completed his toilette. At first Mr. Johnson was amused at this sight, but it soon wearied and disgusted him, and he endeavoured vainly to put an end to it by telling the child that in his country little children would not *dare* to take such liberties A friend who happened to overhear him, warned him, when the child was gone, against directing any reproaches whatever at the young Yankee, "For," said he, "he may one day become the president of the Republic." "Well, and what if he should do so?" asked Mr. Johnson. "Why, then he would be able to do you a deal of harm."

These little Yankees, of twelve or fifteen years of age, are rep sented by all travellers who have entered a Boston or New Y counting-house, as entering their offices, hanging up their h putting their canes by in a corner, gravely taking off their glo placing their glasses on their eyes, humming some new opera tu giving their opinions upon the talent of Jenny Lind, then draw banking books and ledgers from their desks, and transacting affa of business involving thousands of dollars. All travellers a astonished, too, at the fear and veneration which are entertained grown-up men for these youngsters, in whom they seem to admire; worship the possibility of their becoming rich and powerful. Wh the child has become a man, this adoration ceases. The ch might have become the president of the Republic, but the man h made evident the full extent of his faculties, and has proved pre decisively that he never will be president. The tyranny of wom too, equals, if it does not surpass, that of the children, and c cannot imagine how disdainful is the tone in which Americ children and women speak of the servility of English women a European youth. "When I wished to marry," said a colonist the west to Mr Johnson, "I went to find a wife in Canada. Wh I come at night from my day's labour, I find a pleasant fire and good supper; but if I had to marry an American, there would ha been none of this, and my wife would have saluted me each morni with—John, go and fetch some water, and make the ket boil."

That such manners throw into confusion all the relations family, we may readily suppose. There exist but few ties betwe men generally in America, but there exist still fewer between m and wife, between parents and children, and beings of the sa blood. Habituated and accustomed to depend only on themselv taught by their fathers to have confidence only in their own energ the children take their flight as soon as adolescence has arrive just as the bird does when it has gained its feathers, and th parents see them go away with no more anxiety than is evinced the birds when their young ones leave the nest. Neither t fathers nor the sons complain. The destiny of each appears to to run after adventures, and truly no people ever possessed more the spirit of adventure, and no man more than the Americ possesses the attributes of the adventurer,—the smallest possib modicum of attachment to men and places, a love of change, hazard and of chance, and the idea that too intimate, too gent and too modest relationships with others are prejudicial, say the least, to a man's success in life. The Americans se success, and not happiness; or rather they place the latter in t former.

In the spectacle which the United States present to-day, the what have we seen? A state, a system of society, a religion system of manners, a manner of living fixed and determined? N We have merely seen accidents, phenomena, tendencies. Ameri is the country of facts, of phenomena, *par excellence;* and it is th which renders the study of the country so interesting to the philos pher and the politician. There, forgetting all theories, we see fac group and arrange themselves, take form and color, harmon themselves in the best manner they can, and solidify themselv in some way in order to give birth to other facts. We learn le things of the world govern themselves, not by abstract logic, but natural affinities, attractions and repulsion We see that th proceed not from one another in a right line, but that th form themselves by superposition, amalgamation, fermentatio and generation. We witness a moral spectacle something simil to that physical spectacle which is presented in the slow formati of islands in the Pacific Ocean, by the union, assemblage, and heap up of madrepores and other insects. It is this sight that we shou go to the United States to see, instead of going to search for poli cal constitutions. Society does not exist in the United States, only find there the commencements of society. We find n government, only innate and instinctive political principles; religion at all established, only religious traditions and biblic memories and instincts; no society, no fixed mode of life,—on essays and attempts at the formation of manners and the social h Such is America. Once more,—she is a land of phenomena, a cha which is settling but slowly into order, and which cannot f centuries yet unborn become as terra firma, but which as it is, is f of ardent lava, of inflammable gas, and fecund elements of sorts, not the less dangerous to the other nations of the eart It behoves that Europe should be careful now, and that she shou continue so until sufficient time has elapsed to enable America become civilised.

* Notes on North America. Blackwood, 1851

† Travels in the United States, etc., during 1849 and 1850 By Lady Emmeline Stuart Wortley, 3 vols 8vo Bentley, 1851

CHARLES KINGSLEY.

(The Author of "Alton Locke.")

BY PARSON FRANK.

MAGAZINES, like men, are subject to vicissitudes in this fleeting existence of ours. Some have their exits and their entrances, coming in like a lion and going out like a lamb; others pass through a long career of ups and downs, and in their time play many parts. The Rev. Charles Kingsley, to whom we purpose devoting a page or two, is somewhat prominently connected with a magazine (*Fraser's,*) the character and tone of which have, within a few years, undergone a marked alteration. For the better? Yes!—promptly reply the potent, grave, and *reverend* signiors, who form the "progress" party within the Church of England. No!—as promptly vociferate subscribers of the olden time, who loved *Fraser* for its jolly good-fellowship, and infinitely preferred the plentiful cakes and ale of its ancient régime, when Sir Toby Belches and Andrew Aguecheeks by the dozen, held mad revelry in its columns, to the Malvolio virtuousness of the new dispensation. *Blackwood*, too, is graver than of yore; but the dimness of once over-bright "Ebony" is nothing to the gloom that, as old *Fraser*ians contend, has settled on young *Fraser* since it changed its domicile from gay Regent-street to the dusk offices of Mr. Parker's clerical and educational institute. Does the reader remember the clever sketches of the *Fraser*ians in 1835,—the group of distinguished contributors clustered about their publisher's round table? What a change in the staff since those portraits were taken! Seated together in after-dinner companionship, we there behold —among others of kindred renown—Theodore Hook, his eye beaming with wine and a punning impromptu — Crofton Croker, merrily hob-a-nobbing with Jordan—Lockhart, looking thoughtful, determined, and sarcastic—the Ettrick Shepherd in his plaid, tossing off a beaker with hearty good-will — John Galt, "bland and be-spectacled" — Sir Egerton Brydges, like Esau, a hairy and disappointed man—Macnish, the "Modern Pythagorean" and anatomist of drunkenness— "Delta" Moir, looking, as he is, an amiable man and tender poet — Dr. Maginn, effervescent with wit and eloquence— "Father Prout,' attracted ("O rare Jesuit!") to the festive board by his love of cleverness, joviality, and literature—and two other parsons, Gleig, episcopalian and novel-writing, and Irving, presbyterian and novel-denouncing —and Allan Cunningham enjoying a "crack" with Count d'Orsay — and Harrison Ainsworth cheek by jowl with venerable Coleridge— and Barry Cornwall, and Carlyle, and Sir David Brewster, and many *beaux esprits* besides. But now, *tempora mutantur*. The new editor, in the name of the old magazine, *cries peccavi!* —acknowledges truth in the charge of having dealt more than was quite becoming in personalities—pleads that the life of a magazine, like that of a nation and an individual man, has its phases, that time brings experience, and that *Fraser* will never be so boisterous again—and protests that the *Fraser*ians have quite ceased to attend imaginary *symposia*, and to drink gallons of imaginary punch,* and have learned to temper their wit, that it may for the future tell on men's principles of action, without unnecessarily wounding their self love or ruffling their tempers. Accordingly, this journal has now become the organ of that party without a name which sympathizes with the cause of progress in church and state, and embraces among its members the accidentally differing but essentially agreeing disciples of Dr. Arnold, and Arch-deacon Hare, and Professor Maurice. Under this dynasty, the contributions of Mr. Kingsley occupy a foremost place.

Of those contributions the best-known is that strange and taking story, with a strange and taking title, *Yeast*—a memoir of the sayings and doings of Lancelot Smith, gentleman—which appeared in the magazine some three years since, and has recently been *re*presented to the world with new cuffs and collars (as clergymen say when patching up an old sermon) under the name of *Yeast A Problem.* In this, as in all his works, Mr. Kingsley is intent on a crusade against social evils. He is an enthusiastic alumnus of Mr. Carlyle, whom he is for ever quoting and for ever (*longo intervallo*) imitating. Like his master, he is clever at finding fault, quick to discern abuses, warm in intolerance of quackery. Like his master, he is vague when discussing remedies, and most foggy when off what should be Cape Clear. *Yeast* answers the purpose of producing a ferment. It is a *problem* quite capable of puzzling brains of any known consistency. But whether the author has quieted and composed his own fermenting elements into wholesome food—whether he has found the solution to his own problem—this is another question. The merit of his writings lies in their negative, not their positive character; in what is destructive rather than constructive; in exposing the weak points and vicious abuses and hollow pretences of existing systems, political, social, and religious, rather than supplying a new faith and practice. So far as he goes, Mr. Kingsley is a combatant of considerable tact and personal prowess. Not so profound as either Hare or Maurice, he is infinitely more agile, vivacious, and popular than either of those oracular gentlemen. Where they are calm and metaphysical, he is vehement and practical. The wordy paradoxes and tortuous vagaries of Professor Maurice—that able, good, but most unsatisfactory man—find little room in the pages of "Parson Lot" (as Mr. Kingsley occasionally calls himself) who is, we allow, clearness and definiteness itself when compared with his *collaborateur* in the cause of "Christian Socialism." In fact, a competent reviewer has defined the "great merit" of *Yeast* to consist in its *clear, definite* statement of the chief questions that are fermenting in the hearts of men at the present time—its "great fault" in the passion and exaggeration of statement and inferences thence deducted. Everyone can see that the author is in earnest. He is too admiring a devotee of Carlyle to be other than grimly in earnest—sometimes onesidedly, impatiently so. Perhaps this is a necessary condition to the temperament of a Reformer. Enthusiasm may now and then cover a multitude of sins. And Mr. Kingsley's enthusiasm is always for right ends, whatever we may think of the means he adopts for their attainment. The evils of English town and country life he perceives with penetrating glance, and mourns over with no sort of do-nothing sorrow. He sympathises in an extraordinary degree with the spirit of the age—its aspirations, hopes, fears, struggles, sufferings. He comes forward as an exponent of its "poor dumb mouth," and speaks the word it is bursting to speak, and the people waiting to hear. We might almost call him

> A latter Luther, and a soldier priest
> To scare church-harpies from the master's feast,
> Our dusted velvets have much need of him,

for he is no mere "sabbath-drawler of old saws"—

> But spurred at heart with fiercest energy
> To cope battail and to wall about his cause
> With iron-worded proof,*

and most heartily despises the "humming of drowsy pulpit-drones," and the faded rhetoric of "worm-canker ed homilies." Stagnant orthodoxy of this order Mr. Kingsley cannot away with; it provokes him to rampant heterodoxy, till he breathes, if not threatening and slaughter against Dr. Dumsoul Darkman, at least what the doctor would call false doctrine, heresy, and schism.

> Oh, the mouth-man and the heart-man, different they be
> As death and life, light and dark, ice and charity

Crabbed dogmatists—Simeonite or Puseyite—are *Nehushtan* to the author of *Yeast*. As Theophilus Trinal says, there have been times and places in which, with sorrowful emphasis, it might be asked, what can be more opposite that Christ and a Christian, it such as these be Christians?—and the same Theophilus, we remember, in the delirium of his last illness, cried to his mother, "Don't let those bad people come near me—those Christians"—and, on her gently and soothingly replying, "Why, you are a Christian yourself, Theophilus," how significant his feverish exclamation—"What! I? Take them away. They look like black goats butting at me. Let somebody stand near me that loves me." Both in *Alton Locke* and in *Yeast*, Mr. Kingsley is admirable at pourtraying morbid phases of religious character. Nothing can be better than Mrs. Lavington (the mother of Lancelot Smith's betrothed) a severe "evangelical" matron, who bullies her hearty fox-hunting husband after no very promising fashion—trying "to

* See Editor's Address in the No for January, 1849.

* Tennyson.

convert the old man by coldness, severity, and long curtain-lectures, utterly unintelligible to their victim, because couched in the peculiar conventional phraseology of Newton and Simeon's school. She forgot, poor, earnest soul! that the same form of religion which had captivated a disappointed girl of twenty, might not be the most attractive for a jovial old man of sixty." Another happy portrait is Vieuxbois, who considers nothing more heterodox than the notion that the poor were to educate themselves. "In his scheme, of course, the clergy and the gentry were to educate the poor, who were to take down thankfully as much as its was thought proper to give them; and all beyond was 'self-will' and 'private judgement,' the fathers of Dissent and Chartism, Trades'-union strikes and French-revolutions *et hoc genus omne*." And when this gentleman asks the agitator for educational measures, Pray what *limit* would you put to education?—mark Mr Kingsley's reply: (Launcelot Smith• *loquitur*)—"The capacities of each man. If man, living in civilised society has one right which he can demand, it is this · that the state which exists by his labours shall enable him to develope, or at least not hinder his developing his whole faculties to their very uttermost, however lofty that may be." The high-church young lady, impulsive, earnest, and devoted, is vividly represented in the person of Argemone, some of whose conversations with the hero are first-rate in matter and manner both, and are marked by the very form and pressure of the times Launcelot, again, is powerfully depicted—one whom we cannot but watch with interest at every step of his varied and chastened career, until we leave him at the last, assumed to be "perfected through suffering." He is more truthfully and consistently drawn than his successor in the same course of probation, Alton Locke. In one turning point of his biography is concentrated the essence of Mr. Kingsley's philosophy—namely, when he (Launcelot) repents of his *laissez-faire* habits, his ignorance of society, of practical life, and the outward *present*, when he blames himself angrily for having wasted his time on *ancient* histories and *foreign* travels, to the neglect of that *wonderful living present* which weltered daily round him, every face embodying a living soul—"for now he began to feel that those faces *did* hide living souls." Mr. Kingsley recognises the divinity that stirs within us—within this nineteenth century of ours—within our daily life and household histories, he descries something worth thinking about and writing about, even in the smoke-dried faces of factories and factory people, even in an age of mechanics' institutes, anti-corn law leagues, emigration funds, working-men's associations, ragged-schools, and such like. His heart and hope are with this rough, prosy, present time—nor with *him* does distance of centuries lend enchantment to the view He rather sings,

> My own age! my own age! they say that thou art crude,
> Ungrateful to the former time, and wishing all renewed
> I do not spurn that former time, but own it proud and free,
> Yet not for its heroic prime would I surrender thee †

He places his ear against the great heart of the present time—and what others declare to be the dull creaking of machinery, iron-cold and dead, *he* knows to be palpitations of the mystery of Life, warm pulsations of a vital essence, dynamical and not mechanical, spiritual and not material, quickening their beat at every grand thought and noble inspiration. In sooty Manchester he sees something more than legions of operatives—he sees fellow-creatures created by the same Creator and hastening to the same awful eternity with himself, into whose daily life, and habit of thought, and cherished pursuits, he enters with unaffected sympathy—so that much of his doctrine may be expressed in Mrs. Gaskill's words:—"The vices of the poor sometimes astound us *here*; but when the secrets of all hearts shall be made known, their virtues will astound us in far greater degree. Of this I am sure"†—and of this too *he* is sure who has placed Sandy Mackay and others "of that ilk" in his Gallery of Literary Portraits.

The old Scotchman mentioned in the last paragraph, Sandy Mackay, is, we need hardly say, the presiding spirit in *Alton Locke*. Mr. Gilfillan calls him "just Thomas Carlyle *humanised*." Certainly the quantity of Carlylese spouted by him and his author is wonderful—though the angles of the original genius are ground down or worn away, the fine gold is become dim in course of transmutation, the old wine is put into new bottles which hardly improve its flavour or enrich its colour. Mr. Kingsley is too much of a borrower and an imitator to attain a permanent place in our literature, judging at least by this his latest production. We prefer Carlyle in *propriâ personâ* to this second-hand Carlyle, vending second-hand books in a dingy shop, and discoursing second-hand Doric to Chartist visitors Wherein consists the originality and independence often imputed to Mr. Kingsley, on the credit of *Alton Locke*, is to us unknown it as palpable an echo as can very well be conceived, and we are not aware that the author is likely to demur to this judgment; we rather apprehend, such is his veneration of the Latter-Day pamphleteer, that he feels honoured by an opinion that identifies him with, or approximates him to, the cause and person of that rugged genius. Perhaps, if he could or would shake off something of this allegiance, and allow his own inventive powers fair play, and follow the bidding of his own lively fancy, he might produce works that would miss indeed the temporary popularity of his present novels, but gain instead a solid, enduring, ever-growing reputation. As it is he writes for temporary purpose, as a polemic in the condition-of-England question, with the intensity and fire of an *ex-parte* churchman militant, as such, verily he has his reward—and probably content therewith—content to be forgotten with the social evils he yearns to destroy. It has been observed that "the materials with which he is constructing he feels to be too rough for the application of the (artist's) rule and plummet." His book is a thing thrust between the living and the dead and the moral plague which it interprets and would help to stay, consciously mocks at the restraints of rule and the ministries of grace In *Alton Locke* there is a negation of self on the part of the writer—an absence of all desire to stand forth as a "talented writer." Steadiness of aim and singleness of purpose are not throughout beguiled for a moment. The purpose is to arouse the attention of a wider class than that which refers to blue books and official reports, and to force them to look on the social evils that are lying at their doors The social problems perplexing the world, as well as the social miseries that have given rise to them, are boldly grappled with by a writer who does not go into the task of morbid anatomy with a box of aromatic vinegar at his nose."* A question may be, and indeed has been, raised and "vexed," as to whether it is a legitimate use of *fiction*, to write stories with the purpose of illustrating an opinion or establishing a doctrine; whether polemics, be they religious, political, or metaphysical, do not lie wholly beyond its province—inasmuch as the novelist makes his facts as well as his reasonings, coin the premises from which his conclusions are drawn, and may thus coin exactly what he wants, and reject whatever would impede the circulation of his own adopted currency. However these objections may hold good in general against controversial fiction—the unfairness of which is constantly observable in the "religious novels" of all sects, of the various schools headed by J. M. Neale, Paget, Sewell, C. B. Taylor, Charlotte Elizabeth, &c.—still we think where evils are so rife and patent as those which Mr. Kingsley attacks, an author by the mere exposure of them, in a form adapted to arrest public attention, does the state some service; and if the manner he adopts, and the vehicle he chooses for the conveyance of his facts, be objectionable to art, and ill-according with principles of taste, the damage is *his*—and in all probability he will have already counted the cost, and be prepared to sacrifice æsthetical reputation on the altar of the common weal. He may coin his facts to his liking; he may sometimes blind over other and contumacious facts to keep the peace, when they threaten the peace of his theory, he may be sadly partial, exclusive, deaf of one ear, and blind of one eye; but if the tendency of his agitation is to rouse sympathy with myraid sufferers previously unnoticed and uncared for—as in the instance of Hood's "Song of the Shirt"—and to reveal hidden diseases, deeds of darkness, and the "science of starving,"—why, one can hardly deny a genial and peculiar merit to his appeals.

Concerning the social and political doctrines advanced in *Alton Locke* this is not the place to speak. It *may* be, that the political economy against which the diatribes of Maurice and Kingsley and their coadjutors are directed, is after all "bene-

• Politics for the People. † Mary Barton.

* Athenæum 1850, p 944.
† See Edinburgh Review January, 1851.

volence under the guidance of science"—and that these impulsive philanthropists do exhibit in their controversial writings an intolerant, contemptuous spirit, "a restless unwillingness to submit to criticism, examination, or control, and a prompt recurrence to persecution and abuse," which calls for strong reprobation; it *may* be that they really little know, and can ill appreciate, "the strenuous effort, the stern and systematic self-control by which the votary of economic science, the benevolent *man of principle*, keeps his head cool and clear in the midst of the miseries he is called upon to contemplate; and the resolute nerve which is needed to throw cold water on the mischievous schemes of sanguine and compassionate contrivers.....who always insist upon scrambling out of the bog on the wrong side, simply because it is the nearest" The discussion of these grave and pressing questions we leave to the *Edinburgh Review* and the *Leader*, to Parson Lot of the *Christian Socialist* and the honourable editor of the *Economist*. Before leaving *Alton Locke*, however, let us pay our tribute of admiration to many a graphic scene and subtly-defined character in its exciting pages—willingly forgetting the mawkish affectation of a certain interview in Dulwich Gallery, and other not unfrequent blemishes, in favour of the very fine and life like description of Alton's childhood, his "ladder to learning" erected under the auspices of Sandy Mackay, his visit of horror, under the same old Trojan's tutelage, to that memorable upper-room of female sin and shame and starvation; and other stirring episodes in the progress of the tale. The superiority, nevertheless, of the early to the closing stages we account very decided—and we fear that chapter the last embodies but a lame and impotent conclusion, and depicts a state of mind in the hero unwarranted by ordinary psychological laws. Here Mr. Kingsley does seem—as far as observation of man and mind in this age of *Yeast* allows us to judge—to have coined his facts as well as his reasonings in a somewhat arbitrary manner, manufacturing plastic ones that will dovetail smoothly with his religious purpose, and tossing aside those other ordinary and every-day facts which are proverbially stubborn things.

His performances in verse—dramatic and lyric—evince no insignificant fund of poetical capability. *The Saint's Tragedy* entitles him, by common consent, to a place with some of our most distinguished rising poets. If it is, like his prose, occasionally wearisome from monotony and mannerism, and also wanting in that melody and finish which no minstrel can afford to despise, it is also "tender and true," lively and picturesque, enthusiastic and dignified. It utters the same language, and introduces almost the same themes as those which characterise *Alton Locke* and *Yeast*. Thus Elizabeth, the heroine, contrasts her princely state with neighbouring penury in the following strain:—

> We sit in a cloud, and sing, like pictured angels,
> And say the world runs smooth—while right below
> Welters the black fermenting heap of life
> On which our state is built I saw this day
> What we might be and still be Christian women
> And mothers, too—I saw one lay in childbed
> These three cold weeks upon the black damp straw,
> No nurses, cordials, or that nice parade
> With which we try to balk the curse of Eve—
> And yet she laughed, and showed her buxom boy,
> And said, Another week, so please the saints,
> She'd be at work a-field.

Or take her description of a dark, noisome, crowded alley, where

> The gaunt-haunched swine
> *Crowded at their Christian playmates o'er the scraps,*
> Shrill mothers cursed; wan children wailed, sharp coughs
> Glared dumb reproach, *and old perplexity,*
> *Too stale for words;* o'er still and webless looms
> The listless craftsmen through their elf-locks scowled.

For a concise vigour in word-painting of this kind, Mr. Kingsley frequently displays special aptitude; and being less hampered by obligations to Carlyle than when writing prose, he is in poetry more true to himself and to nature. He may claim "peerage" with such of the "upper house" as Moultrie, and R. C. Trench, and Clough, and Burbage, and Sterling, and Patmore—and one day may possibly command a more exalted seat—for he is Charles Kingsley *junior* yet—and of him one may say, in the language of anticipation, not as though he has already attained, either were already perfect.

Various are the paths of literature which he has assayed to tread. The novel—the drama—the sermon—the tract—the review—all have been handled, and with more or less of ease and success, by this reverend gentleman. His *Village Sermons* we have never seen; but they are eulogised by well qualified judges—and he is one of the few living clerics whom we should name, *a priori*, as likely to write effective pulpit addresses to our rural population—the best we know being those by the late Augustus Hare. In *Fraser's Magazine* we trace many a clever criticism to Mr. Kingsley—replete with vivacity, earnestness, and mannerism, like no other man's criticism—neither very profound, nor very scholarly, nor very acute, nor very witty—but written off in a familiar, dashing self-sufficing style, with a spice of humour, and a good deal of practical English sense. And in conclusion we can but allude to his appearances as "Parson Lot" in *Politics for the People* (1848) and *The Christian Socialist*—in which character he discourses graphically enough, and in unequivocal Carlylese, about "Cheap Clothes and Nasty," the rights and wrongs of Chartism and Communism, the politics of the Old and New Testament, and multifarious topics of the same grave order

SONGS FOR THE PEOPLE.

ORIGINAL AND SELECTED.

No XIII.—SEIZE TIME BY THE FORELOCK.

BY G. LINNÆUS BANKS.

Seize Time by the forelock and use it,
Nor your arms on your breast idly fold,
And then, though you live to be ninety,
Yet, in spirit, you'll never grow old.
'Tis not years, man, that constitute wisdom,
Nor the morning of life alone youth,
There be those who are children at sixty,
And boys who are old in the truth

Time is money, did man but employ it,
And a harvest of gold oft it yields,
While he who sits down like a sluggard,
Finds but thistles and tares in his fields·
By the force of the mind and its culture
Is the age of man tested and tried—
For a Newton was older at fifty
Than Methusalah was when he died.

LITERARY NOTICES.

JOHN CASSELL'S ALMANACKS FOR 1853 ARE NOW READY.

THE UNCLE TOM'S CABIN ALMANACK, or, THE ABOLITIONIST MEMENTO for 1853, splendidly Illustrated by George Cruikshank, Gilbert, Harvey, "Phiz," and other eminent Artists, price 1s

THE ILLUSTRATED EXHIBITOR ALMANACK for 1853, containing upwards of Thirty beautiful Engravings, price 6d.

THE PROTESTANT DISSENTERS' ALMANACK for 1853, with 18 beautiful Designs, by Gilbert, of striking Events in the History of Nonconformity, price 6d

THE POPULAR EDUCATOR ALMANACK for 1853, containing Forty-eight Pages of most interesting and valuable Educational Statistics; including a Comparative View of Education at Home and Abroad, Essays on the Leading Sciences; Brief Notices of Eminent Scholars, Exposition of Technical Terms, &c. &c., price 2d

THE TEMPERANCE ALMANACK for 1853, much improved and enlarged, and in which is inserted a Tale of thrilling interest, from the inimitable pen of Mrs Harriet Beecher Stowe, authoress of "Uncle Tom's Cabin," entitled, "THE PLEDGE TAKEN; or, The Husband Saved, and a Family made Happy," with valuable details of the great Temperance Movement, Statistics, &c. With several Engravings, designed by Gilbert, price 2d.

CASSELL'S ELEMENTS OF ARITHMETIC (uniform with Cassell's EUCLID), is now ready, price 1s. in stiff covers, or 1s. 6d. neat cloth.

UNCLE TOM'S CABIN, Illustrated with Twenty-seven Engravings by George Cruikshank, in weekly Numbers, price Twopence each The First Number was published on Saturday, October 23, containing Thirty-two well printed pages, with three elaborate Engravings, from Designs by the above-named Artist. Part I. (containing seven Engravings and ninety-six pages of letter-press), is now ready, price 6d. in a neat wrapper

FACTS, SCRAPS, AND WITTICISMS.

TOO TRUE.—When a rakish youth goes astray, friends gather around him in order to restore him to the path of virtue. Gentleness and kindness are lavished upon him to win him back again to innocence and peace. No one would suspect that he had ever sinned. But when a poor confiding girl is betrayed, she receives the brand of society, and is henceforth driven from the ways of virtue. The betrayer is honoured, respected, esteemed; but his ruined, heart-broken victim knows there is no peace for her this side of the grave. Society has no helping hand for her, no smile of peace, no voice of forgiveness. There are earthly moralities unknown to heaven. There is deep wrong in them, and fearful are the consequences.

GOOD ADVICE.—When you do a thing from the clear judgment that it ought to be done, never shun the being seen to do it, even though the world should make a wrong supposition about it If the act is improper, shun the deed itself; but if it is not, why fear those who censure you wrongly?

WOMAN.—"As the vine" says Washington Irving, "which has long twisted its graceful foliage about the oak, and been lifted by it into sunshine, will, when the hardy plant is razed by the thunderbolt, cling round it with caressing tendrils, and bind up its shattered boughs, so it is beautifully ordered by Providence, that woman, who is the dependent and ornament of man in his happier hours, should be his stay and solace when smitten with sudden calamity, winding herself into the rugged recesses of his nature, tenderly supporting the drooping head, and binding up the broken heart"

A GOOD DESCENT.—It is a question whether being called "the son of the gun" should not rather be taken as a compliment than as a term of abuse, as it is well known that no gun is good for anything unless it *descend in a straight line from a good stock.*

HOW TO "FINISH" A DAUGHTER.—1. Be always telling her how pretty she is. 2. Instil into her mind a proper love of dress. 3 Accustom her to so much pleasure that she is never happy at home. 4. Allow her to read nothing but novels. 5. Teach her all the accomplishments, but none of the utilities, of life. 6. Keep her in the darkest ignorance of the mysteries of housekeeping. 7. Initiate her into the principle that it is vulgar to do anything for herself. 8. To strengthen the latter belief, let her have a ladies' maid. 9. And lastly, having given her such an education, marry her to a clerk in the treasury upon £75 a-year, or an ensign that is going out to India. If, with the above careful training, your daughter is not finished, you may be sure it is no fault of yours, and you may look upon your escape as nothing short of a miracle.

THE GREAT HEART OF MAN.—The heart is a small thing, but desireth great matters. It is not sufficient for a kite's dinner, yet the whole world is not sufficient for it

AMERICAN NOTION OF WOMAN'S LOVE.—'Love is natural to woman as fragrance is to a rose. You may lock a girl up in a convent—you may confine her in a cell—you may cause her to change her religion, or forswear her parents: these things are possible; but never hope to make the sex forego their heart-worship, or give up their reverence for *cashmeres*; for such a hope will prove as bootless as the Greek slave, and as hollow as a bamboo."

TO THE DUKE OF WELLINGTON.

Not only that thy puissant arm could bend
The tyrant of a world, and conquering Fate
Enfranchise Europe, do I deem thee great;
But that in all thy actions I do find
Exact propriety: no gust of mind
Fitful and wild, but that continuous state
Of ordered impulse mariners await
In some benignant and enriching wind—
The breath ordained by Nature.
Thy calm mien
Recals old Rome, as much as thy high deed;
Duty thine only idol, and serene
When all are troubled; in the utmost need
Prescient, they country's servant ever seen,
Yet sovereign of thyself what'er may speed.

B DISRAELI.

THE RETORT COURTEOUS.—When Baxter was on one occasion brought before Judge Jefferies, "Richard," said the brutal Chief Justice, "I see a rogue in thy face." "I had not known before," replied Baxter, "that my face was a mirror"

RATHER TOO LATE.—"Waiter, I'll take my hat," said a gentleman at a party one evening, as he was about going home. "What kind of a hat did you wear?" "A bran new hat, that I paid ten dollars for this morning" "Well, sir," said the waiter, "all the good hats have been gone more than two hours"

At a dinner at the mansion-house, three foreign consuls were present, to whom the Lord Mayor wished to do honour by drinking their healths. He accordingly directed the toast-proclaimer to announce "The health of the three present consuls." He, however, mistaking the words, gave out, "The Lord Mayor drinks the health of the Three per Cent. Consols

THE IMMORTALITY OF THE SOUL.—How can it enter into the thoughts of man, inquires Addison, that the soul, which is capable of such immense perfection, and of receiving new improvements to all eternity, shall fall away into nothing almost as soon as it is created?

COOL REPLY.—A man whom Dr. Johnson once reproved for following a useless and demoralizing business, said in excuse, "You know, doctor, I must live" This old hater of everything mean and hateful, coolly replied, "He did not see the least necessity for that"

HOW TO ABATE AN EVIL.—"The women," says a Yankee Editor, "ought to make a pledge not to kiss any man who uses tobacco, and it would soon break up the practice" "We say," observes another Editor, "were the ladies to pledge themselves to kiss every man who does not use it, the practice would be given up much sooner."

WANTED IMMEDIATELY.—The diameter of the "circle of fashion," one square foot from "a deal of trouble." "Feathers" from the wings of love The "cord" that binds two hearts together. A relic from the "shrine of friendship." Bubbles from the "springs of joy." A gem from the "crown of virtue. The weapons with which people "kill time." To know if 'spirits" of wine and "ghosts" are akin A step from the "pinnacle of glory." To know the length of the plumb-line that will sound the "depth of knowledge" To know the rate of the tide of the "flow of reason." To know if you intend publishing the "music of the spheres." And, whether the "march of intellect" is slow or quick time. And, how to "soothe a murmuring stream," or to quiet a "babbling brook."

A TEMPTER PUNISHED.—A woman in Cincinnati lately horsewhipped a man who was in the habit of frequently calling to entice her husband to grog shops.

WIT IN THE CITY.—James I, in a capricious mood, threatened the Lord Mayor with removing the seat of royalty, the meetings of Parliament, &c., from the capital "Your Majesty, at least," replied the Mayor, "will be graciously pleased to leave us the River Thames."

NOTICES TO CORRESPONDENTS

YOUNG B.—"*Argus*" was the name given the son of Aristor, who, according to classic story, was said to have a hundred eyes, and being killed by Mercury when appointed by Juno to guard Io, she turned him into a peacock; the beautifully coloured spots on which are generally called "eyes." The name Argus is often given metaphorically, to one who is more than usually observant and inquisitive.

"A WOULD-BE ARTIST."—Certainly, a knowledge of anatomy is essential to correct figure modelling. You should understand well what muscles are brought into action, not only by the movement of the body, but by any emotion of the mind. This is necessary even where the figure is partially or wholly covered with drapery Chantrey had exquisite taste, but his consciousness of his defective knowledge of anatomy led him to present most of his statues, &c., in perfect costumes

B W. A.—You do well to improve yourself by reading, but do, pray, pay a little more attention to your spelling.

MARY B.—Lessons on Botany, with numerous illustrative engravings, have appeared both in the "Popular Educator" and the "Illustrated Exhibitor and Magazine of Art" We cannot well introduce them, therefore, into the "Working Man's Friend."

TIMON places us in a very awkward position because, if we advise him to follow his inclinations, we render his conduct obnoxious to the charge of fickleness. If it be understood that he is to serve seven years' apprenticeship, he cannot in honour, leave his master, even though no indenture or agreement has been signed, before the expiration of the term. On the other hand, he does seem, as he says, a waste of time to learn business which he is determined not to pursue As to his wish to go to sea, &c., *that* appears to be the wish of almost all English lads. He had better consult his father.

FREDERICK HINF is thanked, but we fear that we cannot find room for his very clever contribution.

A YOUNG MECHANIC (Sunderland) wishes to know if there be any shops in London where he may obtain good second-hand works on the arts and sciences, natural philosophy and astronomy, &c. Perhaps the best way of obtaining the information as to price, condition, &c., of such books is to procure catalogues from those who deal in second-hand scientific works.

BION.—Your paper on literary pursuits for working men will, we dare say, prove acceptable Send it to us.

R C. may procure information as to deceased officers in the army or navy, by searching the lists kept at the Horse Guards and the Admiralty There is a small fee required in each case

H. BAKER.—The "Lessons in French" may be obtained *direct* from the office by forwarding your address and seven postage stamps. They will also answer R. T. and W. Flood.

THE LINES forwarded by Andrew Reid, Wood, and Clara, are not quite up to the mark Try again.

C. H. T. is bound apprentice to A., who takes B. as a partner. Is the apprentice bound to serve B. as well as A.?—Yes.

W. E, and others who make inquiries as to the government and other schemes for emigration, should read CASSELL'S EMIGRANTS' HANDBOOK. It may be obtained of any bookseller for Ninepence.

*** In our next will appear a tale by Mrs. Stowe, the authoress of "Uncle Tom's Cabin" entitled THE SEMPSTRESS.

All Communications to be addressed to the Editor at the Office, Belle Sauvage Yard, London.

POZZUOLO, IN THE GULF OF NAPLES.

We never think of Naples, but we have day-dreams of cloudless skies, calm, still waters, an idle, luxurious population, and a small tyrant for a king. Visions of gay carnivals, with beautiful women leaning forth from window and balcony, and streets crowded with a laughing, uproarious, miscellaneous throng of pleasure-seekers, float before the mind's eye. And then the glorious bay, with a landward sight of Vesuvius, that most classical of volcanic mountains; and the ruins of Pompeii and Herculaneum close at hand, and only waiting to be visited. Surely this little kingdom of Italy would seem to possess all that is calculated to make life happy. Alas! in our far-off glimpses of this fair land, we take no account of hot, shadeless fields, of cities crowded to excess with a by-no-means cleanly population, the principal part of whom are priests, monks, musicians, lawyers, and lazzaroni. We never think for a moment of the inconvenience of houses swarming with green and creeping lizards, scorpions, spiders, and insects of a still more disgusting character; we never pause to anticipate earthquakes, which may overturn our dwellings at any moment without warning; and still less do we in England calculate upon that loss of personal liberty which he must submit to, who, for a single week even, takes up his residence in sunny Italy. By loss of liberty we do not mean actual incarceration within the four stone walls of a dungeon

VIEW OF POZZUOLO.

—though even that is a contingency by no means unlikely if the traveller should happen to exhibit a disposition curious enough to excite the suspicions of the police,—but we hint rather at a kind of surveillance unknown in England, and which is kept up by means of passports, police spies, and paid writers for a prostitute press. Trifles these, which are apt to somewhat dull the appetite for sight seeing, and dim the lustre of even the brightest of illuminations, and the wittiest of jokes, at the very gayest of carnivals!

But our visit on this occasion is confined to the single town of Pozzuolo, which, though stated to be on the gulf of Naples, has a little gulf of its own, as may easily be discovered by a glance at the map. It is an interesting town, full of antiquities. It is said to have been founded by the Samians, four hundred and seventy years before the birth of Christ; on the other hand, it has of course its legendary origin. Strabo ascribes its foundation to Dicæus, the son of Neptune, according to Suidas, it was built by Hercules, some writers have asserted that it was founded by the Ionians, while others contend that it was first colonised by the people of Cumæ, under the guidance of Diccarchus, after whom it was called Diccarchia the most probable conjecture, however, is, that it received its name from the immense number of sulphureous springs which abound in its neighbourhood, as the word indicates.

At present, Pozzuolo contains about 12,000 inhabitants, two churches, eight convents, several good streets, and a theatre, but the principal interest which attaches to this town, is its connexion with the doings of the mighty past. For a long series of years it was one of the principal sea-ports in the Mediterranean. The merchants of Greece, Rome, and Italy filled for a series of crowded its wharves and even now, the ruins of splendid palaces which everywhere abound attest its ancient magnificence. Beside the shore there once ran a long street or quay, called Piscinæ-Veteres, inhabited by goldsmiths, lapidaries, and workers in metal. Riches and curiosities from all parts of the world gleamed from many a doorway and warehouse, and to this day, there are dug up from the sands of the gulf at low water, or thrown up by the restless waves, jewels and golden ornaments, crysolites, and gravin rings and other personal adornments. "What might I not have seen," says Tully to his friend Atticus, "passing by the mart of Puteoli?"

From the purity of its air, and the delightfulness of its situation, Pozzuolo was a favourite resort of the Romans in the day of their greatest wealth and magnificence. They adorned it with statues, temples, and amphitheatres, and built fine houses and baths in its streets. They fortified it with thick walls and towers, and made it a place of such great renown, that Tully tells us it was called Little Rome.

But wars, and pestilence, and earthquakes, subdued it, and all of its ancient grandeur that now remains is to be traced in broken pillars that stand like sentinels in its quiet and deserted gardens; in crumbling arch and time-stained buttress; in choked-up aqueduct and tottering wall. Hannibal did his best to mar its beauty. In the civil wars of Marius and Scylla it suffered severely, as, indeed, did all Italy. Vespasian and Septimus Severus repaired, and in part restored it; but the Goths, under Alaric, came fresh from the sack of Rome, and brought its beauty down to the ground. Again was it repaired, and again destroyed; for, a few years afterwards, Genseric, the King of the Vandals, made an irruption into its streets, and destroyed all that he could, and what he and his followers left undone, Totila, the Goth, completed. But the Goths being at length driven out of Italy, Pozzuolo was once more rebuilt. For a little time it was again a pleasant watering-place on the Mediterranean, but the Lombards attacked it; the Saracens laid waste its palaces, and destroyed many of its inhabitants, the Normans made a descent upon its peaceful homesteads, and even Alphonso the First, king of Arragon, looked with a destroying eye upon this devoted city.

Indeed, it seems that Pozzuolo has, almost from the moment of its foundation, been a mark for the invader. In the year 1554, Barbarossa of Algiers—that famous red-bearded conqueror—having sacked the island and castle of Ischia, and having exacted tribute from the inhabitants of Prochyta, thought that Pozzuolo would offer but little resistance to his troops. But this time the town was saved, for Don Pedro of Toledo, at that time viceroy of Naples for Charles the F hastened to the relief of its inhabitants, and drove the inva back into the sea.

But earthquakes have been to the full as destructive to town as wars. In 1197, considerable damage was done from a prodigious earthquake which took place, accompa by the fall of great quantities of fire-stones. In 1458, in time of Alphonso, an earthquake overturned a large po of the city; and in 1538 there occurred a convulsion of earth which completed the ruin already so nearly, an often, accomplished. On that dreadful occasion, half the was swallowed up, and its inhabitants destroyed, the Luc lake was nearly filled with earth; and the little tow Tripergoa was totally and irretrievably ruined. Notw standing all these misfortunes, however, the town phœnix-like, from its ashes. Such of the inhabitants escaped from the ruined city, were earnestly invited return, and Don Pedro, to encourage them in rebuil their houses, erected a sumptuous palace, and placed over portal an inscription commemorative of the event. Man the Neapolitan nobility followed this example, and in a years Pozzuolo once more rose fair and beautiful. But tr they might, they could never raise the town to its fo splendour and renown, and from that period it has gradu declined, till it has become in the present day a mere co tion of poor huts and ruins, inhabited by a spiritless uncommercial people. Some very well-read folks say, the religion of the Pope is unfavourable to the advanceme other towns or people in Italy—but, on that question, w not presume to offer an opinion.

A SONG OF CALABRIA.

From the French of DE LAMARTINE.

When in the orchard I, in life's young hours,
Reclined beneath the blooming citron's shade,
Or sported where the almond spread her flowers,
While spring's light breezes with my ringlets play'd
Deep in my soul a low, sweet voice I heard,
And sudden rapture shot through all my veins
'Twas not the wind, the carol of the bird,
Nor childhood's accents that my being stirr'd,
Nor manhood's tones, nor woman's gentler strains
The voice was thine, my guardian spirit! thine!
It was thy heart soft whispering to mine

Again, when doom'd from him I loved to part,
After those hours beneath the sycamore,
While his last kiss was echoing in my heart—
My heart, that none had caused to thrill before—
Once more I heard that murmur low and sweet.
'Twas not his "farewell" sighing through the pines,
'Twas not the sound of his departing feet;
Nor did the wind in melody repeat
The distant song of lovers 'mid the vines.
The voice was thine, my guardian spirit! thine!
It was thy heart soft whispering to mine.

And when I, rich in all a mother's joys,
Brought round my hearth my wealth, a bounteous store
When with their little hands my ruddy boys
Shook down the figs that grew beside my door,
A tender voice awoke within my breast,
Through all my soul I felt its murmurs glide,
'Twas not the young birds chirping in their nest,
Nor the calm breathing of the babe at rest,
Nor song of fisherman upon the tide
The voice was thine, my guardian spirit! thine!
It was thy heart low singing then with mine.

Here, where the thicket shields me from the winds,
I watch the kids and children while they play,
Stirring the coals to warm my shrivelled hands,
And still that voice remains with me, and cheers,
Consoles and strengthens me for evermore;
'Tis not the voice I heard in early years,
Nor the remember'd accents that my tears
Can never to my lonely age restore;
But it is thine, my guardian spirit! thine!
Thy heart is with me still, and weeps with mine.

THE SEMPSTRESS.

BY HARRIET BEECHER STOWE, AUTHORESS OF "UNCLE TOM'S CABIN"

"Few, save the poor, feel for the poor,
The rich know not how hard
It is to be of needful food
And needful rest debarr'd.

Their paths are paths of plenteousness,
They sleep on silk and down;
They never think how wearily
The weary heads lie down.

They never by the window sit,
And see the gay pass by,
Yet take their weary work again,
And with a mournful eye." T. E. I.

THE sufferings of poverty are not confined to those of the common, squalid everyday beggars, who are inured to hardships, and ever ready to receive charity, let it come to them as it will. There is another class on whom it presses with still heavier power, the generous, the decent, the self-respecting, who have struggled with their lot in calm silence, "bearing all things, hoping all things," and willing to endure all things, rather than breathe a word of complaint, or to acknowledge, even to themselves, that their own efforts will not be sufficient for their own necessities.

Pause with me awhile at the door of yonder poor-looking house. In one of its small rooms live a widow and her daughter, who are dependent entirely on the labours of the needle, and those other slight and precarious resources, which are all that remain to woman when left to struggle her way "through this bleak world alone." It contains all their small earthly store, and there is scarce an article of its little stock of furniture that has not been thought of, and toiled for, and its price calculated over and over again, before everything could come right for its purchase. Every article is arranged with the utmost neatness and care; nor is the most costly furniture of a fashionable parlour more sedulously guarded from scratch or rub, than is that brightly-varnished bureau, and that neat cherry tea-table and bedstead The floor, too, boasted once a carpet, but old Time has been busy with it, picking a hole here, and making a thin place there, and though the old fellow has been followed up by the most indefatigable zeal in darning, the marks of his mischievous fingers are too plain to be mistaken It is true, a kindly neighbour has given a bit of faded baize, which has been neatly clipped and bound, and spread down over an entirely unmanageable hole in front of the fire-place, and other places have been repaired with pieces of different colours; and yet, after all, it is evident that the poor carpet is not long for this world.

But the best face is put on everything. The little cupboard in the corner, that contains a few china cups, and one or two antiquated silver spoons, relics of better days, is arranged with jealous neatness, and the old white muslin window-curtain has been carefully whitened, and starched, and smoothly ironed, and put up with exact precision, and on the bureau, covered by a snowy cloth, are arranged a few books and other memorials of former times, and a faded miniature, which, though has little about it to interest a stranger, is more precious to the poor widow than everything besides.

Mrs. Ames is seated in her rocking chair, supported by a pillow, and busy cutting out work, while her daughter, a slender, sickly-looking girl, is sitting by the window, intent on some fine stitching.

Mrs. Ames, in former days, was the wife of a respectable merchant, and the mother of an affectionate family. But evil fortune had followed her with a steadiness that seemed like the stern decree of some adverse fate, rather than the ordinary dealings of a merciful Providence. First came a heavy run of losses in business; then long and expensive sickness in the family, and the death of children. Then there was the selling of the large house and elegant furniture, to retire to a humbler style of living; and, finally, the sale of all the property, with the view of quitting the shores of a native land, and commencing life again in a new one. But scarcely had the exiled family found themselves in the port of a foreign land, when the father was suddenly smitten down by the hand of death, and his lonely grave made in a land of strangers. The widow, broken-hearted and discouraged, had still a wearisome journey before her ere she could reach any whom she could consider as her friends. With her two daughters, entirely unattended, and with her finances impoverished by detention and sickness, she performed the tedious journey.

Arrived at the place of her destination, she found herself not only without immediate resources, but considerably in debt to one who advanced money for her travelling expenses. With silent endurance she met the necessities of her situation. Her daughters, delicately reared, and hitherto carefully educated, were placed out to service, and Mrs. Ames sought for employment as a nurse. The younger child fell sick, and the hard earnings of the mother were all exhausted in the care of her; and though she recovered in part, she was declared by the physician to be the victim of a disease which would never leave her till it terminated her life.

As soon, however, as her daughter was so far restored as not to need her immediate care, Mrs Ames resumed her laborious employment. Scarcely had she been able, in this way, to discharge the debts for her journey, and to furnish the small room we have described, when the hand of disease was laid heavily on herself. Too resolute and persevering to give way to the first attacks of pain and weakness, she still continued her fatiguing employment till her system was entirely prostrated Thus all possibility of pursuing her business was cut off, and nothing remained but what could be accomplished by her own and her daughter's dexterity at the needle. It is at this time we ask you to look in upon the mother and daughter.

Mrs. Ames is sitting up, the first time for a week, and even to-day she is scarcely fit to do so, but she remembers that the month is coming round, and her rent will soon be due; and even in her feebleness she will stretch every nerve to meet her engagements with punctilious exactness. Wearied at length with cutting out, and measuring, and drawing threads, she leans back in her chair, and her eye rests on the pale face of her daughter, who has been sitting for two hours intent on her stitching.

"Ellen, my child, your head aches; don't work so steadily."

"Oh no, it don't ache *much*," said she, too conscious of looking very much tired. Poor girl, had she remained in the situation in which she was born, she would now have been skipping about, and enjoying life as other young girls of fifteen do, but now there is no choice of employments for her—no youthful companions—no visiting—few pleasant walks in the fresh air. Evening and morning, it is all the same; headache or sideache, it is all one. She must hold on the same unvarying task, a wearisome thing for a girl of fifteen!

But see, the door opens, and Mrs. Ames's face brightens as her other daughter enters. Mary has become a domestic in a neighbouring family, where her faithfulness and kindness of heart have caused her to be regarded more as a daughter and a sister than as a servant "Here, mother, is your rent-money," she exclaimed, "so do put up your work and rest a while. I can get enough to pay it next time before the month comes round again"

"Dear child! I do wish you would think to get something for yourself," said Mrs. Ames, "I cannot consent to use up all your earnings, as I have done lately, and all Ellen's too: you must have a new dress this spring, and that bonnet of yours is not decent any longer."

"Oh no, mother, I have fixed over my blue calico, and you would be surprised to see how well it looks; and my best frock, when it is washed and darned, will answer some time longer. And then Mrs. Grant has given me a riband, and when my bonnet is whitened and trimmed it will look very well. And so," she added, "I have brought you some wine this afternoon; you know the doctor says you need wine."

"My dear child! I want to see you take some comfort of your money yourself."

"Well, I do take comfort of it, mother. It is more comfort to be able to help you than to wear all the finest dresses in the world."

Two months after this dialogue found our little family still more straitened and perplexed. Mrs. Ames had been confined all the time with sickness, and the greater part of Ellen's time and strength was occupied with attending to her. Very little sewing could the poor girl now do, in the broken intervals that remained to her; and the wages of Mary were not only used

as fast as she earned, but she had anticipated two months in advance.

Mrs. Ames had been better for a day or two, and had been sitting up, exerting all her strength to finish a set of shirts which had been sent in to make. "The money for them will just pay our rent," sighed she; "and if we can do a little more this week—"

"Dear mother, you are so tired," said Ellen, "do lie down, and not worry any more till I come back."

Ellen went out and passed on till she came to the door of an elegant house, whose damask and muslin window-curtains indicated a fashionable residence.

Mrs. Elmore was sitting in her splendidly-furnished parlour, and around her lay various fancy articles, which two young girls were busily unrolling. "What a lovely pink scarf!" said one, throwing it over her shoulders and skipping before a mirror; while the other exclaimed, "Do look at these pocket-handkerchiefs, mother! what elegant lace!"

"Well, girls," said Mrs Elmore, "these handkerchiefs are a shameful piece of extravagance. I wonder you will insist on having such things."

"La! mamma, everybody has such now, Laura Seymour has half a dozen that cost more than these, and her father is no richer than ours."

"Well," said Mrs. Elmore, "rich or not rich, it seems to make very little odds; we do not seem to have half as much money to spare as we did when we lived in the little house in Spring-street. What with new furnishing the house, and getting everything you boys and girls say you must have, we are poorer, if anything, than we were then."

"Ma'am, here is Mrs. Ames's girl come with some sewing," said the servant.

"Show her in," said Mrs. Elmore.

Ellen entered timidly, and handed her bundle of work to Mrs Elmore, who forthwith proceeded to a minute scrutiny of the articles, for she prided herself on being very particular as to her sewing. But though the work had been executed by feeble hands and aching eyes, even Mrs. Elmore could detect no fault in it.

"Well, it is very prettily done," said she, "what does your mother charge?"

Ellen handed a neatly folded bill, which she had drawn for her mother. "I must say, I think your mother's prices are very high," said Mrs. Elmore, examining her nearly empty purse, "everything is getting so dear that one hardly knows how to live." Ellen looked at the fancy articles [illegible] the room with an air of innocent [illegible] Mrs. Elmore, "I dare say it seems to you as if persons in our situation had no need of economy, but, for my part, I feel the need of it more and more every day." As she spoke she handed Ellen the three dollars, which, though it was not half the price of one of the handkerchiefs, was all that she and her sick mother could claim in the world.

"There," said she, "tell your mother I like her work very much, but I do not think I can afford to employ her, if I can find any one to work cheaper."

Now, Mrs. Elmore was not a hard-hearted woman, and if Ellen had come as a beggar to solicit help for her sick mother, Mrs Elmore would have fitted out a basket of provisions, and put a bottle of wine, and a bundle of old clothes, and all the *et cetera* of such occasions; but the sight of *a bill* always aroused all the instinctive sharpness of her business-like education. She never had the dawning of an idea that it was her duty to pay anybody any more than she could possibly help; nay, she had an indistinct notion that it was her *duty* as an economist to make everybody take as little as possible. When she and her daughter lived in Spring-street, to which she had alluded, they used to spend the greater part of their time at home, and the family sewing was commonly done among themselves; but since they had moved into a large house, and set up a carriage, and addressed themselves to being genteel, the girls found that they had altogether too much to do to attend to their own sewing, much less to perform any for their father and brothers, and their mother found her hands abundantly full in overlooking her large house, in taking care of expensive furniture, and in superintending her increased train of servants; the sewing, therefore, was put out, and Mrs. Elmore *felt it her duty* to get it done the cheapest way she could. Nevertheless, Mrs. Elmore was too notable a lady, and her sons and daughters were together too fastidious as to the make and quality of their cloth to admit the idea of its being done in any but the best man

Mrs. Elmore never accused herself of want of charity fo poor, but she had never considered that the best class o poor are those who never ask charity. She did not con that by paying liberally those who were honestly and indc dently struggling for themselves, she was really doing a gr charity than by giving indiscriminately to a dozen a cants.

"What do you think, mother? Mrs. Elmore says we ch too high for this work," said Ellen, when she returned. am sure she did not know how much work we put in shirts. She says she cannot give us any more work. must look out for somebody that will do it cheaper. I d see how it is that people who live in such houses, and ha many beautiful things, can feel that they cannot afford t for what costs us so much."

"Well, child, they are more apt to feel so than people live plainer."

"Well, I am sure," said Ellen, "we cannot afford to s so much time, as we have over these shirts, for less mone

"Never mind, my dear," said the mother, soothingly; " is a bundle of work that another lady has sent in, and, get it done, we shall have enough for our rent, and some over to buy bread with."

It is needless to carry our readers over all the proc cutting and fitting, and gathering and stitching, necess making up six fine shirts. Suffice it to say, that on Sat evening all but one were finished, and Ellen proceeded to them home, promising to bring the remaining one on Tu morning. The lady examined the work, and gave Ell money, but on Tuesday, when the child came with th morning work, she found her in great ill-humour. Up examining the shirts, she had discovered that in some i tant respects they differed from directions she meant to given, and every [illegible] she had given, and accordingly she her displeasure on Ellen.

"Why didn't you make these shirts as I told you?" she sharply.

"We did," said Ellen, mildly, "mother measured l pattern every part, and cut them herself."

"Your mother is a fool, then, to make such a p work. I wish you would just take them back, and alter over," and the lady proceeded with the directions, of neither Ellen nor her mother, till they had [illegible] Unused to such language, the frightened [illegible] took t work, and slowly walked homeward.

"Oh dear, how my head does ache!" thought she to h "and poor mother, she said this morning she was afra other of her sick turns was coming on, and we have all thi to pull out and do over again."

"See here, mother!" said she, with a disconsolate air, entered the room, "Mrs Rudd says, take out all the b and rip off all the collars, and fix them quite another She says they are not like the pattern she sent; but she have forgotten, for here it is. Look, mother, it is ex we made them."

"Well, my child, carry back the pattern, and show h it is so."

"Indeed, mother, she spoke so cross to me, and loo me so, that I do not feel as if I could go back."

"I will go for you, then," said the kind Mrs [illegible] had been sitting with Mrs. Ames while Ellen was ou will take the patterns and shirts, and tell her the exa about it. I am not afraid of her." Maria Stephens tailoress, who rented a room on the same floor with Mrs. A a cheerful, resolute, go-forward little body, and ready to give a helping hand to a neighbour in trouble. So sh the pattern and shirts, and set out on her mission.

But poor Mrs. Ames, though she professed to take view of the matter, and was very earnest in showing Ell she ought not to distress herself about it, still felt a sh sense of the hardness and unkindness of the world comi her. The bitter tears would spring to her eyes, in t every effort to suppress them, as she sat mournfully ga the little faded miniature before mentioned. "When alive, I never knew what poverty or trouble was," s

thought that often passed through her mind; and how many a poor forlorn one has thought the same!

Poor Mrs. Ames was confined to her bed for most of that week. The doctor gave absolute directions that she should do nothing, and keep entirely quiet—a direction very sensible, indeed, in the chamber of ease and competence, but hard to be observed in poverty and want. What pains the kind and dutiful Ellen took that week to make her mother feel easy! How often she replied to her anxious questions, "that she was quite well," or "that her head did not ache *much*," and by various other evasive expedients the child tried to persuade herself that she was speaking the truth; and during the times her mother slept, in the day or evening, she accomplished one or two pieces of plain work, with the price of which she expected to surprise her mother.

It was towards evening when Ellen took her finished work to the elegant dwelling of Mrs. Page. "I shall get a dollar for this," said she; "enough to pay for mother's wine and medicine."

"This work is done very neatly," said Mrs. Page, "and here is some more I should like to have finished in the same way."

Ellen looked wistfully, hoping Mrs. Page was going to pay her for the last work. But Mrs. Page was only searching a drawer for a pattern, which she put into Ellen's hand, and, after explaining how she wanted her work done, dismissed her without saying a word about the expected dollar. Poor Ellen tried two or three times, as she was going out, to turn round and ask for it, but before she could decide what to say she found herself in the street.

Mrs. Page was an amiable, kind-hearted woman, but one who was so used to large sums of money, that she did not realise how great an affair a single dollar might seem to other persons. For this reason, when Ellen had worked incessantly at the new work put into her hands, that she might get the money for all together, she again disappointed her in the payment.

"I will send the money round to-morrow," said she, when Ellen at last found courage to ask for it. But to-morrow came, and Ellen was forgotten, and it was not till after one or two applications more that the small sum was paid.

But these sketches are already long enough, and it is time to close them. Mrs. Ames at length found [illegible] would appreciate and honour her sincerity of principle and loveliness of character, and by the assistance she was raised to more prosperous days: and she, and the delicate Ellen, and the warm-hearted Mary, were enabled to have a home and reside on their own, and to enjoy something like the return of their former prosperity.

We have given these sketches, drawn from real life, because think there is in general too little consideration on the part those who give employment to those in situations like the low here described. The giving of employment is a very portant branch of charity, inasmuch as it assists that class of poor who are the most deserving. It should be looked on this light, and the arrangements of a family be so made that uitable compensation can be given, and prompt and cheerful ment be made, without the dread of transgressing the rules economy.

t is better to teach our daughters to do without expensive aments or fashionable elegances; better even to deny ourves the pleasure of large donations or direct subscriptions to the charities, rather than to curtail the small stipend of her ose "candle goeth not out by night," and who labours with needle for herself and the helpless dear ones dependent on exertions.

DISGUSTING TASTE OF MEDICINES.—Dr. Polli recommends a ns of rendering the disagreeable tastes of medicines impercible, founded on the physiological fact that a strong impression he nerves, whether of vision, hearing, or taste, renders that ch follows less perceptible. Instead of applying to the mouth, efore, agreeable substances after swallowing nauseous medicines, hould prepare it before, in order that the taste of the medicine not be perceived.—Aromatic substances, chewed just before, range or lemon peel, &c, &c., effectually prevents castor &c., being tasted. In preparing the mouth for bitters, liquorice e only sweet that should be used, the others creating a llarly disagreeable compound taste.

"THE FATAL QUESTION."

A TALE OF THE BALUSTRADES, FROM "PUNCH'S POCKET-BOOK FOR 1853."

(*Being the specimen of a Novel, in Three Volumes, wanting a Publisher.*)

"It was a dull afternoon in August, when a stranger might be seen, leaning with his chin supported by the top of his thumb, over one of the balustrades of the bridge of Waterloo. There was a slight wind which kept whispering in the stranger's ear, but what the wind seemed to say, or what the stranger mentally replied, must remain for ever a mystery. The stranger wore an alpaca coat, of a greyish hue, which had seen better days and better buttons. His hat, which was a wide-awake, contrasted curiously with his sleepy aspect, and a pawnbroker's ticket protruding from the pocket of his waistcoat told a sad story of a watch once going,—but now gone—perhaps for ever. In a few minutes the stranger was joined by one in whose coat age had sown a quantity of seeds, and his collar was secured by a fastening, the existence of which seemed to hang upon a thread of the very slenderest texture. Spooner, for such was the name of him who wore the wide-awake, gave a faint groan when he recognised Tomkins, for so was he called whose presence we have last spoken of. 'Well,' muttered Spooner through his teeth, which were decayed like his hopes, 'how long is the canker to prey upon my heart's blighted blossoms?'—'Tell me rather,' moaned Tomkins with a wild glance at a passing omnibus, 'tell me rather when I shall draw out the envenomed dart that has for months been embedded in my own?'—Here he broke off, and the remainder of the sentence was lost in a low gurgle. Leaving our heroes to moan and gurgle for a few minutes over the side of the bridge, we will give a short sketch of their past history. Spooner was the only child of a doating cheesemonger, who had commenced business with a limited capital and a large heart, the former of which had been consumed in stock, while the latter had led him into a long series of friendly acceptances. 'Time and the hour run through the longest' bill, and the friend whom Spooner Senior had obliged came to him one day to declare that, though prepared to meet his fate, he was not prepared to meet his engagements. The large hearted and heavy-liabilitied Spooner fell in a swoon on his own mat, was conveyed thence to his own mattress, and woke the next morning a determined misanthrope. Young Spooner was thus early taught to hate the world; and the fact is at once explained of his being found, with a moan in his mouth and without a watch in his pocket, on the bridge of Waterloo. Tomkins was a character of a different stamp, and had been nursed in the hard boned, uncomfortable, long-legged lap of poverty. His mother, who was the portionless daughter of a penniless ticket-porter, had run—or rather walked away with the junior partner of a ruined firm, which had left the Court of Bankruptcy without a certificate. Young Tomkins, who had been thrown upon the world with a terrific bump at an early age, had, after floundering about for a considerable period, found his legs at last under the desk of an attorney's office, where he was engaged as a human copying machine at a weekly salary of twelve shillings. With the usual tendency of the human mind to rush into extremes, the imagination of Tomkins had sprung from parchment to poesy, and his office stool—which was of the usual height—had become for him a sort of Parnassus, on which he made verse when he should have been doing better. Let us now return to the bridge, where we will ask the reader to accompany us, as he has just paid the toll, in the shape of patience, during the little digression we have led him into.—'Ha! ha! ha!' cried Tomkins, with a wild burst of frenzied mirth. 'Ha! ha! ha!' and he relapsed again into gloomy silence, which was at length broken by his approaching Spooner in a mysterious manner, and whispering in his ear, 'Tell me——' A female voice, in accents almost hushed with excessive plaintiveness, now warbled, or rather wailed, in gentlest tones, 'A penny a lot.' The two friends stood mutely gazing at each other, startled by this mournful interruption, when Tomkins, with a sort of hoarse emotion, groaned into the ear of Spooner, 'A penny a lot! oh, my friend, is the lot of either of us worth a penny?' and they fell,

dissolved in tears on one another's shoulders This affecting position had lasted for a few moments, when Tomkins, making a last effort, rallied sufficiently to put his long delayed question. It was as follows:—'Tell me, Spooner, oh! tell me if thou canst; but, if thou canst not, vex not my tortured brain with the agony of suspense.'—Spooner's knees trembled, his lips—curving into a bow— were all of a quiver, his teeth amid the awful silence began to chatter, and his ear was stretched out to its most perpendicular longitude. 'Go on,' he groaned; 'the question—the question.'—'Well, then,' finally resumed Tomkins, 'tell me, when is a Judge likely to fall to the ground between two stools?'—Spooner made a convulsive effort. It was but a single one; but it was enough, and having shrieked out, 'When he sits in error,' fell into his friend's arms

* * * * *

Years rolled on, and Tomkins, after many vacant stares over the parapet of Waterloo Bridge, caught a glimpse at last of the tide that was to lead on to fortune. He, with manly resolution, took his place at the oar, and Spooner—though not rowing in the same boat—found his way also into the current of prosperity The two continued friends, but Tomkins never ventured to ask Spooner a conundrum again!"

DANIEL WEBSTER.

It seems but a few weeks since that we had to record the decease of the great American senator, Henry Clay, the last mail (Nov. 7), now brings us the news of the death of the no less celebrated statesman, Daniel Webster The melancholy event took place on the 24th of October, at Marshfield, near Boston. Perhaps no man occupied a larger space in the public mind than the late Secretary of State for the American Republic; and perhaps no man more thoroughly deserved the confidence of the people among whom he had all his life resided. Great men die, but their memories last for ever.

In the "ILLUSTRATED EXHIBITOR" of a few weeks since,* appeared an admirable portrait of the deceased statesman, accompanied by an able and philosophical memoir, for our present purpose, however, it will be sufficient if, instead of indulging in any reflexion of our own, we confine our notice to the events which distinguished the life of this great American lawyer. For this purpose we avail ourselves of an interesting sketch in the *New York Herald* of the 26th ultimo.

"Daniel Webster was born on the 18th of January, 1782, in the last year of the war of American independence, at Salisbury, in the home which his father had established on the outskirts of civilisation The early opportunities for education with which Mr. Webster was favoured were of course very limited, and when quite young he was daily sent two or three miles to school, in mid-winter, and on foot. This school, which was kept for only a small part of the year, was of an indifferent character, but it is evidence of the character of the man, that, even under these disadvantages, he showed a great eagerness for learning.

"Ebenezer Webster, the father of this interesting child, was a most remarkable man. Tall in stature, and severe, plain, and firm in character, he was one of those men who stamp their character not only on their immediate households, but even on the age in which they live In early life he entered the military service of the colonies as a common soldier, and served in the war with the French, under Sir Jeffrey Amherst and Wolf, in the invasion of Canada. He rose to the rank of captain before the end of the war, and, having obtained a grant of land for his services, settled in the town of Salisbury, which was at first called Stevenstown, on the Merrimack river, in New Hampshire. Soon after his settlement in Salisbury, his first wife having died, he married Abigail Eastman, a woman of more than ordinary intellect, who became the mother of Ezekiel and Daniel Webster. She was proud of her sons, and ambitious that they should excel in public and private life; and she lived to see them famous—one as a lawyer, and the other as Secretary of State. After a few years spent in this primitive school in the woods, the young Daniel was in 1796 taken by his father to an academy at Exeter, which had been endowed in 1781 by the Hon John Phillips. In this celebrated school he enjoyed the advantage of only a few months' instruction; but, short as the period was, his mental powers were thus early developed, and he exhibited to his instructors evidence of his superior intellect. After a few months at Exeter, he returned home, and having passed his fifteenth year, was placed by his father with the Rev. Samuel Wood, of Boscawen. In six months, from February to August, 1797, he completed his preparation for college, under the instruction of Mr. Wood. This preparation was, of course, imperfect; but the standard of classical literature did not stand very high in America at the close of the last century.

"In 1797, Webster entered Dartmouth College, at Hanover, New Hampshire, where, after four years of assiduous application to his studies, he graduated in August, 1801. He was not only distinguished for his attention to his collegiate duties, but devoted himself to general reading, particularly to English history and literature. He took part in a small weekly publication, to which he contributed selections and original articles. He also delivered addresses before the college societies. Appreciating the advantages which he shared, in common with the other students, Daniel persuaded his father to send his brother Ezekiel to college; and, that means might be provided for this purpose, Daniel taught a few scholars during the vacations.

"Immediately after leaving college, Webster entered the office of Mr Thompson, of Salisbury, as a student of law. Mr. Thompson was a lawyer of high standing, and represented New Hampshire at various times in both houses of Congress. While in the office of Mr Thompson, Mr. Webster accepted an offer to take charge of an academy, at Fryeburg, in Maine, where his salary was one dollar a day. He was able, by acting as assistant to the Registrar of Deeds, for the county, to earn enough to pay his personal expenses; and, therefore, his salary was all saved as a fund for his own professional education, and to help his brother through college. During his residence at Fryeburg, Mr. Webster borrowed, and for the first time, read 'Blackstone's Commentaries.' In September, 1802, he returned to Salisbury, and resumed his studies under Mr. Thompson, in whose office he remained for eighteen months, extending his knowledge of law, besides giving much time to general reading, especially studying the Latin classics, English history, and Shakspere. He also read Puffendorff's 'History of England' in Latin.

"Being desirous of witnessing a more enlarged course of practice in the law, Mr. Webster went to Boston, and took up his residence there in July, 1804. Previous to entering upon practice, he pursued his legal studies for six or eight months in the office of the Hon. Christopher Gore, a distinguished advocate, and afterwards Governor of Massachusetts, who soon saw, and spoke prophetically of the talents of his pupil. In the spring of 1805, Mr. Webster was admitted to the bar in the Court of Common Pleas, Boston. Soon afterwards he returned to his native State, and commenced practice at Boscawen, near his father's residence. Ebenezer Webster died the following year. In May, 1807, Daniel was admitted as attorney and counsellor in the Superior Court of New Hampshire; and in September of that year, leaving his office in Boscawen with his brother, he removed to Portsmouth, in conformity with his original intention. Here he remained in the practice of his profession for nine successive years. He soon became eminent in the profession, and appeared in the leading cases in all the courts. His practice in New Hampshire, however, was never lucrative, and, although exclusively devoted to his profession, it afforded him only a bare livelihood.

"During the excitement which prevailed previous to the declaration of war with England in 1812, Mr. Webster participated in conventions of his political friends, and in his speeches and essays displayed such extraordinary ability that many of the prominent men of the State were anxious to see him in Congress. At the election next ensuing after the declaration of war in 1812, he was brought forward as a candidate for Congress, and was elected in November, 1812. He took his seat at the first session of the 13th Congress, which was an extra session, called in May, 1813. The fame of his ability had preceded him, and in the organization of the House he was placed by Mr. Clay, the Speaker, upon the Committee of

* No. 41, for October 9.

Foreign Affairs, which was the leading committee in time of war.

"On the 10th of June, 1813, Mr. Webster delivered his maiden speech in Congress, on a series of resolutions moved by himself, relative to the repeal of the Berlin and Milan decrees of the French Emperor. No full report of this speech was preserved, but it took the House by surprise, from the vast amount of historical knowledge and power of illustration which it displayed.

"From this point commenced Mr. Webster's distinguished career as a public man. He sat eight years in the House of Representatives, and nineteen years in the Senate, and during the whole of that period, by his great powers of eloquence, and his remarkable abilities, he exercised an immense influence over the domestic and the foreign policy of his country He also established for himself a pre-eminent position as an advocate. He is the second Secretary of State in the history of the Union who has died in office, and he is justly regarded by his countrymen as entitled to a foremost rank among the statesmen of the Republic."

THE COUP D'ETAT

FROM "NAPOLEON THE LITTLE," BY VICTOR HUGO

THE resistance had assumed unexpected proportions

The combat had become menacing, it was no longer a combat, but a battle, which was beginning in every direction. At the Elysée, and the different ministries, people began to turn pale; they had wished for barricades, and they had got them

In the business streets, the citizens were delivering up their muskets, and the women were making lint "All is going on well! Paris is up!" exclaimed B——, to us, as he entered the Committee of Resistance with a face radiant with joy Fresh intelligence reached us every instant; all the permanent committees of the different quarters had placed themselves in communication with us. The members of the committee deliberated with one another, and issued orders and instructions for the combat in every direction. Victory seemed certain! There was a moment of enthusiasm and joy when all these men, still standing between life and death, embraced each other. "At present," exclaimed Jules Favre, "let but a regiment turn, or a legion appear, and Louis Bonaparte is lost." "To-morrow, the Republic will be at the Hotel de Ville!" said Michael (de Bourges). All was ferment, all was excitement; in the most peaceful quarters of the town the proclamations were torn down, and the ordinances defaced In the Rue Beaubourg, the women cried from the windows to the men employed in erecting a barricade, "courage." The agitation reached the Faubourg Saint Germain.

The principal military accomplices in the drama held a council together. The question was discussed whether it was not necessary for Louis Bonaparte to quit the Faubourg Saint Honoré immediately, and remove either to the Invalides or to the Palace of the Luxembourg; two places which, in a strategical point of view, are more easy to defend against any sudden attack than the Elysée Some preferred the Invalides and others the Luxembourg, and the subject was one which gave rise to an altercation between two generals

It was at this moment that the ex-King of Westphalia, Jérome Bonaparte, seeing that the *coup d'etat* was tottering to its ruin, and having some care for the morrow, wrote his nephew a significant letter, which was published at the time.

The impulsion was really given, the movement of rage and hatred was becoming universal, and the *coup d'etat* appeared lost; one shock more and Louis Bonaparte would have fallen. Had the day but ended as it began, all would have been over. The *coup d'etat* was approaching a state of despair. The hour for the most fearful measures was come. What did he intend doing? It was necessary that he should strike some great blow, some unexpected blow, some terrible blow. He was reduced to this alternative; he was doomed to perish, or to save himself by a frightful expedient.

Louis Bonaparte had not quitted the Elysée. He occupied a cabinet on the ground floor, near the splendid gilt saloon, where, when he was a child in 1815, he had been present at the second abdication of Napoleon. He was there alone; orders had been given that no one should be allowed to have access to him. From time to time the door was opened a little, and the grey hair of General Roguet, his aide-de-camp, appeared. The General was the only person who was allowed to open this door and enter the room The General brought the news, which was becoming every instant more and more alarming, and he frequently terminated what he had to say with the words: "Matters are not going well," or "Matters are going badly." After he had finished, Louis Bonaparte, who was seated with his elbows on a table and his feet upon the fire-dogs, before a large fire, turned his head half round on the back of his chair, and, with the most phlegmatic voice, and without any apparent emotion, invariably answered in the four following words "*Qu'on execute mes ordres*" (let them execute my orders)

What were these orders? We shall see.

Here we pause to collect all our strength of mind, and the narrator lays down his pen with a kind of hesitation and agony. We are approaching the abominable events of that mournful day, the 4th, we are approaching that monstrous fact from which arose the success of the *coup-d'etat* dripping with blood. We are about to unveil the most horrible thing ever premeditated by Louis Bonaparte, we are about to reveal, tell, narrate, and describe that which all the historiographers of the 2nd December have concealed, that which General Magnan carefully omitted in his report, that which, even at Paris, the place where these things were witnessed, men scarcely dare to whisper to each other. We are about to enter on the horrible.

The 2nd December is a crime covered with darkness, a coffin, closed and silent, but from the cracks in which streams of blood gush forth

We will now lift the coffin lid

From an early hour in the morning, for here—and we especially point out the fact—there is most incontestible proof of a premeditated plan, from an early hour in the morning, strange notices had been posted up at the corners of all the streets; we have copied these notices, and our readers must remember them. During sixty years that the cannons of revolutions have, on certain days, boomed through Paris, and that the Government, when menaced, has had recourse to desperate measures, nothing had ever been seen like these notices. They informed the inhabitants that all crowds, no matter of what kind, would be dispersed by an armed force, *without any previous warning whatever*. In Paris, the metropolis of civilization, people do not easily believe that a man will push his crime to extremities, and, therefore, these notices had been looked upon as a means of intimidation that was hideous and savage, but at the same time almost ridiculous

The public were wrong. These notices contained the very germ of Louis Bonaparte's plan They were seriously meant.

A little after one o'clock, a quarter of an hour after the last order given by Louis Bonaparte to General Roguet, the whole length of the Boulevards, from the Madeline, was suddenly covered with cavalry and infantry Almost the whole of Carrelet's division, composed of the five brigades of Cotte, Bourgon, Canrobert, Dulac, and Riebell, and presenting a total of sixteen thousand four hundred and ten men, had taken up their position, and extended themselves in *echelons* from the Rue de la Paix to the Faubourg Poissonnière. Each brigade had its artillery with it. Eleven pieces of cannon were counted on the Boulevard Poissonnière alone. Two of the cannons, with their muzzles turned different ways, had been pointed at the ends of the Rue Montmartre and Faubourg Montmartre respectively, no one knew why, as neither the street nor the Faubourg presented even the appearance of a barricade. The spectators, who crowded the pavement and the windows, looked with affright at all these cannons, sabres, and bayonets, which blocked up the street.

"The troops were laughing and chatting," says one witness. Another witness says, "The soldiers had a strange look about them." Most of them were leaning upon their muskets, with the butt-end upon the ground, and seemed nearly falling from fatigue, or something else. One of those old officers who are accustomed to read a soldier's thoughts in his eyes, General ——, said, as he passed the Cafe Frascati, "They are drunk."

There were now some indications of what was about to happen.

At one moment, when the crowd was crying to the troops—"*Vive la République!*" "Down with Louis Bonaparte!" one of the officers was heard to say, in a low voice—"*Ceci va tourner à la charcuterie!* (we shall soon have a little to do in the pork-butchering line).

A battalion of infantry debouches from the Rue Richelieu. Before the Cafe Cardinal it is greeted by a unanimous cry of "*Vive la République!*" A literary man, the editor of a Conservative paper, who happened to be on the spot, adds the words—"*Down with Soulougue!*" The officer of the staff, who commanded the detachment, makes a blow at him with his sabre. The journalist avoided the blow, and the sabre cuts in two one of the small trees on the Boulevards.

As the 1st Regiment of Lancers, commanded by Colonel Rochefort, came up opposite the Rue Taitbout, a numerous crowd covered the pavement of the Boulevards. This crowd was composed of some of the inhabitants of that quarter of the town, of merchants, artists, journalists, and even several young mothers, leading their children by the hand. As the regiment was passing by, men and women,—every one in fact,—cried: "*Vive la Constitution!*" "*Vive la Loi!*" "*Vive la République!*" Colonel Rochefort, the same person who had presided at the banquet, given on the 31st October, 1851, at the Ecole Militaire, by the 1st Regiment of Lancers, to the 7th Regiment of Lancers—and who, at this banquet, had proposed as a toast—"Prince Louis Napoleon, the chief of the State, the personification of that order of which we are the defenders!"—this colonel on hearing the crowd utter the above cry, which was perfectly legal, spurred his horse into the midst of the crowd, through all the chairs on the pavement, while the Lancers precipitated themselves after him, and men, women and children were indiscriminately cut down. "A great number remained dead on the spot," says a defender of the *coup d'etat*, and then adds—"It was done in a moment."

About 2 o'clock, two howitzers were pointed at the extremity of the Boulevard Poissonniere, at a hundred and fifty paces from the little advanced barricade of the guard-houses on the Boulevard Bonne Nouvelle. While placing the guns in their proper position, two of the artillerymen, who are not often guilty of a false manœuvre, broke the pole of a caisson. "*Don't you see they are drunk!*" exclaimed a man of the lower classes.

At half-past 2,—for it is necessary to follow the progress of this hideous drama minute by minute, and step by step,—the firing commenced before the barricade, but it was languid, and almost seemed as if done for amusement only. The chief officers appeared to be thinking of anything but a combat. We shall soon see, however, of what they were thinking.

The first cannon ball, badly aimed, passed above all the barricades and killed a little boy at the Château d'Eau as he was procuring water from the basin.

The shops were shut, as were also almost all the windows. There was, however, one window left open on an upper story in the house at the corner of the Rue du Sentier. The principal mass of mere spectators were still on the southern side of the street. It was an ordinary crowd and nothing more,—men, women, children, and old people who looked upon the languid attack and defence of the barricade as a sort of sham fight.

This barricade served as a spectacle until the moment arrived for making it a pretext. The soldiers had been skirmishing in this manner, and the defenders of the barricade returning their fire, for about a quarter of an hour, without any one being wounded on either side, when suddenly, as if by the agency of electricity, an extraordinary and terrible movement was observed, in the infantry first, and then in the cavalry. The troops suddenly faced about.

The historiographers of the *coup d'etat* have asserted that a shot, directed against the soldiers, was fired from the window which had remained open at the corner of the Rue du Sentier. Others say that it was fired from the top of the house at the corner of the Rue Notre Dame de Recouvrance and the Boulevard Poissonnière. According to others, it was merely a pistol shot fired from the roof of the lofty house at the corner of the Rue de Mazagran. The shot is contested, but what cannot be contested is that,—for having fired this problematical shot, which, after all, was perhaps nothing more than the noise occasioned by some door slammed-to violently,—a dentist, who inhabited the next house, was killed by a musket ball. The question resolves itself into this: Did any one hear a pistol or musket shot fired from one of the houses on the Boulevard? Is this the fact, or is it not? A host of witnesses deny it.

If the shot was really fired, there still remains one point that requires to be cleared up. Was it a cause, or was it a signal?

However this may be, all of a sudden, as we have said before, the cavalry, infantry, and artillery faced towards the dense crowd upon the pavement, and then, without anyone being able to assign a reason for it, unexpectedly, without any motive, without any previous warning, as the infamous proclamations of the morning had announced, the butchery commenced from the Theatre of the Gymnase to the Bains Chinois, that is to say the whole length of the richest, the most frequented, and the most joyous Boulevard of Paris.

The army commenced shooting down the people, with the muzzles of their muskets actually touching them.

It was a horrible moment; it would be impossible to describe the cries, the arms of the people raised towards heaven, their surprise, their horror; the crowd flying in all directions, the shower of balls falling on the pavement and bounding to the roofs of the houses, corpses covering the road in a single moment, young men falling with their cigars still in their mouths, women in velvet gowns shot down dead by the long rifles, two booksellers killed on their own thresholds without their having known what offence they had committed, shots fired down the cellar-holes and killing anyone, no matter who happened to be below, the Bazaar riddled with shells and balls, the Hotel Sallandrouze bombarded, Tortoni's carried by assault, hundreds of corpses stretched upon the Boulevard, and a torrent of blood in the gutters of the Rue de Richelieu.

The narrator must here again crave permission to suspend his narrative.

In the presence of these deeds without a name, I, who write these lines, declare that I am the registrar of the court. I record crime, I summon the witnesses in the trial. My functions extend no further. I cite Louis Bonaparte, I cite Saint Arnaud, Maupas, Morny, Magnan, Carrelet, Canrobert, and Reybell, his accomplices, I cite, too, the rest whose names will be found elsewhere, I cite the executioners, the murderers, the witnesses, the victims, the heated cannons, the smoking sabres, the drunken soldiers, the mourning families, the dying, the dead, the horror, the blood, and the tears,—I cite them all to the bar of the civilised world.

The mere narrator, whoever he might be, would never be believed. Let the living facts, the bleeding facts, therefore, speak for themselves. Let us hear the witnesses.

We shall not print the names of the witnesses, and we have said why we shall not do so, but the reader will easily recognise the sincere and poignant accent of reality in every account we give.

One writer says:—"The volleys of musketry continued uninterruptedly for twenty minutes, while now and then the cannon was heard booming above all the rest. At the first volley, I threw myself on the ground and crept along on the pavement to the first door I found open. It was a wine shop at No. 180, next door to the Bazaar d'Industrie. I was the last person who went in. All this time the discharge of musketry was still kept up. In this shop there were about fifty persons, and among them five or six women, and two or three children. Three poor wretches were wounded when they came in. Two of them died at the expiration of a quarter of an hour, in horrible agony: the third was still alive when I left the shop at four o'clock;—however, as I afterwards learned, he did not survive the effects of his wounds."

Another witness says.—"At a quarter-past three, a singular movement took place. The soldiers who were turned towards the Porte Saint-Denis fronted about in an instant, resting against the houses from the Gymnase, the house of the Pont-de-Fer, and the Hôtel Saint-Phar. Immediately afterwards, a running fire was directed on the houses and people on the opposite side of the way, from the Rue Saint-Denis to the Rue Richelieu. A few minutes were sufficient to cover the

pavement with dead bodies, and riddle the houses with balls; this paroxysm of fury on the part of the troops remained undiminished for three-quarters of an hour."

Another witness says:—"* * * The first cannon-shots fired against the barricade Bonne-Nouvelle, served as a signal to the rest of the troops, who fired almost simultaneously at every one within the range of their muskets."

Another witness says:—"No words are powerful enough to describe such an act of barbarity. A person must himself have seen in order to be bold enough to speak of it, and attest the truth of a fact which nothing can palliate. The soldiers fired volleys of thousands and thousands and thousands of shots—the number is inappreciable—on the unoffending crowd, and without having the slightest reason for doing so. There was a desire to produce a deep impression. That was the whole secret of the matter."

Another says:—"I can swear that, up to that time, there was neither a barricade nor an insurgent; there were *sportsmen, and there was game* flying from them: that is all."

This image, "sportsmen and game," is the one which immediately suggests itself to the mind of all those who beheld this horrible proceeding. We meet with the same simile in the testimony of another witness—"* * * At the end of my street, and I know that the same thing was observed in the neighbouring ones as well, we saw the Gendarmes Mobiles with their muskets, and themselves in the position of *sportsmen waiting for the game to rise*, that is to say, with their muskets at their shoulders, in order that they might take aim and fire more quickly. In order that those persons who had fallen wounded near the doors in the Rue Montmartre might receive the first necessary attentions, we could see the doors opened from time to time down the street, while an arm would be stretched out, and then hastily drawn in the corpse or the dying man whom the balls were still striving to claim as their own."

Another witness hits upon the same image:—"The soldiers, stationed at the corners of the streets, awaited the inhabitants as they passed along, *like sportsmen lying in wait for their game*, and directly they saw them in the street they fired at them *as they would do at a target*. A great many persons were killed in this manner in the Rue du Sentier, Rue Rougemont, and Rue du Faubourg Poissonnière.

* * * *

"'Go on,' said the officers to the unoffending citizens who demanded their protection. At these words people went their way quietly and with confidence, but it was merely a form of expression already agreed on, and which meant *death*, for hardly had they gone a few steps before they fell."

Let us terminate this list by three extracts, which it is impossible to transcribe without a shudder—"For the first quarter of an hour of this deed of horror," says a witness, "the firing, which for a moment became less sharp, caused some persons who were merely wounded to suppose that they might get up again. Of those who were lying stretched on the ground before the *Prophète*, two rose. One of them fled in the direction of the Rue du Sentier, from which he was only the distance of a few yards off. He reached it in the midst of a shower of balls which carried away his cap. The other could only succeed in raising himself on his knees, in which position, with his hands clasped together, he besought the soldiers to spare his life, but he immediately fell down shot dead. The day afterwards, there was one spot to be seen near the steps leading into the show-rooms of the *Prophète*, scarcely a few feet in extent, into which more than a hundred balls had been fired."

Another witness says:—"At the end of the Rue Montmartre, as far as the fountain, a space of about sixty paces, there were sixty bodies of men and women, both of the upper and lower classes, children, and young girls. All these unfortunate creatures had fallen victims to the first volley fired by the troops and the gendarmerie, who were stationed on the opposite side of the Boulevards. They all fled at the first discharge, and, proceeding a few paces, sank down to rise no more. One young man had taken refuge in a gateway, and tried to shelter himself behind the projection of the wall on the side of the Boulevards. After ten minutes of badly aimed shots he was hit, in spite of all his efforts to render himself as small as possible by drawing himself up to his full height; he was then seen to sink down and rise no more."

Another witness says:—"The plate-glass and the windows in the house of the Pont de Fer were all shattered. One man, who was in the court-yard, went mad with fright. The cellars were filled with women who had sought refuge there, but in vain. The soldiers fired through the shops and the cellar holes. From Tortoni's to the theatre of the Gymnase similar things took place. This lasted more than an hour."

Let us here close these extracts. Let us terminate this mournful inquest. We have had proof enough.

The execration felt for the dead is patent. The testimonies of a hundred more individuals, which we have before us, repeat almost the same facts in the same words. It is at present certain, it is proved, it is beyond the possibility of a doubt, it cannot be denied, it is as evident as day, that on Thursday, the 4th December, 1851, the unoffending inhabitants of Paris, the inhabitants who were not in any way mixed up with the fighting, were mown down without warning, and massacred merely for the sake of intimidation, and that it is not possible to attach any other intention to Monsieur Bonaparte's mysterious command:—

"Let them execute my orders."

This execution lasted until night set in. For more than an hour, there was, as it were, an orgy of musketery and artillery. The cannonade and the platoon firing crossed each other indiscriminately, at one particular period, the soldiers were killing each other.

The most horrible amusements were mixed up with the massacre. The Tirailleurs de Vincennes had established themselves at one of the barricades on the Boulevard that they had carried by assault, and from thence they exercised themselves in shooting at persons who were passing at a distance. From the neighbouring houses, such hideous dialogues as the following were heard. "I bet I will bring that fellow down."—"I bet you won't."—"I bet I will." And then the shot followed. It was easy to know if the person fell by the roar of laughter which accompanied his fall; whenever a woman passed, the officers cried out. "Fire at that woman; give her a touch!"

This was one of the orders. On the Boulevard Montmatre, where the bayonet was greatly in requisition, a young captain of the staff cried out: "Prick up the women!"

One woman, with a loaf under her arm, thought she might cross the Rue Saint-Fiacre. A tirailleur shot her down.

Matters were not so bad as this in the Rue Jean Jacques Rousseau. A woman cried, "Vive la République!" she was merely whipped by the soldiers. But let us return to the Boulevards.

One of the passers-by, a hussier, was struck by a ball aimed at his forehead, he fell upon his hands and knees, imploring mercy! He received thirteen more balls in his body. He survived by a miraculous chance, not one of his wounds was mortal. The ball which struck his forehead tore the skin, and then passed round his skull without fracturing it.

An old man of eighty-four years of age was found concealed somewhere or other, brought before the steps of the *Prophète*, and shot: he fell. "He will have no bump on his head," said a soldier, the old man had fallen upon a heap of dead bodies. Two young men from Issy, who had been married only a month to two sisters, were crossing the Boulevard on their way from their business. They saw the muskets levelled at them, and threw themselves on their knees, exclaiming, "We have married two sisters!" They were killed. A dealer in cocoa, named Robert, residing in the Fauboug Poissonnière, was flying, with his cocoa-machine on his back, down the Rue Montmartre; he was killed.

Some sergeants were heard to say: "*Pitch into the Bedouins, hit them hard!*" "In the writer's time," says a witness, "the soldiers used to call the civilians *pekins*. At present we are Bedouins. The soldiers massacred the people to the cry of '*Give it the Bedouins!*'"

The troops killed for the mere sake of killing. In the court-yards of certain houses, even the horses and dogs were shot.

When the butchery was ended,—that is to say when night had completely set in, and it had began in the middle of the day,—the dead bodies were not removed, they were so numerous that thirty-three of them were counted before a single shop, that of Mr. Barbedienne. Every space of ground left open in the asphalte at the foot of the trees on the Boulevards

was a reservoir of blood. "The dead bodies," says a witness, "were piled up in heaps, one upon the other, old men, children, persons in blouses and paletots, all collected pell-mell, in one indescribable mass of heads, arms and legs."

Another witness describes a group of three individuals in the following terms:—"Two had fallen upon their backs; and the third, having become entangled under their feet, had fallen upon them." The isolated corpses were rare, and were more remarkable than the others. One young man, well dressed, was seated against a wall, with his legs separated, and his arms half folded on his breast. He held in his hand one of Verdier's canes, and seemed to be looking at what was going on around him. He was dead. A little further on, the bullets had transfixed against a shop a youth in velveteen trowsers, who had some proof-sheets in his hand The wind agitated these proofs covered with blood, on which the fingers of the corpse were still closed. A poor old man, with white hair, was lying stretched in the middle of the road, with his umbrella at his side. His elbow almost touched a young man in patent leather boots and yellow gloves, who lay extended with his eye-glass still in his eye. At a few paces distance, with her head upon the pavement, and her feet in the road, lay a woman of the lower classes, who had attempted to escape, with her child in her arms Both were dead, but the mother still tightly grasped her child.

When all was finished, Paris came to see the sight. The people flocked in crowds to the scenes of these terrible occurrences; no one offered the least obstruction. This was what the butcher wanted. Louis Napoleon had not done all this to hide it afterwards.

A woman was standing at the corner of the Rue Richelieu. She was looking on. All of a sudden, she felt that her feet were wet. "Why it must have been raining here," she said, "my shoes are full of water." "No, Madam," replied a person who was passing, "it is not water." Her feet were in a pool of blood.

In the Rue Grange Batilière three corpses were seen quite naked.

At two paces distance from the Theatre des Variétés, the crowd stopped to look at a cap full of brains and blood hung upon a tree.

Another witness says.—"The Boulevards presented a horrible sight. *We were literally walking in blood* We counted eighteen corpses in about five and twenty paces."

Another witness, the keeper of a wine-shop in the Rue de Sentier, says.—"I came along the Boulevard du Temple to my house. When I got home, I had an inch of blood around the bottom of my trowsers."

Let us hasten to get clear of these horrid details.

The next day, the 5th, something terrible was seen in the cemetery of Montmartre.

An immense space, that up to that time had remained unoccupied, was "turned to account" for the temporary interment of some of those who had been massacred. They were buried with their heads above ground, in order that their relations might recognise them. Most of them had also their feet above ground, with only a little earth upon their breasts The crowd flocked to the spot, the sight-seers pushed you about as you walked in the midst of the graves, and, at times you felt the earth giving way beneath your feet: you were walking on the stomach of some corpse. You turned round and beheld a pair of boots, or of sabots, or of women's shoes, while on the other side of you was the head, which the pressure of your weight on the body caused to move.

An illustrious witness, the great sculptor David, who is now proscribed and wandering from France, says.—"In the cemetery of Montmartre, I saw about forty bodies with their clothes still on them, they had been placed side by side, and a few shovelsfull of earth hid all except them heads, which had been left uncovered in order that they might be recognised by their relations. There was so little earth that their feet were still visible; the crowd, horrible to say, was walking on the bodies. Among others, there were some young men with noble features, bearing the stamp of courage; in the middle was a poor woman, a baker's servant, who had been killed while she was carrying round the bread to her master's customers, and, near her, a young girl who sold flowers on the Boulevards. Those persons who were looking for the corpses that had disappeared were obliged to trample their bodies under foot, in order to gain a near view of their faces. I heard a man of the lower classes say, with an expression of horror: 'It is like walking upon a spring-board.'"

It is evident, and we particularly direct the reader's attention to the point, that at first, and for the advantage which it wished to derive from its crime, the *coup d'etat* did not make the least endeavour to conceal it; the first day, on the contrary, it exposed it to all eyes. It was not contented with atrocity—it must needs add shameless impudence. The massacre was but a means, the end was intimidation.

Was this end attained?

Yes.

Immediately afterwards, as early as the 4th December, the public excitement was calmed. Paris was stupified. The voice of indignation which had been raised at the *coup d'etat* was suddenly hushed at the carnage.

Crassus had crushed the gladiators; Herod had slaughtered the infants; Charles IX. had exterminated the Huguenots; Peter, of Russia, the Strelitz; Mehemet Ali, the Mamelukes; Mahmoud, the Janissaries; while Danton had massacred the prisoners; Louis Napoleon had just discovered a new sort of massacre—the massacre of the passers-by.

This massacre ended the struggle. There are times when what should exasperate a people strikes them with terror: the population of Paris felt that the ruffian had his foot upon its throat. The people no longer offered any resistance. That same evening Mathieu (de la Drome) entered the place where the Committee of Resistance was sitting, and said to us. "We are no longer at Paris, we are no longer under the Republic, we are at Naples under the sway of King Bomba."

From this moment, in spite of all the efforts of the committees, of the republican representatives, and of their courageous allies, there was, save at certain points only, such as the barricade of the Petit Carreau, for instance, where Denis Dussoubs, the brother of the representative, fell so heroically, nought but a slight effort of resistance, which more resembled the convulsions of despair than a combat. All was finished.

The next day, the 5th, the victorious troops paraded on the Boulevards. A general was seen to show his naked sword to the people, and was heard to exclaim. "There is the republic for you!"

Thus it was this infamous butchery, this massacre of the passers-by, which was meant as a last resource by the measures of the 2nd December. To undertake them, a man must be a traitor, to render them successful he must be an assassin

It was by this wolf-like proceeding that the *coup d'etat* conquered France and overcame Paris. Yes, Paris! It is necessary for a man to repeat it over and over again to himself before he can credit it: Is it at Paris that all this happened?

Good heavens! The Russians entered Paris with their lances raised, and singing their wild songs, but Moscow had been burnt, the Prussians entered Paris, but Berlin had been taken; the Austrians entered Paris, but Vienna had been bombarded, the English entered Paris, but the camp at Boulogne had menaced London, they came to our barriers, these men from every nation, with drums beating, trumpets sounding, colours flying, swords drawn, cannons rolling, matches lighted: they came drunk with excitement, as enemies, conquerors, instruments of vengeance, crying out with rage before the domes of Paris the names of their capitals,—London, Berlin, Vienna, Moscow! The moment, however, they had crossed the threshold of the city, the moment the hoofs of their horses had rung upon its stones, Englishmen, Austrians, Prussians, Russians, all of them, in a word, on entering Paris, beheld in its walls, its buildings, its people, something predestined, something venerable and august; they all felt a holy sentiment of respect for the sacred city; they all felt that they had before them, not the city of one particular people, but the city of the whole human race; they all lowered the swords they had raised! Yes, the crime of massacreing the Parisians, of treating Paris like a place taken by assault, of delivering up to pillage one quarter of the town, of violating the second eternal city, of assassinating civilisation in her very sanctuary, of mowing down with grape-shot old men, children, and women, in this mighty place, this centre of the world; a crime from

which Wellington restrained his half-naked Highlanders, from which Schwartzenberg kept his Croats free, a crime which Blucher did not suffer his Landwehr to commit, of which Platow did not dare allow his Cossacks to be guilty; this crime, M. Bonaparte, miserable wretch that you are, you caused to be perpetrated, and by French soldiers!

ONE GOOD TURN DESERVES ANOTHER.

"Fatal effects of luxury and ease!
We drink our poison, and we eat disease,
Indulge our senses at our reason's cost,
Till sense is pain, and reason hurt or lost"
Mary Chandler.

THE evening sun was shedding his last rays upon the city spires, and the hum of busy thousands was growing faint upon the ear, as they increased their distance from the giant town, when a mother and her son were entering a quiet path between two fields, at some short distance from London They walked on in silence, for the hearts of both were full of a vague indefinite fear of the coming morrow At last the youth spoke "Mother," said he, "how long has my father been away?"

"Nearly fifteen years, John. When he was taken from me you were scarcely two years old, and yet, when I think of that night, it seems to me but yesterday."

"And have you never heard from him till now, mother?" asked the boy.

"Never!" quietly responded the mother.

"But why have you not told me this before? why, if my father was alive and expected back, have you kept me in ignorance all this time, dear mother?"

"My dear boy," said the mother, "I kept this secret in my own breast so long, when you were too young to know it, that when you came to be almost a man, and grew to look so like him when he was your age—so very like him in his manly beauty—I was unwilling to damp your ardent spirit by telling you of your father's shame."

"Shame, mother!" exclaimed the boy.

"My darling child," said the mother, as she kissed his smooth and open brow, and twined her arms about his neck, "it was for this I brought you out to-night into the fields, where none but you might hear the tale I have to tell"

The fond embrace was given back with an ardour that would have satisfied a less confident mind than Mrs Brandon's, at such a time, of her son's deep love and sympathy

And still they walked on and on, still silent and alone, for she could not bring herself to disclose the secret she had hoarded up so many years to the pure ears of her ardent son

And the pale moon uprose, and the city's hum was heard no more; and the landscape, bathed in the bright yet softened light, brought peace and calm upon their hearts.

Influenced by the scene, they wandered forth into the fields, till the striking of some distant clock gave note of passing time The midnight hour was past, and the mother, leaning confidently upon the arm of her dear, her only son, breathed into his ear a tale of deep passion and fearful crime She told him how, being a young and artless girl, she had been wooed by one who was much her superior in birth, how she had resisted his importunities for a long, long time, till, in an evil hour (for both him and her, though she had no thought of wrong,) they were secretly married —against the will and without the knowledge of her husband's father; for he was a proud, rich man, and had high and ambitious views for his only son, the heir of all his wealth how that they had kept their union from him till secrecy was no longer possible how that, when his father heard of his son's marriage with one possessed of no worldly wealth but virtue and a pure heart, he flew into a fearful passion, and solemnly renounced his only child, bestowing upon him his bitter and everlasting curse how that they had fled away to the great city—the husband's heart filled with bitterness and sorrow. how that they had struggled hard to procure an honest livelihood, expending their last penny in the vain endeavour to provide for themselves and their infant boy the means of living—only the common necessaries of life, for the husband, being a rich man's son, had been brought up to no profession All things failed, and he was driven to desperation, grew morose, and even cruel, to her he had loved so well, and sworn before the altar of his God to honour and to cherish. He became, though by slow and almost imperceptible degrees, a depraved and wicked man, frequenting low houses and associating with infamous characters, often absenting himself from their wretched home for days together, or returning to it in a state of intoxication fearful to behold Still she kept bravely up, never wavering in the deep and holy love she bore the husband of her choice At last, when hope of his reformation began to be almost extinguished in her heart, he obtained some poor employment in a merchant's house. She began, then, to hope again for her husband—fondly dreamed there were happy days yet in store for them—and looked forward to the time when the gloom should depart from his mind, and he should be to her once more what he had been in their happier days. Alas! short-lived was the hope. a year had scarcely elapsed, and she fancied he was beginning to be more like himself. when, temptation failing in his way, he fell. Oh, heavy days! He was taken from her one night by officers of justice, and next morning committed to trial for embezzlement!

Then, and not till then, his father's heart relented. Too late! The deep wrong and injury he had done his son was past recall. The most talented advocates were employed in his defence, and money was lavished like water. It was of no avail Tried, sentenced, and condemned, the wretched man was hurried on board the convict ship, and his miserable wife left without hope or happiness in the world. The father unable to withstand the shock, did not long survive; and died, leaving his hoarded wealth, for which he had sacrificed his son, to her Long, long was it ere she rose from the almost mortal sickness that came upon her at her husband's disgraceful fall; and when she awoke from that sleep, almost of death, she found herself rich—rich beyond her wildest dreams. The proud father had died, having made the only reparation in his power to the deeply injured wife and her young child. Poor and impotent recompence it did not restore to her the husband of her youth, or bring back the peace and happiness of her girlish days. *He* was gone, he, who had formed the bliss of her heart, the light of her eyes—for even in his darkest hour she had not ceased to love and reverence him. What avail were riches now to her he was not there to share them with her, and she prayed to God that she might die and be at rest. But that past, she remembered that she had something still to live for, something to cherish in her infant boy, and she rose from her repining mood, solemnly dedicating herself to God and him

Years passed away, and in the opening mind and filial love of her child, she found a balm for all her sorrows; for even the greatest grief is not proof against a mother's love. Widowed in heart, her greatest pleasure now was in the care and education of her son, who grew every day more and more like what she remembered his father to have been, in everything but wilfulness and pride. And now that father was to come back upon the morrow, and the mother's heart was filled with love, and fear, and doubt, and apprehension—for she knew not how he had passed the years of his exile. Her boy had become to her what the husband once had been, and though wild thoughts of love and duty thronged into her mind, they were mixed with a strange fear of the returning convict To morrow would solve all. To-morrow would seal her happiness or misery. The sorrow and pain of parting, were only equalled by the apprehension of the coming meeting.

"And now, my love," said she, "spare him and me. I have told you all. do not despise my husband do not hate your father"

Their tears flowed fast, as she concluded her fearful recital: and that night the mother and her son sat together hand in hand, their hearts too full for words And when the morning broke, the boy, still clasped in her arms, and pillowing his throbbing head upon her bosom, vowed that no reproach or unkind word should ever pass his lips, or find admittance in his heart against that father who, though he had erred, had deeply suffered for his crime.

He came back. He clasped again to his heart his wife and child. All was forgotten - all forgiven in the joy of meeting. Happiness seemed once more to come upon the mother's heart—serenity once more to visit the house of that faithful and devoted wife Their bliss seemed indeed complete; and the failings of the father were no longer remembered in his unlooked for return

* * * * * *

Pass we a few years Summer had thrice come and gone, and John Brandon was now a man Quiet was upon their home, and apparent peace, but there was a strange feeling in the father's heart—an unwor hy suspicion at the bottom of his thoughts. He was a dark, thoughtful, brooding man, and the years of his compelled exile had helped to deepen his faults, while they had not softened his better feelings For a time, he had appeared perfectly happy in the company of his wife and son; but latterly, an unworthy thought had found entrance in his breast, and was cherished there. He grew suspicious and jealous of his son He imagined—base reflection! that the mother loved the child better than she loved her husband, and in an evil hour, he gave to his suspicions words. Who shall describe the effect of these false and evil thoughts, nurtured in a mind already prepared by crime and imagined wrong, and cherished by a man as wilful and passionate as Richard Brandon? Frequent now were the occasions on which he fancied himself slighted by his wife and son, and deep and bitter were the revilings he bestowed upon their innocent heads. At last, one day, fevered by wine and carried away by passion, he, after a scene of violence and anger, rebuked and

struck his boy. It was enough. That night, after writing a letter full of love and kindness to his mother, John Brandon left his father's house, never, as he intended in the depth of his wounded spirit, to return. He had borne his father's base suspicions—his cruel reproaches, without an angry word or thought; for he knew that his perceptions were perverted and his temper soured by his sufferings, merited though they were; but a blow,—his pride, his chivalrous ideas of honour, could not brook that indignity—even from a father. He inherited some portion of his parent's proud spirit, without his weakness; and he felt that night determined, in the bitterness of his heart, to see that father's face no more. Full of an undefined feeling of revenge, brooding upon his wrong, and nursing his bad resolves, he fled away. The hopes he had so fondly cherished, of being with his mother, and of reconciling his father to himself, were rudely dashed to the earth: his love and duty were lost to him for evermore, and, like water spilt upon the ground, could never be gathered up again. But even in the midst of his anger, he remembered the promise he made to his mother; and the thought of that night came like a holy calm upon his troubled heart, and he felt, that but for her love, he had been lost indeed.

* * * * * *

Time in his varied course, had sped away, bearing on his rapid wings the chance and changes of eventful years. Years of bliss they were to some, of misery to many, and of experience in life and death to all. It is summer once again, and buds sing and roses bloom as they had never ceased to do, the sun shines, and the world looks just to all appearance as it ever had looked, fair, and bright, and blooming, as though it held no aching hearts or ever heard of crime. Time had worked change indeed in those John Brandon left behind him on the night of his departure.

In a miserable room, close and foetid with the unwholesome atmosphere of a crowded [illegible], [illegible] and squalor. There is something in the [illegible] more than poverty, as he regards [illegible] and [illegible] of his devoted [illegible] "Mary, my love"—"I must have some, I know you have some—give it me." He raises his hand to strike the miserable woman, as he had often before, and as she stoops to avoid the blow, he falls senseless to the ground, overcome by intoxication.

"God forgive him!" she exclaims, "for the sake of what he was, and for the memory of the dear boy he banished, I will not upbraid him."

These two were Richard and Mary Brandon. After his son's departure, no longer under the restraint he could not help feeling in his presence, and losing all self command, he gave way to the greatest excesses, and in a few years, dissipated all the wealth left by his broken-hearted parent. With the wreck of his worldly fortune, he became what he now appeared, and though, in his sober moments—which were, alas! but few—his better feelings prevailed, and, weeping like a child, he would ask his poor wife's forgiveness, yet so thoroughly brutalized by drink was he, that he had lost even the appearance of his former respectability. Cast off by his friends, neglected by the world, and deserted by every one but the wretched being who had clung to him in all his waywardness, and found excuses for all his faults, and loved him even in the midst of his crimes, and in the depth of their misery, he appeared to find solace in nothing but the soul debasing and filthy indulgence of intoxication. At last, he became too poor for even this, and he hung about his former haunts too glad to accept the poorest offerings of his drunken, but more fortunate companions: and when, as now, he chanced to be overcome by the drink he was no longer able to purchase, his unfortunate wife would quietly watch over and tend him, as though she had never received injury at his hands.

Plunged in the deepest poverty, steeped in misery, and almost dying of want, she did not reproach him; but prayed for the reformation she had long since looked upon as past. She thought—oh! how often—of her lost son, and in the long silent hours of night, as she sat waiting her husband's coming home, her thoughts wandered back to the night preceding his return, when they had wandered out into the fields together, and she had talked with the boy of his father's crime.

It was long past midnight, on such an occasion as we have described, when, sitting alone, she fancied she heard a strange step upon the stairs. She listened; it was surely coming this way, it was not her husband's; and it was so remarkable, too, that any one should be there at such an hour; her heart palpitated with a strange fear; there was a hand upon the lock, and a figure entered the desolate apartment.

Not a word spoke he; but gazing round the room, as if trying to find something he sought there, approached the chair on which she sat so wonderingly.

She looked earnestly into his face as he bent over her, and then, uttering a wild cry, fell senseless at his feet.

"Mother, mother, dear mother!" he exclaimed, as he raised her in his arms, "look upon me. Why did I leave you? Oh God, she dies!" and he called aloud for help; but before his cry was answered, she recovered.

"My dear lost boy! my only son!" she whispered, "I knew you would come back again. I knew you would not forget me in my poverty. But hush—let me look at you." And she gazed upon his face and travel-stained garments with eyes full of a mother's love. "Still beautiful—still noble: changed, changed, but still the same. Oh, this repays me for all my trials! this moment, so long expected and never doubted, has come at last!" and she clasped him again and again to her breast; and bending meekly down, poured out her soul to God in silent thankfulness for his return.

At this moment the father entered the room.

The mother left her son, and throwing herself upon her husband's breast, whispered soft words of kindness in his ears—"*He* has come back again—never to leave us more. Father embrace your son."

Brandon stood a moment irresolute—it was but a moment in another, father and son were clasped in each other's arms.

"Father, father, forgive me!" cried the son.

"Forgive you," said Brandon, in thick grief-subdued accents; "I have been a very weak and wilful man," and he buried his face in his hands and wept. "O God! oh God!" he murmured, "ruined, utterly ruined in my own esteem, how shall I look upon his face. And *he* asks *my* forgiveness!"

Debilitated by want and intemperance, the shock of John's return was too much for the weak nerves of his father, and he was taken violently ill. But it was a blessed sickness, for during the time, when he was scarcely sensible of anything but a dreamy kind of happiness, and the luxury of sweet sleep, such as he had not known for many a day, a change was taking place, which was to be rendered by the most beneficial results. His first words on recovering were eventful,—and, unlike many such promises made at such times, proved true. "Mary," said he, looking into her face, "from this moment I'll drink no more."

It was a happy night for the three, as they sat hand in hand, mutually forgiving and reconciled. The son told them how he had outlived his old revenge, and when he heard accidentally that they were poor, had come from a foreign land to cheer their lonely days, and never more to leave them.

All forgiven and forgotten, the remainder of their lives glided peacefully away, for John had battled with the world, and come home rich. And he felt how much better it was to give than to receive, and, remembering all his mother's kindness—how, through all her life, she had returned good for evil—felt in his own heart that ONE GOOD TURN DESERVES ANOTHER.

A RAT LEGEND.

In the year, 967, Hatto, the second duke of Franconia, surnamed Bonosus, Abbot of Fulden, was chosen archbishop of Mentz. In his time was a grievous dearth; and the poor being ready to starve for want of food, he caused great companies of them to be gathered, and put into barns, as if there they should receive corn, and other relief; but he caused the barns to be set on fire, and the poor to be consumed therein; saying withal, that they were the rats that ate up the fruits of the land. But not long after, an army of rats gathered themselves together (no man can tell from whence), and set upon him so furiously, that into what place soever he retired, they would come and fall upon him; if he climbed on high into chambers, they would ascend the wall, and enter at the windows and other small chinks and crevices; the more men attempted to drive them away, the more furious they seemed, and the more they increased in number. The wretched prelate, seeing he could find no place by land safe for him, resolved to seek some refuge by the waters, and got into a boat, to convey himself to a tower, in the midst of the Rhine, near a little city called Bingen: but the rats threw themselves by infinite heaps into the Rhine, and swam to the foot of the tower; and clambering up the wall, entered therein, and fell upon the archbishop, gnawing and biting, throtling and tearing, and tugging him most miserably, till he died. This tower is yet to be seen, and at this day is called Rats' Tower. It is also remarkable, that while the archbishop was yet alive, and in perfect health, the rats are said to have gnawed and razed out his name, written and painted upon many walls.

CHRONOLOGICAL EPITOME

OF THE

HISTORY OF ARCHITECTURE IN ENGLAND:

BEING

An attempt to show, at one view, an approximation to the date, duration, and characteristics of the principal styles; some examples; and names of eminent architects.

DATE.	STYLE AND ITS DURATION.	LEADING FEATURES.	EXAMPLES.	EMINENT ARCHITECTS
Romans invaded Britain 55 years before Christ.	**Anglo-Roman.** About 300 years	Remains show frequent use of flat tiled bricks; oftentimes alternately with beach stones. Circular arches sometimes ornamented with them. Reticulated masonry.	St. Martin's Church, Canterbury. Gateway at Lincoln. Richboro' Castle. Tacitus speaks of temples, &c., but of these we know little.	Uncertain.
Saxons arrived A.D. 449 Egbert, 1st king of England ..... 828 Alfred ..... 872 His successors, to . 1066	**Anglo-Saxon** About 150 years	Earliest buildings, probably, were in imitation of Roman or Byzantine structures. Circular arches on short columns, or square pillars. Triangular arches occur occasionally. Zigzag and hatched mouldings	D[illegible] Church, Canterbury. [illegible] Church, Brixworth, Northamptonshire. Escomb Church, Durham. Earl's Barton Church, and that of St Peter's, Lincolnshire, usually admitted of this era. Graymbdd crypt, Oxford, disputed.	Benedict Biscop (7th century). Wilfrid. Tunbald (8th). Alcuin. Edmoth of Worcester (10th).
William the Conqueror ..... 1066 William II ..... 1087 Henry I. ..... 1100 to 1135	**Anglo-Norman.** About 85 years *(Continuing in use some time after the introduction of the Pointed Style.)*	Buildings of large dimensions and greater regularity than Saxon. Circular arches resting on massive cylindrical, square, or multangular pillars (which were sometimes adorned with spiral grooves). Groining simple. Doors deeply [illegible] often richly ornamented. Windows small, and generally single, [illegible] closed in mouldings. Interlaced circular arches, zig-zag, fret, and billet mouldings. [Instance of pointed arch occurs in reign of Henry I.] Many castles built during this period.	Nave of Rochester Cathedral. St Bartholomew's Church, Smithfield. [illegible] Castle, Herefordshire. Rochester Castle. Clifford's Tower, York.	Lanfranc (ob. 1089). William of Wykeham (ob. 1167). Gundulf of Rochester (ob. 1108).
Stephen ..... 1135 Henry II. ..... 1154 Richard I. ..... 1189 John ..... 1199 Henry III. ..... 1216 to 1272	**Early Pointed.** Termed also the "Lancet Style," and "Early English." About 140 years	Narrow pointed (lancet-shaped) windows, afterwards wider, and divided by mullions, with trefoil and quatrefoil ornaments. Vaultings pointed. Columns, &c., less massive than during the last period, ordinarily divided into several shafts. [In the reign of Henry III this style was perfected.]	The [illegible] Winchester Cathedral. [illegible] nave of Lincoln and of Wells Cathedrals. Salisbury Cath. Durham Cathedral. Choir of Westminster Abbey.	[illegible] Walter de Merton (ob. 1277). Walter de Kirkham (ob. 1260). Bishop Hugh de Lacy (ob. 1255). Alnwick Walsingham (1365). Wm. of Wykeham (ob. 1404).
Edward I. ..... 1272 Edward II. ..... 1307 Edward III. ..... 1327 to 1377	**The Pointed Style.** Called by some "Pure Gothic" About 110 years	An increased grace and elegance. Arches better proportioned. Windows divided by numerous mullions with tracery. Ribs of groining more ornamental than heretofore. Pinnacles, finials, [illegible] Pure. Ornaments [illegible] such. corbel and canopies.	Exeter Cath. Crosses at Geddington, Northampton, and Waltham. Trinity Church, Hull. St. Stephen's Chapel, Westminster.	Henry Latomus (ob. 1319). William Wykeham. Hugh de Lavesham (ob. 1332). Alnwick Walsingham (1365). Wm. of Wykeham (ob. 1404).
Richard II. ..... 1377 Henry IV. ..... 1399 Henry V. ..... 1413 Henry VI. ..... 1422 Edward IV. ..... 1461 Edward V. ..... 1483 Richard III. ..... 1483 Henry VII ..... 1485 to 1509	**Florid Pointed.** Termed also "The Perpendicular," and "The Tudor Style" About 140 years. *(Including part of Henry VIII's reign.)*	Windows very large, occasionally [illegible] Groining [illegible] pendent. [illegible] Pointed arches obtuse. Doors and windows square. In private residences, security less studied than during preceding periods, and convenience more.	Westminster Hall. West front Winchester Cath. King's College Chapel, Cambridge. St. George's Chapel, Windsor. Henry VII. Chapel, Westminster.	Chichele (ob. 1443). Close (ob. 1452). Bp Waynflete (ob. 1486). Bp Beaufort (ob. 1447). Bp Alcock (ob. 1500). Sir Reg. Bray (ob. 1503). John Hylmer (1507). Prior Bolton (1532).
Henry VIII ..... 1509 Edward VI. ..... 1547 Mary ..... 1554 Elizabeth ..... 1558 James I. ..... 1603 to 1625	**Elizabethan,** or, "Late Tudor." About 120 years.	The perverted use of forms received from Greece and Rome. Grotesque pilasters, small columns, sometimes [illegible] Strapwork. [illegible] Oriels, [illegible] Many of the mansions and residences of this epoch must during this period.	[illegible] Wollaton Hall, Nottinghamshire. Old Hall, Lincoln. Schools at Oxford. Cummens-eve in Queen Elizabeth's Gallery, Windsor Castle. Audley End. Knole. Montacute. Northumberland House, London.	Edward Paston (?). Holbein (obit.) Sir R. Lee. John Thorpe. R. Adams (ob. 1595). T. Holt. Stockles. Gerard. Christmas.
Charles I. ..... 1625 &c. &c.	**The Revival.**	Columns and entablatures of the established orders of architecture,—viz., Tuscan, Doric, Ionic, Corinthian, and Composite.	The Banqueting House, Whitehall.	Inigo Jones (ob. 1652).
George IV. .... William IV. ..... Victoria	**Modern Gothic.**	This is a highly-decorated form of the Gothic or Pointed style, and is much patronised, though hardly suited to our climate.	St. George's Catholic Cathedral. New Houses of Parliament.	N. Welby Pugin (ob. 1852). Charles Barry.

AN INCIDENT

IN THE WAR OF MEXICAN INDEPENDENCE.

THE following thrilling narrative is from a translation in Sharpe's Magazine. A captain in the Mexican insurgent army is giving an account of a meditated night attack upon a hacienda situated in the Cordilleras, and occupied by a large force of Spanish soldiers. After a variety of details, he continues :—

"Having arrived at the hacienda unperceived, thanks for the obscurity of a moonless night, we came to a halt under some large trees, at some distance from the building, and I rode forward from my troop, in order to reconnoitre the place. The hacienda, so far as I could see in gliding across, formed a huge, massive parallelogram, strengthened by enormous buttresses of hewn stone. Along this chasm, the walls of the hacienda almost formed the continuation of another perpendicular one, chiselled by nature herself in the rocks, to the bottom of which the eye could not penetrate, for the mists, which incessantly boiled up from below, did not allow it to measure their awful depth. This place was known, in the country, by the name of 'The Voladero.'

"I had explored all sides of the building except this, when I know not what scruple of military honour incited me to continue my ride along the ravine which protected the rear of the hacienda. Between the walls and the precipice, there was a narrow pathway about six feet wide, by day, the passage would have been dangerous, but by night it was a perilous enterprise. The walls of the farm took an extensive sweep, the path crept round their entire basement, and to follow it to the end, in the darkness, only two paces from the edge of a perpendicular chasm, was no very easy task, even for as practised a horseman as myself. Nevertheless, I did not hesitate, but boldly urged my horse between the walls of the farm-house and the abyss of the Voladero. I had got over half the distance without accident, when, all of a sudden, my horse neighed aloud. This neigh made me shudder I had just reached a pass where the ground was but just wide enough for the four legs of a horse, and it was impossible to retrace my steps.

"'Hallo!' I exclaimed aloud, at the risk of betraying myself, which was even less dangerous than encountering a horseman in front of me on such a road. 'There is a Christian passing along the ravine! Keep back.'

"It was too late. At that moment, a man on horseback passed round one of the buttresses which here and there obstructed this accursed pathway. He advanced toward me I trembled in my saddle, my forehead bathed in a cold sweat.

"'For the love of God! can you not return?' I exclaimed, terrified at the fearful situation in which we both were placed.

"'Impossible!' replied the horseman.

"I recommended my soul to God To turn our horses round for want of room, to back them along the path we had traversed, or even to dismount from them—these were three impossibilities, which placed us both in presence of a fearful doom. Between two horsemen so placed upon this fearful path, had they been father and son, one of them must inevitably have become the prey of the abyss. But a few seconds had passed, and we were already face to face—the unknown and myself. Our horses were head to head, and their nostrils, dilated with terror, mingled together their fiery breathing. Both of us halted in a dead silence. Above was the smooth and lofty wall of the hacienda, on the other side, but three feet distant from the wall, opened the horrible gulf. Was it an enemy I had before my eyes? The love of my country, which boiled at that period in my young bosom, led me to hope it was.

"'Are you for Mexico and the Insurgents?' I exclaimed, in a moment of excitement, ready to spring upon the unknown horseman, if he answered me in the negative.

"'*Mexico e Insurgente*—that is my password,' replied the cavalier. 'I am the Colonel Garduno.'

"'I am the Captain Castanos.'

"Our acquaintance was of long standing; and, but for mutual agitation, we should have had no need to exchange our names. The colonel had left us two days since, at the head of the detachment, which we supposed to be either prisoners, or cut off, for he had not been seen to return to the camp.

"'Well, colonel,' I exclaimed, 'I am sorry you are not a Spaniard, for you perceive that one of us must yield the pathway to the other.

"Our horses had the bridle on their necks, and I put my hands to the holsters of my saddle to draw out my pistols.

"'I see it so plainly,' returned the colonel, with alarming coolness, 'that I should already have blown out the brains of your horse, but for the fear lest mine, in a moment of terror, should precipitate me, with yourself, to the bottom of the abyss.'

"I remarked, in fact, that the colonel already held his pistols in his hands. We both maintained almost profound silence. Our horses felt the danger like ourselves, and remained as immovable as if their feet were nailed to the ground. My excitement had entirely subsided. 'What are we going to do?' I demanded of the colonel.

"'Draw lots which of the two shall leap into the ravine.'

"It was, in truth, the sole means of resolving the difficulty. 'There are, nevertheless, some precautions to take,' said the Colonel.

"'He who shall be condemned by the lot, shall retire backward. It will be but a feeble chance of escape for him, I admit; but, in short, there is a chance, and especially one in favour of the winner.'

"'You cling not to life, then?' I cried out, terrified at the *sang-froid* with which this proposition was put to me.

"'I cling to life more than yourself,' sharply replied the Colonel, 'for I have a mortal outrage to avenge. But the time is fast slipping away. Are you ready to proceed to draw the last lottery at which one of us will ever exist?'

"How were we to proceed to this drawing by lot? By means of the wet finger, like infants, or by head and tail, like the schoolboys? Both ways were impracticable. Our hands imprudently stretched out over the heads of our frightened horses, might cause them to give a fatal start. Should we toss up a piece of coin, the night was too dark to enable us to distinguish which side fell upward. The colonel bethought him of an expedient, of which I never should have dreamed.

"'Listen to me, captain,' said the colonel, to whom I had communicated my perplexities. 'I have another way. The terror which our horses feel, makes them draw every moment a burning breath. The first of us two whose horse shall neigh—

"'Wins!' I exclaimed, hastily.

"'Not so, shall be loser. I know that you are a countryman, and, as such, you can do whatever you please with your horse. As to myself, who but last year wore the gown of a theological student, I fear your equestrian prowess. You may be able to make your horse neigh, to hinder him from doing so, is a very different matter.'

"We waited in deep and anxious silence until the voice of one of our horses should break forth. The silence lasted for a minute—for an age! It was my horse who neighed the first. The colonel gave no external manifestation of his joy; but, no doubt, he thanked God to the very bottom of his heart.

"'You will allow me a minute to make my peace with heaven?' I said, with falling voice.

"'Will five minutes be sufficient?'

"'It will,' I replied.

"The colonel pulled out his watch. I addressed toward the heavens, brilliant with stars, which I thought I was looking to for the last time, an intense and burning prayer.

"'It is time,' said the colonel.

"I answered nothing, and, with a firm hand, gathered up the bridle of my horse, and drew it within my fingers, which were agitated by a nervous tremor.

"'Yet one moment more,' I said to the colonel, 'for I have need of all my coolness to carry into execution the fearful manœuver which I am about to commence.'

"'Granted,' replied Garduno.

"My education, as I have told you, had been in the country. My childhood, and part of my earliest youth, had almost been passed on horseback. I may say, without flattering myself, that if there was any one in the world capable of executing this equestrian feat, it was myself. I rallied myself with an almost supernatural effort, and succeeded in recovering my

entire self-possession in the very face of death. Taking it at the worst, I had already braved it too often to be any longer alarmed at it. From that instant, I dared to hope afresh.

"As soon as my horse felt, for the first time since my rencounter with the colonel, the bit compressing his mouth, I perceived that he trembled beneath me. I strengthened myself firmly on my stirrups, to make the terrified animal understand that his master no longer trembled. I held him up with bridle and the hams, as every good horseman does in a dangerous passage, and, with the bridle, the body, and the spur, together, succeeded in backing him a few paces. His head was already a greater distance from that of the horse of the colonel, who encouraged me all he could with his voice. This done, I let the poor, trembling brute, who obeyed me in spite of his terror, repose for a few moments, and then recommenced the same manœuvre All on a sudden, I felt his hind legs give way under me. A horrible shudder ran through my whole frame. I closed my eyes, as if about to roll to the bottom of the abyss, and I gave to my body a violent impulse on the side next to the hacienda, the surface of which offered not a single projection, not a tuft of weeds to check my descent. This sudden movement joined to the desperate struggles of my horse, was the salvation of my life. He had sprung up again on his legs, which seemed ready to fall from under him, so desperately did I feel them tremble

"I had succeeded in reaching, between the brink of the precipice and the wall of the building a spot some few inches broader. A few more would have enabled me to turn him round; but to attempt it here would have been fatal, and I dared not venture. I sought to resume my backward progress, step by step Twice the horse threw himself on his hind legs, and fell down upon the same spot. It was in vain to urge him anew, either with voice, bridle, or spur, the animal obstinately refused to take a single step in the rear Nevertheless, I did not feel my courage yet exhausted, for I had no desire to die One last, solitary chance of safety, suddenly appeared to me, like a flash of light, and I resolved to employ it. Through the fastening of my boot, and in reach of my hand, was placed a sharp and keen knife, which I drew forth from its sheath. With my left hand I began caressing the mane of my horse, all the while letting him hear my voice. The poor animal replied to my caresses by a plaintive neighing; then, not to alarm him abruptly, my hand followed, by little and little, the curve of his nervous neck, and finally rested upon the spot where the last of the vertebræ unites itself with the cranium. The horse trembled, but I calmed him with my voice. When I felt his very life, so to speak, palpitate in his brain beneath my fingers, and leaned over toward the wall, my feet gently slid from the stirrups, and with one vigorous blow I buried the pointed blade of my knife in the seat of the vital principle. The animal fell as if thunderstruck without a single motion, and, for myself, with my knees almost as high as my chin, I found myself a horseback across a corpse! I was saved! I uttered a triumphant cry, which was responded to by the colonel, and which the abyss re-echoed with a hollow sound, as if it felt that its prey had escaped from it. I quitted the saddle, sat down between the wall and the body of my horse, and vigorously pushed with my feet against the carcass of the wretched animal, which rolled down into the abyss. I then arose, and cleared, at a few bounds, the distance which separated the place where I was from the plain; and, under the irresistible reaction of the terror which I had long repressed, I sank into a swoon upon the ground. When I re-opened my eyes, the colonel was by my side."

Anger is the sinew of the soul; for that it serveth to increase valour, being moderate and temperate.

Anger makes a man to differ from himself There is no safe counsel to be taken from the mouth of an angry man

If thou hast not so much power as to refrain thine anger, dissemble it, and keep it secret, and so by little and little thou mayest haply forget it.

In correction be not angry, for he that punisheth in his rage shall never keep that mien which is between too much and too little.

The raging perturbations of the mind do punish reason, and blind the sight of wisdom.

SONGS FOR THE PEOPLE.

ORIGINAL AND SELECTED.

No. XIV —MY FRIEND NED.

BY JOHN RICHARDSON.

His hands are hard and brown and rough,
And his garments coarse and old;
But he deems them good enough,
If they guard him from the cold
For he has a noble mind,
And a heart that's warm and kind—
Not a better in the land
You will find —
Living in an humble shed,
Working for his daily bread,
Fearing God and loving man—
My friend Ned.

A mind serene, a conscience clear—
These are jewels of his own
A heart unknown to guilt or fear,
But touch'd with sorrow's tone
Labour when the day's begun,
Rest and quiet when it's done;
And he keeps upon his course
Like the sun —
Early up, and soon to bed;
Sound in heart, and clear in head
And his labour is a joy—
My friend Ned.

He is brave though he is poor,
And would scorn to do a wrong,
And his trust in God is sure,
And his faith in virtue strong
Like a noble-hearted wight,
Though the wrong had all the might,
He would do the with a host
For the right —
One whom tyrants well may dread
Bold in heart, and wise in head—
He's a hero in his soul—
My friend Ned!

Low and humble though his state,
Poor his garment, coarse his food—
Where's the monarch half as great?—
Where's the bishop half as good?—
Proudly I would grasp his hand
With the noblest in the land,
For amongst her best and bravest
He may stand —
Noble—though he toils for bread—
Rich—though living in a shed—
First of all my friends I rank him—
My friend Ned

JOHN CASSELL'S ALMANACKS FOR 1853.

Price 1s, beautifully printed, super-royal 8vo.,

THE UNCLE TOM'S CABIN ALMANACK, or, THE ABOLITIONIST MEMENTO FOR 1853.—The most complete work on the question of slavery that has hitherto been published Everybody who has read "Uncle Tom's Cabin" should possess themselves of a copy of this book, which more than verifies all the statements in Mrs Stowe's thrilling narrative. This work is splendidly Illustrated by George Cruikshank, Esq, J. Gilbert, Esq, W. Harvey, Esq, H. K. Browne, Esq ("Phiz"); and other eminent artists; and contains upwards of 70 pages super-royal 8vo, replete with the most stirring incidents—Lives of Escaped Negroes, the Workings of the Fugitive Slave Law, Anecdotes, Narratives, and Historical and Descriptive Accounts of American slavery The sale already is very large, nearly 20,000 copies having been disposed of in a fortnight.

THE ILLUSTRATED EXHIBITOR ALMANACK for 1853, containing upwards of Thirty beautiful Engravings Price Sixpence.

THE POPULAR EDUCATOR ALMANACK for 1853, containing Forty-eight Pages of most interesting and valuable Educational statistics, including a Comparative View of Education at Home and Abroad, Essays on the Leading Sciences, Brief Notices of Eminent Scholars, Exposition of Technical Terms; &c &c Price Twopence.

THE TEMPERANCE ALMANACK for 1853, much improved and enlarged, and in which is inserted a Tale of thrilling interest, from the pen of Mrs Harriet Beecher Stowe, authoress of the immitable "Uncle Tom's Cabin," entitled, "THE PLEDGE TAKEN, or, the Husband Saved, and a Family made Happy," with valuable details of the great Temperance Movement, Statistics, &c With several Engravings. Price Twopence.

THE PROTESTANT DISSENTERS' ALMANACK for 1853, with Twelve beautiful Designs, by Gilbert, of striking Events in the History of Nonconformity. Price Sixpence

---

CASSELL'S ELEMENTS OF ARITHMETIC (uniform with Cassell's EUCLID), is now ready, price 1s. in stiff covers, or 1s. 6d. neat cloth.

MISCELLANEA.

AMERICAN NON-COMMITTALISMS.—Martin Van Buren, an American statesman (and lawyer) of some note, is accused of an inability to give a plain answer to a plain question. Some time ago when he was on board a steamer the passengers were talking of this peculiarity, and one of them observed—"I'll wager a trifle that one of us shall go down now, and ask Mr. Van Buren the simplest question that can be thought of, and he will evade a direct answer. Yes, and I'll give him leave, too, to tell him why he asks the question, and that there is a bet depending on his reply!" This seemed fair enough, certainly, for to be forewarned was to be forearmed. One of the party was deputed to go down and try the experiment. He found Mr Van Buren, whom he knew well, in the saloon, and said to him—"Mr Van Buren, some gentlemen on the upper-deck have been accusing you of non-committalism; and have just laid a wager that you wouldn't give a plain answer to the simplest question; and they have deputed me to test the fact. Now, Mr. Van Buren, let me ask you—'Where does the sun rise?'" Mr Van Buren's brow contracted, he hesitated a moment, and then replied—"The terms 'east' and 'west,' Mr ——, are conventional; but I—" "That'll do!" interrupted the interrogator, "we've lost the bet"

MY OWN FIRESIDE

Let others boast the doubtful joys
By midnight revelling and noise,
Or ball or rout supplied,
But give to me the pleasure real,
Which when by thee I ever feel,
My own snug fire-side!

What fond remembrance thou dost bring,
While joy and grief together spring
Within my breast divide
The empire of my heart—for here
I've met departed friends and dear,
My dearest fire-side!

Here father, there poor mother sat!
On either side myself and cat;
In front, old Carlo died.
They're gone! and I, with mournful joy,
Remember our sweet employ
By this warm fire-side.

My father with th'instructive page
My infant mind would oft engage,
The while my mother plied
Her busy needle—perhaps for me—
An emblem fit of industry,
By this snug fire-side.

And here beloved surviving friends
How oft I meet, while friendship lends
Old Times swift wings, to glide
Unheeded by, until the chime
His warder sounds, declares 'tis time
To leave the fire side.

WHICH IS THE HAPPIEST SEASON?—At a festal party of old and young, the question was asked—"Which season of life is most happy?" After being freely discussed by the guests, it was referred for answer to the host, upon whom was the burden of four score years. He asked if they had noticed a grove of trees before the dwelling, and said—"When the spring comes, and in the soft air the buds are breaking on the trees, and they are covered with blossoms, I think *How beautiful is Spring!* And when the summer comes, and covers the trees with its heavy foliage, and singing birds are among the branches, I think *How beautiful is Summer!* When the autumn loads them with golden fruit, and their leaves bear the gorgeous tints of frost, I think *How beautiful is Autumn!* And when it is *sere* winter, and there is neither foliage nor fruit, then I look up through the leafless branches, as I never could until now, and see the *stars* shine." Winter, which strips the leaves from around us, makes us see the distant regions they formerly concealed; so does old age rob us of our enjoyment, only to enlarge the prospect of eternity before us.

TEN YEARS AGO.—We are astonished when we contemplate the changes which have been effected in the course of ten years! How rapidly the sweeping tide of time rolls on! The morning of life passes off like a dream, and we look round in vain for the companions of our youthful days. Where are the gay, the beautiful, the happy, with whom we once sported in the sprightliness of youth and buoyancy of enjoyment? They were here, we know them, we loved them; we rejoice with them down time's sunny stream with pleasure's fragile bark, but where are they now? Alas! they have gone before us, the whirlwind of death drove them rapidly onward, and they are sailing on eternity's wide, shoreless sea. These are of our childhood, too, fade away, and soon not a vestige of them is left as a token that they have existed. Time's stupendous [illegible] Ten years more, [illegible] Our present friends, our present companions, will they still be here? No, they may be scattered far away, [illegible] and in a strange land. Ten years, [illegible] things to many, very many, will be changed. The pale emaciated miser, [illegible] over his less gold (the [illegible] of forlorn wretchedness), where will he be? [illegible] the beggar whom he drives from his door, will have gone to their long homes; his wealth will have passed into other hands. Ten years, and the student who is now poring over volumes, and seeking with such avidity for knowledge, will have acquired, and perhaps forgotten it. The lovely maiden, whose mind and person are just matured—she is beautiful—she is happy—pleasure beams in her countenance, and joy sparkles in her eye, with a light as soft and lighter heart, she steps upon life's stage, but alas! ten years and this lovely being will be indeed changed, the bright face [illegible] her once laughing eye speaks deeper of misery now than ever it did of pleasure. [illegible] what is more beautiful, what [illegible] but morning dawn. Ten years, [illegible] many that's [illegible] prosperity, will be wrapped in misfortune's gloomiest shade. Ten years, and the man of business will have settled his "final accounts," the fool will have grown wise, and the wise will have discovered his ignorance. The atheist will have found out his mistake, and the Christian will have realised his hopes.

PROSY old gentlemen think that James Watt was a greater genius than Shakespeare, and that the only motive which should move society is the locomotive. It was such a man who once said of Milton's "Paradise Lost," that it "was a very good book, but it didn't prove anything." Practical men are useful, but, like cook stoves and Bentham, they are shockingly utilitarian; and, like a tailor, see much more beauty in a lot of "cabbage" than in all the rose bushes that ever grew.

LET every man, says Channing, if possible, gather some books under his roof, and obtain access for himself and family to some social library. Almost any luxury should be sacrificed to this.

NOTICES TO CORRESPONDENTS.

R. V. LANTON.—You had better send us the "Extracts," &c., of which you speak. They shall be inserted if suitable.

J. W. B. (Odeham).—Tell us the subject of the paper you wish returned, we shall then, perhaps, be able to give you an answer about it.

MARY OSBORN.—Your verses have been received. We will endeavour to find room for them shortly.

ANSWERS TO ENIGMAS, QUERIES, &c., have been received from J. Timms, Eliza Ann J. Robertson, who has also sent us some useful recipes; M. O., H. Driver, W. Elphinstone, Harry, J. B. Minkin, W. Trim, &c.

J. PARKINSON.—Send us your questions: we will either answer them ourselves, or obtain answers from others.

RICHARD.—We have before stated that the word "Curfew" is a contraction of the French [illegible] that is, "cover, or put out the fire," referring to a law of William the Conqueror, that all persons, on the ringing of a bell at eight o'clock in the evening, should put out their fires. The Curfew Bell is still rung in some of our towns, and it is [illegible] not as usual for a [illegible]

A LITTLE PRINCESS.—We have [illegible] which we have tried in vain to decipher.

J. A.—You must before apply to a skilful occulist, for we know of no remedy for short-sightedness except the use of concave glasses.

J. OUTLER.—We shall endeavour to find room for your "Lays" among our "Songs for the People."

A MECHANIC.—You will find a comprehensive definition of "Political Economy," in the "Popular Education Almanack for 1853," just [illegible]

[illegible]—You [illegible] your knowledge of [illegible] Number, and [illegible] permitting, [illegible] Post Natal.

A YOUNG READER.—The "*Calumet*" is "the pipe of peace" used by the Indians in their negotiations with neighbouring tribes, or the people of other nations. It is usually made, the bowl of soft stone and the tube of a long stout reed, ornamented with feathers. It is passed at their meetings from one to another, each person taking a whiff or two, in token of amity, and the possession of the calumet ensures safe conduct among the allies of a nation by whom it has been given.

W. TIDMARSH.—We cannot undertake to furnish minute descriptions of the various processes for daguerreotyping. The [illegible] can be obtained from some [illegible] instrument maker, and the [illegible] may generally be procured of the same person, or at any experimental chemist's. You will find the [illegible] to be the *cheapest* and the *surest* mode of procedure.

R. S. K.—A "quarantine" means *forty days*, the space during which a ship, supposed to be [illegible] is not allowed to [illegible] with the land [illegible] which it arrives. This is the [illegible] application of the term. But as it [illegible] you have quoted, and which you say you cannot understand, it is used in a forensic, or *law* sense, and means the benefit allowed by law to the widow of a man possessed of lands, whereby she may challenge to continue in his capital mansion or mansion-house *forty days* after his decease, in order to the assignment of her dower, &c.

QUESTIONER.—The old law of "wager of battle" was repealed in 1819.

R. HOLLAND.—Sheridan Knowles's drama of "Virginius" is founded on the fact that a Roman citizen, named Virginius, killed his daughter in the public market-place, to prevent her falling a sacrifice to the lust of the Consul Claudius. The event occurred B.C. 449.

*** The article on SLAVERY IN AMERICA, in continuation of THE SLAVE TRADE IN AFRICA, will appear in our next.

WORKING MAN'S FRIEND
AND FAMILY INSTRUCTOR.

NEW SERIES.—VOL. III., No. 61.] SATURDAY, NOVEMBER 27, 1852. [PRICE ONE PENNY.

THE DOUBLE LADDER OF LIFE.

WITH the poets and the painters, the allegory of Life has ever been a favourite theme. Our own Shakspere likened man's life on earth to the changing characters of the player, another, and a beautiful, though somewhat trite, simile compared it to the seasons —the spring was infancy and youth; the summer, strong maturity and power; the autumn, slow and imperceptible decline, and the "last scene of all that ends this strange eventful history," was represented under the figure of cold and cheerless winter—an aged man in a cloak warming his thin and withered hands over a struggling fire!

to a dull, sad, sluggish stream which, having its rise in obscurity, goes upon its darkened way amid thorns and fat poisonous plants, and sinks at last into the earth, with none to note its departure or to mourn its absence. This last figure depicts the common lot of the undistinguished, the mass, the crowd, the people! In the instance before us the artist has regarded the various phases of man's life with the eye of a philosopher. Here, in this double ladder of human existence, the moral and physical characteristics of the various periods are shown in new, if not perfectly original, aspects. Childhood is represented as a type of animal

THE DOUBLE LADDER OF LIFE, FROM A PICTURE OF THE SIXTEENTH CENTURY.

Again, it was a long journey full of vicissitudes, — or, a dream of an ascent to the summit of a great mountain, the foot of which was covered with flowers, and the apex lost in clouds and darkness,—or, it was a day's travel, commencing in hope and ending in mist and doubt,—or, it was a battle, in which the weak were trampled under foot and the mighty triumphed,—or, it was a tale told by a winter fireside, interrupted frequently and concluded hastily,—or, it was a sudden voyage through storms and clouds and fearful threatenings,—or, sometimes, the life of man has been likened

ism, the mere sensations of hunger and thirst and warmth and cold being all that it can fully comprehend; youth, the next step in the ladder, has its prototype in the innocence and timidity of the Lamb;—a few years pass away, and the youth puts on his budding manhood—love and enterprise are added to his yet but half-formed character, and to the swiftness of the Roebuck he joins the impetuosity and generous vivacity common only to that charming period of our lives;—another step, and then another change,—chivalry, honour, courage, grace, ambition, gallantry,

strength, forbearance, are the better parts of the man's nature, but with these are also associated the thoughtless levity and incessacy which almost invariably attend the possession of manly health and beauty, at this period he is a soldier, or a student, or a lover, or a brawler, or a politician,—the courage and strength of the Bull being added to the ardour and fleetness of the Stag;—a few years more, and the apex of life's ladder is reached, strong in judgment and wisdom, the follies and inconsistencies of youth give way to the moderation and consistency of maturity; all the senses are perfect, all the foibles of his past are considered as partly over, and he is conscious of possessing the majesty and authority, the vigour and firmness, the magnanimity and generosity which poets tell us are the characteristics of the king of the forest. Noble and dignified, he looks back with tranquil satisfaction on the past, and sees in the future but a new field for the exertion of his intellects and the display of his powers.

The caprices of fortune have been conquered, and the illusions of youth have been overcome. The weakness of love has given way to the joy of possession, and the doubts and speculations of his earlier years have yielded to the teachings of experience. He has acquired the character of a veritable man! vigorous, inflexible, sagacious, noble, just! In his hand he bears the symbol of authority; on his shoulders he carries the mantle of wisdom; his breast is encased in the armour of resolution, and on his brow reposes the crown of power!

The topmost height of man's ambition reached, the highest round of the ladder attained, henceforth the passage is a downward one. To the wisdom and courage of the Lion are united the cunning of the Fox. Appearances deceive, and so appearances must be kept up, no matter what the sacrifice. But a few short years, and the cruelty of the Wolf begins to be apparent, a few more, and the time-serving obsequiousness of the Dog's worser nature is fully shown; yet a few more, and the stupidity and obstinacy of the Ass complete the moral picture of the man. Wisdom has given place to display; generosity to carefulness, kindness to mean and miser-like cupidity, and strength to dull, servile, and morose insensibility. The hour-glass on the tomb completes the allegory!

THE FIRST CONCERT IN INDEPENDENCE.

AN AMERICAN SKETCH.

THE year, 1837 will long be remembered in the annals of the mercantile world, for the many and heavy losses which were sustained by the merchants of the eastern cities, who dealt largely with the West. It was my misfortune to belong to that class of sufferers; and in the hope of retrieving some of my losses by a personal interview with my customers, I travelled on horseback, in stage-coaches, and on steam-boats, throughout the northern part of Missouri and Illinois. The only advantage I derived from this tedious trip was a more thorough conviction of the mistaken policy of the prevailing credit system, together with some insight into backwoods life, and perhaps some lessons which may prove useful hereafter. This trip was full of adventure, and now, whilst looking back upon it, I feel strongly tempted to buttonhole the reader, while memory recounts some of the incidents by the way.

I left St. Louis on the steam-boat 'Howard,' bound for Independence, Missouri, with the intention of taking horse at that point, and visiting the principal towns and settlements on each side of the river on my return. Owing to the character of the banks of the Missouri river, very many of the principal towns are located some distance back from the water, according to the width of the bottom-lands; and in such cases the town-site is chosen on the bluffs, and a landing made with one or more warehouses, representing such towns. We touched at one of those landings, and great was my surprise to see standing out on the muddy banks the pretty face of Mrs. Thrush, the former Miss Linnet, whose soft and sweet voice was familiar to all the concert and opera-goers of the day. I had seen her in Philadelphia, as the 'Elberta' to Mrs. Wood's Norma, and my astonishment may be easily conceived at finding her in the far West, standing on the banks of the Missouri river, surrounded by a few companions, and any quantity of trunks and hand boxes. At first sight, I scarcely recognized her, the change had been so great. When I saw her last, she was Miss Linnet; but as I scanned her round and more matured form, I saw that she was now Mrs. some body, but I knew not who, having myself been buried in t wilds of the West whilst time had been working the chan in her. The party was soon hurried on board, and the bo under weigh again, making the hills and valleys re-echo h high-pressure voice, as she struggled against the curre There were but few comforts in those days on board a weste steam-boat for a delicate lady; and for one that was 'enceint the deepest sympathies of man's nature would be awakene The passengers all vied with each other in contributing to t comforts of this interesting lady, and I had the pleasure giving up my berth to her, which was one of the best on t boat. The party consisted of Mr. and Mrs. Thrush, and M and Mrs. Nightingale. The gratitude of Mrs. Thrush for wh was only a common civility, which every lady will receive the West, soon led to an acquaintance with the party; and my recalling the many times I had seen Miss Linnet 'Norma,' and other operas, I was soon installed a friend, ar was often favored with one of those delightful ballads whic no one knew how to sing with more taste and feeling. T time passed pleasantly, and in the course of conversation, t cause of their visit up the Missouri river was explained to m Mr. Nightingale and Mrs. Thrush were giving concerts t gether. They had visited St. Louis for that purpose, b finding Mrs. Thrush was too near her confinment to make h début before a city audience, they had been urged by h money-hunting husband to go into the interior, and give co certs in the small towns until her recovery. In carrying o this plan, they were on their way to Independence, at th time the extreme boundary of demi-civilization.

We were several days on the passage, and during that tim I had abundant evidences of the fatal mistake Mrs. Thrus had made, in changing her name from the softer one of Linn to that of Thrush. Indeed, he should have been calle 'Cuckoo,' for, like that selfish bird, which always lays i eggs in some other bird's nest, and trusts to luck for the hatch ing, he was too lazy to make his own living, and had marri her on speculation. We arrived at Independence witho accident, and took up our quarters at the same hotel, (if shabby can be honored with such an appellation.) Handbi were stuck up announcing a grand concert by Mr. Nightin gale and Mrs. Thrush, from the New-York and Philadelph theatres, Mrs. Thrush to accompany herself on the pian The town of Independence had made rapid strides in th march of progression. Owners of town-lots were dreamin dreams, and luxuriating in floating visions of wealth, at th thoughts of their embryo city having attracted the attentio of 'artistes' from the great cities of the East. Curiosity w on tip-toe to see that wonderful thing, a 'piany.' Ther were a few among the aged inhabitants who could trace bac in the deep recesses of by-gone days a time when they ha heard a concert; but a concert accompanied by a 'piany' w an era to which, in their fondest aspirations, they had neve soared. Imagine, then, the astonishment of the party, (wh in announcing the concert to have a piano accompanimen were under the impression that any town could furnish half dozen,) when they discovered that no such article could b obtained within fifty miles. A council was called, at whic I had the honor to be invited. Mr. Nightingale suggeste the propriety of announcing at once that, as no piano coul be procured, the concert would go on without one. But M Thrush, who appeared to be master of ceremonies, (Mr. Thrush being the centre of attraction,) refused positively t make any such announcement until after the company ha assembled, and then giving the privilege to all those who wer dissatisfied to go to the door-keeper and get back their money relying upon the curiosity and modesty of the audience pre venting them from retiring. This course was adopted, contrai to my advice and that of some few of my acquaintances, wh had formerly lived in St. Louis.

The evening came, and the bar-room, being the only or that was large enough for a concert, was crowded at an early hour. Unfortunately, they forgot that it was dark at seve o'clock, and appointed the fashionable city hour of eight fo the commencement. The time hung heavily from seven t eight o'clock, and was filled up by various parties invitin each other up to the bar to take a drink; and this being fre

quently reciprocated, the steam was generated so high that it only wanted the announcement that the concert would have to go on without a 'piany,' to produce an explosion.

One large, shaggy-haired fellow, a Rocky Mountain hunter, sung out:

'Ive hearn buffalo-bulls bellow, I've hearn grisly bears growl, I've hearn Blackfeet Indians yell, and now I've come here and paid my quarter to hear the forty-piany, and I'm not goin' away till I hear it. So trot it out. Come up, boys, and take a drop of the juice of old corn; and if that piany ain't forthcomin', the way these fellows will have to make tracks won't be slow.'

Poor Mrs. Thrush was ready to faint with alarm, and the look she gave all those who appeared to be civilised was so deploring, that I felt she must be protected at all risk. I whispered to my friends, and they promised their assistance. In the mean time, some of those who were equally disappointed with the Rocky-Mountaineer, but who were less violent, proposed that they get back their money, and made a rush for the door. Another fellow, who went by the name of 'Moderating Bill,' proposed that they should hold a meeting, and give them there 'impositioners' twelve hours to leave the town. This compromise met the approbation of 'Rocky Mountain,' who saw that the boys had not their dander up high enough to attack a woman; and with one Indian war-whoop the party broke for the town 'groggery,' there to concert measures of redress.

The worst opposition being thus disposed of, and order partially restored, the concert was opened by Mr. Nightingale's singing one of his operatic songs full of grand flourishes, and getting hissed for his pains; one fellow crying out.

'Why, look here, stranger, is that what you call singin'? Why, my black Tom can beat that all holler, if you give him a pint of the essence of corn to wet his whistle.'

And suiting the action to the word, he pulled out a long, greasy buckskin purse, and slamming down a quarter, said.

'If you don't believe it, just kiver that bet, if you dare'

At this juncture, to create a diversion, I jumped up on a bench and shouted: 'Silence! the lady is going to sing.' At which Mrs. Thrush took the hint, and, trembling with anxiety, rose to sing. Her voice acted like a charm, and seemed to soothe the irritated demi-savages, and delighted the 'knowing ones.' At the close of the song there was considerable applause, with here and there a remark, 'That's good; but I come here to hear the 'piany.''

Our friend with the quarter, who had been listening in breathless silence, screamed out:

'Now that's what I call singin'; and, turning to Mr. Nightingale, said: 'Now I say, stranger, bein' it's your turn next, just try if you can't leave off your hullabulloo, and give us somethin' nice and feelin' like; somethin' to take out the aggravation of not hearin' that piany.'

Mr. Nightingale, encouraged by the peaceable turn matters were taking, tried it on again, with another grand flourish; but it was no go: he had not gone through one verse, before our quondam friend cried out.

'Botheration! did n't I tell you to stop that hullabulloo? I say, boys, let's hire this chap to call up the hogs of cold mornin's, when it's so tryin' to crawl out from under our warm buffalo-skins.'

This interruption was quieted by another song from Mrs. Thrush! and here ended programme the first.

During the intermission of ten minutes, I took occasion to suggest to both Mr. Nightingale and Mrs. Thrush, that these people were not accustomed to hear scientific music, and that if they would introduce some of our national airs, and plain, old-fashioned ballads, they would doubtless turn the tide of displeasure, and make a favorable sensation on these natives.

My suggestion was thankfully received, and Mr. Nightingale opened the second programme with 'Hail Columbia,' without the fancy-work, and brought down rapturous applause. Mrs. Thrush sang, 'I'm o'er young to marry yet;' 'Oh, I'm in love, but I won't tell with who;' 'If a body meet a body comin' through the rye;' and these songs were sung with so much sweetness and naïveté, that, in the ecstacy of his delight, our gambling friend picked out a half-dollar and offered to bet that 'she could out-sing any woman in them parts;' ending his eulogium with the grand climax, 'that she was too good for a common man's wife, and should have been the helpmate of the great 'Old Hickory.'

The evening's entertainment closed apparently to the satisfaction of all those who had heard the second programme, except, perhaps, the grasping Mr. Thrush, who had not yet recovered from the heart-breaking employment as door-keeper, of having to refund over one half the receipts on account of the absence of the 'piany.'

The next morning, 'Rocky Mountain's' party had posted up an order for the concert-givers to leave the county in six hours, or take the consequences; which order they thought it most prudent to obey: and never shall I forget the melancholy feelings of heart-felt pity I experienced for the once charming Miss Linnet, as she was dragged off in an open ox-waggon, in search of some more congenial and safe place for the display of her musical powers; nor of unmitigated contempt for her husband, for his sordid avarice in forcing his accomplished wife through such degrading drudgery.

Thus ended the first concert in the town of Independence, in the year 1837.

DISRAELI DAGUERREOTYPED.

You thread the well-lighted but silent hall of Rufus and Hastings, and get into the lobby—empty, but ghastly with excess of glare. Tuffnell receives you with a wink, or Mackenzie with a grin. You haul down your white vest, and square your tie, and make your curls all-taut, lift your hat, slide along the vestibule, and enter the house. As you have gone on, since you alighted from your cab, you have heard from porter, policemen, messengers, stray members, and the whippers in, that "Mr Disraeli is up," and hints have flown about your ears that he is making a "a great speech." As you reach the vestibule, you hear swelling cheers; and your fancy, in spite of your experience, if you have any, will insist that there is a fervent orator within, consuming his hearers with burning eloquence, and wielding fierce M P dom with overhelming power. Your blood tingles through your limbs with expectation; and as you push open the green door, your every vein is bursting with eagerness. The House of Commons is before you, and your sensations undergo an instantaneous collapse. Your eye takes in the scene—a full house, listening, too, but lazily and loungingly, the cheer you heard having been made up of an aggregate half laugh, half sneer. You see the orator, there at the top. His body is half thrown across the table, one hand resting behind him, flirting with a laced cambric, the other white hand tapping gently a red box. And he is making a great speech. He is talking to Lord John, whose arms are crossed carelessly, whose thin lips are parted with an easy smile, and who seems to think the eloquence rather amusing. Mr. Disraeli has a most exquisite voice, and he is using only its gentlest modulations. He is quite colloquial, and his tone is friendly and familiar—especially when he comes to a bitter muendo, when he turns his head to the country gentlemen, that they may hear it and laugh—a low, simmering chuckle, that just agitates the surface for a moment only, Lord John and the Whigs and the Radicals smiling, too, as though the sarcasm were a good-natured joke. Mr. Disraeli is getting near the end of his speech, and is now recapitulating and fastening all the points (not mathematical ones) together, as is his wont, and this is his argumentative style. He approaches the peroration—his forte, and here he raises his head; he throws back his collar; he puts by his cambric, he turns from Lord John, and faces the house. He speaks slower; he ceases his affected stammer; he is more serious and more solemn, but still quiet and unpretending. Talking now to the many, and not to one or two, he becomes more oratorical, and he fixes attention. What he is now saying is the manifesto of a party, and not a syllable is lost. He is nearing a meaning, and his articulation is elaborate, and there is a dead silence. But he is still unexcited; dexterously and quietly he eludes the meaning—soars above it, in one or two involuted closing sentences, delivered with a louder voice and with more vehement gestures; and having got the cheer at the right spot, this great orator, concluding, sinks into his seat, as nonchalant as though he had been answering a question about Fahrenheit, and immediately (Mackenzie having told him how the division will be) turns to ask Lord Henry Lennox whether Grisi was in good voice that night!

WAR! Horrid and comprehensive word, war!—It is, says Henry Lord Brougham, the greatest curse of the human race, and the greatest crime, because it involves every other crime within its execrable name.

sence of Madame, he was treated to such a frigid reception that he never could be persuaded to come again; and Marie herself was overwhelmed by a shower of ridicule respecting the appearance of her lover. To shorten the tale, Madame Duchamp finally prevailed on her weak-minded sister, despite the entreaties and protestations both of Marie and Maurice, to send her daughter to Paris, that she might become a lady under the care and supervision of her experienced aunt. The troth of the young people was by no means broken; the shrewd Madame thought this to be quite unnecessary. She supposed Marie to be like most girls, and depended on her foregetting her lover in a week after she should arrive in Paris, calculating the while on profitting largely by increased sales in consequence of having so beautiful a person in attendance. At the same time her intentions were perhaps well meant, for she expected, without doubt, that her niece should succeed to her business, and inherit what she possessed. Meanwhile, poor Marie became utterly wretched; as I have described to you, she seemed slowly to wither away. She had been four months in Paris; she had not heard from Maurice, nor from her mother except through *Madame*, and when she made these disclosures to me, was ready to sink into absolute despair Poor, forlorn thing that she was! I went home revolving the matter in my mind. What was to be done! What could *I* do? I finally broke the subject to an intimate companion, a young German artist—a painter—who I knew would appreciate the interest I took in the business The result was, that we determined to make an incursion into Burgundy, work our way quite carelessly into the neighbourhood of Marie's home, and inspect the situation of things You laugh, my dear Clark, at this adventure, you call it Quixotic I cannot help it. I never commenced a journey with a more earnest purpose or a more cheerful heart; and if there was a sprinkling of romance in it, should it detract from the value of the object which we sought to compass? Obtaining from Marie such information as would enable us to find the desired locality without hinting the reason for the inquiry, my friend and I set off. It was not yet the season of the vintage, but the vine with its rich clusters already exhibited a luxuriant picture We passed rapidly south, and at length reached *Chavolles*. Here our reconnaisance commenced. We had no difficulty in finding the cottage of the widow Laforet, and one afternoon, just at sunset, we entered her dwelling and asked for a draught of wine I fancied there was an air of grief and of loneliness in her manner quite unnatural She desired us to be seated, and provided for us the best her cottage afforded My German friend undertook to explain our movements. We were from Paris, he said, and were making a pleasure tour through this delightful part of France. At the mention of *Paris* the widow started, and her interest in what my friend was saying evidently increased

'From Paris!' she exclaimed. 'Then you must know my Marie!'

I could not help smiling at the poor woman's simplicity, but the German preserved his gravity, and replied 'Perhaps with whom does she live?'

'Ah,' responded the widow Laforet, 'you must have seen her, she is with Madame Duchamp, everybody knows *Madame*.'

'What,' demanded my friend, 'Madame Duchamp, who keeps a shop in the *Passage des Panoramas*?'

'The very same, Sir'

'And what did you say was the name of your daughter, for Madame has several young girls with her?'

'Marie, Sir indeed, you could not mistake *my* Marie. You would know her among a thousand'

'She must mean Marie Laforet,' said the artist, turning to me with an air of indifference, as he proceeded to light his meerschaum.

'Ah, mon Dieu!' cried the poor widow, 'it is indeed my own *petite* Marie. I was certain you knew her. Pray, tell me all you can about her. She must be so happy in beautiful Paris, with everything to delight her'

'I doubt if it is the same person,' said the artist, stiffly.

'But I tell you that it is,' said the other, with eagerness; 'therefore go on pray, go on, Sir.'

'You will please describe your daughter,' said my inexorable friend.

'To be sure. A fine shape, just my height; face round, fresh with roses on her cheeks; fair skin, eyes—ah! so fine, so full, so gentle, so brown, hair, a chestnut, and her whole——'

'Not the same person,' said the other, again turning to me, and giving a puff of his meerschaum.

'But it is; I know that it is!' cried the widow; 'there cannot be two Marie Laforets with my sister. Ah, I have forgotten. Marie is so much altered, so much improved, that even her mother cannot describe her correctly. Just as my sister promised me—the dear, good one! But you will tell me how she looks now, just to please a foolish old woman—I know you will, Sir.'

'I doubt if it can be your daughter,' answered the artist. 'The Marie Laforet whom I have seen is to be sure about your height, and has chestnut hair and brown eyes; but her form seems to be wasted; her face is very pale and thin; her cheeks are colourless. Oh, no, it is not your little Marie;' and the artist drew some fresh tobacco from his pouch.

The widow burst into tears. A vision of the true state of things passed over her.

It was now my turn. 'I am sure,' said I, 'that the Marie whom we know *is* the daughter of our entertainer; the description agrees in everything except in that wherein young people who are unhappy are most liable to change. It is true that her cheeks are pale and hollow, and that she seems to be declining in health; otherwise it answers very well, depend upon it. My good woman,' I continued, with severity, 'you should see to your child.'

'And you, too, know her!' said the widow Laforet, not heeding my reproach, and looking up through her tears; 'and you say she is miserable? Yes, miserable she must be—my own darling, precious Marie! Why did I trust her away from me? My sister should have told me of this. I supposed she hoped there would be a change for the better. Alas! I have not had a happy moment since she left me. Ah, what will poor Maurice say?'—and she continued her lamentations for several minutes.

'And who is Maurice?' inquired the artist.

'Maurice, Sir, is a worthy lad, who is betrothed to my Marie. They were to be married the coming month; but this visit to my sister—alas! it has ruined us all.'

'And Maurice,' said I; 'how does he bear Marie's absence?'

'Indeed, Sir, worse than any of us. Not a word has he heard from her, although he has sent her a great many letters; but he does not blame Marie, not he yet he does nothing but curse Madame Duchamp—God forgive him!—from one week's end to another. He now declares that as soon as the vintage is gathered, he will go to Paris Ah! the vintage this year will be so sad, when we were promising ourselves so much pleasure!'

'And why should you not have it?' said the German abruptly, starting to his feet, and looking the widow Laforet full in the face. 'What is there to prevent your sending to Paris for Marie, and celebrating her nuptials with Maurice at the very time agreed upon?'

'But my sister,' interposed the poor woman timidly.

'*Le Diable!*' growled the German, 'would you sacrifice your own flesh and blood, body and soul, for fear of giving offence to——'

The sentence was cut short in an uncouth German gutteral, which I should not care to have translated.

'But what shall I do?' continued the widow; 'how can I manage it? I know nothing of the ways of the strange folks away in Paris, and if I sent for Marie, my sister never would let her go, for she has been at large charges for her journey, and for dresses, and I know not for what else. Ah, I fear it cannot be; yet what will become of thee, *ma petite!*' And again she wept.

It was now evening, and we were urged to spend the night at the cottage. The German shook his head, spoke of walking on to Charolles, but I overruled him, and he accepted the proffered hospitality. We were served with supper, and the good dame plucked for us from her early fruitage clusters of delicious grapes. I had sustained my part thus far tolerably well, but my heart was ready to burst at the sight of this poor woman, attempting to be cheerful while she prepared our entertainment. As for my friend, I could not too much admire the admirable manner with which he managed the interview. In the course of the evening I undertook to explain to the widow Laforet the dangers of a life in Paris to a young girl like Marie, and was not long in convincing her that she had reason to rejoice that the atmosphere of the city agreed so ill with her child. The artist verified all I said by an abrupt emphatic assent, so that before we retired her only desire was to get her daughter away from such a place of abominations. Thus far our plan had succeeded admirably, and we went to sleep confident and sanguine. The next morning the widow asked our advice as to the best means of getting Marie back to her home. Her only embarrassement was how to brave her sister's displeasure, and how to make amends for the expenses she had incurred for her. These, to us, were minor considerations, for I knew the latter to be much exaggerated in the widow's imagination, and as to the former, it seemed, under the circumstances, of no consequence whatever.

We at once proposed that Maurice should be sent for, and the dame accordingly went for him. As it was but a few steps she soon returned, accompanied by Maurice Foligny, a fine, noble-looking fellow, of manly bearing, to whom, after being satisfied of his ready perception by a few minutes' conversation, I frankly stated our object in coming into the neighbourhood. When he fully understood it, he grasped the hand of each, and without uttering a word, thus silently expressed his thanks. I need not recount to you how my friend and I went back to Paris in high spirits, bearing a letter from the widow Laforet to Marie, and also one to Madame Duchamp, the latter being the joint production of the German and myself, and written in a manner best adapted to effect our object without giving offence. Although mild and conciliatory, it was nevertheless decisive as to Marie's return, on the

ground of her ill health and her mother's lonely situation, referring also to the promise of Madame Duchamp, which her sister at the last moment recollected to mention to me, that if, after a few months' trial, Marie or her mother were not content with the arrangement, the young girl should be sent back I believe there was also a letter from Maurice to his betrothed, but as this is a point of little consequence, I will not speak positively. The end of the whole business you may guess by this painting about which you were so inquisitive. *Madame* did not prove as obstinate as was expected. The fact is, she was pretty well convinced that Marie would never adapt herself to her new life, and consequently that the speculation was a failure; for as the poor girl's health began to droop, even her mysterious demeanour ceased to attract attention. So she was sent home without more delay The only astonishing part of the history is, how suddenly she recovered her health, her gaiety, her plumpness, her colour, and the rich brown of her eyes, which had become so light and dull. The next month came; we had pledged ourselves—the artist and I—to be present, and in the very hey-day of the vintage, attended by a joyous company, Maurice and Marie were united in the little chapel which you see here, after which followed a dance upon the green, and a world of merry-making. My friend the German seized the occasion to exhibit a happy proof of his art.

You were right, my dear Clark this is no fancy sketch

LEATHER, AND THE PROCESS OF TANNING.

The skins of animals have been long employed in the construction of clothing. We know that in an early age of the world, the human race were accustomed to construct their garments of this material; and many of the ignorant and debased aboriginal tribes of distant countries have not, to the present day, any other kind of covering. Now it must surely have suggested itself to every reader, that of all materials the skin of animals must be the worst for such purposes without some preparation. It is liable to a very rapid putrefaction, and, consequently, a fetid smell, which would render it exceedingly disagreeable to any wearer. Those people who have been, or are accustomed to use it, must, therefore, be in possession of some means by which the skin may be made fit for the comfortable use of man. The principal objects to be obtained are to prevent destruction by putrefaction, and to render the skin strong, tough, and capable of resisting water. This we do by a process called tanning, and when thus prepared, we call the skin leather. It will not be necessary to inquire into the nature of the methods probably employed by our forefathers, or to describe those adopted by uncivilised tribes in the present day: we may at once proceed to explain the nature and process of our modern tanning.

If we examine carefully the skin of an animal soon after it has been stripped from the body, we shall find it to consist of three parts. There is, first, the true cutis, which is a membranous substance, chiefly composed of gelatine, soluble in water. In this substance we may trace the various vessels which convey the several fluids of the animal body, and some parts of their contents must of necessity remain in them. Then we have the outer or insensible cuticle, to which the hair, wool, or fur, is attached, both of which are chiefly composed of albumen, impenetrable to water, and almost incapable of putrefaction.

Now, before we proceed to explain the methods of preventing the decomposition and putrefaction of the inner cutis of the skin of the animals, it will be necessary to make a few remarks on the chemical character of gelatine, the substance to which the decay may be traced, and of tannin, the substance by which it is prevented.

Gelatine, or jelly, is an abundant principle in the construction of the animal body. It is not only a component part of bony structures, but is abundant in the soft and white parts, especially in the skin. By boiling, the gelatine may be extracted from any of these parts of the animal body, in a transparent solution, and when gently evaporated, may be made solid, having that flexible tremulous character which distinguishes the jellies that are brought upon the table. By a still greater evaporation, the gelatine is rendered hard and brittle, and forms in fact the substance called glue. When in this state, gelatine may be kept a long time without any alteration of character; but when in a thin or liquid state, it soon putrifies.

The substance called tan, or tannin, has a strong astringent, and a particular taste. It is obtained from galls, catechu, oak bark, and many other vegetable substances. Now if a solution of gelatine, glue or isinglass, for instance, be added to an infusion of oak-bark, or galls, a copious white precipitate will be immediately thrown down, which has a smell precisely the same as that of well tanned leather. The compound formed by the union of gelatine and tannin is incapable of decomposition in water, and the liability of gelatine to undergo putrefaction is, when thus united, overcome.

The first process in preparing a skin is to remove all the animal juices contained in the pores of the cutis, and all extraneous substances, and in most cases to remove the cuticle and its hairy covering. Having thus obtained the pure skin in a state ready to imbibe any substance in which it is macerated, the process of tanning may be commenced. There are two ways in which the skins of animals may be prepared and made fit for some parts of human clothing, namely, tanning and tawing. In the former the skin is impregnated with the vegetable substance called tan; and in the latter, made to combine first with alum and other salts, and afterwards with the white of eggs, or some other animal matter. The thick sole-leather used in making boots and shoes is tanned; the white kid-leather employed in the manufacture of gloves is tawed; and the fine Turkey leather is first tawed, and afterwards slightly tanned. Some tanned leathers are curried, that is, imbued by manual labour with oil. We must now proceed to state such general facts, in relation to each of these processes, as shall put the reader in possession of the most important information, without noticing those slight variations in the preparation of leather, upon the advantages of which even practical men may entertain a difference of opinion. It is to the principles and leading processes alone that we refer.

As soon as the skin comes into the tanning-yard, it is, as already stated, to be cleaned before any process of preservation can be commenced. The cuticle and the hairy covering is to be removed, and the cutis is to be cleansed from all extraneous substances. There are several ways in which this is done, regulated by the process to which the skin is to be afterwards subject, and the purpose to which it is to be applied. The thin skins of cows, calves, and other animals, generally used in the manufacture of flexible kinds of leather, and usually curried, are not prepared in the same manner as thick hides, such as those of the ox and the boar; the leather formed from which is commonly employed for the soles of boots and strong shoes

The thin hides are prepared in the following manner. They are first thrown into a pit containing water, in which they are cleansed from all impurities. Here they are allowed to remain for a day or two, and afterwards removed, and scraped upon a cylindrical stone, called the beam, with a blunt knife prepared for the purpose. In this way, any of the flesh or fat that may adhere is removed. They are then thrown into a pit containing lime-water, in which they are macerated for many days, until the skin becomes hard and thick, and the cuticle and hair is loosened from the skin; the separation being made on the beam with a blunt knife. After this has been done, the hides are thoroughly washed, to remove any portion of the lime that may adhere to them, and then immersed in the mastering-pit, where they remain for several days, acted upon by a bath of water and a putrescent dung, such as that of pigeons, fowls, or dogs; that of horses or cows is unfit for the purpose. Of all the processes to which the skins are subject, none require so much attention as this, for by the action of this bath they are rendered soft, and if allowed to remain a few hours too long, their texture is entirely destroyed.

The thick hides intended for sole-leather are prepared in a different manner. After the skins have been thoroughly cleansed, as in the former instance, the cuticle and hair should be, if possible, removed without the process of liming; for lime, if retained in the skin, renders the leather liable to crack. This may generally be done, though the process already described is frequently practised. The most approved method is to roll the skins together in heaps in some warm place, where putrefaction may be aided. After remaining a few days in this state, the hair adheres less tenaciously, and may be

easily removed. The next operation is called raising, and is intended to open the pores of the skins, so as to give the tanning liquor a more entire action upon them. They are, therefore, immersed for several days in some acid liquid: acetous acid, formed from an infusion of rye or barley strongly fermented, was used for this purpose: but now diluted sulphuric acid is much preferred, in the proportion of a pint of acid to about fifty gallons of water.

We come now to the process of tanning. In whichever way the skins may be prepared, the same method of tanning is adopted. From what has been already said, it will be evident to the reader that the process of tanning must necessarily be an extremely simple one; in fact it consists of nothing more than the immersion of the skins in an infusion of tannin The affinity of the gelatine and tan causes a gradual extraction of the tan from the water and union with the skin. A hole, or pit, is formed, and when the infusion is prepared, the skins are thrown in, and continue exposed to the solution, only increasing the strength until the operation is completed. It is a process of great simplicity, though requiring constant attention that every part may be alike exposed to the tanning principle. No advance in the arts can in any great measure aid the workman, a fact which accounts for the early introduction, or, at least, the universal use, of this manufacture.

Oak bark is the principal substance used for tanning in this country. The bark, when stripped from the tree, is first piled in large stacks, and is not taken to the tan-yard until ground into a fine powder. It is thrown into pits of water, with which the soluble parts are quickly united, forming what is technically called the ooze. The skins are first placed in a weak solution, and, after remaining in this for a time, in a stronger; and this increase of strength is continued until the operation is complete. In the preparation of the thick sole-leather, these successive immersions are not sufficient, for, after being subject to many oozes of different strength, it is still found to be only partly tanned, which may be known by cutting the skin; the parts which have undergone the change present a brownish colour, and the others remain white. A partially tanned skin will therefore present the appearance of three distinct strata, the central part having suffered no change of colour. The thick hides after being partially tanned are placed in larger pits with alternate layers of oak bark, the oak being both the bottom and upper layer A weak ooze is then poured in between the interstices, so that in a short time the skins are exposed to a saturated solution of tan.

It is here worthy of remark, that tan is not the only substance contained in vegetables, and capable of solution in water. The infusion of oak bark is known to contain gallic acid, and other extractive matter. All these unite with the leather, and may perhaps have some effect in the production of that change which the animal matter undergoes, for chemists are not acquainted with any method by which they can extract tan alone. The presence of gallic acid in leather is easily proved; for any part which is touched with a salt of iron immediately turns black. From the experiments made by Davy and others, it appears that the colour and flexibility of leather are in a great measure due to the extract; and even the quantity of tan that is absorbed depends on its presence and amount

Common calves' skins usually require from two to four months for complete tanning, sole-leather from fourteen to twenty months, and a boar's shield about two years.

When the tanning is complete, the hide is taken out of the pit. Sometimes it is stretched upon a convex piece of wood called a *horse*, and beaten with a heavy steel bar; at other times it is passed through iron cylinders, a process which adds solidity to the leather, besides effectually driving out nearly all the water it contains. When the larger quantity of fluid has been thus removed, the skins are taken to the drying house, and there remain exposed to a constant current of air till quite dry.

The method usually adopted of currying leather is very simple; and as it has probably been witnessed by many of our readers, a short description will be sufficient. The hide as it comes from the tan-yard is first immersed in water, and softened; and then placed on a smooth wooden beam with the fleshy side outward. With a sharp knife the currier, who is elevated above his work, pares off the inequalities, and reduces it to the required thickness. It is then washed and rubbed with a polished stone, and afterwards covered with oil, or a mixture of oil and tallow. When dry, the skin is fit for use, except that it is blackened on the grain side by rubbing it with iron liquor, and on the flesh side with lamp black and oil.

It may here be mentioned that in the preparation of thin skins, such as lambs' and goats', more care is required than in those of which we have been speaking. When prepared, they are subject to a variety of operations, such as tawing, dyeing, oil-dressing, and shammoying, but whatever process is to be adopted, that of tanning always precedes, except in the manufacture of white leather. These thin leathers are used for a great variety of purposes, such as bookbinding, the manufacture of gloves, couch and chair linings. It is not, however, necessary for us to detail the manner in which the skin is prepared for tanning; for although in some respects different from that already described, in consequence of the great care required in manipulation, it is, in principle, essentially the same. When prepared, the skin appears an exceedingly thin white membrane, and is called a pelt, and is ready for any operation that may be required.

The method of tawing is as follows:—The pelts or skins are placed in a solution of alum and salt in warm water, and there allowed to remain until they have gained a sufficient toughness and thickness. They are then taken out and washed, and afterwards immersed in bran and water, where they ferment, throwing off much of the alum and salt previously imbibed, but at the same time retaining, it is supposed, a portion of alumine received from the solution. They are then dried and again soaked in water to extract still more of the alum; after which they are trodden in yolk of eggs until nearly all the substance of the egg is taken up, and a transparent liquid is left.

There are many kinds of leather to which we are unable to refer in this paper, but the principle upon which every tanning process is conducted has been so fully stated, that it will be quite evident every alteration of character or appearance must arise from either the addition or omission of some operation altogether independent of the preservation of the skin. The Russia leather, so valuable in this country for bookbinding and other fancy purposes, is tanned in the same manner as our own leathers; but, with all our skill, still we are unable to produce it, although the method of manufacture has been frequently described by those who have resided in Russia.

WELLINGTON.

(*From Sir E. L. Bulwer's "New Timon"*)

Next, with loose rein and careless canter, view
Our man of men, the Prince of Waterloo;
O'er the firm brow the hat as firmly prest,
The firm shape rigid in the buttoned vest,
Within—the iron which the fire has proved,
And the close Sparta of a mind unmoved!

Not his the wealth to some large natures lent,
Divinely lavish, even where misspent,
That liberal sunshine of exuberant soul,
Thought, sense, affection, warming of the whole,
The heat and affluence of a genial power,
Rank in the weed, as vivid in the flower;
Hush'd at command, his veriest passions halt,
Drill'd is each virtue, disciplined each fault;
Warm if his blood—he reasons while he glows,
Admits the pleasure, ne'er the folly knows;
His eye ne'er wrong if circumscribed the sight,
Widen the prospect and it ne'er is right,
Seen through the telescope of habit still,
States seem a camp, and all the world—a drill.

Yet oh, how few his faults, how pure his mind,
Beside his fellow conquerors of mankind!
How knightly seems the iron image, shown
By Marlborough's tomb, or lost Napoleon's throne!
Cold if his lips, no smile of fraud they wear;
Stern if his heart, still "Man" is graven there
No guile—no crime his step to greatness made,
No freedom trampled, and no trust betrayed
The eternal "I" was not his law; he rose
Without one act that honour might oppose,
And leaves a human, if a hero's name,
To curb ambition, while it lights to fame.

SLAVERY IN AMERRICA.

The publication of Mrs. Stowe's admirable tale has given an impetus to the deadly hatred which all Englishmen feel for the "peculiar institution" of America, such as it has never before received. The southern slave-holders quail before "Uncle Tom's Cabin." The thousands—nay millions—of copies which have been printed of this remarkable work, are the best evidences of public opinion on the subject of slavery. It is true that, even in this country, there have been found men who, not daring to defend or excuse the conduct of the slave-holders of America, have fallen foul of the author, and declared that her descriptions have been exaggerations. Even Dickens in his "Household Words," speaks smoothly and glossingly of the dealers in human flesh and blood, and appears to think that no such characters as Mrs. Stowe has drawn could possibly exist, even in America. Did Mr. Dickens, when he affected to disbelieve in the atrocities of Legree, forget that in the American newspapers there are constantly to be seen such paragraphs as this, which we cut from the *Richmond Times*?—

A gentleman named Ball, overseer for Edward T Tayloe, finding it necessary to chastise a field hand for insolence or idleness, attempted to do so in the field, when the negro resisted, made fight, and being the stronger of the two, gave the overseer a very severe beating, and then betook himself to the woods Mr. Ball, as soon as he could do so, mounted his horse, and proceeding to Mr Tayloe's residence, informed him of what had occurred. Mr Tayloe, in company with Ball, repaired to the corn-field, to which the negro had returned, and demanded to know the cause of his conduct. The negro replied that Mr Ball had attempted to whip him, but that he would not submit to it Mr. Tayloe said he should, and ordering him to cross his hands, directed Mr Ball to take hold of him. Mr Ball did so, but perceiving that the negro had drawn a knife, told Mr Tayloe of it, who immediately sprang from his horse, and, drawing a pistol from his pocket, shot the negro dead at his feet. Upon this the *Richmond Republican* comments as follows — "Mr. Tayloe did just what every man who has the management of negroes should do—enforce obedience or kill them."

Or did Mr. Dickens, when he spoke of the want of plot in Mrs. Stowe's story, and the inconsistency of her making Uncle Tom die the death he did, forget that he killed one of his best characters, teeth and all, by a railway concussion, in the last chapter but one of "Dombey and Son."

All this, however, is beside the question. We rejoice to think that—whatever be the literary faults of Mrs. Stowe's book—the publication of "Uncle Tom's Cabin" has re-awakened the world to the horrors of that abomination which Clarkson and Wilberforce did their best to put down, we rejoice in the fact that the touching passages in that famous book have found an echo in every English heart, and that—mainly through its revelations—the days of slavery are numbered. In truth, it must be so; for the very laws of population forbid the permanence of slavery in America. The black man thrives in the climate where the white man decays, and it is the knowledge of this very remarkable fact, that, in great part, accounts for the dislike to the coloured population which is everywhere expressed in the United States. Till the people of the North admit the free man of colour to a social equality with themselves, we can put little faith in their denunciations of slavery! Every man, woman, and child in England should know, that in that part of North America called the United States, no single individual with the least taint of African blood in his veins, is admitted into any kind of social communion with the whites. The whites in America neither eat, nor drink, nor converse with the blacks in any other relation than that of masters and servants. The black man, though he be free, is not allowed to sit in the same room, to ride in the same railway carriage, to put his foot in the same department of a theatre, or a steam-boat, or an omnibus, or any place of amusement whatever, with the white! Even among the sticklers for emancipation,—nay, the speakers at abolition meetings,—this feeling of dislike may be seen, distinctly, and often disagreeably exhibited. What, then, is the conclusion we draw from these facts? Why, that the freedom of the black must come from Europe, through the force of public opinion, and that the extensive circulation of such works as that of Mrs. Stowe is one great means of emancipation. We can expect nothing, in spite of Mr. Dickens's hopeful prophecy, from the slave-holders themselves; as, how should we expect justice or mercy in those who retain an irresponsible power over these poor black human chattels? Stripes and blows are the answer of the Southern planter to the black man's prayers.

Take a passage from Mr. Casey's recently published work, "Two Years on the Farm of Uncle Sam," for evidence of the slave's condition in America:—

"The slaves are all that I had imagined; coming up to the dark outline of fancy with a terrible precision. We put in to wood at one of these places, and there for the first time I saw those hewers of wood and drawers of water. A party of us went on shore to shoot; some distance in the wood we found two men, three women, and two boys; there were twenty in all on this farm. The women were dressed in a rough, shapeless, coarse garment, buttoned at the back, with a sort of trousers of the same material, rough shoes and stockings, the upper garment reaching nearly to the ancle; a kind of cloth, like a dirty towel, was wound round the head. One of the women drove an ox-team; she had a large and powerful whip, with which, and a surprising strength, she belaboured and tugged the unwieldy team with great dexterity. The other women had five children, and assisted in loading the wood; the younger, about sixteen years of age, had one child, and appeared to do nothing. The women, it seemed to me, worked harder than the men. I observed the almost complete absence of memory in the elder woman; she could not remember where she had left the link-chain or goad-whip; though but a few minutes out of her hand I must confess that, looking on that labour-crooked group, I felt a dislike, strong and definite, to that system which takes away even the hope of improvement, crushing down the principle of self-esteem in the man, until he reaches the passive and unambitious existence of the oxen which he drives. And looking on those women (negroes though they were), so unnaturally masculine, so completely unsexed, so far removed from all those attributes with which the name of woman is associated, I felt that no reason, based on an asserted right, no fiction of argument, could stand in my judgment but as dust in the balance, when the question is whether a human being (no matter of what colour, whether an Indian or an African sun may have burned upon him), should possess the liberty or right of securing his own happiness to the extent of his ability. Their then state—their look, bodies, mind, and manner, were so many self-evident arguments against the system, which no representations, however plausible, could refute; and all that I had listened to from Southerners on the voyage disappeared like gossamer in the tempest, before the mute living picture of wretchedness presented by that group."

Has one man any inherent right to possess property in the bones and sinews of another—a right to buy and sell, and dispose of as he pleases, his fellow human beings? No! Liberty is the most sacred of all the rights of man. To deprive a man of this, his natural heritage, is to strike a blow at the root of all the benefits and advantages which belong to him by the gift of God. To believe in the justice of depriving any portion of the human race of freedom, when they have violated no law, is to endanger the liberties of all men, because, as Channing truly argues, "it is plain that if one man may be held as property, then every man may be so held." A being gifted with intelligence, capable of attaining a high moral state of happiness, and endowed with immortality, cannot legitimately become the property of another. *Ad man has a right to himself.* This proposition is so self-evident, that all men, whether slave-holders or not, believe in its truth, so far as their own individual cases are concerned, at any rate. The kidnapping system is now universally reprobated, and the very nations which hold human beings in bondage have declared it to be the very worst kind of piracy. If it be wrong to deprive free men of liberty, it surely must be as wrong to hold those in slavery who have been born in a state of servitude.

No question of expediency, or policy, can be raised in justification of the iniquity, for no violation of the moral laws of the universe can be extenuated. Because an evil is hoary with age, and has interwoven itself into the very machinery of society, it does not become less an evil, and its extinction is as much required by the Creator as if it were but a day old.

The most enormous of all evils is SLAVERY. It is bad enough in its minor developments—such as curtailing the political or

religious privileges of a people; but when it converts intellectual, responsible, and immortal beings into creatures held as chattels, personal to all intents, purposes, and constructions whatever, it is impossible to form anything like a just estimate of its fearful character. For, what does such a slavery as this necessarily do? It tramples upon those sacred laws of Omnipotence which establish the equality of man, which enjoin universal charity, and which make this life a state of probation, in which it is designed that every man should be furnished with unrestricted opportunities for developing the lofty and noble faculties of his mind, and of giving full scope to his capacities for enjoyment and happiness within the bounds of morality and propriety.

Slavery makes the will of the enslaved entirely subject to the will of the enslaver. It lowers him to the level of a beast, it renders him liable to the worst and most barbarous degradations, and it makes him, as far as possible, an irresponsible being, because it deprives him of enlightenment, and places insurmountable barriers in the way of his obtaining knowledge. And why does it this? Because it knows that so deeply innate is the consciousness of the right to the enjoyment of liberty in the minds of those even who are born in bondage, that nothing but brutifying their natures can make them at all resigned to their shameful servitude.

And what can be said of a people who practise these atrocities, and of a government which sanctions them? The people must be more debased than those whom they oppress, and the government, by aiding the strong against the weak, inflicts the very evil which it was created to suppress, and is as far behind in civilisation, refinement, and justice, as were the despotisms of the middle ages. The great and pure-minded Channing, in one of his noble pamphlets against slavery, truly remarks that "no greater calamity can befall a people than to prosper by crime." Oppression, whether perpetrated by monarchical institutions, in which the divine right of kings is recognised, or by representative governments, whose deliberations are controlled and guided by the voice of the people, will eventually bring with it a fearful retribution, which cannot but prove most disastrous to all who uphold it, unless timely measures are taken to do justice—for every violation of the moral laws of the universe has its appropriate punishment.

Tyranny is infamous when practised by despotically constituted powers, which seek to put down free institutions altogether, but how much worse is its character when a country, calling itself free, and boasting of its love of liberty, allows oppression, worse than any that exists in nations which acknowledge themselves to be enslaved, to ride rough-shod over the rights of more than three millions of thinking, reasoning beings, naturally endowed with full capacities for gaining intelligence and enjoying happiness? What a lamentably sad state of national hypocrisy does this show! Yet such is the course pursued by the Western Republic. And, strange to say, the inconsistency of the pro-slavery portion of its people extends much farther than this even For they sympathise with the cause of liberty in the Old World, while they crush it in the New World. They denounce the tyrants of Europe, while they patronise the tyranny of America. Fond of freedom themselves, and anxious for its success abroad, the spirit of selfishness, domination, and cruelty, leads them to repress it at home.

Oh, consistent Republicans, the cause of liberty has reason to blush for you! Your lofty assumptions, your boasted freedom, your declaration of independency, in which you recognise the right of every man to liberty, your "peculiar institution," your Fugitive Slave Law, and the enactments which exist in several of your states by which it is made criminal to teach a slave to read, prove you to be false to the cause of advancement, and insincere in your pretensions of attachmment to human rights. You told the world that it was your love of liberty which caused you to have a bloody contest with Mexico, while, in reality, you aimed at securing another slave state to the Union, by the annexation of Texas. And now you are endeavouring to effect a revolution in Cuba, under the plea that you desire to emancipate the colonists there from the oppressive dominion of Spain, while your real object is to annex Cuba to the American Union, and to strengthen your power in Congress by the addition of another slave state. Such hypocrisy as this on the part of the pro-slavery party must cause it to be regarded not only with universal indignation, but also with universal contempt.

The means employed by this party to prevent the spread of abolitionism are well worthy its principles. The advocates of slavery know well enough that they have neither reason nor justice on their side, and hence they never attempt anything like a logical argument in support of their "peculiar institution."

Physical force is the power they employ to crush their antagonists, and to prevent the spread of free-soilism! Mob law is allowed to exercise its brutal and barbarous authority on those who, in the southern states, dare to lift up their voices against the infamous slave system. In reading the records of the sufferings of abolitionists, it would almost seem that the men who sanction and perpetrate these outrages possess fiendish natures, and are in a state of revolting depravity.

And the law itself, in some States, appears to be but little better than "mob law." When we read of a minister in the United States, the Rev. Jesse McBride, who was arrested in the town of Guildford, North Carolina, for having presented a little girl with a tract called "The Ten Commandments," in which the wickedness of slavery is exposed—we can hardly believe our eyes. The sentence of the court was that he should be placed in the pillory, receive twenty lashes, and be imprisoned for one year! He appealed against this sentence to the supreme court. In the meanwhile he continued his labours, until a large mob dragged him from his church one Sunday morning, and offered him one of two alternatives, either to leave the state for ever, or endure death. He accepted the first proposition, and he was conveyed out of the state. Among those engaged in this transaction there were deacons and members of Christian (?) churches.

The indignation of outraged humanity has been naturally excited by the Fugitive Slave Law, one of the most barbarous enactments that ever stained the statute-book of any country. This atrocious law vests supreme power in one commissioner. Should he send back the supposed fugitive to slavery, ten dollars are allowed him as his fee. Should he not, he is entitled to five dollars only. Thus, a direct appeal is made to his cupidity. The country is overrun with kidnappers, who gladly avail themselves of every opportunity of gratifying their avaricious dispositions by sacrificing human liberty; and even the freedom of free coloured men, who are not very well known, is frequently endangered.

In Baltimore a man was arrested under the new act, and, although witnesses swore to his being a free man, yet he was sent to his supposed master, who had the honesty to declare that a mistake had been made, and that he was not his slave. Few slave-holders would have done as much!

Another case occurred in Pittsburgh, in which a man arrested as a fugitive slave was said by the prosecutors to have fled two years before. Fortunately, however, respectable inhabitants of the place came forward, and declared that, to their knowledge, the man had been a resident of the town for upwards of twenty years.

But public opinion in the free states has declared its determination to effect the abolition of this wicked law; and before this righteous will of the people, all the powers of slavery combined will eventually prove as powerless as the bark of the mariner is when vainly struggling with the fatal maelstrom, or when dashed by a tempest against some rocky shore. In the meantime, while the Fugitive Slave Law continues to stain the statute-book of the Western Republic, the friends of liberty there, believing that they cannot conscientiously obey any law which is opposed to the sacred injunctions of religion, are determined, regardless of fines and imprisonment, to fulfil that great command of Omnipotence which declares that "thou shalt not deliver unto his master the servant that is escaped from him unto thee."

It is, indeed, a fortunate, nay, providential thing that Canada, whose soil is consecrated to freedom, should adjoin the United States, and thus afford a near and suitable place of security for the fugitives from the whips and chains of the southern plantations. And ought we not to prevent the much-talked-of annexation of Canada to the States, if it were but for the sake of those multitudes of unfortunates who, unable to enjoy liberty, "the inherent right of every man," in their own

country, yet, happily, find it in the North American dominions of Queen Victoria?

Common Literature, says a clever writer in *The Uncle Tom's Cabin Almanack*, is antagonistic to Slavery. There is something that must not be allowed to enter the mind, which must not be admitted into educational courses, which it is dangerous to allow even to a general reader, in nearly all the writings of the good and great. The southern states of America need an expurgated literature, in which dangerous sentiments shall all have been carefully eschewed.

There are three great agencies in active operation, which are slowly, but surely, undermining the foundations of American slavery. First, there is public opinion, in the northern states, which is every year growing stronger and more determined in its opposition to "the peculiar institution." Secondly, there is the tide of emigration which is constantly flowing towards the free states. This necessarily increases the strength and numbers of the Abolitionists, and it also results in giving a larger number of representatives in Congress to the north, than is possessed by the south. Thirdly, there is the free labour movement, which, if successful in producing cotton in the British colonies in sufficient quantities to supply the demands of the European market, will speedily annihilate the most infamous system of tyranny that was ever founded. These three influences must eventually effect the abolition of slavery.

There were raised in the United States, during the last official year—from September 1, 1851, to August 31, 1852—no fewer than 3,015,029 bales of raw cotton, which, at 400 lbs. to the bale, represents 1,206,011,600—one thousand, two hundred and six millions, eleven thousand, six hundred pounds. The whole of this immense crop, with the exception of 175 bales, was raised in the slave states, Alabama, Louisiana, Texas, Florida, Georgia, and North and South Carolina, and Virginia, supplying the bulk of the quantity named. Of this large crop, Great Britain took considerably more than one-half—in actual figures, 667,499,600 lbs;—for home use in the United States, there were reserved about 600,000 bales, the remainder being exported to France, the North of Europe, and various other foreign ports Compared with the previous year, an increase of nearly half-a-million bales is observable, and the quantity will no doubt go on increasing. Now all, or nearly all, this cotton is raised by slave labour, and the object of these figures is to show that, notwithstanding the assertions to the contrary, slavery is rapidly increasing in the United States, and slavery *must* increase, so long as the British merchant takes his supply of cotton from Louisiana, and so long as the British artisan consumes the tobacco of Virginia! The total coloured population of the United States, according to the last census, is stated to be 3,626,985, of whom 3,191,724 are slaves! The slave states of America—and let every child in Great Britain and Ireland learn their names by heart—are Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, Missouri, North Carolina, South Carolina, Tennessee, Texas, and Virginia! In 1790—just sixty-two years ago—there were in the whole of the United States, less than four millions of inhabitants. Of these the slaves constituted rather more than half-a-million. Let us see how this great nation has progressed, and how it has improved that dreadful legacy which, as the Americans are so fond of declaring, it inherited from the mother country:—the white population, which, sixty-two years since, was only 3,172,464, is now 19,630,738—rather more than 38 per cent. of increase. The slaves during the same period have increased from 697,897 to 3,198,324, or nearly 29 per cent. But there is another element to be taken into the calculation. At the first-mentioned period, there were in that part of North America called the United States, 59,466 free blacks, at the present moment the free coloured population numbers only 428,661 persons. So that while in the last sixty years the white population has increased 38 per cent., and the slaves 28 per cent, the extension of the numbers of free coloured people—these, too, be it remembered, native to the soil, and many of them as fair in complexion as the Americans themselves—has been no more than 10 per cent.! The increase in the slave population has been gradual and certain. In 1800, the numbers were 893,067; in 1810, 111,364; in 1820, 1,538,064; in 1830, 2,009,031; and in 1840, 2,487,113.

The following table will show the relative increase of the white and coloured population since 1840:—

States.	Whites.	Free Coloured.	Slaves.	Total.	Number in 1840.
Alabama	426,815	2,250	342,894	771,959	590,756
Arkansas ..	162,071	587	46,983	209,641	97,574
California ..	200,000	—	—	200,000	80,000
Connecticut	363,189	7,415	—	370,604	309 970
Delaware ..	71,989	17,957	2,239	91,528	78,085
Florida.....	47,120	926	39,341	87,387	54,477
Georgia	513,083	2,589	362,966	877,585	691,392
Indiana	983,634	5,100	—	988,734	685,866
Illinois	853,059	5,339	—	858,398	476,183
Iowa.....	191,830	292	—	194,122	43,112
Kentucky ..	770,061	9,657	221,768	1,001,496	779,828
Louisiana	224,271	15,686	240,807	580,792	352 411
Maine	581,920	1,312	—	583,232	901,793
Massachusetts	985,498	8,774	—	994,271	737,698
Maryland .	418,763	74,943	89,800	582,506	470 019
Mississippi	291,536	898	300,419	592,853	375,651
Michigan.	313,156	2,547	—	395,703	212,267
Missouri . .	592,176	2,667	89,289	684,132	383 702
N Hampsh.	317,354	477	—	317,831	284,574
New York .	3,032,571	47,548	—	3,080,024	2,428,921
New Jersey	466 283	22,269	119	488 671	373,306
No Carolina	582,477	27 271	288,412	868,870	753,419
Ohio	1,951,101	25,930	—	1,977,031	1,519,467
Pennsylvania	2 258,310	53,201	—	2,311,681	1,724,033
Rhode Island	141,012	3,543	—	147,555	108,830
So Carolina	274,775	8,789	384,925	668,489	594,398
Tennessee .	767,319	6,280	2 9,819	1,083,418	829,210
Texas	143,141	926	54,446	187,403	140 000
Vermont . .	312,756	710	—	314,466	291,948
Virginia ..	894,140	53,906	473,026	1,421,081	1,239 797
Wisconsin	303,600	626	—	304,226	30,945
Total	19 517,885	409,300	3,175 902	23 102 987	17,234,358

To these totals must be added about half a million whites for the newly-acquired possessions in Mexico, Oregon, and distant colonies, ten thousand free coloured persons, and about four thousand slaves, so that we have for the grand total population of the United States, including California, nearly twenty-three and a-half millions, of whom *every eighth man is a slave!* But how, during all these years have the cotton manufactures of Great Britain prospered? Why, in 1815 there were imported into England 99,000,000 lbs. of raw cotton wool; in this present year of grace, the mills of Manchester and the north consume nearly a thousand millions of pounds a year, four-fifths of which is raised by slave labour! Oh, enlightened men of the nineteenth century,—philanthropists, free traders, gospel ministers, think of the wrongs, and tears, and groans, and sweat of blood this cotton, cultivated in the southern states, has tended to engender: think, that for the sake of cheapness we, every one of us, do a wicked deed, and help to degrade to a condition worse than that of beasts of burden, three millions of human beings made in the image of their Maker! Think how

All unconsciously, we're aided in America's disgrace,
Help to bind the galling fetters upon millions of our race;
Let the time gone by suffice us, we are not in darkness now,
Never more at Slavery's altar let a free-born Briton bow
Half Columbia's slave-grown cotton finds its way to England's shore,
We have worn the blood-stained fabric, brothers, let us wear no more.
Of the *free-grown* cotton woven, on the glad wind floating free,
Let our banner wave a promise to the bondsmen o'er the sea,
"Up and onward" is our motto—shrink not from fearful odds;
Not ours the curse of slavery—not the battle ours, but God's!

But there is yet one other way by which emancipation may be effected,—and that is, by *a general rising of the slaves.* Knowledge and slavery are incompatible; and it appears very certain, that the spirit of intelligence is now being very much diffused among the slaves. The American Anti-Slavery Society is doing much towards creating this intelligence; and no doubt the fugitives who have been returned to the southern plantations from the north, will spread far and wide the information they have obtained. When the enslaved become fully conscious of their condition, and of the inhuman injustice they endure, it is to be feared that a general insurrection will be the result, which would necessarily be attended by the most dreadful consequences. It is to be sincerely hoped that liberty may be secured for these down-trodden human beings without the sacrifice of life, or the shedding of blood.

Slavery, and the spirit of the age, are incompatible. Slavery and enlightenment can never be united. Slavery and the will of God are antagonistic; society is undergoing a purification; free and enlightened opinion are rapidly making ground; and all despotisms (American slavery among the number) must vanish away. In the eloquent language of George Thompson, who is writing on the same theme: "Let us but be true to our principles, abhor all compromises, and have faith in the truth, and we may hope all things. It cannot be that God will be worsted in this struggle. Let us be co-workers with Him, and our triumph is sure."

ENGLAND IN THE PRESENT DAY.

BY M. DE LAMARTINE.

Author of "The History of the Restoration of the Monarchy in France," &c. &c.

When a man is strongly pre-occupied with the crisis under which his country labours, every opportunity that arises is caught at to turn to the profit of his compatriots the sights with which he is struck, and the reflections with which these sights inspire him. Called by circumstances of an entirely private nature to revisit England for some time, after an absence of twenty years, it was impossible for me not to be dazzled by the immense progress made by England during that lapse of time, not only in population, in riches, industry, navigation, railroads, extent, edifices, embellishments, the health of the capital, but also, and more especially, in charitable institutions for the people, and in associations of real, religious, conservative, and fraternal socialism, between classes to prevent the explosions by the evaporation of the causes which produce them, to stifle the murmurs from below by incalculable benefits from above, and to close the mouths of the people, not by the brutalities of the police, but by the arm of public virtue. Very far from feeling afflicted or humiliated at this fine spectacle of the operation of so many really popular works, which give to England at the present moment an incontestible pre-eminence in this respect over the rest of Europe, and over us, I rejoiced at it. To asperse one's neighbour is to lower oneself. The rivalries between nations are paltry and shameful when they consist in denying or in hating the good that is done by our neighbours. These rivalries, on the contrary, are noble and fruitful when they consist in acknowledging, in glorifying, and in imitating the good which is done everywhere: instead of being jealousies, these rivalries become emulation. What does it signify whether a thing be English or French, provided it be a benefit? Virtues have no country, or, rather, they are of every country: it is God who inspires them, and humanity which profits by them. Let us, then, learn for once how to admire.

But I am told that these practical virtues of the English to the poorer, the *proletaire*, the suffering classes are nothing but the prudence of egotism! Even if that were the case, we ought still to applaud, for an egotism so prudent and so provident, an egotism which could do itself justice by so well imitating virtue, an egotism which would corrupt the people by charity and prosperity—such an egotism as that would be the most profound and most admirable of policies, it would be the machiavelism of virtue. But it is not given to egotism alone to transform itself so well into an appearance of charity, egotism restricts itself, while charity diffuses itself; without doubt there is prudence in it, but there is also virtue; without doubt, Old England, the veritable patrician republic under her frontispiece of monarchy, feels that the stones of her feudal edifice are becoming disjoined, and might tumble under the blast of the age if she did not bind them together every day by the cement of her institutions in favour of her people. That is good sense, but under that good sense there is virtue; and it is impossible to remain in England for any length of time without discovering it. The source of that public virtue is the religious feeling with which that people is endowed more than many others; a divine feeling of practical religious liberty has developed at the present moment, under a hundred forms, among them. Every one has a God, where every one can recognise the light of reason, and adore that God, and serve him with his brothers in the sincerity and in the independence of his faith. Yes, there is, if you will, at the same time, prudence, well understood egotism, and public virtue in the acts of England, in order to prevent a social war. Let it be whatever you like. But would that it pleased God that plebeian and proprietary France could also see and comprehend its duty to the people! Would that it pleased God that she could take a lesson from that intelligent aristocracy! Would that she could once for all, say to herself, "I perish, I tremble, I swoon in my panics. I call at one time on the monarchy, at another on the republic, at another on legitimacy, now on illegitimacy—then on the empire, now on the inquisition—then on the police, now on the sabre, and then on speech to save me, and no one will save me but myself. I will save myself by my own virtue!"

I have seen England twice in my life, the first time in 1822. It was the period when the Holy Alliance, recently victorious and proud of its victories over the spirit of conquest of Napoleon, struggled against the newly-born liberalism, and was only occupied in everywhere restoring ancient regimes and ancient ideas. The government of England, held at that time by the intelligent heirs of a great man (Mr. Pitt), was a veritable contradiction to the true nature of the country of liberty; it had taken up the cause of absolute sovereigns against the nations; it made of the free and proud citizen of England the support and soldier of the Holy Alliance, it blindly combated the revolution, with its spirit and its institutions at home, and everywhere else. England, by no means comfortable under such a government, hardly recognised herself; she felt by instinct that she was made to play the part of the *seide* of despotism, and of the churches, in place of the part of champion of independent nationalities, and of the regulated liberty of thought which Mr. Pitt had conceived for her. Thus her tribunes, her public papers, her popular meetings, her very streets and public places, rung with indignation against her government and her aristocracy. The ground trembled in London under the steps of the multitudes who assembled at the slightest appeal or opportunity, the language of the people breathed anger, the physiognomies hatred of class to class; hideous poverty hung up its tatters before the doors of the most sumptuous quarters; women in a state of emaciation, hectic children, and ghastly men were to be seen wandering with a threatening carelessness about shops and warehouses loaded with riches; the constables and the troops were insufficient, after the scandalous process of the Queen, to bridle that perpetual sedition of discontent and of hunger. The painful consciousness of a tempest hanging over Great Britain was felt in the air. A cabinet, the author and victim of that false position, sunk under the effort. A statesman sought in despair a refuge against the difficulties which he saw accumulating on his country, and which he could no longer dominate but by force. I avow that I myself, at that time young and a foreigner, and not yet knowing either the solidity or the elasticity of the institutions and the manners of England, was deceived, like everybody else, by these sinister symptoms of a fall, and that I prognosticated, as everybody else also did, the approaching decline and fall of that great and mysterious country. The ministry of Mr. Canning placed me happily in the wrong.

I saw England again in 1830, a few months after our revolution of July. At that time the political government of England was moderate, reasonable, and wise. It endeavoured, as Lord Palmerston, as Sir Robert Peel, as the Duke of Wellington have done, after the revolution of February, to prevent a collision on the continent between the revolution and the counter-revolution. It then refused, as it refused in 1848, to be a party to an anti-French or anti-republican coalition. It proclaimed not only the right and independence of nationalities, but also the right and independence of revolutions. It thus humanely avoided irritating the revolutionists. It spared Europe the effusion of much blood. But in 1830 it was the misery of the English and Irish *proletaires* that frightened the regards, and brought consternation to the thoughts of observers. Ireland was literally dying of inanition. The manufacturing districts of the three kingdoms having produced more than the world could consume during the fifteen years of peace, left an overflow of manufactures; the masses emaciated, vitiated in body and mind and vitiated by their hatred against the classes of society who possess. The manufacturers

had dismissed armies of workmen without bread; these black columns were to be seen, with their mud-coloured jackets, dotting the avenues and streets of London, like columns of insects whose nests had been upset, and who blackened the soil under their steps.

The vices and brutishness of these masses of *proletaires*, degraded by ignorance and hunger—their alternate poverty and debaucheries—their promiscousness of ages, of sexes, of dens of fœtid straw—their bedding, in cellars and garrets—their hideous clamours, to be met with at certain hours of the morning in certain lanes of the unclean districts of London—when that human vermin emerged into the light of the sun with howling, groaning, or laughter that was really Satanic, would have made these masses of free creatures really envy the fate of the black slaves of our colonies—masses which are abased and flogged, but at all events loathed! It was the recruiting of the army of Marius; all that was wanting was a flag. Social war was visible there, with all its horrors and its furies. Everybody saw it, and I myself foreboded it like everybody else. These symptoms struck me as such evidence of an approaching overthrow for a constitution which thus allowed its vices to stagnate and mantle, that having some portion of my patrimony in England, I hastened to remove it, and to place it where it would be sheltered from a wreck which appeared to me to be inevitable. During that time the aristocracy and the great proprietary of England appeared insensible to these prognostics of social war, scandalised the eyes of the public by the contrast of their Asiatic luxury with these calamities, absented themselves from their properties during whole years, and were travelling from Paris to Naples and to Florence, while at the same time propagating speculative or incendiary liberalism with the liberals of the continent. Who would not have trembled for such a country?

This time (September, 1850) I was struck, in visiting England, with an impression wholly opposed to the impressions which I have just depicted to you. I arrived in London, and I no longer recognised that capital, excepting by that immense cloud of smoke that that vast focus of English labour or leisure raises in the heavens, and by that overflowing without limits of houses, workshops, and *chateaux*, and agreeable residences (*demesnes de plaisance*), that a city of two million six hundred thousand inhabitants casts year after year beyond its walls, even to the depths of her forests, her fields, and her hills. Like a polypus with a thousand branches, London vegetates and engrafts, so to speak, on the common trunk of the *City*, quarters on quarters, and towns upon towns. These quarters, some for labour, and others for the middle classes; some for the choice leisure of the literary classes, and others for the sumptuosities of the aristocracy and for the splendours of the Crown, not only attest the increase of that city, which enlarges itself in proportion to its inhabitants, but they testify to the increase of luxury, of art, of riches, and of ease, of all which the characters are to be recognised in the disposition, in the architecture, in the ornaments, in the spaciousness, and in the luxury, sometimes splendid, sometimes modest, of the habitations of man. In the west two new towns—two towns of hotels and palaces—two towns of kings of civilisation, as the ambassador of Carthage would have said, have sprung up. Towards the green and wooded heights of Hampstead, that St. Cloud of London, is a new park, including pastures, woods, waters, and gardens in its grounds, and surrounded by a circle of houses of opulent and varied architecture, of which each represents a building capital that it frightens one to calculate. Beyond the solitude inclosed in the capital, other towns and suburbs have commenced and are rapidly climbing, step by step, and hillock after hillock, these heights. In these places arise chapels, churches, schools, hospitals, penitentiary prisons on new models, which takes away from them their sinister aspect and signification, and which hold out moral health and correction to the guilty in place of punishment and branding. In these places is to be seen hedges of houses appropriated to all the conditions of life and fortune, but all surrounded by a court or a little garden, which affords the family rural recollections, the breathing of vegetation, and the feeling of nature present even to the very heart of the towns.

This new London, which is almost rural, creeps already up those large hills, and spreads itself from season to season in the fields which environ them, to go, by lower, more active, and more smoky suburbs, to rejoin, as far as the eye can see, the Thames, beyond which the same phenomenon is reproduced on the hills and in the plains on the other side. In surveying this the eye loses itself, as if on the waves of the ocean. On every side the horizon is too narrow to embrace that town, and the town continues beyond the horizon; but everywhere, also, the sky, the air, the country, the verdure, the waters, the tops of the oaks, are mixed with that vegetation of stones, of marbles, or of bricks, and appears to make of new London not an arid and dead city, but a fertile and living province, which germinates at the same time with men and trees, with habitations and fields, a city of which the nature has not been changed, but in which, on the contrary, nature and civilisation respect each other, seek for and clasp each other, for the health and joy of man in a mutual embrace.

Between these two banks of the river, and between its steeples and its towers—between the tops of its oaks, respected by the constructors of these new quarters, you perceive a moveable forests of masts, which ascend and descend perpetually the course of the Thames, and streak it with a thousand lines of smoke, which the steamers, loaded with passengers, stream out like a river of smoke above the river of water which carries them. But it is not in the newly-constructed quarters alone that London has changed its appearance, and presents that image of opulence, of comfort, and of labour, with thriving—the City itself, that furnace at the same time blackened and infect of this human ebullition, has enlarged its issues, widened its streets, ennobled its monuments, extended and straightened its suburbs, and made them more healthy. The ignoble lanes, with their suspicious taverns, where the population of drunken sailors huddled together like savages in dregs and dust, have been demolished. They have given place to airy streets, where the passers-by coming back from the docks, those *entrepots* of the four continents, circulate with ease in carriages or on foot, to spacious and clean houses, to modest but decent shops, where the maritime population find, on disembarking, clothes, food, tobacco, beer, and all the objects of exchange necessary for the retail trade of seaports. these streets are now as well cleaned from filth, from drunkenness, and obscenity, as the other streets and suburbs of the City. One can pass through them without pity and without disgust, one feels in them the vigilance of public morality and the presence of a police which, if it cannot destroy vice, can at all events keep it at a distance from the eyes of the passers-by, and render even the *cloaci* inoffensive.

In the country districts and secondary towns around London the same transformation is observable. The innumerable railways which run in every direction all over England have covered the soil with stations, coal depôts, new houses for the persons employed, elegant offices for the administration, viaducts, bridges over the lines to private properties; and all these things impart to England, from the sea to London, the appearance of a country which is being cleared, and where the occupants are employed in running up residences for themselves. Everything is being built; and everything is smoking, hurrying on. so perfectly alive in this soil; one feels that the people are eager to seize on the new sense of circulation which Providence has just bestowed on man.

Such is England in a physical sense, sketched broadly. As to political England, the following are the changes which struck me. I describe them as I reviewed, with sincerity, it is true, but not unmixed with astonishment. The appearance of the people in the street is no longer what filled me with consternation twenty years ago. In place of those ragged bands of beggars—men, women, and children—who swarmed in the narrow and gloomy streets of the manufacturing town, you see well-dressed workmen, with an appearance of strength and health, going to work or returning peaceably from their workshop with their tools on their shoulder; young girls issuing without tumult from the houses where they work, under the superintendence of women older than themselves, or of a father or brother, who brings them back to the house; from time to time you see numerous columns of little children of from five to eight years of age, poorly but decently clad, led by a woman, who leaves them at their own doors, after having watched over them all day. They all present the appearance of relative comfort, of the most exquisite cleanliness, and of

health. You will perceive few, if any, idle groups on the public way, and infinitely fewer drunken men than formerly; the streets appear as if purged of vice and wretchedness, or only exhibit those which always remain on the scum of an immense population.

If you converse in a drawing-room, in a public carriage, at a public dinner table, even in the street, with men of the different classes in England; if you take care to be present, as I did, at places where persons of the most advanced opinions in the country meet and speak; if you read the journals, those safety-valves of public opinion, you must remain struck with the extreme mildness of men's minds and hearts, with the temperance of ideas, the moderation of what is desired, the prudence of the liberal opposition, the tendency evinced towards a conciliation of all classes, the justice which all classes of the English population render to each other, the readiness of all to co-operate, each according to his means and disposition, in advancing the general good—the employment, comfort, instruction, and morality of the people—in a word, a mild and serene air is breathed in place of the tempest-blast which then raged in every breast. The equilibrium is re-established in the national atmosphere. One feels and says to oneself—"The people can come to an understanding with itself; it can live, last, prosper, and improve for a long time in this way. Had I my residence on this soil I should not any longer tremble for my hearth."

I except, it must be understood, from this very general character of harmony and reconciliation two classes of men whom nothing ever satisfies—the demagogues and the extreme aristocrats—two tyrannies which cannot content themselves with any liberty, because they eternally desire to subjugate the people, the one by the intolerance of the rabble, and the other by the intolerance of the little number. The newspapers of the inexorable aristocracy, and of the ungovernable radicalism, are the only ones that still contrast, by their bitterness, with the general mildness of opinions in Great Britain. But some clubs of chartists, rendered fanatical by sophistry, and some clubs of diplomatists, rendered fanatical by pride, only serve the better to show the calm and reason which are more and more prevailing in the other parts of the nation. The one makes speeches to the emptiness of places where the people are invited to meet, and the others pay by the line for calumnies and invectives against France and against the present age. No one listens, and no one reads. The people work on. The intelligent tories lament Sir R. Peel, and accept the inheritance of his conservative doctrines by means of progress.

It appears that a superhuman hand carried away during that sleep of twenty years all the venom which racked the social body in this country. If a radical procession is announced, as on the 10th of April, 250,000 citizens, of all opinions, appear in the streets of London as special constables, and preserve the public peace against these phantoms of another time. Such is the present appearance of the public mind in England to a stranger.

THE EDDYSTONE LIGHTHOUSE.

The building of watch towers, now called lighthouses, had its rise in the earliest ages; and in several instances has been the object of royal munificence. The purpose of their erection is to exhibit a light, to warn seamen, during the darkness of the night, of their approach to any sand, promontory, or insulated rock; as those on the South Foreland, Flamborough Head, the Eddystone rocks, &c.

The most celebrated structure of the kind among the ancients was the Pharos of Alexandria, which has been accounted one of the seven wonders of the world. This famous tower was built by the Ptolemies, kings of Egypt, and successors of Alexander; it is supposed to have been finished about 283 years before the Christian era, and had the name of Pharos, from the island, upon a rock at the eastern end of which it was built, so that its walls were washed by the sea. Its height is said to have been 547 feet (English measure), and a fire upon the top of it was constantly kept burning in the night, to light such ships as sailed near these dangerous coasts, which are said to be full of sands and shelves of rocks. According to Josephus, this light could be seen at the distance of three hundred stadia; that is, forty-one and a half English miles.

This magnificent structure, called even by Cæsar wonderful, was the work of Sostratus, of Cnidus; and from the accounts which have descended to us of its great size, the durability of its materials, and of the substantial manner in which it was built, we might have reasonably expected it to be in existance at this day; but this is not the case. There is, indeed, still a lighthouse, but of a much more humble form, rising out of the midst of an irregular castle, or garrison, kept in this island, and which is now called Farion. Upon what occasion this famous building was destroyed, or met its destruction, history is, as far as we know, silent; but a writer of the twelfth century speaks of it, not only as a building subsisting in his time, but in perfect good condition; for he says, "There is nothing like it in the whole world, for the fineness of the edifice or the strength of its structure; for, besides that it is built of the hardest Tiburtine stones, these stones are also joined together with melted lead, and so firmly connected, that they cannot be loosened from one another; for the sea beats against the very stones wherewith it is built on the north side."

As this stupendous work existed, either entire or in part, about five hundred years ago, it is evident that some extraordinary fate must have happened to it since that time, as its disappearance cannot be accounted for merely by the neglect of it. To have pulled it down would have been a work of so much labour, that even a wanton desire of destruction would have been foiled in the attempt; and it appears scarcely possible that its demolition could answer any useful purpose. Nor can we suppose that it has been undermined by the sea's gaining upon the rocks it was built upon, as those are said to be of granite. It seems, therefore, most likely that it was destroyed by the shock of an earthquake, which at the same time produced a subsidence; as it has been stated by travellers that the foundations or ruins of art are still seen among the rocks of the island on which it stood, under the surface of the water. At any rate, we have authentic testimony that this stupendous tower existed for a period of one thousand six hundred years.

From this lighthouse, as the most celebrated, structures of this kind have generally obtained the same name; as the Faro di Messina, and others. The most remarkable amongst the moderns, till the erection of the lighthouse on the Eddystone rocks off Plymouth, was the Tour de Cordovan, situated near the coast of France, upon a small island near the mouth of the river Garonne, in the Bay of Biscay. This lighthouse was begun two hundred and fifty-three years ago, in the reign of Henry II. of France; it occupied twenty-six years in building, and was finished in the reign of Henry IV., in the year 1610.

About fourteen miles S.S.W. of Plymouth Harbour, are situated a very dangerous cluster of rocks, called the Eddystone rocks, upon which many a fatal accident has happened, by ships, particularly those that were homeward bound, running upon them. In the sixteenth century, the erection of a lighthouse upon one of these rocks was considered very desirable for the benefit of the commerce of the country; but from their insulated position, their distance from the land, the heavy seas continually rolling over them, together with the circumstance of their being wholly immersed every high tide, presented difficulties which, for a time, appeared insurmountable.

In the year 1696, Mr. Henry Winstanley, of Littlebury, in Essex, undertook the erection of a lighthouse upon these dangerous rocks, and obtained the necessary powers to put it in execution.

Mr. Winstanley had previously distinguished himself in a certain branch of mechanics, the tendency of which is to raise wonder and surprise. He had in his house at Littlebury a set of contrivances, more curious than useful; and it appears that he had established a place of public exhibition at Hyde-park corner, called Winstanley's Waterworks, which were mentioned in the "Tatler" of September, 1709.

The particulars of the erection of the lighthouse by Mr. Winstanley was furnished by himself, together with views of the building, to Prince George of Denmark, then Lord High

Admiral of England, of which the following extract is the commencement:—

"This lighthouse was begun to be built in the year 1696, and was more than four years in building: not for the greatness of the work, but for the difficulty and danger in getting backwards and forwards to the place; nothing being or could be left safe there for the first two years, but what was most thoroughly affixed to the rock, or the work, at a very extraordinary charge; and although nothing could be attempted to be done but in the summer season, yet the weather then, at times, would prove so bad, that for ten or fourteen days together the sea would be so raging about these rocks, caused by out-winds, and the running of the ground seas coming from the main ocean, that although the weather would seem, and be most calm in other places, yet here it would mount and fly more than two hundred feet, as has been so found since there was lodgment upon the place; and, therefore, all our works were constantly buried at those times, and exposed to the mercy of the seas; and no power was able to come near, to make good or help anything, as I have often experienced with my workmen in a boat in great danger, only having the satisfaction to see my work imperfectly at times, as the seas fell from it, at a mile or two distance; and this at the prime of the year, and no wind or appearance of bad weather, yet trusting in God's assistance for a blessing on this undertaking, being for a general good, and receiving most inexpressible deliverances."

Then follows the account of Mr. Winstanley's proceedings during three summers, as they were unable to continue the work during each winter, it being impossible to pass and repass with the materials on account of the heavy seas which then prevailed. The lighthouse was sufficiently completed in November, 1698, to enable them to exhibit a light on the 14th of that month; and in the following spring, such alterations and additional strength were given to it, as the experience of the first winter suggested.

Mr. Winstanley's lighthouse, unlike the Pharos of Alexandria, was not of very long duration; and, from the construction of it, it would appear that it was not adapted to withstand the fury of the element by which it was surrounded. In November, 1703, Mr. Winstanley went down to Plymouth to superintend some repairs which the building required, and it is stated, upon undoubted authority, that, previous to going off with his workmen, some friends intimated to him the danger that one day or other the lighthouse would certainly be overset; he replied, "He was so very well assured of the strength of his building, he should only wish to be there in the greatest storm that ever blew under the face of the heavens, that he might see what effect it would have upon the structure."

Mr. Winstanley's wish was gratified in an awful manner. While he was there with his workmen and light-keepers, that dreadful storm began, which raged the most violently upon the 26th of November, 1703, in the night; and of all the accounts of the kind with which history furnishes us, we have none that has exceeded this in Great Britain, or was more injurious or extensive in its devastation.

The next morning, when the violence of the storm was so much abated that it could be seen whether the lighthouse had suffered by it, nothing appeared standing; nor were any of the people or materials of the building ever found afterwards. And, it is stated in a work entitled "The Storm," published in London the following year, that the lighthouse had not been long down, when the Winchelsea, an homeward bound Virginia ship, was split upon the rock where that building stood, and most of her men drowned.

The great utility that the lighthouse had proved itself to be of, during its short continuance, together with the loss of the Winchelsea and other ships, proved powerful incentives to awaken the attention of those most nearly concerned, to attempt the erection of another, the former building having demonstrated it to be a thing, however difficult, yet not in its own nature impossible or impracticable. It was not, however, till the year 1706, that powers were obtained for the commencement of the work, and Mr. John Rudyerd was engaged as engineer and surveyor. This gentleman was not bred to any mechanical business or scientific profession, being at that time a silk mercer who kept a shop upon Ludgate-hill, London; but having made these kind of studies his private amusement, he had well qualified himself for the important undertaking which was now committed to his charge, and of which he so ably acquitted himself.

The building which he erected was of wood, its form was the frustrum of a cone, surmounted by a lantern for the exhibition of the light; its figure was simple and elegant, unbroken by any projecting ornament, or anything whereon the violence of the storms could lay hold; all the windows, shutters, and doors were so constructed that when shut their outside formed a part of the general surface, like the port-holes in a ship's side, without making any unevenness or interruption in the surface, so that the force of the sea striking it, flowed off without injuring the building.

We have stated that the building was of wood; it was essentially so: but, in order to insure its stability, by increasing the gravity or weight of the lower part, it was built solid to the height of thirty-three feet above the rock; and as the door was consequently elevated, an iron ladder was placed for the purposes of egress and ingress; this solid part consisted of some layers, or courses, of timber, and the rest of hard stone, called in that part of the country "moor stone." The whole weight of stone thus introduced at the bottom of the building amounted to two hundred and seventy tons, and may be considered in the nature of ballast. The whole height of this building, to the top of the ball which surmounted the lantern, was ninety-two feet, upon a base of twenty-three feet four inches.

The work was commenced in July, 1706, and was completed in 1709. It is stated that during the progress of the work, Louis XIV. being at war with England, a French privateer took the men at work upon the Eddystone rock, together with their tools, and carried them to France; and the captain was in expectation of a reward for his achievement. While the captives lay in prison, the transaction reached the ears of that monarch: he immediately ordered them to be released, and the captors to be put in their place; declaring that, though he was at war with England, he was not at war with mankind: he therefore directed the men to be sent back to their work with presents, observing, the Eddystone lighthouse was so situated as to be of equal service to all nations having occasion to navigate the channel that divides France from England.

Mr. Rudyerd has himself stated that four ships of war were appointed at sundry times to that station, "to expedite the work, and to protect the workmen," which was probably in consequence of the accident above stated.

The building when thus completed, continued, with certain repairs, to answer all the purposes intended by its erection, till December, 1755, forty-six years after its completion, when it accidentally caught fire in the upper part, and continued to burn downwards, driving the three attendants before the flames, from room to room, till they were obliged to quit the building, and take refuge in a hole in the rock, it being then low water, from whence they were providentially rescued before the returning tide swept them to a watery grave. The flames had been discovered from the shore early that morning, and a boat put off to render the assistance required. One of the three men, as soon as he was landed, ran away, and was not again heard of at Plymouth, fear having taken complete possession of his faculties; another having been much injured by the melted lead, which flowed over his face and down his throat, died a few days afterwards. Thus was destroyed the second Eddystone lighthouse, which, but for the fire, bade fair to withstand the raging of the winds and the sea for a long period of years.

We must next give an account of that beautiful building subsequently erected on the same rock by Mr. Smeaton. This building is not only beautiful in the symmetry of its figure, but its stability appears to be as great as the rock on which it stands.

Mr. Smeaton's first interview with the managing proprietor, Mr. Weston, took place on February 23, 1756; when having received instructions to prepare the necessary designs for a new erection, he set about his task with such earnestness and ability, that he very soon had the outline to lay before his employers, of the building which has for seventy-eight years withstood the raging of the winds and waves, and been, through the blessing of an Almighty Providence, the means of preserving many a ship's crew from perishing on these dangerous rocks.

The building is entirely of stone, fitted together by the dovetailing of each of its parts, by which every course of stone may be considered as one piece, and the whole cemented together forms one mass. Its height is eighty-seven feet to the ball surmounting the lantern, and its width at the base is twenty-six feet. The building was completed, and the light first exhibited, on October 16, 1759. The management of the light is intrusted to three men. Two only were employed for this service during the existence of the first, and early part of that of the present lighthouse; but in consequence of the following accident a third attendant was engaged. It happened that one of the two men was taken ill and died, and notwithstanding the Eddystone flag (the signal for help) was instantly made, the weather was such for some time, as to prevent any boat from getting so near the rocks as to speak to them. In this dilemma the living man found himself in an awful situation; being apprehensive that if he tumbled the dead body into the sea, which was the only way in his power to dispose of it, he might be charged with murder; this induced him for some time to let the corpse remain, in hopes that the boat might be able to land some person to relieve him from his distress; but it was nearly a month before the weather permitted a landing, and the body by this time was so far decomposed, as to render its removal difficult. This induced the proprietors to employ a third man, that in case of a future occurrence of the same nature, or the sickness of either, there might be constantly one to supply the place. This regulation also afforded a seasonable relief to the lightkeepers; for since there were three, it has been a rule, that in the summer, in their turns, they are permitted each to go on shore, and spend a month among their friends and acquaintance.

It may be a matter of surprise how persons can be found, who are content, for a salary only amounting to the wages of a day-labourer, to give up their liberty, and live an isolated life, as lightkeepers, upon the Eddystone rocks, they are, however, for the most part, men who have passed the prime of life, and having still to earn their bread by their own labour, find this an easy employment. But to show how different are the ideas of mankind, concerning the nature of confinement, we relate the following anecdote, which occurred some time before Mr. Rudyerd's lighthouse was burned down. "Says the master to a shoemaker in his boat, who he was carrying out to be a lightkeeper, 'How happens it, friend Jacob, that you should choose to go out to be a lightkeeper, when you can, on shore, as I am told, earn your half-a-crown and three shillings a day in making leathern hose, whereas the lightkeeper's salary is scarcely ten shillings a week?' Says the shoemaker, 'I go to be a lightkeeper, because I do not like confinement.' After this answer had produced its share of merriment, he at last explained himself, by saying, that he did not like to be confined to work."

THE IMPORTANCE OF THE WORKER.

WHAT was the purpose for which such vast numbers assembled in the Crystal Palace last year? May we not say, that it was to do honour to *Labour?* and such an honour as was never shown to it before, since the commencement of our race. For thousands of years, the sweat of the brow was looked upon as a mark of disgrace, and was shunned and avoided by all who had the power to do so. The honour which it was capable of achieving was treasured up for kings, and the great men of the earth, who showed by their pyramids and other gigantic works, how far they themselves were removed above the necessity of labour itself. Nothing but the absolute command of God, and his refusal to give bread without the tillage of the soil, have perpetuated the existence of labour upon the earth. If there had been no necessity for food, or if the precept urged by St. Paul, "If any will not work, neither shall he eat," had not been supported by divine authority in its general relation to man, the slave would have been almost on a level with the despot, and he would have had no inducement sufficiently strong to make him submit to the imposition of bodily labour. And this shrinking from toil and effort was thus universal, although it had been long known, that so far from being an unmitigated curse, labour had been proved to be in its effects one of the best of blessings, by keeping men from evil. Though idleness has long been known to be the surest and readiest way to destroy all moral excellence, and, as such, has been reprobated by the wise and excellent of all nations and of all ages, yet the love of it has not ceased to sway the mind, and has oftentimes overcome every resistance which could be made to it. But when the nations of the world were assembled together for the first time in the history of the world, Labour was the attribute they delighted to honour; we enthroned it in our thoughts, and we built it a palace! And though the glass structure no longer charms our eyes in Hyde Park, a People's Palace of even more noble dimensions and more finished elegance is preparing, where fitting homage shall be rendered to the worker. In that building we shall, as a nation, honour Labour. We shall bend with admiration before its effects, we shall extol its power, and be ravished with its beauty—and the living agents which shall have wrought successfully with it, shall, in the after remembrance, have a name and reputation which shall spread wherever winds can blow, or waters bear. Our interest will be excited, not only with respect to the lighter and more elegant efforts of Labour, and to those which are exerted upon the precious substance of the earth—the labour of the mine and the furnace, of the hammer and the anvil, will be equally represented, and equally claim our admiration and encouragement. "Man," said Prince Albert at a meeting last year, "is approaching a more complete fulfilment of that great and sacred mission which he has to perform in this world. His reason being created in the image of God, he has to discover the laws by which the Almighty governs his creation, and by making these laws his standard of action, to conquer nature to his use—himself a Divine instrument."

THE SLAVE'S APPEAL.

Who made this man my master?—
That's what I want to know—
That he should wreck my heart in death,
Or chain my life to woe!
Have I no soul to bring the morn
Of love upon my cheek?
And did he sell my wife to scorn?—
Have I no heart to break?
Who made this man my master?—
That's what I want to know

Who made this man my master?—
The spirit in the skies
But bids me toil for life and love,
But thraldom he denies!
And that my brow bears deeper glow,
Why should they call me slave?
Or by my heart, through bondage, know
No country but the grave?
Who made this man my master?—
That's what I want to know.

FREDERICK ENOCH.

LITERARY NOTICES.

JOHN CASSELL'S ALMANACKS FOR 1853.

Price 1s., beautifully printed, super-royal 8vo.,

THE UNCLE TOM'S CABIN ALMANACK, or, THE ABOLITIONIST MEMENTO FOR 1853.—The most complete work on the question of slavery that has hitherto been published. Everybody who has read "Uncle Tom's Cabin" should possess themselves of a copy of this book, which more than verifies all the statements in Mrs. Stowe's thrilling narrative. This work is splendidly illustrated by George Cruikshank, Esq.; J. Gilbert, Esq.; W. Harvey, Esq.; H. K Browne, Esq. ("Phiz"), and other eminent artists; and contains upwards of 70 pages super-royal 8vo., replete with the most stirring incidents—Lives of Escaped Negroes; the Workings of the Fugitive Slave Law, Anecdotes, Narratives, and Historical and Descriptive Accounts of American Slavery. The sale already is very large, nearly 20,000 copies having been disposed of in a fortnight.

THE ILLUSTRATED EXHIBITOR ALMANACK for 1853, containing upwards of Thirty beautiful Engravings. Price Sixpence.

THE POPULAR EDUCATOR ALMANACK for 1853, containing Forty-eight Pages of most interesting and valuable Educational Statistics; including a Comparative View of Education at Home and Abroad; Essays on the Leading Sciences; Brief Notices of Eminent Scholars; Exposition of Technical Terms; &c. &c. Price Twopence.

THE TEMPERANCE ALMANACK for 1853, much improved and enlarged, and in which is inserted a Tale of thrilling interest, from the pen of Mrs. Harriet Beecher Stowe, authoress of the inimitable "Uncle Tom's Cabin," entitled, "THE PLEDGE TAKEN; or, the Husband Saved, and a Family made Happy;" with valuable details of the great Temperance Movement, Statistics, &c. With several Engravings. Price Twopence.

THE PROTESTANT DISSENTERS' ALMANACK for 1853, with Twelve beautiful Designs, by Gilbert, of striking Events in the History of Nonconformity. Price Sixpence.

CASSELL'S ELEMENTS OF ARITHMETIC (uniform with Cassell's EUCLID), is now ready, price 1s. in stiff covers, or 1s. 6d. neat cloth.

BITS OF MY MIND.

THE Continual streams into the Mediterranean from the Atlantic and Black Sea are a puzzle. The current is always running into the Mediterranean, both through the Straits of Gibraltar and the Dardanelles. How is this? My notion is, the *motion of the Earth* is the cause. It is from west to east. This at the equator or near it, where the Earth's circumference is great, throws the waters of the ocean against the western shores of the continent of America, and of Asia and Europe. Hence the Pacific Ocean is of many feet *higher level* than is the sea on the eastern side of the Isthmus of Darien. And hence the Atlantic Ocean is *forced up* the Mediterranean and Black Sea. The *fresh water*, however, that falls so plentifully into the Black Sea, *being lighter*, runs out *upon* and *over* the ocean coming in, and hence the constant *out current* from this sea into the Mediterranean, where it is evaporated by the greater heat of the sun

You may if you please set public opinion at defiance, nay it may come perchance to be your duty to do so. But when you do it, be sure to *remember*, and not forget one thing—and that is, that, sooner or later, *you will be surely made to suffer for it.*

Is it philosophical to despise or decry the insignia of office, such as the gown of the Judge, the surplice of the Priest, the wig of the Lawyer, &c. It is just the contrary: all men are, in fact, most strongly affected through the senses, and if *the office is respected so will the insignia be.* It is only when the office has fallen into contempt that the *insignia* become contemptible. Take Scribleras's test for instance.—Let any man try to form "an abstract idea of a Lord Mayor divested of his wig, gown, gold chain, and glass coach." Let him do this if he can,—and when he has succeeded, let him say if he has got any *additional respect* for the office of a Lord Mayor.

IN addressing large audiences of the miscellaneous sort, nothing is so effective as the *interrogative style.* You put questions, you knowing what the answers will be; but this gives great life and variety to the process. You at once avoid so much of the "preachee! preachee" tone, which is always bad, and not to be endured for any length of time; and you interest your auditory by making them "part and parcel" of the scene with yourself. Every man who says a word under such circumstances thinks "how capitally *we* got on," and is your friend henceforward! This to all who are forced to address mixed bodies of people, on general topics, is *a secret worth knowing.*

No exercise displays muscular strength and activity more than does "skaiting." In fact good skaiting depends upon *muscle*, especially in the lower limbs. No weakly built man, however elegant his proportions, ever *skated well.* In Holland, where during half the year skaiting is as common as walking, it is observed that the women sometimes skait better than the men, and under loads that would puzzle a man to manage. The reason is, in the great muscularity of lower limb, which females of a class exposed to constant exercise generally retain. Such *Dutch skaiting* as I have seen was *not elegant* by any means, certainly not, but it is not the less *true*, therefore, that strength of limb is the *only foundation* for all the perfection that can be reached in this most graceful of all exercises.

THE difference of temperature, in one way, between different climates, is not so great as is commonly imagined: thus, though the heat in *Jamaica* be great, there are days in a fine *English summer* as hot as Jamaica; and days in a *Russian summer* as hot as our English summer. But the average amount of heat to be borne is very different in these countries, and it is this duration of temperature that tries the constitution. Very hot, very cold, or very damp days, if insulated, do no harm to any body, if common care be used. It is the duration and average amount of these peculiarities of climate that try persons' strength, whose bodies are not inured to them, especially with heat and damp, extreme cold being comparatively manageable and innoxious. A great cause of disease under change of climate arises, however, from travellers *not bending to the modes of living* required by the new climate. If, for instance, men *will* go to *Bengal*, and eat large quantities of animal food, drink copiously of fermented and spirituous liquors, and expose themselves to the perpendicular sun or the night dew, what marvel is it that fevers and liver complaints ensue?

SIR Walter Scott, writing an account of his feelings on the death of his friend and patron the Duke of Buccleugh says—"I never thought it possible that one man could have loved another so much where *difference of rank* was so very great." The reflection is characteristic, but is the case properly put? I see no marvel in a Commoner being able to love a Duke, even though that Duke had a couple of hundred thousand pounds a year, and all sorts of good things in his power besides. *The question is, could the Duke equally love the Commoner*, who had nothing in his power, but a little well-turned flattery. This is the question for "Herald's college." At all events, I cannot pretend to answer it.

To a tempest, whether it rage against a government or an individual, if it be excessive, the politic way is to offer a mitigated resistance, yielding something, though repelling much. Upon this principle it is that to a garden a good hedge is a better protection than a wall. When the wind blows furiously, either the wall is levelled, or the gale rising over it in a body, falls again with full fury on the other side, and sweeps all before it. The hedge, on the contrary, by *repelling part, and letting part through*, breaks the force of the tornado and fulfils the adage of "Divide et impera!" This is Whig policy.

Is there such a personage as a "strictly *impartial* person?" I do not know, but it is in the chances that there is, perhaps, one in a million of people. But then he is not, nor can be, of any use with his "impartiality." For this good reason, because the "partial" villians about him are not capable of judging, and consequently of admitting, that *he is what he is.* Hence his impartiality is really useless. If a man had a watch that miraculously told true time to the millionth part of a second, it would be of no service either to him or others, in ordinary life. The rest would *believe their own watches and disbelieve his*; and the *result* would be much the same as if they were all wrong together.

TALKING of climates, our north of England climate is not, after all, a bad sort of a climate by any means: but so uncertain, that it is perpetually liable to cross accidents. When you should have sunshine you now and then are amongst snow, and one frosty night will sometimes spoil the work of a fine spring, or a rainy September half drown a golden harvest. In short it is like an *unlucky beauty*, that is every now and then getting a tooth knocked out, or an ugly bump on the nose that will leave its mark behind it.

I HAVE *several times* in various passages of my life had a feeling that what was then saying or doing had happened before, and have been, as it were, enabled on the instant, mentally to predict what would come next. This has happened to me a score of times at least. I see Scott, in his diary, alludes to something of the same nature, which seems to have annoyed him, and which he calls an "insane" feeling. Insane! what insane, Sir Walter? I fear I have little in common with Scott (would I had more), but I trust I am no more mad than he was.

It has often been remarked that "a wit must have a criminal auditory, otherwise he cannot shine." Just so. The atmosphere must be *metrical*, "otherwise" we can have no *rhyming*. If the *rope* be not stretched *tight enough*, the rope-dancer may in vain essay to keep his footing.

A little way come to another is a great wrong done to ourselves.

IT was a good reply of Plato, to one who murmured at his reproving him for a small matter: "Custom," said he, "is no small matter, and custom, or habit of life does frequently exceed the natural inclination, either to good or evil."

NOTICES TO CORRESPONDENTS.

A TRAVELLER.—According to the report on railways presented by Captain Simmonds, it appears that the proportion of sufferers by railway accidents (taking the year 1851 for example), is about *four to every million* of passengers.

A TEETOTALER.—We have not by us a list of Temperance publications. Send a penny stamp enclosed to W. Tweedie, 337, Strand, and you will get a list in return. The *Temperance Almanack* for 1853 may be had there, or at our office.

TYRO.—The words "acumen" and "acuteness" certainly differ in signification; the idea of the first of these words is taken from a leaf tapering gradually to a point; that of the second from a leaf which is sharp-pointed without tapering. *Acumen* means quickness of intellect, *acuteness* means sharpness, keenness, subtleness.

MARY ANNE.—We have obtained for you the following from *Soyer's Modern Housewife*—"Potatoes à la Maitre d'Hôtel. Boil ten middle-sized potatoes cut in slices of an inch thick, put in a stewpan half a pint of milk, or broth, a little salt, pepper, grated nutmeg, and eatable-spoonful of fresh-chopped parsley; then simmer on the fire; when boiling add a quarter of a pound of fresh butter, and the juice of a lemon; stir well a few minutes, when each piece is well covered with the sauce, dish up hot." Mary Anne will observe, however, that this is not the most economical mode of preparing potatoes for a family.

INQUIRER (Bristol).—The returns of the persons engaged in various occupations, as ascertained by the recent census, have not yet been furnished to the public; but the late Mr. Porter, in his "Progress of the Nation," states that the proportion of persons in the United Kingdom who pass their time without applying to any gainful occupation is quite inconsiderable. Of 5,812,276 males, twenty years of age and upwards, living at the time of the census preceding the last, there were said to be engaged of some calling or profession, 5,466,182.

CHARLES MARTIN.—Read carefully the Lessons on English Grammar, in the "Popular Educator;" and especially read the questions for examination at the close of each lesson, and endeavour to answer them.

All Communications to be addressed to the Editor, at the Office, Belle Sauvage Yard, London.

CARVING IN WOOD.

NEXT to the art of sculpture and modelling in plastic materials, carving in wood, ivory, and other substances, has, from very early times, engaged the attention of mankind. The ancients, we are told, used ivory to a great extent in works of art, and its union with gold, called by the Greeks *chryselephantine* sculpture, was adopted by the greatest artists. In later times, carving in ivory has been confined to smaller objects. Wood of almost every description was a favourite material for carving among the ancients, and, after clay, was doubtless, from the facility of cutting it, the first substance used for imitative art.

But machinery has been lately made to perform the work of the artist in wood. By Jordan's Machine-carving, various specimens of which were shown at the world's fair in Hyde-park, the imitation of man's labour has been very successfully carried out. The patent process is in operation at the works of Messrs. Jordan, in the Belvidere-road, Lambeth; the wood has motion given to it, while the tools remain nearly stationary. A pattern of the work to be carved is first modelled by the artist, and afterwards copied by the machine in wood with perfect accuracy, and in such a manner that two or three copies are made simultaneously, the carving thus prepared by the machine is then sent back to the artist, who introduces by hand the finishing touches. A very large amount of the carving in the new Houses of Parliament has been effected by this machine. The more delicate work for the same building requiring hand-processes, is entrusted to Mr. Rogers, whose exquisite productions have done much towards the revival of a taste for this art.

ALTAR PIECE IN CARVED WOOD, AS SHOWN IN THE CRYSTAL PALACE, BY M. GEERTS, OF LOUVAIN.

About five years ago, Mr. Piatt patented a carving machine, which was based on another patent machine, invented by Mr. Irving, for preparing the materials for inlaying. According to a description given of it before the Institute of British Architects, Mr. Piatt's Machine combines the principle of the lathe, the drill, and the pantograph. The material on which the design is to be carved is fixed on a table which turns on a centre. The tool, acting in the manner of a centre-bit, is attached to an arm, also working on a centre, and is made to revolve with great velocity.

Guided by a pattern of cast iron, the tool, by a double movement of the arm and the table, can be made to pass through any combination of curves, drilling out the material as it passes over it. The lines of the design are determined by the iron patterns, and the depth and form of sinking by the shape and position of the tool; and if a double moulding is required, two pattern and two tools and a double operation are necessary. The tool and its position at the end of the arm being once adapted to the section of the moulding to be produced, the rest is purely mechanical, the workman guides the tool with one hand, and the table with the other, and the design comes out with great rapidity. The tool revolves thrice thousand times in a minute, and the wood is cut away in the form of very fine fragments, like saw-dust, leaving a smooth surface behind it. The machine will cut-stone with nearly the same facility as wood.

A kind of imitative carving was introduced a few years ago, in which a hot iron is employed instead of a cutting tool An iron mould is prepared corresponding to the pattern to be produced; and this mould, being heated to redness, is applied with great force to the surface of a piece of dimpled wood; and this process is repeated until the required form is produced, by burning away the surface of the wood. The char is then removed, and any requisite undercutting is done by hand. When finished, the work has somewhat the appearance of old oak, and the surface may be brought to a high polish.

The recent exhibitions of manufactures, both modern and mediæval, have been rich in specimens of carving, showing to how high a degree of excellence that art may be carried. It is a pleasing feature in the history of taste in this art, after a long period of decline, has now again worked its old into favour.

In the reign of Elizabeth, says Mr. Ward, the art of carving on wood appears to have reached its zenith. At that period the houses of the nobility were adorned with the richest workmanship of sculptured wood, and objects of furniture made of British woods were richly carved, in accordance with the prevailing taste of the age. The interspersion of old pieces of [illegible] with modern portions is great demand amongst collectors, dealers, and connoisseurs. And then, having spoken of the wood carvings of the middle ages, the Chapels of Westminster Abbey, and the Cathedrals of Durham and York, the author comes to our own times, and thus eulogizes Grinlin Gibbon:—"Who, he remarks truly, 'that there is no instance of a man before Gibbon who gave to wood the loose and airy lightness of flowers, and chained together the various productions of the elements, with a free disorder, natural to each species?' And so truly was the workmanship of Gibbon, according to the same authority, that a carved pot of flowers in a room shook, as though they were natural, by the mere motion of the coaches in the street. The Chapel at Windsor, and the Choir of St. Paul's, contain some foliage by Gibbon, executed in the most artistic manner. The [illegible] of cherubs possess a sweetness of expression and a [illegible] loveliness, which, as long as they exist, will render them the admiration of all lovers of ideal beauty, and his picture-frames, where dead game, flowers, and foliage almost deceive the eye into a belief of their reality, are first-rate. Wood carvers at about this time began to develop their powers. It was Bird, of Bristol, who first suggested to Bailey the idea of making figures, and determined the ultimate direction of the sculptor's mind."†

The specimen of carving shown in the engraving is by M. Geerts, of Louvain, one of the most successful artists in wood. The original work was quite free from gilding and colour, the natural grain of the wood giving all the light and shade requisite. As will be seen by reference to the picture, it was an expressive and capital piece of work.

---

* Knight's Cyclopædia.
† The World and its Workshops By James Ward.

EDMUND BURKE was a *great writer*, but not a *great man*. His style is beautiful, his matter indifferent They who deem Burke *profound*, either in metaphysics or politics, are themselves shallow thinkers in both.

COMMON SENSE.

THERE is a class of persons who object to the study of Logic, because they cannot perceive its practical utility; and affirm that men may, and do reason very correctly without it. This objection might be applied as forcibly to the science of grammar, music, chemistry, mechanics, &c.; in which the practice must have preceded the theory. But, while these objectors repudiate the rules of Logic as useless, in many cases they advocate the use of systematic principles; and maintain, that Common Sense is the sufficient and only safe guide in reasoning. Hence, I am led to think, that these Common Sense persons are ignorant of the meaning of the term they employ. When the word is used definitely, I apprehend it means an exercise of the judgment unaided by any rules. This method we all frequently adopt; because we have no established principles to guide us, and are therefore compelled to act on the best suggestions. He who is skilful in this, is regarded as possessing superior Common Sense. But even he should remember, that whatever may be the amount of his Common Sense alone, he is far inferior to that man who with a tolerable share of Common Sense, also thoroughly understands a well connected system of rules. For Common Sense is only a subordinate guide. It is, however, generally admitted, that a well formed system of rules is desirable when it can be obtained; and this is allowed even by those who denounce the study of Logic Notwithstanding our opponents have such a strong predilection for Common Sense, they would deride the man who depends upon it alone, as his best and safest guide in all cases. For example; a sailor would perhaps treat a treatise of a disease by Common Sense, and laugh at the Science of Medicine, but he would be the first to ridicule the proposal to navigate a ship by Common Sense, without the rules of nautical science It is very clear, therefore, that systematic knowledge is far preferable to mere extemporaneous judgments. I maintain therefore, that those persons who are perpetually eulogizing Common Sense, as superior to an acquaintance with the Aristotelian theory in reasoning, know not what they say, nor what they affirm. If they do, then I should say, that they are destitute of mental energy, in not trying to acquire that, by which they may reason with certainty, instead of guessing their way in the dark.

JOSEPH ALLEN.

THE VOYAGE OF LIFE.—When we talk of the man * that woman being no longer the same person whom we remember in youth, and remark (of course to deplore) changes in our friends, we don't, perhaps, calculate that circumstance only brings out the latent defect or quality, and does not create it. The selfish lassitude and indifference of to-day's possession is the consequence of the selfish ardour of yesterday's pursuit the scorn and weariness which ensue *vanitas vanitatum* is but the lassitude of the sick appetite pall with pleasure the insolence of the successful *parvenu* is only the necessary continuance of the career of the needy [illegible] mental struggles are like our gray hairs, or our [illegible] but the fulfilment of the plan of mental growth and decay tha which is snow-white now was glossy black once, that which is sluggish obesity to-day was boisterous rosy health a few years back, that calm weariness, benevolent, resigned, and disappointed, was ambition, fierce and violent, but a few years since, and has only settled into submissive repose after many a battle and [illegible] Lucky he who can bear his failure so generously, and throw up his broken sword to Fate the Conqueror with a manly and humble heart! Are you not awe-stricken, you friendly reader, who, taking the page up for a moment's light reading, lay it down, perchance, for a graver reflection?—to think how you, who have consummated your success or your disaster, may be holding marked station, or a hopeless and nameless place, in the crowds who have passed through how many struggles of defeat, success, crime, remorse to yourself only known!—who may have loved and grown cold, wept and laughed again, how often!—to think how you are the same, *you*, whom in childhood you remember, before the voyage of life began? It has been prosperous, and you are riding into port, the people huzzaing and the guns saluting,—and the lucky captain bows from the ship's side, and there is a cave under the star on his breast which nobody knows of, or you are wrecked, and lashed, hopeless, to a solitary spar out at sea—the sinking man and the successful man are thinking each about home, very likely, and remembering the time when they were children, alone on the hopeless spar, drowning out of sight, alone in the midst of the crowd applauding you.—*W. M Thackeray.*

THE MELANCHOLY OF PROFESSED WITS.

An article lately appeared in a periodical called *La Paix*—a French newspaper of considerable talent—which attempted to explain the phenomenon of melancholy in professed wits; but the writer has not fully investigated the causes of that melancholy, nor has he deduced any of those grand moral lessons that may be learned from such a subject. It is one, however, which deserved the most serious attention, if any higher purpose were in view than the satisfying of a vain curiosity. We shall, therefore, state briefly the facts, and follow them up with a few reflections.

Few romances are more seductive to readers than Don Quixote. One day, Philip III., king of Spain, was standing in one of the balconies of his palace, observing a young Spanish student, who was sitting in the sun and reading a book, while he was bursting out into loud fits of laughter. The farther the student read, the more his gaiety increased, until at last he was so violently excited, that he let the book fall from his hands, and rolled on the ground in a state of intense hilarity. The king turned to his courtiers, and said, "That young man is either mad, or he is reading Don Quixote." One of the guards of the palace went to pick up the book, and found that his majesty had guessed rightly. Yet, Miguel Cervantes, the author of this book which is so amusing, had dragged on the most wretched and melancholy existence. He was groaning and weeping, while all Spain was laughing at the humorous adventures of the knight of La Mancha, and the wise sayings of Sancho Panza.

It is well known that Molière, the first comic author in France, the man who wrote the ludicrous scenes of The Doctor in Spite of Himself, The Country Gentleman, and The Hypochondriac, was a prey to invincible melancholy. Molière was seldom cheerful, and never without great effort. After having diverted Louis XIV., the court, and the whole city, he carried into his domestic circle, and even into his intercourse with men of letters, a sadness, which the greatest worldly prosperity could never entirely dispel.

Scarron, that wit so full of raillery, possessed an exterior the least humorous that could be imagined. On first seeing this little man in a black coat, a white wig, and a sallow countenance, no one would ever have supposed that he was a jester full of levity.

We could mention few authors who had the reputation of being such entertaining companions as Desaugiers, no one could enliven a company of friends, or set the table in a roar like him. There is not one of his songs which does not breathe the most lively and most unfettered gaiety, and as to the figure of Desaugiers, was it not the most complete type of the happiest man upon the face of the earth? Always singing, always laughing, the countenance of Desaugiers seemed to defy the attacks of sorrow, his whole life appeared to be spent in the midst of a continual feast. And yet Desaugiers was sad! melancholy overwhelmed his heart in his most joyous festivals, and amidst his most mirthful songs, if he celebrated so much the pleasures of wine, it was because he sought in it the forgetfulness of that gnawing grief which he concealed from every eye, and would have wished to conceal even from himself.

Comic actors, too, like authors of the same stamp, have been subjected to this secret influence of melancholy, nor have they shared in the gaiety which their appearance merely has excited in others. "Observe Bouffe," says the writer of the paper in *La Paix*, "a smile appears but seldom to animate his countenance, emaciated by a state of almost constant disease. Fereol, weary of amusing the pit of the comic opera, without being able to amuse himself, has retired to a country house near Orleans, and is seeking relief from the recollections of the theatre in the midst of his pentangs. Probably you may have met a man in the streets of Paris, with blue spectacles and a very miserable air, without ever thinking that you had before your eyes Arnal, one of the most entertaining comedians of the ballad. Samson and Ambrose, those famous comedians of the French theatre, are only comic after seven o'clock in the evening. As to Debureau, the celebrated prince of the rope-dancers, the moment he puts off the coating of flour, with which he has whitened his countenance, he becomes the saddest man in the whole neighbourhood in which he lives."

There is a well known anecdote of Biancolelli, the celebrated harlequin, whose gambols and drolleries have been the amusement of all Paris, at the theatre of the fair of St. Germain. One day a physician of great eminence in that city, beheld a man entering his study, who came, as he said, to seek the assistance of his skill against a disease which nothing could cure. Having made some inquiries into the causes of his sufferings, the unknown patient replied, that he was afflicted with a deep melancholy, which rendered life an insupportable burden.

"You must excite the nervous system," said the physician to his patient.

"I do, every day of my life, but it does not make me forget my sadness," replied the patient.

"You must travel, then."

"I have made the tour of Europe, and still my wretchedness has travelled with me."

"Oh! the case is sad indeed, but still there is a remedy; go every evening to the Italian comedy; you will see the celebrated Harlequin Biancolelli; his gaiety is catching; that will make you cheerful."

"Alas, Sir," said the poor patient, "I see my malady is incurable, I am Biancolelli."

To these examples, quoted by *La Pair*, we might add others, every where to be met with, and occurring almost every day. Dickens, in his Life of Grimaldi, speaks of the devouring melancholy which pursued this celebrated actor whenever he was off the stage, or left to his own resources, and it is well known that the late Mr. Liston, whose face was sufficient to set an audience in good humour, was a confirmed hypochondriac. Who are the men most ill tempered in their own houses! men of the most morose and captious dispositions, who quarrel with their wives, and children, and servants, who know not what to do with themselves, or how to get rid of their weariness? They are commonly such as exhibit in society the most jovial character, the utterers of witty expressions, the droll, who are saluted on their entry into a place with bursts of laughter, and who e inventive powers in buffoonery are inexhaustible. When they have thus for hours been amusing the frequenters of the saloons, they have returned to their own homes with heavy hearts and empty heads, weary of themselves, and distressing others with their ill humours. Their gaiety is a mask, which they put on for a night, and take off when they enter their own houses. Who has not met with persons of this double character? professed jesters among others, intolerable in their own domestic circle, as full of discontent in their own families, as they are of boisterous merriment in the face of the world.

There is not perhaps, one of our readers, who has not experienced the same sensations in himself. At what time are men most exposed to the approaches of melancholy and sadness? on what day and in what hour are they in their saddest mood, when all objects around them appear most discouraging? Is it not after such assemblies of pleasure, after they have been giving way to a foolish and intoxicating mirth, after they have been partaking of these frivolous amusements, the "laughter of fools." They have left these houses of feasting, more sad, more dejected, and more disposed to irritation of temper. Why is this? It is not difficult to be explained.

Man by instinct, by situation, by duty, is called on to be serious. And let no one mistake us here; the seriousness of which we speak is altogether different from sadness and dejection. It is the gravity of an intelligent creature, who retires within himself, who comprehends the greatness of his moral obligations, and to whom an important mission has been intrusted. It is the will of God that we should be serious; He has implanted both the principle and the need of this seriousness in our very nature. So really is this the case, that the moment a man finds himself alone, placed, as it were, face to face with himself, and left to his own thoughts, he immediately becomes serious. Not to be so, he must do one of two things; either he must retrace in his memory those comic scenes in which he has been engaged, and bring them back in his imagination, or he must take refuge in an amusing book, or some such source. In both cases, every one must observe that the man gets out of himself, turns off his eyes from himself, in fine, cheats himself, to avoid being serious, he employs stimulants, which produce a confusion in his moral nature, similar to that which wine produces in his physical constitution.

And not only man is instinctively serious, every thing that he sees in this world, every thing about him is serious also. The firmament with its thousands of stars, that move in constant harmony, is a solemn spectacle. This globe with its plants and fruits, presents a serious aspect. The animals are serious. The whole universe, in whatever point of view we behold it, whatever part of creation we examine, is serious. Life is a serious business, and death a serious conclusion to it. Certain philosophers have inquired, why man becomes serious, and even feels a kind of melancholy, every time he comes directly in contact

with the grand scenes of the exterior world. This impression, we think, is sufficiently accounted for by the seriousness that is spread over all the works of nature; and if this gravity is often accompanied with sadness, this arises from the contrast that man cannot fail to perceive between the peaceful majesty of the creation, and the tumultuous emotions of his own heart.

Man never laughs when he is alone, without the presence of external excitements; he never laughs when he is contemplating the universe. Consider the subject closely, and you will see, that laughter always has its source in circumstances that belong to man alone, in the misfortunes, the mistakes, the defects, and the vices of man. Not that we would blame laughter or innocent mirth, as some moralists have done. But what is necessary to be well understood, because our social and domestic relations often lead us to misunderstand it, is, that the mirth that manifests itself in loud bursts of laughter, the foolish gaiety, which is boisterous and deafening, that systematic merriment, if we may use the expression, which characterises the lives of certain men, is a state contrary to nature.

The preceding observations may suffice to solve the moral problem laid down by the writer in *La Paix*. Comic authors and actors must necessarily be more sad than the rest of mankind, for the very reason that it is their object to make others gay. They have adopted a profession which obliges them to struggle with their natural inclinations, and the re-action springing from this is in proportion to the violence which they have put upon themselves. They cannot stop within the bounds of that gravity which is natural, after their task is finished; but they sink into a state of ill humour, disgust, and often misery. We would not say, that comic authors and actors themselves have a clear and distinct knowledge of this re-action; it is most probable they have not. The world requires of them that which renders them sad and melancholy, and most of them can do nothing but answer the demand. But our explanation is not, therefore, the less just There are many feelings that the majority of mankind appreciate only by their effects, and of the causes of which they have no knowledge they experience them, they are happy or miserable under them; but they cannot explain whence they proceed. Harlequin Biancolelli amused all the world, and was miserable himself while amusing them. Had he consulted a moralist, instead of going to a physician, he would have learned that his moral nature was revenging itself for the force put upon it every evening of his life. In the same manner may be explained the contradiction that appears in the character of Desaugiers. As to Sterne and Molière, they needed not to consult any one; they had sufficiently read their own hearts to know what inspired them with so deep a melancholy.

It may seem a paradox, at first sight, to maintain that peace is the sister of gravity, and that the most serious man, in the Christian sense of the word, is at the same time the happiest man But experience attests that it is a great truth. If we inquire, who is the least miserable upon the earth? we must look at the man who is most serious, and whom perhaps superficial observers may accuse of being melancholy This man conforms himself to the designs of Divine Providence; he is in that moral condition which his Creator has appointed for him, he his serious, because God designs him to be so; and true happiness, both in this world and that which is to come, is always the portion of the man who does His will.

JAMES WOLFENDEN, THE LANCASHIRE MATHEMATICIAN.

James Wolfenden was born at Hollinwood, near Manchester, on the 22nd day of June, 1754. His father, John Wolfenden, was a native of Higginshaw, near Royton; but having married Mary Simister, of Hollinwood, he went to reside there, and followed hand-loom weaving as an occupation. Before James had completed his sixth year his mother died, upon which his father removed to Higginshaw, and shortly afterwards to Chapel Croft, in Oldham. While residing here, a journeyman hatter taught young Wolfenden the letters of the alphabet, and though the *name* of his first instructor had escaped his memory, he ever remembered his *services* with feelings of gratitude. He remained only a short time at Oldham, being again removed to Hollinwood, where he resided with his grandfather in a secluded cottage, thatched with straw, and known by the name of the "Willows," from its being surrounded with large trees of that description. About this time he was sent to a day-school in the neighbourhood, but the bobbin-wheel and the loom being considered much more profitable employments than learning to read, he was taken away after one week's attendance, and the sum of three-halfpence defrayed the expenses of his scholastic education. These deficiencies, however, were in some degree supplied by the assiduity of his grandfather, who took advantage of the intervals of leisure after the day's weaving was concluded, to instruct him in reading, writing, and arithmetic. From this stage Mr. Wolfenden may be said to be *self-taught*, if we except some occasional assistance he received from Mr. Jeremiah Ainsworth (grandfather of the gifted novelist, W. H. Ainsworth, Esq.), a well-known mathematician, then resident near Hollinwood. Though his days were occupied at the loom, he spent most of his leisure hours in reading all the works on science he could procure in that *then* thinly-populated neighbourhood, so that by the time he arrived at manhood he was well acquainted with most of the principal writers on physical and mathematical subjects, and had made the works of Euclid, Newton, Simpson, and Emerson, his particular study. Simpson's *Select Exercises*, he often maintained, was "worth its weight in gold;" his *Fluxions* ever kept its place as a favourite book; and *Newton's Method of Prime and Ultimate Ratios*, formed the basis of many of his most difficult investigations. At the age of twenty-eight he married a Miss Raynor, of Hollinwood, who died within two years, leaving him one son, the present Mr. John Wolfenden, and he never married again. In his old age, when adverting to these subjects, he frequently amused his friends by relating, that when the marriage fees were paid, their whole stock of money amounted to one shilling "to set up house and begin the world with," but, notwithstanding the low state of their exchequer, he took a house, which he occupied, until he had attended and paid rent at more than a hundred half-yearly rent-days. Mr. Wolfenden's ardour for the acquisition of knowledge, however, suffered no diminution, and his first contributions to the mathematical periodicals appear in *Burrow's Diary* for 1781, where he answers ques. 64 5, and proposes ques. 71—"Given the base and vertical angle of a plane triangle, to construct it, when the rectangle under the line bisecting the vertical angle, and the difference of the sides is the greatest possible." The last question was solved by Mr. Ainsworth, with the assistance of the conic sections, and the proposer is said, by the editor, to have given "a very elegant solution, deduced from the doctrine of prime and ultimate ratios." Mr. Wolfenden appears not to have been quite satisfied with this summary disposal of his favourite method of investigation, and the proposal of ques. 87 concluded his correspondence to that work. This question was afterwards re-proposed, as No. 136, in *Whiting's Mathematical Delights*, to which the proposer's solution by means of "ultimate ratios," is the only one printed; and he also re-proposed the former one, under "Senex," as No. 400 in the *Gentleman's Mathematical Companion*, which called forth the able and profound geometrical investigation by Mr. Butterworth, contained in pp. 764-5 of the *Companion* for 1818. He next appears in the *Gentleman's Diary* for 1783, where the solution to ques. 495, and the proposal of ques. 506, sufficiently evince his proficiency in geometrical investigation. To *Whiting's Mathematical, Geometrical, and Philosophical Delights*, he also contributed several curious and difficult questions, which may be seen in articles 17 and 20 of that work: it will be observed he here employs his favourite method in the solution of questions 136-7. In 1797, the first number of the *Student* was published by his talented friend and pupil, Mr. William Hilton; and Mr. Wolfenden appears as the proposer of the 16th, and prize questions. He was very liberal in his contributions to the second number of this work, which was contrary to his usual practice; but the reason may be found in his partiality for its conductor; the only solution to the prize question was furnished by himself. To the third number he contributed props. 35, 6, 7, 8, 9, of the well-known and valuable "Modern Geometry," as also solutions to the 36th and 37th questions. The first of these is the prize in the *Ladies' Diary* for 1791, and was re-proposed on account of the solution by Lieutenant Mudge not appearing satisfactory; the

second question in the 25th, in *Burrow's Diary* for 1777, which was answered by the editor in 1779, "but, as that answer is false in *principle*, the question was re-proposed with a view to have the error pointed out, and a true solution given to the problem." Fluxional solutions were given to this question in the *Student*, by Laputiensis and Mr. Wright; but the proposer's, by the method of limits, is the only one printed. The 53rd, 72nd, and 73rd questions in this work were proposed by him, to the first only of which were solutions given. The last question was re-proposed as the prize in the first number of the *Mathematical Associate*, and was ably answered by Mr. Jones, Professor Gill, and Dr. Rutherford. Some able solutions were furnished by Mr. Wolfenden to the fourth number of the *Student*; and it has been stated that the dread of a dispute between himself and some of the other contributors respecting the 73rd question led to the discontinuance of the work. His correspondence to the *Gentleman's Mathematical Companion* is distinguished for its profundity and elegance. The noted question respecting the "exciseman's staff," which first appeared as ques. 699 in the *Gentleman's Diary*, was here re-proposed, and answered by Mr. Wolfenden in a very complete and elegant manner, so far as the question itself is concerned, and his supplementary remarks furnish an excellent specimen of mathematical criticism. Particular circumstances have led Mr. Septimus Teebay, of Preston, to reconsider Mr. Wolfenden's results, and he has deduced from his new solution several interesting particulars, which it is to be desired he will soon make public. Mr. Teebay is well known to be profoundly acquainted with dynamics, and his investigations will be acceptable not only to his immediate friends, but to all who take an interest in mathematical inquiries. We may further state that several manuscript solutions by Mr. Wolfenden, to questions in that work, are still in existence, which, together with those printed, fully prove him to have been considerably in advance of most mathematicians of his time in mechanics and physical science. He was repeatedly solicited to contribute to *Leybourn's Mathematical Repository*, but he does not appear to have done more, in his own name, than propose ques. 153 in the first series of this extensive and valuable work. Altogether his contributions to the periodicals extend over a period of nearly sixty years, and though he was far from being so extensive a correspondent as Butterworth, there is scarcely a work of this description but had, at one time or other, either *publicly* or *privately*, a share of his support, and that generally in questions of the highest order of difficulty. About 1794 he became a member of the Oldham Mathematical and Philosophical Society, which, from the number of able geometers it has produced, may not unaptly be termed the *Lancashire School*. Ainsworth, Taylor, Mabbot, Hilton, Fletcher, Wolfenden, Butterworth, Kay, &c., are names which need only be enumerated to prove the importance and respectability of the association.

During the period just reviewed, Mr. Wolfenden enjoyed the correspondence of most of the leading characters of the day. Professors Bonnycastle and Lowry are said to have visited him in his seclusion, and to have expressed themselves much gratified with his instructive and interesting conversation; and it may be gathered from the following extracts from various letters addressed to him how high he ranked in the estimation of the talented writers. It is much to be regretted that these few are the only remains of an extensive collection, the rest having been used by a grand-daughter to "wrap sweetmeats in:—"

No. I. London, Sept. 21st, 1795.

Sir,—As I am now in a distant part of the country, I could wish to commence a regular correspondence with you, as it would be a means of informing me how the rest of my friends are, and to me a constant source of pleasure and instruction. The day after my arrival here I introduced myself to Mr. Whiting,—a very modest and agreeable man he is. I dined with him the Sunday following. He has received a solution to that question of mine in the *Delights*, from Mr. Lowry. I found Mr. Griffiths a few days after, he is with Mr. Lackington, the greatest bookseller in London. I was soon after admitted a member of a mathematical society, consisting of upwards of sixty members. * * Mr. Sanderson, Isaac Dalby, Mr. Whiting, Hampshire, Edwards, Bickford, Griffiths, &c., are all members, among whom I meet with a friendly reception. Most of these gentlemen remember you but thought such a person *as you never existed*, but that your writings had been by *some eminent person under a fictitious name* Mr. Leybourn is publishing a periodical work [this was the *Mathematical Repository*, old series, but the question alluded to was cancelled in the second number], and I think Sanderson examines the proof sheets. He told me the question respecting the exciseman's staff was re-proposed in it; when it makes its appearance I will send you one. Your well wisher,

Mr. Wolfenden, Hollinwood JOHN FLETCHER.

No. II. London, June 23rd, 1798.

Dear Sir,—When my friend Mr Fletcher was in town last, he promised me he would ask you for a new question or two, one of them to be the Prize Question. He informed me you would send a solution to the last Prize, and that you had a solution to the question in the "Gentleman's Diary," about the excise man's staff. If you will send me a new question or two, and a solution to the Prize, I shall be very much obliged. * * * Give my respects to Mr Fletcher when you see him.—I remain, your obliged servant,

Mr. James Wolfenden, Hollinwood. WILLIAM DAVIS.

No. III. September 3rd, 1798.

Sir,—I should esteem it a particular favour if you will please to favour me with anything suitable for the "Repository."

I am, Sir, your most obedient,

Mr James Wolfenden, Hollinwood, THOMAS LEYBOURN.

No IV. Bolton, Nov. 4th, 1798.

Sir,—* * * Please to present my most respectful compliments to Mr Wolfenden when you see him. I consider myself as much honoured by the notice he took of me in his letter to Mr. Walker. * * * I intend to buy the "Student," which you inform me was published on the 1st instant. * * * I am endeavouring to kindle a love for mathematics in this place, as far as lies in my power. * * * I hope Mr Hilton's removal to Liverpool will turn out to his advantage.—I am, Sir, your obliged friend,

Mr. John Fletcher, Oldham. JAMES CUNLIFFE.

No. V Taliaris, 4th June, 1799.

Sir,—Mr Swale this day sent me a question from you for the use of the "Mathematical and Philosophical Repository," for which you will please to accept my thanks. I have not yet received any question that pleases me for a Prize Question for the next number. I will, therefore, be obliged to you if you will be so good as to favour me with a very difficult question in physics or mechanics I mean one that includes something of *forces*. These sort of questions are in your way, and I could wish you to form an article on this subject, to contain curious and difficult questions as exercises. By this means you might be of great use to your brother mathematicians. * * * I remain, Sir, your most obedient,

Mr. James Wolfenden, Hollinwood THOMAS LEYBOURN.

No VI. Chester, Feb. 26th, 1799.

My dear Sir,— * * * Mr. Leybourn, the editor of the "Repository," in his last letter to me, desired me particularly to write and solicit your productions for his work. He mentioned having written to Hollinwood, but had not received any reply * * * He would be extremely thankful for some good questions. There is one advantage attending Leybourn's publication, viz., *exemption from postage and thanks from himself*. * * * I have this day received the "Student," No. II., but I have very little time to do much in it, perhaps I shall despatch the geometrical questions—though I would wish to observe, the 27th will not be done neatly by many. I remain, Sir, your most obedient,

Mr James Wolfenden, Hollinwood. J. H. SWALE.

No VII. London, Sept. 27th, 1799.

Dear Sir,—I received your very ingenious letter of the 18th ult, covering a very ingenious and elegant solution to the exciseman's staff question, and accompanied with a new question, for which you have my best thanks. * * * As I cannot think that a printed copy of these would be disagreeable to you, I have taken the liberty of enclosing one without-making any abridgment as you desired. * * * Send a solution to your question as soon as you can conveniently; indeed, the sooner the better, as it will give me an opportunity of considering and examining your remarks in that solution, which I hope will be given in that candid and true gentleman-like manner in which you have already begun them. * * * Give me a few solutions to some of the other questions. You may find some of them worthy of your notice.—I am, dear Sir, with great respect, your obedient servant,

Mr. James Wolfenden, Hollinwood. WILLIAM DAVIS.

No. VIII. Chester, February 12th, 1800.

Sir,—I am desired by Mr. Leybourn to request the favour of a solution to your question in No. 7 of the "Repository." * * * I was happy to see your solution to the *old question* in the "Gentleman's Companion;" but I have not yet had time to peruse it

attentively. I entreat you to favour me with a good geometrical problem for the "Repository," if you have any prepared.—Yours with respect,

Mr. James Wolfenden, Hollinwood. J. H. SWALE.

No. IX. Liverpool, 28th October, 1800.

Sir,—From two letters I received from Messrs. Travis and Fletcher, I formed a hope, ill-founded it appears, that you would favour me with the result of your labours upon the question I wrote you concerning. I have waited with great impatience, and at no little expense, four or five days for it; but now hardly expect any answer. The "Student" will be out some time next week, and a parcel shall be sent off for the society at Oldham.

I remain your most humble servant,

Mr. James Wolfenden, Hollinwood WILLIAM HILTON.

No. X. London, August 26th, 1801.

Sir,—In conformity with your request, I write to inform you how Mr. Davis is getting on with the "Companion." * * No solution has been given to yours Edwards some time ago promised a solution, but he informed me last Sunday that he should only answer his own * * Mr. Davis will be ready for your solutions in about three weeks, and he hopes you will not disappoint him * * I have seen Mr Wildbore lately, but the old gentleman showed a shyness which I attributed to something which inadvertently fell from me at Liverpool. * * Seeing this, I forbore making any inquiries concerning the "Diary," and he as studiously avoided saying anything * * Mr. Davis is extremely solicitous that you answer your own questions *at least*.

With respects, I am, &c,

Mr. James Wolfenden, Hollinwood. JOHN FLETCHER.

From the preceding it will appear evident that he was well known as an able mathematician, and also how very backward he was to appear prominently before the public. His immediate friends repeatedly urged him to apply for some public situation, and at last, yielding to their entreaties, he applied, through the agency of Mr Fletcher, for the situation of Mathematical Master in the Royal Military Academy; but there was at the time no vacancy in that establishment, and he never renewed his application. Indeed, so strong was his attachment to home, that when he was offered a situation in Liverpool, he transferred it to Mr. William Hilton, who was then his pupil, and afterwards the talented editor of the *Student*. In 1807, Mr. Wolfenden calculated the first tide-table for the port of Liverpool, which was published by Mr. Lang, in the *Original Liverpool Almanack* for the following year. The conditions were, that he should receive £5 for the first table, and *something additional* to that sum for succeeding years, *if the work was found to pay*. The work *did pay*, and he continued to calculate the table up to the time of his death, *but for the last two years, when he most needed pecuniary assistance, the proprietors thought proper to lop off the additional fee*. In this work he proposed and solved the following problem:—

"Suppose the sun and moon in the equinoctial, and the ratio of their forces to raise the tides to be given, it is required to find *geometrically* their elongation, when the interval, or intercepted, are between the place of high water and the moon is the greatest possible."

The solution is founded on the lemma to prop. 58, *Simpson's Select Exercises*, and shows how much can be effected by geometry when applied by a skilful hand. In a foot note he informs his readers that "Bernoulli and other writers on the theory of tides make use of fluxions in the investigation of this problem."

Mr. Wolfenden's time continued thus to be occupied, partly at the loom, and partly by private tuition, until his sixty-second year, when, in consequence of some disagreement with his employer, he relinquished hand-loom weaving, and devoted the whole of his time to tuition. On this occasion he issued the following circular—a document, by the way, as simple and unaffected in its style and pretensions as were the life and habits of its author:—

"James Wolfenden, Private Teacher of Mathematics in Manchester and its vicinity, respectfully informs the public that he can at present engage a few more pupils, who may be instructed in Arithmetic, Geography, and the Use of the Globes, as well as the higher branches of Mathematics and their application to Mechanics."

From this period until he attained his sixty-sixth year, he continued to give instruction to various [illegible] in Manchester and the neighbourhood, some of whom at present occupy the highest rank in science, and whose [illegible] friendships ceased only with the death of their talented tutor. "In 1830," says Mr. William Lees, of Hollinwood, "I expressed a wish to see the late Mr. Butterworth, of Haggate, when Mr. Wolfenden, with his usual cheerfulness, said, 'I'll go with you, and introduce you to him.' Accordingly, the following Sunday we went, and it was truly gratifying to witness the interview between these aged and devoted sons of science. To hear them discourse on the writings of Newton, Simpson, and Emerson, and of the palmy days of the '*Companion*,' was pleasant, indeed; *but when such inquired of the welfare and prospects of the other, disclosures were made which force one to think that these men were deserving of better things*. At parting, Butterworth expressed a doubt of their ever seeing each other again, when Wolfenden replied, '*the probability was, that they would be inmates of Royton workhouse together*.' His circumstances were very low, indeed so much so, as scarcely to afford the *commonest* necessaries of life. When, however, his extreme poverty became known to his friends and pupils in Manchester, they set themselves laudably to work in his behalf, and succeeded in raising, by subscription, a sum sufficient to purchase an annuity which would have supported him in comfort. But, alas! the assistance came too late, for £2 were all that he received of it during his life, and when he died, one of the sovereigns was still unchanged. When Mr. Hodgkinson [now Professor Hodgkinson, F. R. S., and President of the Manchester Philosophical Society], who brought him the money, pressed him to accept another sovereign, stating, 'that it was his, and had been collected for his own use,' he modestly declined, saying, 'that what he had received would be sufficient for the present.' And so it was, for he died the following Monday week, the 29th of March, 1841, aged eighty-seven years."

His character may be summed up in a few words. He has been described as possessing "a firm and independent mind, nor was he ever known to submit to any mean action: a great lover of truth, and stoutly opposed to falsehood of whatever kind. His honesty and rectitude of conduct were such as to command esteem and respect from all who knew him." The tardy, though praiseworthy, assistance rendered to one so distinguished in science did not escape observation, and a paragraph which appeared in the *Manchester Guardian*, announcing that since death has rendered "their intentions toward him nugatory, a part of the handsome sum subscribed for his support will be appropriated to his decent interment, and to a suitable memorial to be placed over his grave," appears to have roused the ire of one who desired to see more *timely* aid, and induced him to give vent to his indignation in the following effusion, dated 31st March:—

ON THE DEATH OF WOLFENDEN, OF HOLLINWOOD,
THE WEAVER AND MATHEMATICIAN.

Astronomers have taught us, there are stars,
Whose rays have reached not yet our nether world,
So far are they above us. What are these
But emblems of thyself, old WOLFENDEN?
Thy light was hidden unto all, save few,
In thine own generation yet shall move
Onward in glory to eternity.

They who believe
In the soul's transmigration, well may think
In thee Archimedes survived again,
So skilled thou wert in all the mystic signs
Of squares and circles!—angles to subtend,
Prove two and two *ar'n't* four; and that the whole
Is not a part, that nothing can at once
Be true and false, that there are lines which run
Nearer each other to eternity,
Yet never touch;—with other wonders, sure,
Too much, by far, for common intellects
To compass.

Well! thou art gone
The way of all the earth!—thy body rests,
As doth thy busy brain!—Thou gatheredst up
Thy feet, and died in peace, obscurely died:

With poverty and its encompassing round.
So many gems of genius oft hath set.
Yet not be seen a cloud! but cherishing
A sure and certain hope, that he should live
To after times, though in his days forgot:
A light that glimmered in a sepulchre!
Oh! sweet delirium in the cup of death!

Rest, rest, poor shade!
And be not angry. *They* have clubbed a purse,
And met in to bury thee! Then, o'er the spot,
Scribe times, and squares, and serpents in a ring,
Biting their tails! In life forgot, never heed,
In death thus honoured!—And yet in thy day
They purposed help, but, ah! in hoary years,
Four score and ten well nigh; once opassed round
With poverty, infirmities, and grief;
Had not yet found the fitting time to give!
Great God! deliver us from stony hearts!
And hypocrites, who purpose to do
A deed of mercy: then on the house top
Go forth to blazon it!—Oh! modesty,
Equalled by such munificence alone!

Wouldst have'em keep
Their lust? or come with offerings round thy grave?

His remains were interred in St. Margaret's Church-yard, Hollinwood, and a stone, bearing the following inscription, marks the spot

"Where rest the ashes of the honoured dead"

"James Wolfenden, of Hollinwood, died March 29, 1811, aged 87 years. Born in a humble station of life, and compelled to toil as a weaver for his daily bread, self-instructed, he became a distinguished Mathematician—familiar with the writings of Simpson, [illegible], and the ancient Geometers, an able contributor to the Diaries and other Mathematical Publications, and a student of the works of Newton. A few Members of the Literary and Philosophical Society of Manchester, with other individuals, anxious to mark their sense of acquirements like his, made under such unfavourable circumstances, raised in the year 1811 a sum sufficient to purchase an annuity for his support, but his death occurring shortly after, they determined, besides bearing the expenses of his funeral, to place this stone over his remains to perpetuate the memory of his name and merits"

Burnley, April 12th, 1852.

[The above is one of a series of able Biographical papers by Professor Wilkinson, published in the *Preston Guardian*.]

MORE NEWS FROM THE DIGGINGS.

THE following letters, which may be relied on as authentic, are inserted without comment.—

To the Editor of the Working Man's Friend.

SIR,—I don't know whether your readers have heard enough of the auriferous regions, or whether the following extract from a letter, dated July last, is worth inserting in your columns. It is from a young man, a cousin of mine.—I am sir, yours obediently, J. P. C.

* * * * * * * *

"I arrived here (Melbourne) on the 7th of May. The following day I started for the 'diggings,' and on the 18th arrived on the celebrated gold fields of Bendigo, 110 miles from this place. As soon as I arrived I commenced work: the gold is found on the surface on the hills, and in the valleys under the surface ranging from 4 feet 6 inches to 12 feet deep, when, if you hit on a lucky spot, the precious metal makes its appearance embedded in the pipe clay bottom. The clay is then carefully scraped, and the contents, together with about two inches of the dirt, are taken to a creek, and there washed in a cradle, similar to a child's. If there happens to be any, it falls to the bottom with the motion of the cradle, the dirt passing away with the water. I was very unlucky, and after being at it about a month I returned to this place. I have now joined the mounted gold escort, belonging to the government, for conveying the gold from the diggings to this place. The pay is very good. There are from 50,000 to 60,000 men in the gold fields. They may be classed as follows. Those making their fortunes, but they are few; those saving a little, would do as well at ordinary labour; the e just paying their way, and those not getting a living, but stick to it because they are their own masters.

I made one ounce the whole of the time I was there. In my opinion the gold will last for years to come. The diggings now extend over 50 miles of the country, and new fields are being daily found. When I left, flour was 2s., sugar 1s. 6d., and salt 1s. 4d. per lb. I walked down, and when I was 45 miles on the road I was attacked and robbed, by four armed robbers, of the gun which Richard gave me, about 37 shillings, and, what I regret more than all, your purse. * I saw resistance was useless, and therefore got off without any injury. I slept that night and the following under old trees, and when I arrived here I was nearly exhausted.

Post-office, Melbourne, Port Philip, Australia.
June 17th 1852.

MY DEAR FATHER AND MOTHER,—I scarcely know how to write down on paper the wonders of this place, and I will earnestly beg of you to believe what I am about to write. I am obliged to ask this of you, for the things that I have seen and heard are so astounding, that if I were in England I should scarcely believe my own brother, if I had one here. Now to begin. Melbourne is a place fifty times better than I expected, a most brilliant country, and the houses, some of them, as good as in London, and the place is larger than Windsor and Eton put together. Carpenters, and in fact every trade, no matter what, get from 6, 8, 10, to 12 *pounds* a week, and their lodging does not cost them together with board more than 30s a week. I am at a capital inn, with Frank and several others, and we pay board and lodging 25s. each a week; this is dirt cheap for the enormous wages. This day is Thursday. I have a situation to go to on Monday as a clerk, at £2 a week for the first fortnight, but I am to have £300 a year in a few months. The practice done here by the solicitors is enormous, they think no thing of making four and five thousand pounds a year. What will you think of Robert Thoburn earning from 8 to 10 pounds a week, merely to shoe horses, he has found an old fellow chum of his, getting by Jove shoeing, &c 20 and 30 pounds a week. I am engaged by a solicitor, I just saw the name on the door, walked in, and asked them if they wanted a clerk; produced my character; [illegible] £2 a week, supposing that I should [illegible], but at the same time told me if he found me what I represented myself to be, I should have £300 a year. This is thought nothing of. Drapers' assistants are getting £9 a week, with board and lodging. Pray some of you come out. I have written off to Ned, to send me word what will buy him out of the regiment, if I can get him here, we could make a thousand a year quite easy. This may seem to you very great, but it is no true that such is the state of affairs here. Every shop, no matter what, are all good purchasers. There are thousands at the gold diggings. This is just winter now, and in less than two months from this time, I am told not a clerk or assistant of any kind will stay in the town, unless he gets £500 a year. Bricklayers get £1 a day, policemen, 10s. a day, board, lodging, and clothes. The people think no more of putting by £10 a week, than we did of getting £1, and maintaining ourselves out of it. Everybody is wanted here, trades, professions, everything. You must excuse the manner of my writing, but here am I, in the land of Australia, surrounded with the e wonders. You may make yourselves perfectly easy about me, although the people here are not the most perfect set of men. Drunkenness, and almost every bad thing, is practised here, more so than in London, and fellows with smock-frocks look on £1 bank-notes like waste paper. I have sent you a newspaper, don't be surprised at the robberies, for horses and carts, that a year back fetched £12, now sell for £100, all [illegible] terribly expensive, shoes, 25s each. [illegible] plenty of things with you. If John was here he could make thousands of pounds. The people at the diggings get their £100 a week easy, and more. Fields have just been found out. Sailors, when they get in this port, all leave their ships. They used to get, a year back, to go from here to England, about £6, and now they get £90 for the run home. I feel almost mad with the extraordinary place. I shall be all right in a day or two. I mean, of course, that the excitement to a new-comer must be very great. I must now make a finish to my letter; and I sincerely hope that you, my dear father and mother, are in the enjoyment of good health, together with my brothers and sisters. I shall send another letter to you in a few weeks by the steam-ship, and tell you more about the place. I hope, for Gray's sake, that he is on his way here. The next letter I shall write to John, I am satisfied, that if he were to come out, he could make his fortune. Give my love to all; and believe me, my dear father and mother, your affectionate son,

HENRY.

* The letter was written to his sweetheart, who, alas! died a short time before its arrival.

UNCLE TIM AND MASTER JAMES.

BY MRS. HARRIET BEECHER STOWE,

Authoress of "Uncle Tom's Cabin," etc.

IN THREE PARTS.

PART THE FIRST.—*Newbury and its Inhabitants.—Master James Benton.—Uncle Tim.—Aunt Sally.—Miss Grace.*

DID you ever see the little village of Newbury, in New England? I dare say you never did; for it was just one of those out-of-the-way places where nobody ever came unless they came on purpose: a green little hollow, wedged like a bird's nest between half a dozen high hills, that kept off the wind and kept out foreigners; so that the little place was as strictly "sui generis" as if there were not another in the world. The inhabitants were all of that respectable old standfast family who make it a point to be born, bred, married, die, and be buried all in the self same spot. There were just so many houses, and just so many people lived in them, and nobody ever seemed to be sick, or to die either—at least while I was there. The natives grew old till they could not grow any older, and then they stood still, and lasted from generation to generation. There was, too, an unchangeability about all the externals of Newbury. Here was a red house, and there was a brown house, and across the way was a yellow house; and there was a straggling rail fence or a tribe of mullen stalks between. The parson lived here, and Squire Moses lived there, and Deacon Hart lived under the hill, and Messrs. Nadab and Abihu Peters lived by the cross-road, and the old "widder" Smith lived by the meeting-house, and Ebenezer Camp kept a shoemaker's shop on one side, and Patience Mosely kept a milliner's shop in front, and there was old Comfort Scran, who kept store for the whole town, and sold axe-heads, brass thimbles, liquorice balls, fancy handkerchiefs, and everything else you can think of. Here, too, was the general post-office, where you might see letters marvellously folded, directed wrong side upward, stamped with a thimble, and superscribed to some of the Dollys, or Pollys, or Peters, or Moseses, afore-named or not named.

For the rest, as to manners, morals, arts, and sciences, the people in Newbury always went to their parties at three o'clock in the afternoon, and came home before dark, always stopped all work the minute the sun was down on Saturday night; always went to meeting on Sunday, had a school-house with all the ordinary inconveniences, were in neighbourly charity with each other, read their Bibles, feared their God, and were content with such things as they had—the best philosophy, after all. Such was the place into which Master James Benton made an irruption in the year eighteen hundred and—no matter what. Now this James is to be our hero, and he is just the hero for a sensation—at least so you would have thought, if you had been in Newbury the week after his arrival. Master James was one of those whole-hearted, energetic Yankees, who rise in the world as naturally as cork does in water. He possessed a great share of that characteristic national trait so happily denominated "cuteness," which signifies an ability to do everything without trying, and to know everything without learning, and to make more use of one's ignorance than other people do of their knowledge. This quality in James was mingled with an elasticity of animal spirits, a buoyant cheerfulness of mind, which, though found in the New England character perhaps as often as anywhere else, is not ordinarily regarded as one of its distinguishing traits.

As to the personal appearance of our hero, we have not much to say of it—not half so much as the girls in Newbury found it necessary to remark, the first Sabbath that he shone out in the meeting-house. There was a saucy frankness of countenance, a knowing roguery of eye, a joviality and prankishness of demeanour, that was wonderfully captivating, especially to the ladies. It is true Master James had an uncommonly comfortable opinion of himself, a full faith that there was nothing in creation that he could not learn and could not do; and this faith was maintained with an abounding and triumphant joyfulness, that fairly carried your sympathies along with him, and made you feel quite as much delighted with his qualifications and prospects as he felt himself. There are two kinds of self-sufficiency: one is amusing, and the other is provoking. His was the amusing kind. It seemed, in truth, to be only the buoyancy and overflow of a vivacious mind, delighted with everything that is delightful, in himself or others. He was always ready to magnify his own praise, but quite as ready to exalt his neighbour, if the channel of discourse ran that way: his own perfections being more completely within his knowledge, he rejoiced in them more constantly; but if those of any one else came within the same range, he was quite as much astonished and edified as if they had been his own.

Master James, at the time of his transit to the town of Newbury, was only eighteen years of age, so that it was difficult to say which predominated in him most, the boy or the man. The belief that he could, and the determination that he would, be something in the world, had caused him to abandon his home, and, with all his worldly effects tied in a blue cotton pocket-handkerchief, to proceed to seek his fortune in Newbury. And never did stranger in Yankee village rise to promotion with more unparalleled rapidity, or boast a greater plurality of employment. He figured as schoolmaster all the week, and as chorister on Sundays, and taught singing and reading in the evenings, besides studying Latin and Greek with the minister, nobody knew when: thus fitting for college, while he seemed to be doing everything else in the world besides.

James understood every art and craft of popularity, and made himself mightily at home in all the chimney corners of the region round about; knew the geography of everybody's cider-barrel and apple-bin, helping himself and every one else therefrom with all bountifulness; rejoicing in the good things of this life, devouring the old ladies' doughnuts and apple-pies with most flattering appetite, and appearing equally to relish every body and thing that came in his way.

The degree and versatility of his acquirements were truly wonderful. He knew all about arithmetic and history, and all about catching squirrels and planting corn; made poetry and hoe-handles with equal celerity; wound yarn and took out grease spots for old ladies, and made nosegays and knick-knacks for young ones; caught trout Saturday afternoons, and discussed doctrines on Sundays, with equal adroitness and effect. In short, Mr. James moved on through the place

"Victorious,
Happy and glorious,"

welcomed and privileged by everybody in every place; and when he had told his last ghost-story, and fairly flourished himself out of doors at the close of a long winter's evening, you might see the hard face of the good man of the house still phosphorescent with his departing radiance, and hear him exclaim, in a paroxysm of admiration, "that Jamesee talk rally did beat all—that he was sartinly a most miraculous cretur!"

It was wonderfully contrary to the buoyant activity of Master James's mind to keep a school. He had, moreover, so much of the boy and the rogue in his composition, that he could not be strict with the iniquities of the curly pates under his charge; and when he saw how determinately every little heart was boiling over with mischief and motion, he felt in his soul more disposed to join in and help them to a frolic, than to lay justice to the line, as was meet. This would have made a sad case, had it not been that the activity of the master's mind communicated itself to his charge, just as the reaction of one brisk little spring will fill a manufactory with motion; so that there was more of an impulse towards study in the golden good-natured days of James Benton, than in the time of all that went before or came after him.

But, when "school was out," James's spirits foamed over as naturally as a tumbler of soda-water, and he could jump over benches and burst out of doors with as much rapture as the veriest little elf in his company. Then you might have seen him stepping homeward with a most felicitous expression of countenance, occasionally reaching his hand through the fence for a bunch of currants, or over it after a flower, or bursting into some back-yard to help an old lady empty her wash-tub, or stopping to pay his devoirs to Aunt This or Mistress That—for James well knew the importance of the

"powers that be," and always kept the sunny side of the old ladies.

We shall not answer for James's general flirtations, which were sundry and manifold; for he had just the kindly heart that fell in love with everything in feminine shape that came in his way, and if he had not been blessed with an equal faculty for falling out again, we do not know what ever would have become of him. But at length he came into an abiding captivity, and it is quite time that he should; for, having devoted thus much space to the illustration of our hero, it is fit we should do something in behalf of our heroine; and, therefore, we must beg the reader's attention while we draw a diagram or two that will assist him in gaining a right idea of her.

Do you see yonder brown house, with its broad roof sloping almost to the ground on one side, and a great, unsupported, sun-bonnet of a piazza shooting out over the front door? You must often have noticed it; you have seen its tall well-sweep relieved against the clear evening sky, or observed the feather beds and bolsters lounging out of its chamber-windows on a still summer morning; you recollect its gate, that swung with a chain and a great stone; its pantry-window, latticed with little brown slabs, and looking out upon a forest of beanpoles. You remember the zephyrs that used to play among its pea-brush, and shake the long tassels of its corn patch, and how vainly any zephyr might essay to perform similar flirtations with the considerate cabbages that were solemnly vegetating near by. Then there was the whole neighbourhood of purple-leaved beets and feathery parsnips, there were the billows of gooseberry bushes rolled up by the fence, interspersed with rows of quince-trees; and far off, in one corner, was one little patch penuriously devoted to ornament, which flamed with marigolds, poppies, snappers, and four-o'clocks. Then there was a little box by itself with one rose geranium in it, which seemed to look around the garden as much like a stranger as a French dancing-master in a Yankee meeting-house.

That is the dwelling of Uncle Timothy Griswold. Uncle Tim, as he was commonly called, had a character that a painter would sketch for its lights and contrasts, rather than its symmetry. He was a chestnut burr, abounding with briers without and with substantial goodness within. He had the strong-grained practical sense, the calculating worldly wisdom of his class of people in New England: he had, too, a kindly heart, but the whole strata of his character was crossed by a vein of surly petulance, that, half way between a joke and earnest, coloured everything that he said and did.

If you asked a favour of Uncle Tim, he generally kept you arguing half an hour, to prove that you really needed it, and to tell you that he could not all the while be troubled with helping one body or another, all which time you might observe him regularly making his preparations, and see, by an odd glimmer of his eye, that he was preparing to let you hear the "conclusion of the whole matter," which was "Well, well—I guess—I'll go on the heel—I 'spose I must, at least;" so off he would go and work while the day lasted, and then wind up with a farewell exhortation "not to be a calling on your neighbours when you could get along without." If any of Uncle Tim's neighbours were in any trouble, he was always at hand to tell them "that they should not have done so," that "it was strange they hadn't more sense;" and then close his exhortations by labouring more diligently than any to bring them out of their difficulties, groaning in spirit, meanwhile, that folks would make people so much trouble.

"Uncle Tim, father wants to know if you will lend him your hoe to-day?" says a little boy, making his way across a corn-field.

"Why don't your father use his own hoe?"

"Ours is broke."

"Broke! How came it broke?"

"I broke it yesterday, trying to hit a squirrel."

"What business had you to be hitting squirrels with a hoe? say!"

"But father wants to borrow yours."

"Why don't your father have that mended? It's a great pester to have everybody using one's things."

"Well, I can borrow one somewhere else, I suppose," says the supplant. After the boy has stumbled across the ploughed ground and is fairly over the fence, Uncle Tim calls,

"Halloo, there, you little rascal! what are you going off without the hoe for?"

"I dind't know as you meant to lend it."

"I didn't say I wouldn't did I? Here, come and take it—stay, I'll bring it; and do tell your father not to let you hunt squirrels with his hoe next time."

Uncle Tim's household consisted of Aunt Sally his wife, and an only son and daughter: the former, at the time our story begins, was at a neighbouring literary institution. Aunt Sally was precisely as clever, as easy to be entreated, and kindly in externals, as her helpmate was the reverse. She was one of those respectable, pleasant old ladies whom you might often have met on the way to church on a Sunday, equipped with a great fan and a psalm-book, and carrying some dried orange-peel or a stalk of fennel, to give to the children if they were sleepy in meeting. She was as cheerful and domestic as the teakettle that sung by her kitchen fire, and slipped along among Uncle Tim's angles and peculiarities as if there never was anything the matter in the world; and the same mantle of sunshine seemed to have fallen on Miss Grace, her only daughter.

Pretty in her person and pleasant in her ways, endowed with native self-possession and address, lively and chatty, having a mind and a will of her own, yet good-humoured withal, Miss Grace was an universal favourite. It would have puzzled a city lady to understand how Grace, who never was out of Newbury in her life, knew the way to speak, and act, and behave, on all occasions, exactly as if she had been taught how. She was just one of those wild flowers which you may sometimes see waving its little head in the woods, and looking so civilised and garden-like, that you wonder if it really did come up and grow there by nature. She was an adept in all household concerns; and there was something amazingly pretty in her energetic way of bustling about, and "putting things to rights." Like most Yankee damsels, she had a longing after the tree of knowledge, and having exhausted the literary fountains of a district school, she fell to reading whatsoever came in her way. True, she had but little to read; but what she perused she had her own thoughts upon, so that a person of information, in talking with her, would feel a constant wondering pleasure to find that she had so much more to say of this, that, and the other thing than he expected.

Uncle Tim, like every one else, felt the magical brightness of his daughter, and was delighted with her praises, as might be discerned by his often finding occasion to remark that "he didn't see why the boys need to be all the time a coming to see Grace, for she was nothing so extraor'nary, after all." About all matters and things at home she generally had her own way; while Uncle Tim would scold and give up with a regular good grace that was quite creditable.

"Father," says Grace, "I want to have a party next week."

"You sha'n't go to having your parties, Grace, I always have to eat bits and ends a fortnight after you have one, and I won't have it so." And so Uncle Tim walked out, and Aunt Sally and Miss Grace proceeded to make the cakes and pies for the party.

When Uncle Tim came home, he saw a long array of pies and rows of cakes on the kitchen table.

"Grace, Grace, Grace, I say! What is all this here flummery for?"

"Why, it is to eat, father," said Grace, with a good-natured look of consciousness.

Uncle Tim tried his best to look sour; but his visage began to wax comical as he looked at his merry daughter, so he said nothing, but quietly sat down to his dinner.

"Father," said Grace, after dinner, "we shall want two more candlesticks next week."

"Why, can't you have your party with what you have got."

"No, father, we want two more."

"I can't afford it, Grace; there is no sort of use in it, and you sha'n't have any."

"Oh father, now do," said Grace.

"I won't, neither," said Uncle Tim, as he sallied out of the house, and took the road to Comfort Scran's store.

In half an hour he returned again, and fumbling in his pocket, and drawing forth a candlestick, levelled it at Grace.

"There's your candlestick."

"But, father, I said I wanted two."

"Why, can't you make one do?"

"No, I can't; I must have two."

"Well, then, there's the other; and here's a fol-de-rol for you to tie round your neck." So saying, he bolted for the door, and took himself off with all speed. It was much after this fashion that matters commonly went on in the brown house.

But, having tarried long on the way, we must proceed with the main story.

James thought Miss Grace was a glorious girl; and as to what Miss Grace thought of Master James, perhaps it would not have been developed, had she not been called to stand on the defensive for him with Uncle Tim. For, from the time that the whole village of Newbury began to be wholly given unto the praise of Master James, Uncle Tim set his face as a flint against him, from the laudable fear of following the multitude. He, therefore, made conscience of stoutly gainsaying everything that was said in his praise, which, as James was in high favour with Aunt Sally, he had frequent opportunities to do.

So, when Miss Grace perceived that Uncle Tim did not like James as much as he ought to do, she, of course, was bound to like him well enough to make up for it. Certain it is that they were remarkably happy in finding opportunities of being acquainted; that James waited on her, as a matter of course, from singing-school; that he volunteered making a new box for her geranium on an improved plan, and, above all, that he was remarkably particular in his attentions to Aunt Sally, a stroke of policy which showed that James had a natural genius for this sort of matters. Even when emerging from the meeting-house in full glory, with flute and psalm-book under his arm, he would stop to ask her how she did, and if it was cold weather, he would carry her foot-stove all the way home from meeting, discoursing upon the sermon and other serious matters, as Aunt Sally observed, "in the prettiest, prettiest way that ever ye see." This fire was one of the crying sins of James in the eyes of Uncle Tim. James was particularly fond of it, because he had learned to play on it by intuition; and on the decease of the old psalm-tune, which was slain by a fall from the gallery, he took the liberty to introduce the flute in its place. For this and other sins, and for the good reasons above named, Uncle Tim's countenance was not towards James, neither could he be moved to favour.

To all Aunt Sally's good words and kind speeches, he used only to say that "he didn't like him, that he loited to see him a manifesting and glorifying there in the choir gallery on Sundays; and acting everywhere as if he was master of all; he didn't like it, and he would'n't." But James was not a whit cast down or discomfited by the malcontent aspect of Uncle Tim. On the contrary, when report was made to him of divers of his hard speeches, he only shrugged his shoulders with a very satisfied air, and remarked that "he knew a thing or two, for all that."

"Why, James," said his companion and chief counsellor, "do you think Grace likes you?"

"I don't know," said our hero, with a comfortable appearance of certainty.

"But you cannot get her, James, if Uncle Tim is cross about it."

"Fudge! I can make Uncle Tim like me, if I have a mind to try."

"Well, then, Jim, you'll have to give up that flute of yours, I tell you, now."

"Fa, sol, la! I can make him like me and my flute too."

"Why, how will you do it?"

"Oh, I'll work it," said our hero.

"Well, Jim, I tell you, now, you don't know Uncle Tim if you say so, for he is just the *settest* creature in his way that ever you saw."

"I *do* know Uncle Tim, though, better than most folks, he is no more cross than I am, and as to his being set, you have nothing to do but make him think he is in his own way when he is in yours, that is all."

"Well," said the other, "but, you see, I don't believe it."

"And I will bet you a gray squirrel, that I will go there this very evening, and get him to like me and my flute both," said James.

(To be continued.)

THE AGE OF CHIVALRY.

"The age of chivalry has gone, and one of calculators and economists has succeeded."—BURKE.

The age of chivalry has gone,
With all its feudal sheen;
No knightly banners flout the sky,
No men-at-arms are seen.

The tourney's lists are broken up;
The wand'ring minstrel's lay,
No more resounds in castle halls,
Or bower of lady gay.

The warder looks not from the keep,
The drawbridge guards no more,
Nor grim portcullis frowns above
The iron-plated door.

We read of them in storied page,
Or poet's charming song,—
We read of them as things of yore,
That not to *us* belong.

But who will mourn that iron age—
That fierce and lawless time,
When power could rule with wrong and blood
Or gold conceal a crime?

Who mourns that now no vassal hordes
Need tremble at a frown,
Or, when they dare to speak of rights,
No sword may hew them down?

Who mourns, that England's million sons
Are free from lordly sway—
A sway, that from their hearths and homes,
Could tear the poor away?

The few may mourn, who wish to wield
A tyrant's scourging rod,
And bow the knees which freedom bids
Now only bow to God

The few may mourn, who wish to turn
The wheels of Progress back,
And keep the soul, with ban and curse,
In Superstition's track.

But who, that feels the living fire
Of liberty and thought,
Would wish to let the blessings go
For which his fathers fought?

The chains have fallen from the serf,
He calls his home his own,
His dungeon doors are open flung,
His tyrants are o'erthrown

He labours not with drooping head—
A hearty worker, he,
For ev'ry stroke of brawny arm
Brings wages fair and free.

His voice is heard;—but not in groans
For mercy from his chief;
It speaks, in manly accents high,
Of charters and belief.

His claims are heard—his wrongs redressed,
Erect, he treads the sod
That made his birthright—liberty,
His only owner—God!

The age of chivalry has gone,
Its bondage passed away,
And never may its age return,
All English freemen say.

S. B BEAL.

THE DRUNKARD'S CHARACTER.—(From a volume of pamphlets, lettered "Miscellaneous Sheets," presented by King George III. to the British Museum The date is 1646.)—"A drunkard is the annoyance of modesty; the trouble of civility, the spoil of wealth; the distraction of reason He is only the brewer's agent, the tavern and alehouse benefactor, the beggar's companion, the constable's trouble. He is his wife's woe, his children's sorrow, his neighbour's scoff, his own shame. In summer he is a tub of swill, a spirit of sleep, a picture of a beast, and a monster of a man."

NAPOLEON AT ST. HELENA.

(*From Lamert ne's History of the Restoration of the Monarchy in France.*)

His fri nds and servants wearied, not with duty, but of patience, tired of separation from their families, of the climate, of sickness, and of inquisition, quitted him, or tried to quit him, under pretence of being torn from him by the persecution of the governor, or of rendering him more useful services in Europe. Physical debility broke in upon him with despair. He felt increasing attacks of the malady which had shortened his father's life. 'I sometimes have a desire to quit you,' he said to his last companions, Montholon and Bertrand. 'That is not difficult. I should escape from you the most easily by suicide, since my religious principles do not at all trouble me. I am one of those who believe that the punishments of the other world have only been imagined as an addition to the insufficient attractions we are promised there. After all, what harm is it to return a little sooner to God?' He suffered from pain, from debility, from want of sleep, and from failing strength, which made the light of day as disagreeable to him as darkness. His mind alone was never enfeebled. He witnessed his slow destruction firm and impassible. His thoughts always dwelt upon himself, and he prepared to die gracefully. 'I vegetate, I no longer live,' he said to his servants. Nature, however, prevailed at the last moment over the cold philosophy of his approaching end, in the numerous testaments and codicils he dictated to bequeath legacies to men and women who had left traces of affection, or service, or of gratitude in his life. His mother, who still lived at Rome, his brothers, his sisters, the companions and secretaries of his exile, his natural children and daughters, those who had given him their blood, his college friends, his most military companions, and his executioners when in power, received sums of money from him, out of the millions he had left on quitting Paris in the coffers of Montalivet, his banker, and the statues, the pictures, the arms, the furniture, the manuscripts, the vases, the articles of domestic furniture, consecrated by the use he had made of them, a distribution from the least, wherein the most distant remembrances were sought or rewarded even at the bottom of his memory. Even his wife, who had forsaken him, was neither accused nor excepted. He recollected that he was the daughter of the Cæsars, and that she protected by Austria would be withdrawn from a son who might have insulted Europe. This son, a prisoner himself, in the palace of Vienna, was the only great remnant through which he survived himself upon earth, his pride, his love, his gaiety, his name, his posterity. He never shed a tear but for him. Whether it was a return of the dying man to those early impressions which revive towards the close of life, and bring us back to the practice of our boyhood's worship; or, whether a poetical precaution of the founder of a dynasty, affecting to die in official communion with the national faith, of which he had been the restorer, Napoleon, who never spoke of religion but as a political institution, the indifferent instrument of all governments, was desirous of dying as a Christian, and attested an authentic and, so to speak, an imperial faith, by the ceremonial of his death. The image of Christ dying on the cross, pressed close to his mouth, raised the lips of this martyr to ambition. At the moment when the soul separated from the body, he exhibited no weakness unworthy of him. He awaited his death as an exhibition, and composed his attitude even to his last breath before the mirror of his fame. He demanded to be buried with his arms and in his military costume, under two willow trees near a spring, the shade and freshness of which had been grateful to him during his last days. He expired at length without pain and in silence, during a convulsion of the elements, on the night of the 5th of May, 1821. His last words he stammered out were, *Army* and *France*, but it could not be ascertained whether it was a dream, delirium, or adieu. It was apprehended that the transmission of his body to Europe might awake the Continent, and he was buried, with military honours, under the willow trees indicated by himself. The diligence of his death changed the immense terror which had set Europe during his life, into immense pity. When people ceased to fear him, they ceased to hate. Impartial minds began to do him justice. Genius and glory were not denied to him; but it was deplored that so much genius and so much glory had only been consecrated to the personal greatness of one man, instead of being devoted to the amelioration of the world. This is where he failed to his destiny, to God, to humanity, to France, and to himself. The fine part of his character was not equalled by the good. He was the greatest man of modern times, but he was also the most sterile in results for the human race. He wasted France and Europe for fourteen years, without imparting to them an idea, a liberty, or a virtue. He shook the world without displacing it. France, however, which owes him a severe judgment, owes him also impartial gratitude. He made her illustrious, he made her resound with the splendour of his own name, during the early part of a century, through the universe. It is a service to aggrandise the name of one's country, for the name of a people is a spell in time and history, and a certain claim to immortality.

These verbose and incoherent commentaries on his life, edited by partial hands, have neither the freedom nor the sincerity of the effusions of a heart indifferent to the empire and to posterity. They are confidences of parade, in which the dissembled intention assumes the guise of frankness. They throw no real light upon a mind which transforms and diversifies itself under so many contradictory aspects, that it is impossible to discern truth from sophistry, and nature from affectation. In religion, a philosopher with philosophers, an atheist with atheists, a deist with deists, a Christian with Christians, superstitious with the superstitious, indifferent with the indifferent; in politics, a republican with the republicans, a democrat with the democrats, a royalist with the royalists, a constitutionalist with the liberals, a despot with the despots, prophesying by turns the triumph of kings, the triumph of subjects, European domination by England, universal yoke by Russia, the irresistible democracy of France, the explosion of ideas and the reign of the sword, and offering himself to all systems as the only balance of the world, capable of doing all, accomplishing all, and preserving all. In these conversations Napoleon put forth as an oracle contrasts or maxims of triple meaning, on the past, the present, and the future, so that destiny cannot belie the one without justifying the other. The tribune of the world, of whom this [illegible] trembled, and who seeks from thence not to enlighten but [illegible] throws an echo to every wind, the repetition [illegible] Always an actor under the drama, he still performs a part when the curtain of the world is drawn upon him, suggesting that the only eternal part for man to act is man, and that the only immutable greatness is truth. Therefore, these conversations of St. Helena announce, but do not touch. They afford no assistance for history, but little interest for the human mind, and no emotion for the heart. Except for his adorators, this man who has spoken for six years on the brink of his tomb, has spoken in vain!

TO HARRIET BEECHER STOWE,

THE AUTHORESS OF "UNCLE TOM'S CABIN."

Immortal Stowe! thy thrilling book shall live,
Long as the dusky African can give
His meed of praise, or British hearts and hands,
Shall rise to break the stern oppressor's bands.

Thy [illegible] pierced a soul,
[illegible] war, and deeper [illegible];
While in thy well poised mind at once we see
The working of a heart by God made free.

Others may count the stars which loom in space,
Or clasp young science in their fond embrace,
Others may mark the foibles of the day,
And sap with ridicule their fount away;—

But thine it is to stir the inner core,
Of feelings vibrating from shore to shore,
And urge the tide, which bears a people's wave,
To bless thy country, and to free the slave.

Long may thy talents, on the pinions borne
Of holy truth, thy native land adorn!
Long may'st thou live, a star, the gloom to light,
Which wraps America in moral night!

E. H.

THE PHILOSOPHY OF IDLENESS.

"The sea hath its pearls, and heaven hath its stars," sings the poet,* "but my heart hath its great love—even the love of nature, in her glory and magnificence;" and, looking at the future, and recalling hours, long summer hours, of pleasant idleness, afar from the bustle and dust of a great city, so sing we.

"Idleness," we think we hear some utilitarian grumbler say, "this is no place for idleness: the hills and meadows are to work upon and in; for the idle there are the workhouses, the prisons, and the streets."

And to that very practical man we make a gentle answer, and say, with all manner of deference and humility, and without even hinting, for a moment, that there is a morsel of truth in the old fable of the unstrung bow, or in any other fable whatever which inculcates anything but the strictest attention to the severest labour—"There is more real usefulness in a little idleness now and then, my friend, than you and such as you can ever be brought to comprehend; at least, while in your present spirit. The idleness we would see a little more of in the world if we could, is not *neglect* of useful labour, but *occasional cessation* from it; an idleness which, we believe, brings men nearer to their Maker!"

And thus wise comes the lesson:—From the densest, foulest, grimest, dullest, dirtiest, and worst-ventilated streets and alleys of the workmen's quarter, are driven every day, through all the summer months, some one or other party of poor people out into the country. Very poor and shabby vehicles they ride in—mere furniture-vans with curtains at the sides, and very mean and scanty garments clothe their limbs; but both are redeemed and sanctified by looks of happiness, and the better thoughts and kinder feelings which such simple occasions never fail to awaken. Why, even the pennyworth of bright red ribbon that decorates the baby's cap, and the flower in its father's button-hole, are evidences, if none further were sought, of the softening and improving influence of such little idleness as we have dared to advocate.

When we remember, too, that for this day's pleasure the thirty or so pale-faced people who take their seats in the vehicle have been clubbing their little savings together—in many cases only a penny a week—for months, we can easily comprehend the reason of their unusually joyful looks, easily appreciate the little extra show and bustle that their poverty puts on; easily, if our hearts be in their right places, enter into and sympathise with their gladness and enjoyment.

It was once our fortune to join such a party. We have no shame in saying so, for the good minister of the largest and poorest district in Bethnal Green thought it not derogatory to his dignity or unworthy his high office to join it too. It consisted of fourteen vans, drawn by three horses each, and filled to overflowing. In all about three hundred and fifty individuals found accommodation either inside or outside the vehicles, and among them were men, women, and children of all ages, from the baby on its mother's knee to the palsied old pauper of ninety.

It is an annual custom of the minister we speak of to take the children of the national school and workhouse, with such of his parishioners as choose to join him, into the country for a holiday at least once during the summer; and so it happened that we, being anxious to discover how the very poor would disport themselves in the green fields, agreed to accompany the party. And here were we within the grass-green curtains of that humble vehicle, its only silent though gratified occupant: here were we, with our old-world doubts about us, anxious to catch some sound, even the slightest, of grumbling or discontent. But none came: those poor people were too glad to get out, for once in a way, from their dull houses and dirty streets, too happy to cast off for a few hours the rust of toil, and take into their spirits the sweet cool air of fields and trees, to feel in aught but the best of tempers with themselves and the world. It may have been—as it was no doubt—that among the various groups assembled there were some cold hard men who had scarcely ever bestowed a thought hitherto on anything but self, and whose tempers were none the better in consequence;—but for that day at least they put off their dull business habits, forgot the sordid, mean, and petty ways of life, and entered into the spirit of the hour with all the glee of the very youngest children there.

At least we thought so, when, having cleared the town and got into a dusty country road, we were joined by another branch of the same party, some twenty wagon-loads of children, who, free from restraint, burst out with all kinds of quaint manifestations of delight; singing, hooting, laughing, shouting to each other in a manner fitted to make one's spirit grow young again in hope!

If any hard-headed utilitarian—even our own supposititious grumbler aforesaid—had seen those poor children tumble, and hoot, and dance, and run upon the grass—that verdant carpet spotted with yellow cups and bright-eyed daisy stars—and heard their piping voices shrill above the songs of the birds; and watched them as they chased each other into the cool depths of the forest, or hid among the broad green leaves in the very sport and lightheartedness of childhood—a childhood with many of them unblessed with parents' fondness—he would at once have changed and abrogated his too worldly creed, and acknowledged with us that there may be a saving grace even in a little summer idleness.

That hard, depreciating, doubting temper, so common in the world, is the invariable harvest we gather when the seeds of life are sown without the blessing of a thankful spirit. Of what utility—to use a word dear to a certain class of thinkers—is it to teach children their duty to their betters and the world, unless they are also early imbued with a love of God's beauty everywhere? Without this teaching the whole machinery of life is nothing more than so many clanking irons and rattling chains to the spirit, so many fetters to bind the heart to earth, so many blinding, deafening sights and sounds to keep the eyes and thoughts from heaven!

> Is it, O man, with such discordant noises,
> With such accursed instruments as these,
> Thou drownest nature's sweet and kindly voices,
> And jarrest the celestial harmonies! *

But look at the various groups assembled now upon the green-sward. Above them are the waving trees in thousand shapes of beauty, sending their bright arms up into the sky, around them the peaceful cattle browsing on the grass; beneath the soft and verdant carpet made not with hands, while into their awakened spirits come the voices of kindly Nature, to summon from the shadowy past the forms of love too long absent, if not unknown. The simplicity of an elder world mingles in their thoughts, and better fits them for their encounter with their harsher duties—better enables them to bear the cross of poverty and ill. They have passed out of the gates of the dull city, and in an hour are amidst the solitude and stillness of primeval forests. Think you that the varied landscape of wood, and hill, and water, and sky, has no softening influence on their hitherto dull and torpid natures—no stirring power to make them better men and women, more thoughtful fathers, more affectionate mothers, more obedient children? Surely it has.

Around them are the tall waving grass, the sparkling gems of red and white flowers, the pleasant low of cows, the sweet voices of the birds: they walk amid the beautiful things o Nature, and feel themselves improved; and as they carelessly si them down to partake of their "mid-day repast" of plain brea and meat, and water from the brook close by, or idly stretc themselves in the shade, while the children run and spor among the green things waving on the hills, they are doubtles in better temper with the world and with themselves. The see the forest animals free and happy; they hear the bees i ceaseless whirl and hum disport from flower to flower; the listen to the merry birds on leaf and spray; and, contente with the holiday thus given them, dream not that

> Man to man more cruel,
> Appoints no end of suffering for his slave †

And so the long bright summer day goes by, till the sun slowly veering to the west, gives warning to depart. The good minister draws his happy flock together, and addresses a few words to their not unlistening ears:—"On the next Sunday—who knows!—perhaps I shall rest in the graveyard, some on of yourselves! a lily broken untimely, will bow down his head to the earth; why then delay? the hour is accom

* Henrich Heine.

* Longfellow. † Massinger.

plished; let us make ready to meet our God!"* If not in these, in some such words he warns them to prepare for life for the doom of all things living; and as the teacher's task is closed, the children rise up from the grass and bow before him; and he takes them one by one by the hand, and blesses them in wordless prayer, and so they go upon their way; and their homeward journey is full of love, and merriment, and chastened joys; and as their songs rise on the night wind, the good clergyman, the promoter of all their happiness, leans back on his seat, and feels that he is doing his best duty to his flock. There is peace at his heart, and he feels

> Majestic thoughts in thrilling sounds expressed,
> That soothe his soul like harpings of the blest †

And so if we have not *proved* that a little idleness, now and then, is a kind of moral medicine, we have stated our *belief* in the virtue of it—which is very nearly the same with the great majority of logicians. G. P. P.

A BULL-FIGHT IN LISBON.

Few popular sports are *more* popular in the Spanish peninsula than the bull-fight. To witness a bull-fight, all classes of people, from queen to beggar girl, and from prince to peasant, will neglect their proper business, and crowd delighted into the amphitheatre. But, alas for the chivalry of Portugal! the bull-fight no longer exists as it does in Spain—pity the sport exists at all! To be sure, cruelty to the beasts has by no means ceased, but nearly all danger to the fighters has! Sorely disappointed was I on one occasion, when, seated as a spectator at the feats of the arena in Lisbon, to discover that there was not the slightest possibility of witnessing a death, even of a bull! I had nerved myself for some awful catastrophe, as I thought, by endeavouring to subdue all the finer feelings of humanity; but I doubt my success, for I was exceedingly disgusted with what I did see. Perhaps, however, if there had been more courage and less cruelty displayed, I might have felt differently. I know that on similar occasions I had previously become very much excited, and cried "*Viva!*" for a victorious bull as loudly as anybody. But those were fights in which Spaniards were engaged, who laugh to scorn the cowardly, barbarous bull-fighters of Portugal.

At the southern extremity of the *Campo de Santa Anna*, Lisbon, stands the *Praça dos Touros*, bull-circus. This is a wooden edifice, and was built in the time of Don Miguel. It is said to be nearly as large as the circus at Cadiz, and is fitted up with some five hundred boxes, capable of containing eight or ten thousand spectators. It is destitute of neatness and elegance, and was, when I saw it, in a bad state of preservation. Along the highest rows of benches it is inappropriately ornamented by a series of trophies, vases, and obelisks, all made of wood. Every Sunday and fête-day, the proprietors give the public a performance, which is duly announced in some such fustian as follows:—

"This day will be given, in the elegantly-built and delightful *Praça do Campo Santa Anna*, a wonderful and highly-amusing combat of thirteen ferocious and monstrous bulls, to which the respectable public of this renowned capital is invited. The proprietors, ever anxious to gratify the expectations of the magnanimous and distinguished nation of Portugal, so generous in its patronage of these spectacles, feel the greatest satisfaction in being able to announce that they have spared neither trouble nor expense in order to secure the abovementioned animals, which belonged to the richest proprietor of *Riba Tejo*, who possesses among his herds the most robust and the bravest of bulls. This gentleman has consented to send them to the circus, to assist in the representation that will be given this afternoon." Here follows an eulogium on the coolness and unrivalled agility of the bull-fighters; and, after eight lyric stanzas extolling the ferocity of the animals—the bulls, not the fighters—the terrible force of their horns, and a thousand other dangers of the combat, the whole announcement winds up with a description of some marvellous fireworks that will conclude the entertainment.

In spite, however, of grandiloquent announcements, strangers having the spirit of genuine *campinos* are always greatly disappointed. The combat unto death, both of man and beasts, was abolished in the time of Mary I., 1777 or 1778; and this diversion has lost its most horrid interest and its shuddering attractions. The functions of the *matador de espada* have ceased, and good bull-fighters are no longer trained up in Portugal, while the most celebrated of Spain refuse to visit the sister country.

These fights open, as in Spain, by a grand display on horseback. When the court is present, an equerry of the royal household acts as *cavalheiro*, and then the best horses from the royal stables are in attendance. Mounted upon one of them, the equerry performs the steps and evolutions of the old Spanish horsemanship, at the same time saluting the court and the public; all of which is termed *cortezias do cavalheiro*. The bull then bounds forth, and is received by the knight, when the more daring among the flag-bearers immediately begin to annoy him with their goads and gaudy capes. Some of the mantle-bearers display great dexterity; but they are in general awkward and timid, though the danger is not great, seeing that the animals have their horns sheathed in leather and tipped with balls. When the bull lacks bravery, or is greatly fatigued, affording little interest in the combat, *Gallegos* (peasants from the province of Gallicia, Spain) or negroes are sent against it, who render a service very similar to that of the dogs which the Spanish people clamor for, with the well-known cry of "*Perros!*" whenever the bull seems to be too tame. These *Gallegos* take part in all the Portuguese bull-fights. They make their appearance in round hats and quilted hides, and carry long, two-pronged forks, whence they are called *homens de forcado*, men of the fork. Their place is beneath the royal tribune, where they are formed in line; and when the bull approaches that vicinity, they receive him on the points of their weapons. Near them may be seen a species of side-de-camp, mounted, and clad in the old Spanish garb, short cape and hat of plumes. His office is to transmit orders to all parts of the circus from the authorities.

When a bull evinces cowardice or exhaustion, the *Gallegos*, at a given signal, cast their forks aside, and rush upon him. The most courageous, placing himself in front of the animal, seizes the moment when, with lowered head and closed eyes, he is running at him, to leap between his horns, to which he clings firmly, allowing himself to be violently tossed and flung about. The rest then throw themselves upon the brute, securing him by the legs, horns, and tail, and even jumping upon him, until the poor beast, who sometimes draws a dozen of them round the ring three or four times, is compelled to stop. This is termed, not "taking the bull by the horns," but *seizing the bull by the hoof*, and appears to afford the greatest delight, especially to the lower classes of the spectators; hence, at this moment, the plaudits are most enthusiastic. A number of bullocks and cows with bells round their necks now enter, which the subdued bull peacefully follows out of the circle at a trot. His wounds are then dressed, and he is either sent home or reserved for another occasion.

The negroes, it seems, appear but seldom, and it would be well for humanity if they were entirely excluded; for they are called upon to perform feats which none of the *gentlemen* fighters dare attempt. These poor wretches hire themselves out, for the value of a few shillings, to provoke the bull when he is too tame and cowardly. For this purpose, they ornament their heads with feathers, in imitation of the savage chiefs of Africa, and conceal themselves either in figures of horses made of paste-board, called *cavallinhos de pasta*, or in large hampers. The bull is sure to throw them down, and often maims and bruises them in the most shocking manner. I saw one poor old fellow gored through a hamper, to the infinite delight and amusement of the audience; nobody appearing to relish the joke more than the ladies, by whom the front seats of nearly all the boxes were filled. Sometimes these miserable blacks are forced, by the cries of the populace and the orders of the directors, to re-appear in the arena, even while suffering from severe contusions; and loss of limbs is the probable result of this base and dastardly inhumanity.

Before the close of this most refined and delectable exhibition with fire-works, we have another display of horsemanship and horse-dancing, when *vivas* resound from all sides, and flowers, money, and sometimes jewels, are showered down upon the heroes of the ring who have that day most distinguished themselves in encounters with blunt-horned bulls.

* This thought occurs in one of Longfellow's poems, we have forgotten which.
† Martin F. Tupper.

EXERCISES FOR INGENUITY.

A MEDIUM OF INTERCOMMUNICATION FOR ALL READERS.

25. How is it, that looking down at an object from the top of some high building, or cliff, makes it appear so diminutive; whilst looking at it from a level surface, from the *same distance*, alters its apparent size very little?—S. COLLIER

26. Who was the author of the phrase, "Evil communications corrupt good manners?"

27. What is the reason that fewer men are killed by a mine explosion than by the after-damp?—LUPUS.

28. Who were the Weeping and Laughing Philosophers, and why were they so called?—ELIZA ANN.

29. The length of the chord subtending an arc of 220° is 36 inches; from the extremities of which two straight lines are drawn, which, with the chord, form a triangle, the vertex of which is a point in the arc; and the angle contained by the chord and one of the straight lines, is 57° 40′ required the remaining angles and the length of each side —JOSEPH TIMMS

30. There is a custom throughout Wales of feasting and larking, ducking for apples, &c, on the last night in October, which they call the "Night before Winter,"—what is the origin of it?—LUPUS.

31. How did the islands of St. Helena and New Zealand become British colonies?

32. Can any of your correspondents explain whether it requires more power to work a pump in raising a quantity of water when the piston is working near to the surface of the water, than it does when the piston is working near the delivery pipe?—VINCENT

33. Who gave Wales its present name, and what does it signify? —J. B.

34. What is the derivation and meaning of the oriental word Satrap?—J RICHARDS

35. When were the figures of arithmetic brought into Europe, and by whom?—H. F.

36. Is there any law in existence to force servants to stay from Martinmas to Martinmas, and, if so, when was it made?—H. V.

37. Receipts are required for making and using of blacking, harness paste, and [illegible]

38. Can any of your readers explain the origin of the phrase, Hob-a-nob —H B

39 Whence comes the Latin phrase, the English of which is, "Let justice be done, though the heavens should fall?"

40 How many revolutions would a marble, one inch in diameter, make in reaching the earth, if dropped from a height of one mile high in the air?—P

ANSWERS TO QUESTIONS PROPOSED IN NO 57

1. The destruction caused by the fire of London, in 1666, occasioned many disputes to those who owned property, as in many cases all boundary marks necessary to determine the extent of boundary were quite obliterated, and in order to settle all disputes, that each might obtain their respective claim in a more speedy manner than by legal process, it was determined that all claims &c, should be referred to the judgment and decision of two of the most respectable land surveyors *of the time—men* who had been thoroughly acquainted with London previous to the fire. The surveyors appointed to determine the rights of the various claimants were *Mr. Hook* and *Mr. Crook*, who, by the justness of their decisions, gave general satisfaction to the interested parties, and by the speedy determination of the different claimants, soon restored order. Thus the origin of the saying "Hook or by crook"—M. A. H.

Another correspondent says —Persons in the olden time entitled to fuel-wood in the king's forest were only authorised to take it off the dead wood or branches of trees in the forest, with a cart, a hook, and a crook.

Another of our friends suggests a different origin for the phrase.—It is said that Strongbow, when debating with his followers on the best mode of capturing Ireland, said it must be by "Hook or by Crook" The N E. boundary of Waterford harbour is known as the Hook, and Crook-haven is an equally well-known harbour on the south coast hence the words of the besieger.—T. W. SMART

4, The following is the origin of this distinction.—In the reign of Henry the Second, a synod was held at Westminster, at which the Pope's legate was present. The Archbishops of York and Canterbury contending for precedency, high words begat blows, till at last the adherents of Canterbury pulled York from his seat to the ground, and tore his casule, chimera, and rochet from his back. The legate, transported with fear, fled from the place of meeting Next day York appealed to the people And the dispute was settled by the respective titles of "Primate of England" and "Primate of all England"

8. Edward I., King of England, conquered Wales. Born at Westminster, June 16th, 1239. Died at Burg-on-the-sands, near Carlisle, June 7th, 1307. Edward II., his eldest surviving son, was the first Prince of Wales. The natives submitted to the English dominion with extreme reluctance, and Edward, as a conciliatory measure, promised to give them for their prince one who was a Welshman by birth and who could not speak any other language, accordingly he presented to the people his son Edward, then an infant who had been born at Caernarvon. From the time of Edward II the eldest son of the King of England has always been created Prince of Wales —J ROBERTSON.

9. The origin of ALL FOOLS' DAY.—From a very early age this day has been considered as one set apart for the exercise of all kinds of practical jokes and mirthful folly. The term given to it, we may hold as a travestie of the festival of All Saints' Day. The custom of playing-off little tricks on this day, whereby ridicule may be fixed upon unguarded individuals, appears to be universal throughout Europe In France one thus imposed upon is called "Un poisson d'Avril," an April fish It is very remarkable that the Hindoos practise precisely similar tricks on the 31st of March, when they have what is called the Huli Festival.—MATT GUNSBY.

An old friend and subscriber, Mr B Lowe, of Manchester, furnishes the following authorities for the origin of All Fools' Day.—[illegible] "Apollo," 1795, vol I, No I, is the following query "Whence proceeds the custom of making April fools?" Answer It may not improperly be derived from a memorable transaction happening between the Romans and Sabines, mentioned by Dionysius, which was thus the Romans, about the infancy of the city, wanting wives, and finding they could not obtain the neighbouring women by their peaceable addresses, resolved to make use of a stratagem, and, accordingly, Romulus instituted certain games, to be performed in the beginning of April (according to the Roman calendar), in honour of Neptune Upon notice thereof the bordering inhabitants, with their whole families, flocked to Rome to see this mighty celebration, where the Romans seized upon a great number of the Sabine virgins, and ravished them, which supposition we suppose may be the foundation of this foolish custom"

"Humorous Jewish Origin of the custom of making Fools on the First of April —This is said to have begun from the mistake of Noah sending the dove out of the ark before the water had abated, on the first day of the month among the Hebrews, which answers to our first of April, and, to perpetuate the memory of this deliverance, it was thought proper, whoever forgot so remarkable a circumstance, to punish them by sending them upon some sleeveless errand, similar to that ineffectual message upon which the bird was sent by the patriarch"—*Brand's Popular Antiquities*, Vol. I.

The custom of making fools on the First of April prevails among the Swedes, it being alluded to in Torcens' "Voyage to China," 1750—2, (and in Germany we have the making of an April fool described in the phrase "Einen zum April schicken." In Scotland the persons sent on errands were called *cobie, messengers*)

Interesting particulars, as to the various origin, &c of making fools on the First of April will be found in Vols I. and II of "Hone's Every-day Book," and "Brand's Popular Antiquities," Vol. I.

10 Adam and Noah left the largest fortunes to their families, for they left them the world —ELIZA MARY

11. MOURNING —Among the ancients, mourning was expressed by various signs tearing their clothes, wearing sackcloth, laying aside casigns of honour. Thus Plutarch, from the time of his leaving the city with Pompey, neither shaved his head, nor, as usual, wore the crown of garland. Amongst the Romans, a year of mourning was ordained by law for women who had lost their husbands. The colours of the dress or habit worn to signify grief vary in different countries In Europe, the ordinary colour for mourning is black, which, being the [illegible] used to denote the termination of life. In China, [illegible] in token of purity; which colour was the mourning of the ancient Spartan and Roman ladies In Egypt, it is yellow, which, representing the colour of loaves when they fall, and flowers when they fade, signifies that death is the end of all human hopes. In Ethiopia, brown, which denotes the earth to which all the dead return In Turkey, blue, which is an emblem of the happiness which it is hoped the deceased enjoys Kings and cardinals mourn in purple or violet, which is supposed to express the combination of sorrow and hope. The custom of mourning for the dead in shrieks and howlings is of great antiquity, and prevails almost universally among the followers of Mahomet.—F. G. P.

12. A blacksmith must necessarily be the most dissatisfied of mechanics, because he is continually *striking for wages!*—CH ZH.

13. SIR,—In answer to the question, "How did Canada obtain its name," allow me to extract the following from "Macgregor's British America," Vol. II., page 328 and 329:—"Canada is said to have been first discovered by the Spaniards, who, not finding any of the precious metals, which formed the grand object of all their discoveries and conquests, abandoned any claim to a country which only appeared to afford the means of living by the cultivation of its soil." When the French afterwards visited this part of America, the Indians repeated so frequently the words "Aca nada," *here is nothing* (which they are said to have heard the Spaniards exclaim), that Cartier imagined them to mean the name of the country, and to this circumstance is usually attributed the origin of the appellation, Canada, by which it has been designated since that period, although it bore also for some time, in common with the adjacent territories, the general name of New France."—E. R.

John Roberts, R.M., S. Collier, Anna, F.R., G.H., and others, have sent similar replies. The question having elicited inquiry among our readers, the end is attained; without research there can be no knowledge.

14. In what year were the Commons first called to sit in Parliament?—In the reign of Henry III. was held the first assemblage approaching to the character of a Parliament. It was first called in 1225, in order to give supplies for carrying on a war against France; the money was only granted on condition that the great charter should be confirmed, and thus the example was set at the very first for rendering supplies a check upon the prerogative of the king, and gradually reducing that power to its present comparatively moderate level. Under the earlier Norman kings, and it is believed under the Saxons, an assembly, called the Great Council, had shared with the sovereign the power of framing laws, but it was only until the reign of Henry III., that the body had any power to balance that of the king. And it was not until 1265, that representatives from the inhabitants of towns were introduced.—A. H. Another correspondent says "The earliest writ that have been preserved for summoning knights, citizens, and burgesses to Parliament are those issued by Simon de Montfort, Earl of Leicester, and Baron of the barons in 1264, in the name of King Henry III., who was then a prisoner in his hands." The division of the legislature into two houses—in other words, the institution of our present House of Commons—is traceable to the time of Edward I.—J. R.

15. The sittenagemote of the Saxons, literally an "assembly of wise men," the Parliament of the Saxons, from the Anglo-Saxon "gemoth," an assembly, and "witan," to know, which has the same root, "wet," or "wis," as the word wit, wisdom, wise, and the legal phrase still in use, "to wit." The nature of this assembly and its powers cannot, however, be stated with any precision.—G. ROBERTSON.

16. Cannons were first used at the battle of Cressy, in 1346.

17. How many [illegible] of one side, can be [illegible] for waste in making?

736½ lbs. = 9838 oz. ÷ 7856 = 1¼ cub. feet. 1¼ − 1 = ¼ cub. ft. = 1728 cub. inches. ¼ = 375 + 375 + 375 = 1125 ÷ 2 = 5625 half sum. 5625 · 375 = 1875 · 1875 × 1875 × 1875 × 5625 = 00037078857 &c. · 00037078857 ÷ ⅓ = ·00089 superficies of end of file.

·00089 × 5 = 374895 cub. inches in each file.

1728 ÷ 374895 = 5160 files, nearly. R. M.

The answers to arithmetical questions are extremely numerous, but, as our plan is to insert the correct one only, our friends must excuse us if, in opposition to their expressed wishes, we fail to point out in what particulars the several replies are deserving or otherwise.

19. In reply to the 19th query in the "*Exercises for Ingenuity*," I respectfully submit that $99\frac{9}{9} = 100$.—Also permit me to remind your numerous readers that four nines can be so arranged as to denote 111 or 20, viz., $\frac{99}{9} = 111$, $99^{\frac{9}{9}} = 20$.—HENRY DRIVER.

20. The humidity of the atmosphere will occasion such a density, that the clouds will not permit all the rays of light to pass through, the red ones being reflected. The dark ones will be more opaque still, and suffer them to pass into them, though some may not be in such a position as not to be touched by rays of light.—BENNET LOVE.

21. If a ball of marble 37·6092 inches circumference be reduced to one third its size, what will its circumference then be and its weight, the specific gravity of marble being 2·838? Several answers have been received to this question which nearly approach the truth, especially that supplied by J. Timms, of Chesterfield. The proposer's *own* solution is as follows:—

37·6992 ÷ 3·1416 = 12 dia. 12 × 12 × 12 × ·5236 = 904·7808 * —Contents of larger ball.

904·7808 ÷ 3 = 301·5936—Contents of lesser ball.

301·5936 ÷ ·5236 = 576·576 ∛ = 8 32 × 3·1416 = 26·188112 inches —Circumference of lesser ball.

1728 . 301·5936 :: 2·838 : 195·32 oz. = 41·27 lb. troy, weight of lesser ball.

Circumference 26·188112 inches

Answer—Weight 495·32 oz., or 41·27 lbs.

22. The various effects are produced by the different temperatures of the atmosphere: it being the coldest which occasions hail, its thickness prevents the particles of damp from rising off the earth at all, and produces fog. Rain is occasioned by the cold condensing the vapour of the air, when near the point of saturation. The cause of snow is, when the air is nearly saturated with vapour, indeed, once by a current of air *below freezing point*, some of the vapour is condensed, and frozen into snow. When flakes of snow in their descent pass through a bed of air above freezing point, they partially melt, and fall to the earth as half-melted snow, or sleet.—B. L.

23. The following are furnished as receipts for making the

SYMPATHETIC INKS OR SECRET WRITING

If a weak infusion of galls be used, the writing will be invisible until the paper is moistened with a weak solution of sulphate of iron. It then becomes black, because these ingredients form ink.

If a paper be soaked in a weak infusion of galls, and dried, a pen dipped in the solution of sulphate of iron will write black on that paper, but colourless on any other.

The diluted solution of gold, silver, or mercury, remains colourless upon the paper till exposed to the sun's ray.

Diluted prussiate of potash affords blue letters when wetted with the solution of sulphate of iron.

Letters written with sal-ammoniac, dissolved in water, or with the juice of a lemon, are not visible till held by the fire.—See "Wonders of Nature and Art."—JOHN MATHER.

Write on paper with the juice of onions, and the writing will be invisible until warmed at the fire, it then becomes of a brownish yellow.

Another kind of yellow. Write with a solution of nitrate of bismuth, the letters will be invisible, but if the surface is wetted with a solution of prussiate of potash, the characters will appear of a beautiful yellow colour.

Write with a solution of corrosive sublimate, and wet the characters with a solution of iodide of potash, when the writing will become visible, of a bright scarlet colour.

Dissolve sulphate of the red, and add a small portion of saltpetre. The ink is invisible until the paper is warmed, when it appears of a clear rose colour. The colour disappears again as the paper gets cold. Put into a phial half an ounce of distilled water, one drachm of bromide of potassium, and one drachm of pure sulphate of copper (blue vitriol), gently warm the mixture until the salts appear to be [illegible] dissolved, when the liquid is fit for use. The brown bromide, and the sulphate of copper, act upon each other in solution; bromide of copper and sulphate of potash is the result. The sulphate of potash may be precipitated by the addition of about half an ounce of spirits of wine, and the remainder will be a nearly pure solution of bromide of copper in alcohol and water. Words written on paper with this ink are perfectly colourless, but when warmed at the fire, they become brown, and again become [illegible] as the paper gets cold.

Dissolve [illegible] (salt) in aqua regia, and dilute the solution with four times its weight of water; this gives a fine sea-green colour when the paper is warmed, and disappears as the paper cools, and is renewed on warming again.

Write on paper with a solution of green vitriol (sulphate of iron), the writing will be invisible; but if the paper is wetted with a solution of the yellow salt used by the dyers, called prussiate of potash, the characters will appear of a beautiful blue colour.

J. ROBERTSON.

LITERARY NOTICES.

THE SELF AND CLASS EXAMINER IN EUCLID, containing the Enunciations of all the Propositions and Corollaries in Cassell's Euclid, adapted for the use of Colleges, Schools, and Candidates, is now ready, price 6d.

CASSELL'S ELEMENTS OF ARITHMETIC, in paper cover, 1s. 6d. neatly bound in cloth.

THE ANSWERS TO ALL THE QUESTIONS IN CASSELL'S ARITHMETIC, for the use of Private Students, and of Teachers and Professors who use this work in their classes, is preparing for publication.

* It appears, however, that the Kings of Spain and Portugal both complained at the French King's "unjust usurpation of their footsteps by sending Cartier to Canada;" and it was [illegible] their exclusive, "What I shall they quietly divide [illegible] them with [illegible] me to take a share as their brother [illegible] of Adam's will that bequeaths that vast inheritance to them."

MISCELLANEA.

ELECTRICITY APPLIED TO THE CAPTURE OF WHALES.—The *New Bedford (U. S.) Mercury* gives an account of some interesting experiments, illustrating the effect of electricity to facilitate the capture of the whale. The most prominent features of this new method are thus described.—"Every whale at the moment of being struck by the harpoon is rendered powerless, as by a stroke of lightning, and, therefore, his subsequent escape or loss, except by sinking, is wholly impracticable, and the process of lancing and securing him is entirely unattended with danger. The arduous labour involved in a long chase in the capture of a whale is superseded, and, consequently, the inconvenience and danger of the boats losing sight of or becoming separated from the ship is avoided. One or two boats only would be required to be lowered at a time, and, therefore, a less number both of officers and seaman than heretofore employed would be ample for the purposes of the voyage. The electricity is conveyed to the body of the whale from an electro-galvanic battery contained in the boat, by means of a metallic wire attached to the harpoon, and so arranged as to reconduct the electric current from the whale through the sea to the machine. The machine itself is simple and compact in construction, enclosed in a strong chest weighing about 360 lbs, and occupying a space in the boat of about three-and-a-half-feet long by two in width, and the same in height. It is capable of throwing into the body of the whale eight tremendous strokes of electricity in a second, or 950 strokes in a minute, paralyzing in an instant the muscles of the whale, and depriving it of all power of motion, if not actually of life."

ADULTRATED CAYENNE PEPPER.—The *Lancet* gives the following results of an analysis of 28 samples of Cayenne pepper obtained at different shops.—"That out of the 28 samples of Cayenne pepper subjected to analysis, 24 were adulterated; that out of the above number four only were genuine; that out of the 24 adulterated samples, 22 contained mineral colouring matter, that red lead, often in large and poisonous quantities, was present in 13 samples, that Venetian red, red ochre, brick dust, or some other analogous ferruginous earths, were contained in seven samples, that cinnabar, vermillion, or sulphuret of mercury, was detected in one sample, that six of the samples consisted of a mixture of ground rice, turmeric, and Cayenne, coloured with either red lead or a red ferruginous earth, that six samples contained large quantities of salt, sometimes alone, but more frequently combined with rice and a red ferruginous earth or with red lead; that one of the samples was adulterated with a large quantity of the husk of white mustard seed, that two contained rice only, coloured with red lead or a ferruginous earth. As is well known, red lead and vermillion, or sulphuret of mercury, are highly deleterious substances, both being characterised by the very peculiar circumstance that they are not, like the majority of other compounds, when received into the system, at once eliminated therefrom but remain in the body for a considerable time, gradually accumulating, until at length they occasion the peculiar symptoms which distinguish their presence in large amount. Thus, however small the dose taken from day to day, the constitution is yet liable, by the repetition of the dose, to be at length brought under the influence of the poison, and to become seriously affected.—P.S. We place no great dependance on the decisions of the *Lancet*; certainly it is not infallible!

THE LAKE OF HAARLEM.—that interesting inland sea, which burst through the dykes of sand and willows, and swallowed up some of the richest meadows of North Holland, more than three centuries ago—has been nearly expelled from the territories on which it had seized in spite of Dutchman and Spaniard. In the year 1539, while the people of the district were groaning under the oppression which afterwards drove them into the insurrection now considered one of the noblest up-risings of the world,—the North Sea broke over the artificial dams and the triple ridges of sand formed by the action of wind and tide on that stormy coast, and showed the inhabitants how to isolate their cities and cut off a besieging enemy—a lesson afterwards turned to effective account by them at Leyden and elsewhere. But the invasion of the water brought horror and desolation into the fertile flats of North Holland. Twenty six thousand acres of rich pasture land, with meadows, cattle, and gardens, were covered by the waves which would not ebb—and the village of Nieuwenkirk was submerged, and all its inhabitants were lost in the tremendous calamity. More than two centuries elapsed before any one began to dream of recovering this vast estate, and then, although the lake was only six feet in depth, the recovery was long believed to be impracticable. Again and again the project has been started since the present century came in. In 1819 a scheme was submitted to the King for the drainage, and approved,—but it led to no result. Even as late as the session of 1838 a motion for the same purpose was rejected by an immense majority in the Dutch House of Representatives. But as the engineering science of the age grew more daring and confident, even Dutch phlegm gave way, and the works were, as our readers are aware, commenced. They have been long in progress,—and it is now reported that the task is near its final accomplishment. The remains of the unhappy village of Nieuwenkirk have been found, with a mass of human bones, on the very spot where the old charts of the province fixed its site. In a few more weeks it is believed that the Lake of Haarlem, famous for its fishing and its pleasure excursions, will have become mere matter of record.

RUSTIC WIT.—A village doctor went to visit a patient in a neighbouring hamlet, and took with him his gun, that he might wing any game that he encountered in crossing the fields. A peasant meeting him on the way, asked whither he was going? "To see a patient," was the answer. "What, then," said the peasant, "do you really fear to miss him in the ordinary way that you take your gun with you?"

DIFFERENT sounds will travel with different velocity—a call to dinner will run over a ten-acre field in a moment and a half, while a summons to return to work takes from five to eight minutes.

I ONCE said to the late Mr. Cobbett, that do what I could, I never could rub from my mind what was called a "vulgar prejudice," and that was, that "the Princess Charlotte came unfairly to her end." Cobbett replied, briefly but markedly, "Sir, it is no vulgar prejudice."

Why is a lawyer like a tailor?—Because he is always ready to commence a *suit*.

Why is a polite gentleman like a pine-tree? Because he has a profusion of *bows* (boughs).

NOTICES TO CORRESPONDENTS.

R. WILLIAMS.—You ask us to "explain the principle and the construction of the Barometer," it is impossible to do this in a brief notice of correspondence, but we will insert a short article on the subject in an early number.

JOHN PARKER.—*Ale and Porter* have been in existence far too long for the health and comfort of a large portion of the human family. Beer was first made by the ancient Egyptians. It was in use in this country as far back as the times of the aborigines. The Saxons introduced *mead* (a preparation of honey and water fermented), the use of which prevailed till about the period of the Conquest, after which malt liquor became the national beverage, and its use became connected with almost every circumstance of life: hospitality was thought incomplete, unless the flagon of "nut brown ale" was handed, flowing over, to the traveller or visitor. In answer to your second question, the *Potato* was first brought to this country by Sir Walter Raleigh, about the year 1610, and was first planted in his garden at Youghal, in Ireland. For an answer to your third question as to the militia, you had better apply to her Majesty's Secretary of State for the Home Department, the Rt. Hon. S. H. Walpole.

JAMES WAGNER.—Your lines have been received, but we cannot promise their insertion.

DEATH OF WELLINGTON.—We have received lines on the death of the late Duke, from "Jayne," J. W. P. I., G. Clarke, Thomas, T——b, and some others, the insertion of which however we are compelled to decline.

J. C. D. is about the tenth correspondent who has gravely written, requesting to know the meaning of the word "*upwards*" in reference to numbers, as "upwards of fifty," &c. he assures us that he has "talked with many people who are use that *upwards* means *under* the given number." These "many people" must surely reside in some district never yet visited by the schoolmaster!

W. C.—You had better apply to some bookbinder near you; the expense of sending your books to London and back will cost you as much as the binding of several volumes.

N. WATERALL.—We fear your drawing and description will hardly warrant the expense of engraving and printing.

R. A.—When it is said that the "*onus probandi*" rests upon any person, it means that upon that person rests the responsibility of proving a particular point; from onus, *a burden* and probare, *proving*.

WINTON.—*Chirology* and *Chiromancy* are two very different sciences: the former being the art and practice of communicating thought by certain movements of the hand and fingers, and the latter being the *pretended* art of foretelling a person's fortune by the lines of his hand.

SARAH.—*Cream Syrup* is made thus.—Mix finely powdered lump sugar with an equal weight of new cream. It will keep for a long time if put into bottles and closely corked and sealed over. It is commonly placed in two ounce wide-mouthed phials. It may thus be taken on long voyages, a fresh phial being used at every meal, as it will not keep after being opened.

AN INQUIRER may fix a drawing in chalk, by washing it dexterously over with milk from which all the cream has been carefully skimmed.

BADGWORTH.—A correspondent who dates his letter from this place, but whose name we cannot decipher, wishes for a copy of the rules of the "Wilts Friendly Society;" we are sorry that we cannot inform him where to obtain it. As several inquiries have been made for these rules, perhaps some correspondent will tell us where they may be obtained.

K. H. PLAISTER.—Covers for binding the two volumes of the "Illustrated Exhibitor" in one, will be prepared in due time.

J. RICHARDSON.—Your verses will appear shortly.

ALBEYNE.—The impressions of your coin were taken on the commonest bottle wax, instead of good sealing wax, in consequence of which they are reduced to powder, and are perfectly illegible.

J. SOWDEN (Devonport).—We know nothing of the publication to which you refer, and are therefore not answerable for the editorial neglect of which you complain.

All Communications to be addressed to the Editor, at the Office, Belle Sauvage Yard, London.

BOOKBINDING.

DESIGN FOR THE COVER OF A BIBLE; CARVED IN BOXWOOD BY MR. ROGERS, AND EXHIBITED AT THE CRYSTAL PALACE BY MESSRS. NISBET.

BOOKBINDING.

Books are often valued for their binding, rather than for their contents; and many a man possesses a fine library who has an empty head. Splendour in the binding of books is a taste which dates back from remote times. The rarity of manuscripts, and the ornaments of every kind with which they were enriched, rendered them so precious that they were exhibited upon the desks for the purpose of gratifying the sight and the pride of their possessors. Seneca said of them: *Pierisque libri non studiorum instrumenta sunt, ad edum ornamenta.*" But if these rich bindings, some beautiful models of which still exist in public libraries, were suitable before or soon after the invention of printing, when books were almost as scarce as manuscripts, they are an anachronism when we are compelled to keep them so closely in our libraries. These magnificent covers, executed for the greater part by jewellers, who enriched them with reliefs in gold, silver, steel, and ivory, with precious stones, with enamels, and with decorations of every kind, could only be suitable for the missals and the antiphoners placed in churches. On seeing at the Exhibition, inclosed in the beautiful articles of furniture from Austria, the superb bindings in ivory, carved with so much art, or in gold and silver inlaid with gems, and enamels still more precious, it might be supposed that these were shrines inclosing sacred relics, or even the casket of Darius, in which Alexander deposited the poems of Homer.

Between simple bindings and those in which costliness is carried to extreme, a medium may be found in which lovers of books delight, combining elegance with solidity and simplicity, qualities preferable to richness of gilding. At the period of the *Renaissance*, artists of great taste executed admirable bindings for kings, princes, and a few rich and learned *amateurs*, whose names are preserved in the recollection of bibliopolists, who maintained in their houses binders whose tastes they directed.* Some chose the Byzantine style, but the greater portion adopted the style called the *Renaissance*. After them, the binders confined themselves to imitation, applying this style of ornament indiscriminately to every species of book.

Some attempts have been made to submit bookbinding to general principles, and to adapt the binding either to the period in which the books were written, or according to the subjects of which they treat, and a variety of ornaments have been devised in consequence. The idea, though a happy one, is not new, and has not generally been adopted. We have seen the cap of liberty, the owl, and the wand of Æsculapius, applied to bindings with respect to the contents of the works. The Egyptian, Grecian, and Roman ornamental emblems have been resorted to, as well as the Gothic, borrowed from monuments. Others have thought it desirable that bookbinders, departing from the beaten track, should endeavour to give a more peculiar character to their bindings, a character which should mark our era; and that thus the choice of colours—more or less sombre or more or less bright—might always be in accordance with the nature of the subject treated of in the books. They contend that this system would at once afford, in a large library, the advantage of facilitating the search for books by immediately striking the eye: that it is also to be desired that certain styles of ornament should indicate whether such a work, on Egypt for example, belonged to the Pharaonic, the Arabic, the French, or the Turkish era; and that it should be the same with ancient Greece, Byzantine Greece, or modern Greece, the Rome of the Cæsars, or the Rome of the Popes.

All these suggestions may be useful if they are placed under the control of taste and judgment.

Modern bookbinding is carried on in England on a scale of such magnitude as the binders of former times could scarcely have foreseen. The production of books greatly exceeds that of any former period, and has caused the application of so much machinery to bookbinding, that it may fairly be said to have become a manufacturing business. Books, handsomely bound, gilt, lettered, embossed, and otherwise ornamented, no longer depend upon individual skill; but are produced, with extraordinary rapidity, by the aid of machinery. Mr. Burn, of Hatton-garden, first introduced rolling machines to supersede hammering; the iron printing-presses of Hopkinson and others were altered to form arming-presses, by which block-gilding, blind-tooling, and embossing, can be effected with accuracy and rapidity. Leather covers, embossed in elaborate and beautiful patterns by means of powerful fly-presses, were introduced by M. Thouvenin, in Paris, about 25 years ago; and almost simultaneously in this country by Messrs. Remnant and Co., and by Mr. De La Rue, who were quickly followed by others. Embossed calico was also introduced about the same period, by Mr. De La Rue; hydraulic presses, instead of the old wooden screw-presses; Wilson's cutting-machines, which supersede the old plough; the cutting-tables with shears, invented by Mr. Warren De La Rue, and now applied to squaring and cutting millboards for book covers: all these means and contrivances, indispensable to large establishments, prove that machinery is one of the elements necessary to enable a binder on a large scale to carry on that business successfully.

Binding in cloth-boards is carried on with such rapidity by houses like the Remnants, the Leightons, the Westleys, and others, that 1,000 volumes can be put in cloth, gilt, in *six hours* provided the covers be previously got ready, and this can be done in less than two days!

* This is probably the cause which has kept us in ignorance of the names of these artists.

SONGS FOR THE PEOPLE.

ORIGINAL AND SELECTED.

No. XV.—THE MIDNIGHT CHIME.

BY JOHN RICHARDSON.

Hark! the great clock strikes midnight,
Telling how wears the time,
While I listen—sit and listen—
Filling a page with rhyme;
And my heart it feels less weary,
And my bent head grows less drowsy,
As I listen to the chime.

Ah! and what says the great clock?
It tells me of wasted time—
Oh! the waters I might have breasted,
While I revell'd in the slime!
And it speaks in gentle sadness,
Till my life seems all like madness,
As I listen to the chime.

And it bears my earnest spirit
Away on the stream of time;
And deeds that once seem'd guiltless,
Change colour and look like crime:
And it speaks in solemn warning,
Of a night that knows no morning:
And so dies away the chime.

And what does my great heart answer?
It speaks of the coming time;
And it swears to atone for a mis-spent youth,
And a manhood's wasted prime:
No tears for its follies streaming;
But an age its youth redeeming—
Not vainly hath peal'd the chime.

DIFFICULTY.—The word "difficulty" is simply a relative term. "There are a thousand difficulties in the way," is true. "There is no difficulty at all," is also true. The truth of the statement, in each case, depends upon the speaker. There is no difficulty in the thing to be done; the difficulty lies solely in the inability of the proposer. That little child is struggling hard to lift the footstool on which it has been sitting, it cannot. Whence the difficulty? That blind old man makes serious "sport" to thousands, by hurling an amphitheatre to the ground. You could not have done it. Why not? Samson found no difficulty. One of the current fallacies of society is, "the thing cannot be done." Yes, it can. Anything can be done, provided it do not involve a contradiction in terms, or a violation of immutable law. Material difficulties will not yield to material power, except by a very slow process; but bring in mind, and embody it in art, and the difficulty vanishes. Mind masters matter, and art is mind in action.

UNCLE TIM AND MASTER JAMES.

BY MRS. HARRIET BEECHER STOWE,

Authoress of "Uncle Tom's Cabin," etc.

IN THREE PARTS.

PART THE SECOND.—*James makes himself agreeable to more persons than one.—George Griswold, the Minister.—James becomes serious.*

Accordingly, the late sunshine of that afternoon shone full on the yellow buttons of James as he proceeded to the place of conflict. It was a bright, beautiful evening. A thunder-storm had just cleared away, and the silver clouds lay rolled up in masses around the setting sun; the rain drops were sparkling and winking to each other over the ends of the leaves, and all the blackbirds and robins, breaking forth into song, made the little green valley as merry as a musical box.

James's soul was always overflowing with that kind of poetry which consists in feeling unspeakably happy; and it is not to be wondered at, considering where he was going, that he should feel in a double ecstacy on the present occasion. He stepped gaily along, occasionally springing over a fence to the right, to see whether the rain had swollen the trout-brook; or to the left, to notice the ripening of Mr. Somebody's water-melons; for James always had an eye on all his neighbours' matters as well as his own.

In this way he proceeded till he arrived at the picket-fence that marked the commencement of Uncle Tim's ground. Here he stopped to consider. Just then, four or five sheep walked up, and began also to consider a loose picket, which was hanging just ready to drop off, and James began to look at the sheep. "Well mister," said he, as he observed the leader judiciously drawing himself through the gap, "in with you, just what I wanted;" and, having waited a moment, to ascertain that all the company were likely to follow, he ran with all haste towards the house, and swinging open the gate, pressed all breathless to the door.

"Uncle Tim, there are four or five sheep in your garden." Uncle Tim dropped his whetstone and scythe.

"I'll drive them out," said our hero; and with that, he ran down the garden, and made a furious descent on the enemy; bestirring himself, as Bunyan says, "lustily and with good courage," till every sheep had skipped out much quicker than it had skipped in; and then, springing over the fence, he seized a great stone, and nailed on the picket so effectually, that no sheep could possibly encourage the hope of getting in again. This was all the work of a minute; and he was back again, but so exceedingly out of breath that it was necessary for him to stop a moment and rest himself. Uncle Tim looked ungraciously satisfied.

"What under the canopy set you to scampering so?" said he; "I could a driv' out them critturs myself."

"If you are at all particular about driving them out yourself, I can let them in again," said James.

Uncle Tim looked at him with an odd sort of twinkle in the corner of his eye.

"I suppose I must ask you to walk in," said he.

"Much obliged," said James, "but I am in a great hurry." So saying, he started in very business-like fashion towards the gate.

"You had better just stop a minute."

"Can't stay a minute."

"I don't see what possesses you to be all the while in such a hurry; a body would think you had all creation on your shoulders!"

"Just my situation, Uncle Tim," said James, swinging open the gate.

"Well, at any rate have a drink of cider, can't ye?" said Uncle Tim, who was now quite engaged to have his own way in the case.

James found it convenient to accept this invitation, and Uncle Tim was twice as good-natured as if he had stayed at the first.

Once fairly forced into the premises, James thought fit to forget his long walk and excess of business, especially as about that moment Aunt Sally and Miss Grace returned from an afternoon call. You may be sure that the last thing these respectable ladies looked for was to find Uncle Tim and Master James *tête-à-tête* over a pitcher of cider; and when, as they entered, our friend looked up with something of a mischievous air, Miss Grace was so puzzled that it took her at least a quarter of an hour to untie her bonnets strings. But James stayed and acted the agreeable to perfection. First he must needs go down into the garden to look at Uncle Tim's wonderful cabbages, and then he promenaded all around the corn-patch, stopping every few moments and looking up with an appearance of great gratification, as if he had never seen such corn in his life; and then he examined Uncle Tim's favourite apple-tree with an expression of wonderful interest.

"I never!" he broke forth, having stationed himself against the fence opposite to it; "what kind of an apple-tree is that?"

"It's a bell-flower, or something another," said Uncle Tim.

"Why where did you get it? I never saw such apples!" said James, with his eyes still fixed on the tree.

Uncle Tim pulled up a stalk or two of weeds and threw them over the fence, just to show that he did not care anything about the matter, and then he came up and stood by James.

"Nothing so remarkable, as I know on," said he.

Just then, Grace came to say that supper was ready. Once seated at table, it was astonishing to see the perfect and smiling assurance with which James continued his addresses to Uncle Tim. It sometimes goes a great way towards making people like us, to take it for granted that they do already, and upon this principle James proceeded. He talked, laughed, told stories, and joked with the most fearless assurance, occasionally seconding his words by looking Uncle Tim in the face with a countenance so full of good-will as would have melted any snow-drift of prejudices in the world.

James also had one natural accomplishment, more courtier-like than all the diplomacy in Europe, and that was, the gift of feeling a real interest for anybody in five minutes; so that, if he began to please in jest, he generally ended in earnest. With great simplicity of mind, he had a natural tact for seeing into others, and watched their motions with the same delight with which a child gazes at the wheels and springs of a watch, to "see what it will do."

The rough exterior and latent kindness of Uncle Tim were quite a spirit-stirring study: and when tea was over, as he and Grace happened to be standing together in the front door, he broke forth,

"I do really like your father, Grace!"

"Do you?" said Grace.

"Yes, I do. He has something in him, and I like him all the better for having to fish it out."

"Well, I hope you will make him like you," said Grace, unconsciously; and then she stopped, and looked a little abashed.

James was too well-bred to see this, or look as if Grace meant any more than she said—a kind of breeding not always attendant on more fashionable polish,—so he only answered,

"I think I shall, Grace; though I doubt whether I can get him to own it."

"He is the kindest man that ever was," said Grace; "and he always acts as if he were ashamed of it."

James turned a little away, and looked at the bright evening sky, which was glowing like a calm golden sea, and over it was the silver new moon, with one little star to hold the candle for her. He shook some bright drops off from a rose-bush near by, and watched to see them shine as they fell, while Grace stood very quietly waiting for him to speak again.

"Grace," said he, at last, "I am going to college this fall."

"So you told me yesterday," said Grace.

James stooped down over Grace's geranium, and began to busy himself with pulling off all the dead leaves, remarking in the meanwhile,

"And if I do get your father to like me, Grace, will you like me too?"

"I like you now very well," said Grace.

"Come, Grace, you know what I mean," said James, looking steadfastly at the top of the apple-tree.

"Well, I wish, then, you would understand what I mean, without my saying any more about it," said Grace.

"Oh! to be sure I will," said our hero, looking up with a

very intelligent air; and so, as Aunt Sally would say, "the natter was settled, with no words about it."

How shall we narrate how our friend James, as he saw Uncle Tim approaching the door, had the impudence to take out his flute, and put the parts together, screwing it round and fixing it with great composure?

"Uncle Tim," said he, looking up, "this is the best flute that ever I saw."

"I hate them tooting things," said Uncle Tim, snappishly.

"I declare! I wonder how you can!" said James, "for I do think they exceed—"

So saying, he put the flute to his mouth, and run up and down a long flourish.

"There! what think you of that?" said he, looking in Uncle Tim's face with much delight.

Uncle Tim turned and marched into the house, but soon faced to the right-about and came out again, for James was fingering "Yankee Doodle"—that appropriate national air for the descendants of the Puritans.

Uncle Tim's patriotism began to bestir itself; and now, if it had been anything, as he said, but "that 'ere flute"—as it was, he looked more than once at James's fingers.

"How under the sun could you learn to do that?" said he.

"Oh, it's easy enough," said James, proceeding with another tune; and, having played it through, he stopped a moment to examine the joints of his flute, and in the mean time addressed Uncle Tim: "You can't think how grand this is for pitching tunes—I always pitch the tunes on Sunday with it."

"Yes; but I don't think it's a right and fit instrument for the Lord's house," said Uncle Tim.

"Why not? It is only a kind of a long pitch-pipe, you see," said James; "and, seeing the old one is broken, and this will answer, I don't see why it is not better than nothing."

"Why, yes, it may be better than nothing," said Uncle Tim; "but, as I always tell Grace and my wife, it 'aint the right kind of instrument, after all: it's not solemn."

"Solemn!" said James; "that is according as you work it: see here, now."

So saying, he struck up Old Hundred, and proceeded through it with great perseverance.

"There, now!" said he.

"Well, well, I don't know but it is," said Uncle Tim; "but, as I said at first, I don't like the look of it in meeting."

"But yet you really think it is better than nothing," said James, "for, you see, I could not pitch my tunes without it."

"Maybe 'tis," said Uncle Tim; "but that is not saying much."

This, however, was enough for Master James, who soon after departed, with his flute in his pocket, and Grace's last words in his heart; soliloquizing as he shut the gate, "There, now, I hope Aunt Sally won't go to praising me, for, just so sure as she does, I shall have it all to do over again."

James was right in his apprehension. Uncle Tim could be privately converted, but not brought to open confession; and when the next morning Aunt Sally remarked, in the kindness of her heart,

"Well, I always knew you would come to like James," Uncle Tim only responded, "Who said I did like him?"

"But I'm sure you seemed to like him last night."

"Why, I couldn't turn him out of doors, could I? I don't think nothing of him but what I always did."

But it was to be remarked that Uncle Tim contented himself at this time with the more general avowal, without running into particulars, as was formerly his wont. It was evident that the ice had begun to melt, but it might have been a long time in dissolving, had not collateral incidents assisted.

It so happened that, about this time, George Griswold, the only son before referred to, returned to his native village, after having completed his theological studies at a neighbouring institution. It is interesting to mark the gradual development of mind and heart, from the time that the white-headed, bashful boy quits the country village for college, to the period when he returns, a formed and matured man; to notice how gradually the rust of early prejudices begins to cleave from him; how his opinions, like his hand writing, pass from the cramped and limited forms of a country school, into that confirmed and characteristic style which is to mark the man for life. In George this change was remarkably striking. He was endowed by nature with uncommon acuteness of feeling and fondness for reflection: qualities as likely as any to render a child backward and uninteresting in early life.

When he left Newbury for college, he was a taciturn and apparently phlegmatic boy, only evincing sensibility by blushing, and looking particularly stupified whenever anybody spoke to him. Vacation after vacation passed, and he returned more and more an altered being; and he who once shrunk from the eye of the deacon, and was ready to sink if he met the minister, now moved about among the dignitaries of the place with all the composure of a superior being.

It was only to be regretted that, while the mind improved, the physical energies declined, and that every visit to his home found him paler, thinner, and less prepared in body for the sacred profession to which he had devoted himself. But now he was returned, a minister, a real minister, with a right to stand in the pulpit and preach; and what a joy and glory to Aunt Sally, and Uncle Tim, if he were not ashamed to own it.

The first Sunday after he came, it was known far and near that George Griswold was to preach; and never was a more ready and expectant audience. As the time for reading the first psalm approached, you might see the white-headed men turning their faces attentively towards the pulpit; the anxious and expectant old women, with their little black bonnets, bent forward to see him rise. There were the children looking, because everybody else looked; there was Uncle Tim in the front pew, his face considerately adjusted; there was Aunt Sally, seeming as pleased as a mother could seem; and Miss Grace, lifting her sweet face to her brother, like a flower to the sun; there was our friend James in the front gallery, his joyous countenance a little touched with sobriety and expectation: in short, a more embarrassingly attentive audience never greeted the first effort of a young minister. Under these circumstances, there was something touching in the fervent self-forgetfulness which characterised the first exercises of this morning, something which moved every one in the house.

The devout poetry of his prayer, rich with the orientalism of Scripture, and eloquent with the expression of strong yet chastened emotion, breathed over his audience like music, hushing every one to silence, and beguiling every one to feeling. In the sermon there was the strong intellectual nerve, the constant occurrence of argument and statement, which distinguishes a New England discourse; but it was touched with life by the intense, yet half-subdued, feeling with which he seemed to utter it. Like the rays of the sun, it enlightened and melted at the same moment.

The strong peculiarities of New England doctrine, involving, as they do, all the hidden machinery of mind, all the mystery of its divine relations and future progression, and all the tremendous uncertainties of its eternal good or ill, seemed to have dwelt in his mind, to have burned in his thoughts, to have wrestled with his powers, and they gave to his manner the fervency almost of another world; while the exceeding paleness of his countenance, and a tremulousness of voice that seemed to spring from bodily weakness, touched the strong workings of the mind with a pathetic interest, as if the being so early absorbed in another world could not be long for this.

When the services were over, the congregation dispersed with the air of people who had *felt* rather than *heard*; and all the criticism that followed was similar to that of old Deacon Hart, an upright, shrewd man, who, as he lingered a moment at the church door, turned and gazed with unwonted feeling at the young preacher.

"He's a blessed creature!" said he, the tears actually making their way to his eyes; "I have not been so near heaven this many a day. He's a blessed creature of the Lord, that's my mind about him!"

As for our friend James, he was at first sobered, then deeply moved, and at last wholly absorbed by the discourse; and it was only when meeting was over that he began to think where he really was. With all his versatile activity, James had a greater depth of mental capacity than he was himself aware of, and he began to feel a sort of electric affinity for the mind that had touched him in a way so new; and when he saw the mild minister standing at the foot of the pulpit stairs, he made directly towards him.

"I do want to hear more from you," said he, with a face full of earnestness, "may I walk home with you?"

"It is a long and warm walk," said the young minister, smiling.

"Oh, I don't care for that, if it does not trouble you," said James; and leave being gained, you might have seen them slowly passing along under the trees, James pouring forth all the floods of inquiry which the sudden impulse of his mind had brought out, and supplying his guide with more questions and problems for solution than he could have gone through with in a month.

"I cannot answer all your questions now," said he, as they stopped at Uncle Tim's gate.

"Well, then, when will you?" said James, eagerly. "Let me come home with you to-night?"

The minister smiled assent, and James departed so full of new thoughts, that he passed Grace without even seeing her. From that time a friendship commenced between the two, which was a beautiful illustration of the affinities of opposites. It was like a friendship between morning and evening: all freshness and sunshine on one side, and all gentleness and peace on the other.

(To be continued.)

A TRIP TO MOUNT ST. BERNARD.

On a bright, smiling morning in the month of September, 18—, we left Geneva on a trip to Mount St. Bernard. The deck of the little steamer was crowded with passengers, representatives of almost every nation of the globe. the garrulous Frenchman; the taciturn Englishman; the thinking, smoking German (by the way, I really believe the weed induces thought); the canny Scotsman; the swarthy Spaniard; the dignified Italian; the restless Russian, the inquiring American; each typified his race, and formed the "dramatis personæ" in the little social *rôle* to be performed during the few hours we were to be on board.

The blue waters of the lake, reflecting the beams of a morning sun, danced gaily on, soon to swell the current of the turbid Rhone, which rushes impetuously forward just beyond the outskirts of the city, and is lost to view after its junction with the Arve, a few miles below the town. The last friendly greetings over, the steamer launched forth upon the bosom of the lake, and we sped along,—the spotless, peerless peak of Mont Blanc on our right, and the dark Jura extending like a rampart on our left.

Geneva Lake is about forty miles long, in the form of a crescent. Its shores are dotted with little villages, whose whitened spires add loveliness to the scene. On reaching Lausanne, which is about three quarters of its length, we immediately engaged a land-conveyance, and, after much bargaining and talking (the only way to prevent extortion), we started on our journey. A few miles from Lausanne is the far-famed castle of Chillon, immortalised by the pen of Byron and the imprisonment of the heroic Bonnevard. It stands upon the very edge of the lake, whose waters, close under its walls, are eight hundred feet deep, and commands the pass of the mountains, from the canton of Valais to the Vaud. We were conducted through it, and found that Byron's description was true to the letter. The seven columns look as solid and firm as though put up yesterday, and the Gothic ceiling gives the place rather a pretty effect. The partitions formerly existing between the cells have been taken away, and the gloom and dreariness of the apartment in a measure dispelled. The pillar and the ring to which Bonnevard was chained were pointed out to us, and the effect of the cankering teeth of the iron is seen upon the flinty floor: the rock is much worn around the column where he paced to and fro, the chain allowing him to take only three steps, and the pillar is covered with the names of illustrious men, mementoes, as it were, of the sufferings of the hardy Swiss patriots. The walls are exceedingly thick, and the melancholy moaning of the waters must have sounded the requiem of many a poor wretch. The windows are very narrow, and guarded by thick iron bars. We were introduced by our guide into a dark room, called the "Chamber of Torture." It was here that the condemned took his final exit from this world, through a trap-door which precipitated him down a pit, its sides armed with sharp spikes, into the lake below.

Journeying onward, on the following day we reached Martigny, situated at the foot of Mount St. Bernard, where we changed our conveyance for a "char-à-banc," a vehicle holding three. The "char-à-banc," is like a small stage cut in two, lengthwise, with a seat only on one side. It is so constructed in consequence of the narrowness of the road, and is peculiarly adapted to persons of a nervous temperament facing the side of the road as you do, you have the full benefit of the ravines and precipices which border the way; and the effect is often heightened by the mischievousness of "cocher," who drives as near the edge as possible, urging on his mules with shouts and the lash.

In proportion as we ascended, the scene changed; the green of the fields merged into dusky brown, and the trees were represented by stunted bushes of a sickly appearance. After a tedious ride of several hours, we reached Liddes, a miserable village, a sort of half-way house, where we dined, and mounted mules to accomplish the remainder of the ascent, as the path is so narrow and steep that waggons are impracticable. At Geneva we complained of the heat. we now wrapped our cloaks and blanket-shawls around us, shivering with the cold. As we journeyed upward, the scene became more and more wild. The mountain-torrent seemed literally jammed between the rocks, far down in the depths below, foaming and hissing at its confinement. The few stunted bushes finally disappeared, and we at last emerged upon as desolate and gloomy a tract as I ever beheld. What before had been a road, was now a simple goat-path, broken and rugged. We followed nearly in the foot steps of Napoleon Buonaparte; and the summit of a small peak, overhanging an immense chasm, was pointed out to us as the spot from which he had nearly fallen, while urging on his tired troops, during one of his Italian campaigns.

Some little distance from the Hospice, the track is indicated by tall posts, with fingers pointing to the summit of the mountain, to guide the bewildered traveller when overtaken by the snow-storm. The nearer we approached the top, the more awfully grand the scene became, surrounded as we were by nature's cloud-capped towers The dead silence which reigned in the air was almost insupportable; and the rain which commenced falling, enveloping everything in a thick mist, and benumbing us with cold, did not at all improve our feelings. Still, onward and upward were the words; and I doubt whether the emperor himself urged forward his tired troops with more energy than we did our lazy, stumbling mules. This exercise saved us, perhaps, from freezing. At last, after ascending a steep path, with a 'mer de glace' below us, nearly fifty feet in depth, we reached the Hospice, the shades of night having already settled upon the mountain-tops.

At the entrance we were met by one of those world renowned animals, the St. Bernard dog, who, wagging his bushy tail, walked in a dignified manner up to us in token of welcome. We patted his huge head, and he disappeared through the doorway, as if to apprise the inmates of the approach of strangers. He was of a dark yellow colour, broad-chested, with short, thick hair, fitted by nature to brave fatigue and the elements. On entering the hall, and ringing a bell, the rope of which was suspended from the wall, we were received with exceeding politeness by one of the monks, who ushered us into the salle-à-manger, heaping upon the blazing hearth large billets of wood. We gathered around the fire, not needing an invitation, for we were shivering with cold. The wind howled and moaned around the building, and heavy drops of rain and hail pattered loudly against the window-panes. A deep gloom seemed to have settled upon us all (our party was now increased by the arrival of some gentlemen from the Italian side); and it was not at all dispelled when we heard the solemn chimes of the chapel pealing forth, sending their iron voices to be echoed and re-echoed by the peaks around. It was the hour of prayer: and we listened to the low chant of the monks, as they slowly moved along the vaulted passage to the chapel, seeming almost like voices from the tomb. The effect was inexpressibly sublime. There they were, separated from the external world, bound by a vow to devote the best portion of their lives to deeds of mercy and benevolence; engaged in devotion, holding converse with their Maker, who seeth in secret, almost, I may say, face to face; the elements at war around them, sending their cold and chilling breath through the gloomy building, far removed from the habitations of men. Too much praise cannot be awarded them, and their cause should enlist the sympathies of the world at large.

After a coarse and homely meal, seasoned however with a prodigious appetite, we retired to rest; but sleep was a tardy visitor, so deep was the impression made upon me by all that I had heard and seen.

The Hospice is four stories high; oblong, and perfectly plain, with a wide hall running its entire length. Its walls are very thick, so as to resist the avalanche, which occasionally comes thundering down from the peaks around, and stands upon a base, surrounded

on almost every side by lofty crags. There are fifteen monks, who occupy the main building, and six domestics, who live in a small house a few rods distant. The fraternity is bound by a vow to remain fifteen years engaged in their philanthropic calling. Few, however, can endure the rigour of the winters, but are obliged to descend to a more congenial climate to recruit their shattered health. In the wall of the hall is a large marble tablet, with an inscription in honour of Napoleon; several pictures of him are suspended in the rooms, and the monks seem to adore him.

Close to the Hospice is the "morgue," or charnel-house, where the bodies of those found dead upon the mountain-passes are deposited. Several skeletons, or rather dried remains (the extreme cold acting upon them in a measure like petrifying earth, or embalming compositions), their tattered garments strewn round about them, stood in ghastly array against the walls; and in one corner we saw the remains of a mother and her child, locked in death's cold embrace, perhaps never to separate until the last trump shall summon them to their home in the skies. Many are the sad relics shown the traveller in this gloomy abode, but the sight elicits tears of pity rather than disgust.

On the morning of our descent the ground was covered with snow, which was falling in such fine flakes as almost to resemble mist, making it difficult to see a few feet in advance. Before leaving, we were conducted to the chapel, standing at one extremity of the building. It is prettily ornamented with sacred relics and marble altars. I would here remark, that no charge is made by the monks for receiving and entertaining travellers. The poor worn pilgrim is safely housed, and sent on his way rejoicing; but visitors who desire it are shown the charity-box in the chapel, and leave whatever contribution they may wish. Many wealthy families make yearly pilgrimages to the Hospice, to deposit their contributions.

One of the objects which most interested us was [illegible] the monument erected by Buonaparte to the memory of the young Desaix, who was mortally wounded at the battle of Marengo. He fell at the commencement of the action, having time only to say "Go, tell the First Consul that I die with regret at not having done enough to live in posterity!" During his military career, General Desaix had had four horses killed under him, and received three wounds. He was a mere youth, and had just rejoined the head quarters of the army, burning with a desire for battle. The evening previous he remarked to his aides-de-camp "It is now a long time since I have fought in Europe; bullets do not know me more; something is about to happen." When his death was announced to the First Consul, in the midst of a terrific fire, he only remarked, "Why am I not allowed to weep his loss?" About a month after the action, his body was transported to Mount St. Bernard, having been previously taken to Milan to be embalmed.

Napoleon occupied three days in crossing St. Bernard, which offered serious obstacles to the heroic courage of the French troops. His whole army came very near annihilation in passing, on the opposite side, the ford of Bard, considered impregnable, by reason of its position on the summit of a peak, and closing the passage of a deep valley. He dug a passage in the rock, beyond the reach of cannon, which served his infantry and cavalry; and, enveloping the wheels of his waggons and cannon with straw, on a dark night forced his way through the little town of Bard, although exposed to the fire of a battery of twenty-two pieces, which, playing upon him at random, did little damage to the republican troops.

After bidding our kind host adieu, we set out, our guides leading the mules, the descent being so slippery as to render this precaution necessary. The cold penetrated to such a degree, that some of our party dismounted to restore the circulation of blood. Our hands were swollen like small boxing-gloves, and we walked the whole distance to Liddes, enjoying the comforts of exhausted breath, tired limbs, and wet, frozen feet. The descent to Martigny was made in about three hours, and we hailed with joy the first sight of the Hotel de la Tour, our stopping-place for the night.

On our return to Geneva, we took the opposite side of the lake from that by which we came, sleeping at the little village of Eriau. The road was quite circuitous, passing through defiles which shut us from the external world, and again approaching close to the lake's edge, the soft music of whose gentle ripples, as they plashed upon its pebbly shore, formed a striking contrast to the hoarse voice of the mountain-torrent. A great part of the way, the road was shaded by the Madeira-nut tree, whose branches, meeting overhead, formed a leafy avenue, sheltering us from the [illegible] We passed groups of peasantry, in their picturesque costume, gathering the nuts, and collecting them in large sacks. Pretty little farms, fields of grain, orchards, dotted the landscape; and through the long, umbrageous vista we saw spires, the molten waters of the lake, and Mont Blanc in the dim distance. It was a beautiful picture; and we found it a difficult matter which to admire most, Nature in her wild and rugged majesty, or extended as she was before us, in soft and gentle mien. Switzerland is truly a romantic country; and Savoy, which partakes much of its character, will not suffer in the comparison.

ALFRED THE GREAT.

THE great names of history come through the mighty past like bright stars in a wintry sky, all the more splendid and attractive from contrast with the surrounding darkness; and the intellectual giants of the earliest times—Homer, Plato, Charlemagne, Alfred—claim for themselves, and claiming obtain, the love and homage of all future ages. This is natural; for hero-worship is the one great characteristic of humanity—the attribute common to all nations, kindreds and tongues; the mind-chain that binds alike the rich and poor, and fuses into one general, never-failing, unmistakable, family likeness all the peoples of the earth, both past and present.

Two master-minds of England and America, Carlyle and Emerson, have recognised this principle, and given to the world, in deep utterances, their dictum that in the belief in great men exists the master-note of progress, the touchstone of love, ambition and chivalry. It is good to believe in the greatness of humanity: the mythology of the ancients abounds in demi-gods,—the songs of the [illegible] poets tell of their wondrous deeds, and the annals of all nations' infancy teem with relations of great deed and noble actions, ever and anon performed by men who lived in and yet *beyond* their age. "The gods of fable," says Emerson, "are the shining monuments of great men. I count him a great man who inhabits a higher sphere of thought, into which other men rise with labour and difficulty. He is great who is what he is from nature, and never reminds us of others." And such a man was Alfred, at once the law-giver, warrior, poet, priest, and king of his own time and people—the embodied idea of learning and greatness, and his name, albeit but seldom spoken, bears a kind of spell about it to take us back a thousand years, and teach us, in the comparison of his time with ours, to acknowledge how much we owe to his endeavours.

> "A thousand years ago,
> A mighty spirit came,
> To earn himself, through weal and woe,
> An everlasting name."

And, sitting by our fire-sides—with floors, no longer rush-strewn, and with wisdom and learning no longer confined to monks and lawyers—we may take our well-thumbed "History" in our hands, and learn from the story of the Saxon king, many a lesson of fortitude and bravery; patience under suffering, and hope in affliction; and many an incentive to virtue, truth, charity, meekness, and reliance! Far away in time, but near enough for example; removed in destiny and sphere of action, but living with us still in the spirit of all great and noble deeds, the history of the English lawgiver will continue to be read with interest through all time and by all sorts of people. What matters it to tell that history here? Of what avail to speak of his early talent and his noble birth—his genius, first roused by the recital of rude Saxon poems, sitting on his mother's knee—(oh, glorious queen, mother of our king, how much we owe thee!—but no less, perhaps, though, than every son of every virtuous mother could say of his own parent)—his battle with the rude usurping Danes—his despair and flight, concealed in a shepherd's hut, and unwittingly reproved because his thoughts were distant from the burning cakes upon the hearth—his noble daring and courageous spirit, when, in fierce conflict, he overcame the great Danish Hubba, and seized the said-to be enchanted standard of his foe—his bold spirit in venturing disguised into the Danish camp, and singing before the warlor Guthrum in his tent, and, marking the supine security of his enemies, making haste to call his followers together, and meeting them near Selwood Forest, boldly marching against the invaders of his country—his victories and his triumphs—his magnanimity and noble bearing with the conquered—his energy in re-building his ruined cities, and founding schools and colleges for his people—his love of justice and his practice of mercy—his propagation of matchless code of laws, and

his institution of civil rights and military discipline—his encouragement of morality and good government—his victory, in his own person, over selfishness and love of power—his labours as an author, a warrior, a law-giver, and a monarch—his prudence, justice, learning, valour, and death;—are they not written in the chronicles of the kings of England?

"All hail, our own, our ancient peerless boast!
From thee thy Britain loves her all to date;
Proud of a king, so wise, so good, so great,
Who gave the liberties we value most,
The sacred rights we ohildly venerate,
In rich abundance round our sea-girt coast;
Where is thy tomb among us? where the spot
Ennobled by some record of thy worth,
True father of thy country? Have we lost
All love of thee? Hath England then forgot
Her patriot-prince, her law-giver, her sage,
Who taught her, nourished her, and sent her forth
Rejoicing on her way, from age to age,
Queen of the seas, and empress of the earth?"

Alfred was born at the village of Wantage, in Berkshire, on the 25th of October, 849, and died in the year 901, in the full strength of his faculties, after a glorious reign of twenty nine years and a-half. He was the youngest of the five sons of Ethelwolf, the second king of England after the union of the kingdoms of the Saxon Heptarchy; three of his brothers—Ethelbald, Ethelbert, and Ethered, the first two of whom conjointly shared the throne—reigned before him, and he was twenty-two years of age when he succeeded to the cares and grandeurs of monarchy. he is distinguished from all other of our kings by the appellation of THE GREAT.

"'Tis just a thousand years to-day—oh, years are swift and brief!—
Since first uprose in majesty the day-star of our chief,
Since Wantage tired a wondrous child, whom God in truth made the cause
Of half the best we boast in British liberties and laws.

Arouse thee, royal Alfred! in majesty look round,
On every shore, in every clime, thy conquering sons are found!
By kingdoms and dominions, by continents and isles,
The Anglo-Saxon realm is *fifty hundred thousand miles*.

Aye, smile on us, and bless us in thy loftiness of love!
The name of Anglo-Saxon is all other names above
By peoples and by nations, by tribe and sept, and clan,
Two hundred millions claim it in the family of man!"*

To Alfred the Great, king of England, the old Latin maxim, *De mortuis nil nisi bonum* (let nothing but good be said of the dead), does *not* apply; for the historians have recorded no act of his which detracts from his character as a man or his honour as a king, and it would therefore be very difficult, at this distance of time, to say any harm of him. G. F. P.

* Martin F. Tupper.

GIANTS.

By a giant is generally understood a person of more than ordinary bulk and stature. The Holy Scriptures inform us that there existed giants in the antediluvian ages, but the passage from which the information has been obtained has been the subject of much controversy. But this is not the only place where they are mentioned, others name them, with their dimensions, as in the cases of Og, the King of Bashan, and Goliath of Philistia. In a memoir read before the Academy of Sciences at Rouen, M. Le Cas gives the following account of giants that are said to have existed in different ages.—"Rioland, a celebrated anatomist, who wrote in 1614, says, that some years before there was to be seen, in the suburbs of St. Germain, the tomb of the giant Isoret, who was 20 feet high. In Rouen, 1600, in digging about the ditches near the Dominicans, they found a stone tomb containing a skeleton, whose skull held a bushel of corn, and whose shin-bone reached up to the girdle of the tallest man there, being about four feet long, and consequently the body must have been 17 or 18 feet high. Upon the tomb was a plate of copper, whereon was engraved 'In this tomb lies the noble and puissant lord, the Chevalier Ricon de Valelmont, and his bones.' January 11, 1618, some masons, digging near the ruins of a castle in Dauphine, in a field which (by tradition) had long been called the giant's field, at the depth of 18 feet, discovered a brick tomb 30 feet long, 12 feet wide, and 8 feet high, on which was a grey stone, with the words *Theutobochus Rex* cut thereon. When the tomb was opened, they found a human skeleton entire, 25 feet and a half long, 10 feet wide across the shoulders, and five feet deep from the breast-bone to the back. His teeth were about the size each of an ox's foot, and his shin-bone measured four feet.

"Near Mazarino, in Sicily, in 1516, was found a giant 30 feet high; his head was the size of an hogshead, and each of his teeth weighed five ounces. Near Palermo, in the valley of Mazara, in Sicily, a skeleton of a giant 30 feet long was found in the year 1548; and another of 33 feet high in 1550; and many curious persons have preserved several of these gigantic bones."

But it is not our design to prove in the present paper that such beings have ever existed as those mentioned above (although there is sufficient evidence to prove these did exist), but we do maintain that one does exist whose power is infinitely superior to any of the race of Anak, or to a Hercules, or to any of those mentioned by Le Cas. Yes, a monster before whom mountains disappear into the shade of oblivion,—one who is capable of performing such prodigies as are unparalleled in the history of human affairs, and who, as a mighty ruler, exercises a great degree of power and influence over the kingdom of this world. We speak of the deeds of great warriors (heroes misnamed) of

"Achilles' wrath, to Greece the direful spring
Of woes unnumbered . . . . . .
That wrath which hurled to Pluto's gloomy reign
The souls of mighty chiefs untimely slain,"

but their actions are less than nothing compared with those of the giant of whom I am speaking. But his power is not devoted to such purposes as those of ancient time; instead of devoting it to the massacre and destruction of human life, he exercises it for the amelioration of the human race. And this giant is *Perseverance*. Let us now very briefly turn and view his labours in the history of our own country, let us look back for a few hundred years, when the land in which we dwell presented over its whole surface one field of contention and bloodshed, with scarcely any object sufficiently prominent to deserve attention or to excite interest,—the very midnight of the dark ages. And from this period we find, through the aid of Perseverance, the darkness gradually disappearing, and light's refulgent rays beaming forth. The crusades were unsuccessful in bringing about the object which they had in view; they were repeated from time to time for about 150 years, till seven armies had found their graves in the plains and mountains of the East—but they produced a beneficial effect. They introduced into Europe a taste for elegance and refinement. Many of the crusaders, returning from the East, where some of the remains of the civilisation and polish of the Greeks and of the Roman empire still lingered, brought along with them a relish for more refined manners than those to which they had hitherto been accustomed. Hence it is that, immediately after the crusades, ancient literature and the fine arts began to be cultivated assiduously. In the fourteenth century the dawn of literature became manifest in Europe. Petrarch, Boccaccio, and Froissart, on the continent, Geoffrey Chaucer in England, and Abutfeda, an Arabian geographer and historian, flourished. In the fifteenth century commenced that contest known in history by the name of the Reformation. The greatest instance of the accomplishments which can be effected through the instrumentality of Perseverance is exhibited in the person of Martin Luther, who is the immortal monument of the Reformation.

Besides the former, John Huss in Bohemia, Jerome of Prague, and Wickliffe in England, took the lead in promulgating the doctrines of the Reformation. By the aid of Perseverance, literature had been advancing with a steady but rapid pace over the whole continent. The celebrated art of printing had been discovered, about the year 1440, and brought to England by William Caxton, and was then beginning to exercise that influence over human transactions which is so wonderfully developed in the present day. In Italy, painting, statuary, and architecture, had reached their highest glory under Michael Angelo, Raphael, Titian, Correggio and others.

But another instance of persevering zeal, akin to that of Luther's, is disclosed in the character of Columbus, who in this period discovered the vast continent of America, which formed the principal feature of this era.

The seventeenth century is distinguished for the great struggle in our country for civil liberty with the kings of the Stuart family.

There are three features in the present century which must not be passed over negligently, as they manifest most fully the perfection to which Perseverance can bring whatever is blessed with his aid.

The first is the rapid improvement in science, and in the useful arts. Mathematics have been carried to such an extent, and have attained to a power and easiness of investigation, of which the ancients formed no conception. Astronomy, by the aid of mathematics and optics, has laid open to our examination the system of the universe; subjected the various heavenly bodies to weight and measurement; and accounted, with the utmost precision, not only for the phenomena known to the ancients, but for ten thousand others. Mental phenomena, also, and all other departments of knowledge connected with the conduct of the understanding, have been investigated on the principles of sound philosophy, and many most important truths have been established. Natural history, in

all its numerous branches, has been pursued with such ardour and success, as is altogether unexampled.

Political economy and chemistry may be said to have been created in this period. Geography, also, has explored almost every nook and corner of our planet; and while intellect has been on the march, addition has been made to the happiness and convenience of the human family. Machinery, in every department of labour, has been carried to high perfection. The invention of the steam-engine has placed at the disposal of man such power that it would be presumptuous in the extreme to assign limits to it, and the improvement in every department of art still going on is unprecedented in the history of mankind

The second feature of this period is the great progress that has been made in the translation of the Sacred Scriptures into the numerous languages of the world The Holy Scriptures had before this been translated at different times into Syriac, Arabic, and Coptic; but a great addition to these translations, especially into oriental languages, belongs to this period. By this means, men of different nations can become acquainted with each other's languages, and learn to act on similar principles, to a greater extent than has ever been witnessed.

The third remarkable feature of this period is the abolition, first of the slave trade, and afterwards of slavery in the British colonies This traffic in human beings commenced at a very early period The European settlers in America, in their cupidity for acquiring wealth from the mines, and consequently needing labourers before a sufficient number of people had grown up, had recourse to the wicked practice of sending ships to the coast of Africa, to obtain, by any means whatever, men, women, or children, and convey them across the Atlantic to their settlements. The prosecution of this most abominable traffic was the means of creating a mass of human misery and destitution which can scarcely be described, and what is most to be regretted is, that the encouragers of such a system were natives of a country professing the gentle and benign doctrines of Christianity. The zeal of a few benevolent persons was the means of opening the eyes of the British to the crimes of which they were guilty whilst they sanctioned such inhumanity, till at last the whole nation, roused to indignation, determined to wash its hands of the foul stain. And the manner in which this was done is very unique. The British nation purchased the freedom of the slave, and advanced twenty millions of pounds to set the wretched captives free.

After having given this somewhat general view of the labours of Perseverance, we will now select a few individual instances from the pages of biographical history, to prove, as I have before stated, that it is always willing and ready to render assistance to those who seek it, even when want of time, want of books, when poverty, ill health, and even imprisonment, are all enlisted among the various obstacles it will have to surmount.

We find the late Professor Heyne, of Gottingen, who was one of the greatest classical scholars of his own or any other age, had spent the first thirty-two or thirty-three years of his life not only in obscurity, but in an almost incessant struggle with the most distressing poverty. He had been born indeed amid the miseries of the lowest indigence, his father being a poor man, with a large family, for whom his best exertions were often unable to provide bread, and, to use Heyne's own words, "want was the earliest companion of his childhood;" he likewise says, "I well remember the painful impressions made on my mind by witnessing the distress of my mother, when without food for her children How often have I seen her, on a Saturday evening, weeping and wringing her hands, as she returned home from an unsuccessful effort to sell the goods which the daily and nightly toil of my father had manufactured." Yet we find that man in his latter days enjoying a degree of distinction, both in his own country and throughout Europe, of which scarcely any contemporary name in the department of literature could boast. And in 1812 he departed this life, after having placed himself nearly at the head of the classical scholars of his age, while he was loved and venerated as a father, not only by his numerous pupils, but by all ranks of his fellow citizens, who, on his death, felt that their university and city had lost what had been for half a century its chief distinction.

We find Valentine Duval—a very able and learned antiquary of the last century, and who at the time of his death held the office of keeper of the imperial medals at Vienna, as well as that of one of the preceptors to the prince, afterwards the Emperor Joseph II — was the son of a peasant, and lost his father when only ten years of age. He was then taken into the service of a farmer of the village; but being discharged from his service for some petty fault, he resolved to leave his native place altogether, that he might not be a burden to his mother He set out on his travels, without even knowing in what direction, or to what place he was going, in the beginning of a dreadful winter, and for some time begged in vain for a crust of bread and shelter against the inclemency of the weather, till, worn out with hunger and fatigue, he was at last taken in by a poor shepherd, who permitted him to lie down in a place where he shut up his sheep. We afterwards find him proceeding to Paris, not in the company of the poor shepherd, but in that of the Emperor Francis I. He was enabled in that great city to speedily distinguish himself, and eventually acquired a high standing among the literary men of the day.

Opie, the painter, one of our own countrymen, was taken from a saw-pit in Cornwall by Dr. Wolcot; and in a few years afterwards we find him residing in London, where he had attained great eminence as a portrait painter, and was admitted as an associate in the Royal Academy, and eventually elected professor of painting in that far-famed institution. William Hutton was born at Derby, where his father was a working wool-comber, burdened with a large family, for whom his utmost exertions scarcely sufficed to procure subsistence. "My poor mother," says he, in his own account of his life, "more than once, with one infant on her knee and several more hanging about her, have fasted a whole day; and when food arrived, she has suffered them with a tear to take her share; "at another time," he says, "we fasted from breakfast time one day till noon the next, and then dined upon nothing but flour and water boiled into a paste" At the age of seven years, he was sent to work in a silk mill, and being too small to reach the engine, a pair of huge pattens were fixed to his feet by order of the master, which he dragged about with him for a year, at that tender age he had to rise every morning at five o'clock and submit to a beating, whenever his master could make it convenient to spare time to give him one "On one occasion," says Hutton "he made a serious wound on my back, and on a succeeding punishment struck that wound in such a manner as nearly to produce mortification." Hutton arrived at the close of this weary bondage in his fourteenth year, when he was again bound for seven years to a stocking weaver, a man little preferable to the former, who half-starved and beat him, till, in his seventeenth year, he ran away from him, and begged his way to Birmingham After this it would occupy too much space and time to follow him through one-half even of the trials which awaited him for several years; but suffice it say that ultimately we find him in his old age reaping an ample compensation for all the adversity of his youth, respected by all who knew him, and elected, directly after the publication of his justly celebrated "History of Birmingham," a Fellow of the Antiquarian Society of Edinburgh, and although he was sixty years of age, when this his first work made its exit from the press, he lived to add to it a long list of others In order to prepare himself for the composition of his last, which was a description of the Roman Wall, he performed a journey on foot of above six hundred miles, at the age of seventy-eight, an account of which journey is published by his daughter, who accompanied him on horseback

The celebrated Bernard Palissy, to whom France was indebted, in the sixteenth century, for the introduction of the manufacture of enamelled pottery, one day by chance saw a beautiful enamelled cup, which had been brought from Italy. He was then struggling to support his family by painting, in which he was self taught, and it immediately occurred to him, that if he could discover the art of making these cups all his toil and difficulty would be at an end For some time he had little or nothing to expend upon the pursuit which he had so much at heart; but at last he happened to receive a considerable sum for a work which he had finished, and this enabled him to commence his researches. He spent the whole of his money, however, without meeting with any success, and he was now poorer than ever. Yet it was in vain that his wife and friends besought him to relinquish what they deemed his chimerical project. He borrowed more money, with which he repeated his experiments, and when he had no more fuel wherewith to feed his furnace, he sacrificed his chairs and tables to the purpose Still his success was very inconsiderable He was now obliged to give a person who had assisted him part of his clothes by way of remuneration, having nothing else left, and with his wife and children starving before his eyes, and by their looks, silently reproaching him as the cause of all their sufferings But he neither despaired, nor suffered his friends to know what he felt (for at heart Palissy was miserable indeed), but in the midst of it all preserved his wonted cheerfulness, and losing no opportunity of renewing his pursuit of the object which he all the while felt confident he should one day accomplish. And at last, after sixteen years of persevering exertion, his efforts were crowned with complete success, and his fortune made. And at the age of ninety years this extraordinary character ended his days for the sake of the Protestant religion within the walls of the Bastile.

As a poet, Robert Burns is a most remarkable instance of what a man may do in educating himself, and acquiring an extensive acquaintance with literature, while occupying a very humble rank in society, and even struggling with the miseries of the most cruel indigence.

Burns has himself given us a sketch of his life in a letter to Dr Moore; he says, "my father was advanced in life when he married

I was the eldest of seven children; and he, worn out by early hardships, was unfit for labour. My father's spirit was soon imitated but not easily broken. There was a freedom in the lease (referring to his father's farm) in two years more; and to weather these two years we retrenched our expenses. We lived very poorly. I was a dexterous ploughman for my age; and the next eldest to me was a brother (Gilbert) who could drive the plough very well, and help me to thresh the corn. This kind of life—the cheerless gloom of a hermit, with the unceasing toil of a galley slave—brought me to my sixteenth year." For want of space we will not pursue farther the history of Burns. We are all acquainted with his popularity—the misfortunes and the errors of his short life—and lastly the immortality which he has won by his genius. Another striking instance we find in that of William Gifford, who was for many years editor of the "Quarterly Review." At the early age of thirteen years he was turned upon the world, with a little brother not quite two years of age, without a father or mother, and not a relative or friend in the world. His little brother was sent to the workhouse, and he was himself taken home to the house of a person, named Carlisle, who was his godfather, and had seized upon whatever his mother had left, under pretence of repaying himself for money which he had advanced to her. By this person William was sent three months to school, but his patron then growing tired of the expense, gained employment for him in the capacity of plough-boy.

An injury, however, which he had received some years before, on his breast, was found to unfit him for this species of labour, and it was next resolved that he should be sent to Newfoundland to assist in a warehouse. But upon being presented to the person who had agreed to fit him out, he was declared to be too small—and this scheme also had to be abandoned. "My godfather," he says, "had now humbler views for me, and I little heart to resist anything. He proposed to send me on board one of the Torbay fishing boats, I ventured however to remonstrate against this, and the matter was compromised by my consenting to go on board a coaster. A coaster was speedily found for me at Brixham, and thither I went when little more than thirteen." While in this humble situation, however, and seeming to himself almost an outcast from the world, he was not altogether forgotten. He had broken off all connexion with Ashburton, where his godfather lived, "but, says he, "the women of Brixham, who travelled to Ashburton twice a week with fish, and who had known my parents, did not see me without kind concern, running about the beach in ragged jacket and trousers." They often mentioned him to their acquaintances at Ashburton, and the tale excited so much commiseration in the place that his godfather was obliged to send for him home. At this time he wanted some months of fourteen. "For a few months I was sent to school, and my progress at my darling pursuit, arithmetic, was now so rapid, that I was soon at the head of the school, and qualified to assist my master in cases of emergency." "At the age of fourteen," he says, "I went in sullenness and silence to a shoemaker, to whom I was soon after bound till I should attain the age of twenty-one. At this time I possessed but one book in the world, it was a treatise on algebra; I considered it as a treasure, but it was a treasure locked up; for it supposed the reader to be acquainted with simple equations, and I knew nothing of the matter. My master's son had purchased "Fenning's Introduction," this was precisely what I wanted—but he carefully concealed it from me, and I was indebted to chance alone for stumbling upon its hiding-place. I sat up for the greatest parts of several nights successively, and before he suspected his treatise was discovered had completely mastered it. I now entered upon my own, and that carried me pretty far into the science. This was not done without difficulty. I had not a farthing in the world or a friend to give me one, so that pen, ink, and paper were completely out of my reach. There was indeed a resource; but the utmost caution and secrecy were necessary in applying it. I beat out pieces of leather as smooth as possible, and wrote my problems on them with a blunted awl, for the rest my memory was tenacious, and I could multiply and divide to a great extent." In this servitude he spent six years, when he was brought into notice by the simple incident of a piece of satirical poetry which he had composed falling into the hands of Mr W Cookesley, a surgeon, who immediately set on foot a subscription for his relief. The rest of his story may soon be told. His difficulties were at an end, and this wonderful character died in London, in the 71st year of his age, after having been 17 years the editor, as before stated, of the "Quarterly Review."

Similar in some respects to the history of Gifford, is that of his contemporary, Thomas Holcroft, the author of many well-known productions in light literature. In his eleventh or twelfth year, he was present at Newmarket races. He was so much struck by the contrast between his own mean and ragged condition and of the clean, well-fed, and well-clothed stable-boys, that he determined to try if he could not find a master to engage him in that capacity at Newmarket. After much perseverance he was engaged, and very soon began to distinguish himself by his expertness in his new occupation. In speaking of his change of circumstances he says, "Nothing, perhaps, can exceed the enjoyment of a stableboy's breakfast; what then may not be said of mine, who had so long been used to suffer hunger, and so seldom found the means of satisfying it. For my own part," he adds, "so total and striking was the change, I could not but be happy. I had been exposed to every want, happy had been the meal when I had enough; rich to me was the rag that kept me warm; and heavenly the pillow, no matter what or how hard, when I could lay me down to sleep." In such a manner was the youthful days of a man spent, who by dint of perseverance ensured to himself an old age of competency and respect.

The Italian writer Gelli, who attained so much distinction by his numerous works, as to have been elected to the high dignity of consul to the Florentine Academy, passed his early years in a tailor's shop. Linneus, the great founder of the science of Botany, was apprenticed to a shoemaker. Our countryman, Ben Jonson was for some time a bricklayer, and Fuller, when speaking of him in his "English Worthies," says, "Let not them blush that have, but those that have not a lawful calling." Ben Jonson has done what many a man has done since, mount a scaffold with a trowel in his hand and a book in his pocket. David Parens, Professor of Theology in Heidelberg, was apprenticed to a grinder of drugs.

The late Dr Isaac Milner, dean of Carlisle, and Lucasian Professor of Mathematics, was a weaver. Falconer, the author of the "Shipwreck," in his boyhood did not even acquire the elements of education, having been taught to read by a person named Campbell, who was present in one of the vessels in which Falconer sailed.

The history of Columbus and Captain Cook are too well known to need mentioning. Daniel Defoe, the author of "Robinson Crusoe," was a brickmaker at Tilbury Fort. Christopher Smart, a self-educated man, wrote his celebrated composition, called "The Song of David," with charcoal on the walls of his cell while confined in a madhouse.

British youths! are not these instances sufficient to convince us, that success will crown our efforts, and the palm of victory will be secured, if we only persevere and press toward the mark and object after which we are fervently longing, and that whatever obstacles may arise, and for a time seem to mar our labours, yet with assiduity and zeal we shall overcome all, and come off more than conquerors. Let us only "put our shoulders to the wheel," and not lie dormant, for "if we would obtain, we must attempt." "A thing begun is half done." "The soul of the sluggard desireth, and hath nothing." The Intellectual Giant is the only giant that is worth seeing, after all.

H. W.

MISS BERRY.

The hand that penned a long series of the pleasantest letters in the English language has lain mouldering in a vault at Houghton since the spring of 1797; and more than half a century later—at the close of 1852—is finally hushed the fascinating tongue that refused the proffered coronet of the pleasant letter writer, whom she really loved. The last male descendant of Sir Robert Walpole (every one's Horace Walpole—no one's Earl of Orford) tendered sixty years since his title to Mary Berry:—and Mary Berry, after living to charm some seventy years of English society since, only a week ago ceased to live. What thoughts and recollections does such a death awaken! Miss Berry *knew* Horace Walpole, and corresponded with him,—and Horace Walpole had *seen* La Belle Jennings and *knew* Prior's Kitty. A little fancy throws us two centuries back, into the last year of the Protectorate, and headlong into the profligacies of the Restoration.

Miss Berry—or rather Mary Berry—was the elder of the two daughters of Robert Berry, Esq., of South Audley-street; a Yorkshire gentleman, of fortune—if we are not misinformed,—find certainly the disappointed heir-at-law of an uncle, who unexpectedly left his wealth away from him. The names of the girls were, Mary and Agnes:—or as they were called in society, *Old* Berry and *Elder* Berry. Mary, even when Walpole knew her, was mistress of Latin; and Agnes, it is said, painted in water colours, as well as "Lady Di,"—and if she had taken to sculpture, would, it was thought at Strawberry Hill, and in South Audley-street, have rivalled the Hon. Mrs. Damer.

When, or in what way, Walpole became acquainted with Miss Berry, and her sister, we have never heard. He first met them, we suspect, at Lord Strafford's, at Wentworth

Castle, in Yorkshire. Be this as it may, he met them before 1789,—and was soon enamoured. The father may have had some expectancies from the Lord of Strawberry,—and that this was the case, may be fairly assumed from his allowing his daughters to correspond so familiarly with "a forlorn antique of seventy-one," his removal of his daughters to Italy when the correspondence was increasing, and his final return to Twickenham, to be within call of the Prince of Letter Writers. Walpole was fond of his "two wives," as he called them,—would write and number his letters to them,—and tell them stories of his early life, and of what he had seen and heard, with ten times the vivacity and minuteness that he employed in telling similar stories to Pinkerton or Dalrymple. The ladies listened;—and it was Walpole's joy—

Still with his favourite Berrys to remain.

Delighted with what they heard, they began with notes of what he told them: and soon induced him, by the sweet power of two female pleaders at his ear, and in his favourite 'Tribune,' to put in writing those charming 'Reminiscences' of the Courts of George the First and his son, which will continue to be read with interest as long as English history is read. In the opening sentence of his 'Reminiscences,' Walpole tells the origin of his now printed recollections,—and gives us to understand, that he had "no greater pleasure" than to please both the ladies. So his contemporaries understood:—and Courtenay, somewhat to his annoyance, described him as one—

> Who to love tunes his note with the fire of old age,
> And chirps the trim lay in a trim gothic cage,—

—alluding to some rather mediocre verses which he had addressed to his "dear wives," and printed at his private press.

When Walpole died, he left to the Misses Berry, in conjunction with their father, the greater part of his papers, and the charge of collecting and publishing his work. The so-called edition of his works, which appeared in five volumes quarto, was edited by the father,—who lived with his daughters, at Twickenham and at South Audley-street for some years after Walpole's death. The father died, a very old man, at Genoa, in the spring of 1817; but the daughters lived in London,—and for upwards of half a century saw, either in South Audley-street, or in Curzon-street, or at Richmond (within sight of Strawberry), two generations of literary men. They loved the society of authors and of people of fashion,—and thought at times (not untruly) that they were the means of bringing about them more authors of note mixed in good society (for that was the point) than Mrs. Montague, or the Countess of Cork, or Lydia White herself, had succeeded in drawing together.

It would have been strange if Miss Berry, with all her love and admiration for Horace Walpole, had escaped the fate of being an authoress:—an authoress she was,—though one of little note, and not likely to be heard of as such hereafter. Her writings, of a very scattered and unimportant character, were collected by herself, in 1844, into two octavo volumes, entitled, miscellaneously enough, "England and France; a Comparative View of the Social Condition of both Countries, from the Restoration of Charles the Second to the present Time: to which are now first added, Remarks on Lord Orford's Letters—the Life of the Marquise du Deffand—the Life of Rachael, Lady Russell; and 'Fashionable Friends,' a Comedy." In these "Miscellanies" (for by that name should they have been called) are to be found many keen and correct remarks on society, and on men and manners,—with here and there a dash of old reading, and every now and then a valuable observation or two on the fashion and minute details of the age in which Walpole lived. They will while away an hour agreeably enough,—but will certainly not maintain a literary reputation.

Miss Berry's last literary undertaking was a vindication of Walpole from the sarcastic, and not always correct, character of him drawn by Mr. Macaulay, in an article in the the *Edinburgh Review*. The lady shews her pin-points well, but she is no match for the dextrous writer of the *Edinburgh*,—and her defence has little to recommend it beyond the motive which induced her to undertake it. Of far greater service to Walpole and to literature was the publication in 1840, for the first time of the sixty letters which Walpole had addressed to herself and her sister. In his late years Walpole makes no better appearance than he does in his letters to Mary and Agnes. He seems to have forgotten the gout and Chatterton, Dr. Kippis and the Society of Antiquaries,—and to have written like an old man no longer soured by the world, but altogether in love with what was good.

Miss Berry was in her ninetieth year when she died,—and survived her younger sister about eighteen months. She is said to have felt her sister's loss severely. For a time she was observed

To muse and take her solitary tea;—

but she rallied, and continued to cultivate the living society of our times,—as well as that vanished society which she was as it were the last to enjoy, and which she has transmitted in flesh and blood to our own times—the society of Walpole and his friends of Strawberry Hill.

A TRIP TO AUSTRALIA.

The following, from a private letter of an Indian officer upon sick leave, will be read with interest, as affording another view of Australian society.—

"I commenced this a few days before we expected arriving at Port Phillip, so as to be ready to send it if there should be a ship sailing. After we got clear of Java Head we had a fresh breeze from the south-east, and as we had been unable to take in water at Anger, the captain decided upon doing so at some small islands I had never heard the name of before; they are called the Cocoas, and are about 700 to 800 miles to the southward and westward of Java Head. Their history is rather curious. A Captain Ross, formerly in the East Indian service, lives on them with his family. Before Borneo was given up to the Dutch he was governor of it, and while there he advised the English government to allow him to build a sloop of war, as there was such magnificent timber. She was launched only the day before the island was given up; but the Dutch allowed him to finish her, and the English government there made a present of her to Captain Ross as a reward for his services. He cruised about in her for many years, and, as it were, re-discovered these islands, for they had been known to exist although never visited. He took a fancy to them, wrote home to England, and brought out the whole of his family. The English government refusing him protection, he has placed himself under that of the Dutch, and got 300 Malay slaves, whom he liberated upon arriving in the islands, and formed a settlement there. His ship was lost on a voyage to Batavia, and he was many years without having any intercourse with the world; but being nearly starved—for the islands produce little more than cocoa-nut trees—he built a schooner, making the ropes of the cocoa-nut fibre and the sails of the thick bark that is round the cocoa-nut tree just below the branches. He was just sailing when a whaler put into the island, and from her he procured canvass and went to Batavia, since which time he has traded regularly there, selling cocoa-nut oil, of which he makes great quantities, having a steam engine of 10-horse power to bruise and press the nut. About the sixth day from Java Head we sighted the islands, which are very low, covered to the water's edge with trees. There are about 21 of them, the largest not three-quarters of a mile broad; they are in a circle, reefs joining them, and forming a magnificent lagoon, to which there is only one entrance. I went on shore early the morning after we anchored, and pulled about three miles up the lagoon to the settlement. Their chief amusement appears to be sailing-boats, of which there are immense numbers, and managed beautifully. I counted nearly 30 as we pulled up, sailing away to the different islands to pick up the nuts. Captain Ross is a strange, gaunt-looking man; he and his son resembling Robinson Crusoes. They live in wooden houses, raised about 10 feet on piles from the ground, and are as rough as you can well imagine. They have books, and the quantity Captain Ross has read is wonderful. He has been 26 years in the islands. The Malays are a lazy set of fellows; he pays them so much a day, and so well that they won't work for more than two or three days a week. The greatest punishment he inflicts is to banish them from the islands.

"*Melbourne, June* 18.—We arrived here on the 5th, after a

very good and quick passage from Java Head. I wrote you a letter from the Straits of Sunda, and I send a letter which I wrote just before arriving here. We found this place in a state of great excitement, as you may well imagine from the accounts you have received by this time in England. The bay is a most lovely one, and the entrance is narrow and difficult of entrance. At William's-Town, where the large ships lie, there are about 50 vessels lying unable to get away. Melbourne is a fine large town, the streets broad and regular, all running at right angles to each other. The houses, in size, are irregular, but none built of wood, the government not permitting it. The excitement and business going on is wonderful. But I was most struck, upon landing, by the number of idle-looking fellows wandering about. I asked what they were, and was told that they were gold diggers, come down for a few weeks to spend their money. The hotels are numerous, but bad, being filled with these people. We put up at one called 'The Passengers,' something better than the others, and not, considering the times, very dear. Gold is being found in greater quantities than ever. As the winter advances food and necessaries will increase in price. They are already very high, the roads are cut up, and the creeks and rivers swollen. It is supposed there are upwards of 40,000 people at the different diggings. The price of everything is exorbitant. Any man with some money might double it with the greatest ease and safety every month; but as to men on incomes of £150 to £200 a-year, the commonest workmen are in a better position. A common carter makes £12 a-week, his expenses, perhaps, are £4. A cab, or rather, carriage driver, makes £30 to £40 a-week, or above £1,100 a-year. Masons and carpenters receive £1 a-day, but some won't work even for this. There is nothing of any kind going on. All houses or public buildings that were in progress are now at a stand-still. No one can get servants. The chief-justice told me that his had left him months ago. His son opened the door to us, and I believe his wife (as many other ladies have to do) washes her own clothes. The governor has no servants; all men are so independent that they will not hire themselves to do anything unless they get what they ask. Going into a shop, if you ask them to abate in their exorbitant price, they quietly tell you to walk out, that they don't want to sell anything to you. A load of water is 18s., a load of wood, £1, boots are £4; a pair of shoes, £2, Jack-boots, which are much used at the diggings, £7. Pistols fetch any amount A parcel, valued at £60, arrived a short time since; in a week's time they were all sold, having realised nearly £700. The way they generally go to the diggings is this —They form themselves into parties of three or four, buy a cart and two or three horses, load it with everything that is necessary for their living and working for two or three months, according to their own pleasure. Some men clear £300 or £400 a-month, some not so much, some have done more. There is one just returned, and now in the hotel, who was away six weeks, and cleared £3,600. but the real way to make money is buying gold, if you have any capital. At the diggings it sells for £2 15s. and £2 17s. an ounce, in Melbourne, for £3 5s. per ounce. The gold is sent down by escort, and can be realised, and the sovereigns sent by the return escort; therefore 8s. to 10s. may be made on every ounce twice a month. This is how the banks and all the houses are making immense sums. The escort arrives every week. They brought more gold last time than they ever have before, above 55,000 ounces. There is also a private escort which brings down large quantities, private hands also bring a good deal.

"Melbourne is built upon an undulating country, and although across the promontory is not more than one to two miles to the bay, by the river Yarra (which is very narrow, but deep enough to float small steamers and ships) it is nearly eight. The banks of the Yarra are low, and covered with a small underwood something like the English broom, but they call it here the tea-tree,—why I can't find out, for it is not the least like it. The land near the town is very pretty, and not unlike the park scenery of England; the trees are scattered about very picturesquely, mostly of the gum species; there are botanical gardens near the town—few flowers, but prettily situated. No government-house has yet been built, Mr. La Trobe, the governor, living in a small house. We dined there last night, and he has promised to give us all the assistance in his power. Notwithstanding the numbers of all kind collected at the diggings from all parts, but principally consisting of old convicts, ticket-of-leave and conditional pardon men, the order that has been maintained is wonderful. It arises, every one says, in a great measure from the right feeling of the diggers themselves. Many of them are gentlemen and many respectable emigrants—these might be expected to side with law and order; but that the others should, when there is scarcely any force to maintain it, is very curious and praiseworthy, but it is still very doubtful whether it is good policy to allow these men equal freedom and advantages with honest men. When public buildings cannot be carried on for want of labour, now would be the time to make the convicts useful, instead of allowing them to go to the diggings to make their fortunes and to run the risk of their defying the law, if it were against their interest to obey it,—and they are strong enough to place all law at defiance. Hitherto they deserve all praise for their quiet behaviour, but when the want of food presses, as winter advances, and the rain renders it more difficult to dig, I am afraid there will be considerable increase of crime and disorder; and as the law at present exists, there is certainly a premium in England on crime which is followed by transportation, for if the convicts behave well they generally get their tickets of leave in a year or less. Even if transported for life they may receive a conditional pardon, and, although they may have been guilty of the worst crimes, they may go to Europe or any part of the world excepting England. Transportation is therefore looked on by many as anything but a punishment; they are removed to a country where they are sure of making money, being upon their first arrival well taken care of by the government; and thus escaping all the difficulties an emigrant generally experiences in a strange country before he can look about him.

"Draught horses are all bought up here immediately they are heard of. We have a cart, and are trying to get two cart horses to start with. We hoped to have got away yesterday, but could not procure horses. We have got all things ready: a small tent, cooking things, a cradle, pick, axes, shovels, &c., and a cart. All the things are moderate, except the latter, and that is £40. They ask £60 a-piece for a moderately good cart horse; six months ago they went for £10 and £15! We were offered a pair yesterday for £185, but that we could not give. A cart is absolutely necessary to cart the soil to the water, besides taking our things up. If we can get a horse to-morrow we shall be off on Monday to the diggings—to the Bendigo—and try our luck for a month or so. Our party consist of W——, myself, and an old Cape colonist, who came from Singapore with us, a very good, steady man—he lost all his money in the war there; there is one other man going who was also at the Cape, but has been once at the diggings before. We have one native servant, who acts as cook. We shall all have to dig and work and share alike. All the things being on property, saleable when we please, they will fetch their original prices We drive the cart up ourselves, and trudge it. I have thought of applying for assistant-commissionership, but of that by and by. I wrote thus much last night, I must finish it to-day, as the ship I intend sending the letter by sails this evening or to-morrow early.

"The rent of houses here is immense; for one of four or five rooms unfurnished you pay £350 and £400. All the poor government officials—from the governor downwards—are being ruined, and unless their salaries are raised out of the increased revenue derived from the gold-fields many of them will be in a most painful position. The average is from £300 to £400 per year—not so much as some of the smallest houses rent for. Lodgings cannot be had under £5 per week. You may imagine what other expenses are from this.

"From what I have already seen, and from what I have been told, it is now almost useless for any person to come here to make money unless he has capital to start on, or is a strong working man, able to dig up his own capital. There is no distinction of class here now; every man calls himself a gentleman: cabmen, porters, carters, policemen, and public-house keepers, in speaking to you, call themselves gentlemen, for they are quite as rich as any, much more so than most of the government officials. They say themselves, 'This is the poor man's country;' that the gold has been sent by God to them alone, to give them their day, they don't interfere with 'swells,' as they call them, but look down upon them; they say that many a 'swell' works as hard as they do, but it is scarcely known of any of them making money by digging, and this they imagine proves it was sent for the poor man. There is scarcely a man you meet in the streets who has not his pockets full of notes. The common waiters at the hotel we are living at get £200 a-year each, and the boots gets above £100."

WELLINGTON AND NAPOLEON,

A PARALLEL AND A CONTRAST.

[The substance of a Lecture delivered by Mr. GEORGE DAWSON, at the Town Hall, Birmingham, on the 19th of November, at the instance of the Birmingham Polytechnic Institution. About three thousand persons were present on the occasion.]

YESTERDAY, in London, after the great man, whom I purposely call great, was consigned to his grave, the Garter King at Arms gave forth all his styles, honours, and titles. It may not be unbecoming in me to do what the herald-king did, and trace what led to the giving of those titles, the abilities of which they were the symbols, and show why it was they honoured the man; and if I can draw anything in his praise by a comparison with the other great man with whom he fought, I shall be excused if I indulge in a little national vanity; and if I praise the Englishman at the expense of his opponent, it may even be allowed; and if, at the conclusion, my audience believe that the name of Napoleon Buonaparte appears more attractive, I hope when you look at your own good Englishman, you will find him more honourable and worthy of admiration; and if not so much like the lion, still like that faithful animal which guards his master, noble to the last, humble and self-denying. He who looks longest will learn to give Wellington a higher place in history than Napoleon ever could have. I am no admirer of the cosmopolitan spirit, but while wishing to love all mankind, I feel that patriotism should ever be cherished; and that it is pardonable in a man to prefer the men of his own land to those of any other. Our great countryman now dead we all well knew, and I bring forward the other man with a view to contrast and comparison.

When Napoleon began his career he was engaged in that struggle for liberty for all men against the monopoly of a small party, shut up in feudalism, and who maintained the right of ruling the world as they thought good, and for their own pleasure. The evil of the revolution was at the door of those whose tyranny and despotism had pressed the spring down so low that, when it did rebound, it was almost as fatal to the people as to the rulers. At that time Napoleon sprung up, a mighty talent. He loved soldiership; but was looked upon by many men in England as the representative of a new life. Many took his side, wept at his disasters, gloried in his victories, and opposed Pitt and his ministry—not out of love for Napoleon,—but because they regarded him as a new symbol of freedom and liberty in Europe. Napoleon had no aim beyond himself. He had one great idol—himself. He was the most intense worshipper of self the world ever knew. He had opportunities which no other man had. He made his way through the frippery and nonsense of the day, for which thousands admired him. But when we see him with his feet in satin sandals, and employing artists to caricature the old Roman robes, fetching the poor Pope from Rome to crown him, with the oil bottle to anoint him, using religion merely to cheat men, for he cared no more for religion than some of the philosophers whom he helped to put down—Catholic when it suited him, and Protestant when it pleased him—when we see all these things, our sympathy for the man is lost, and we no longer look on him as the advocate of a new regime, but as a man with no other aim but to worship himself, with no great cause to uphold him, no retreat when his work was done, no duty to perform when his fighting was over; and when he married an emperor's daughter, discarding Josephine for the purpose of becoming Emperor Napoleon, when he wore laurels, and became one of the race of valets, an Englishman's interest in Napoleon the Great was over—the man had lost the meaning of life, his first love was past, he was no longer the protester for men against forms, nor the asserter of the new life of Europe against the old regime of royal and priestly tyranny; and that being the case our admiration of Napoleon ceases.

He really never had any cause to rely upon. He was, in every respect, a selfish man—not, in the vulgar sense, for what it might bring him, but he was selfish in a noble sense: having a firm faith in himself, he took little counsel of anybody—held other people cheap, and could do his own work. So far he had self-dependence. But he measured other men's rights by his own will, which was the measure of all things. He was unscrupulous in his means, and petty in his ends. He once said that there were only two motives which governed mankind—fear and interest. At love he laughed—at friendship he mocked. He loved France, but it was for himself. He was France. He did not so much serve France as he made France serve him. Doubts, fears, and difficulties, which haunted others, he knew nothing of. There was no meanness he would not stoop to, in the shape of knavery, assassination, and theft! He cared not how many fell in battle, nor what happened, so that his dream of being universal ruler might be realised, and to accomplish which piety and truth were sacrificed by him. If, then, a man be asked if he admired Napoleon, he might well answer, that in one sense he did, for he liked to see a man do his work well. The man who with a will carries an army over the Alps, is a refreshment and a joy, and we learn from him to prop our vacillating will. By him the word "impossible" went out of the French dictionary and out of his own soul. He widened the regions of human possibility, and showed that nature was not exhausted, that history was not used up. He did mighty works, in which men, weak or strong, find consolation and strength. He wrote "can" upon everything. He was, in some respects, the democrat, in the noblest sense, not of the people, but of the rights of the people—the right of any horse-boy to become a king. He opened a career for talent, and made a way for capability. He showed many an inclination for internal reform, and, if circumstances had allowed, he would have done more for the people, he was the giver of the French code, and he was a man of large aims; but the fault of his life was the turning France into a camp, and Europe into a battlefield, by which he cut off his opportunities for introducing a new regime, and initiating a new era of social progress. He surrounded war with a false military halo, and filled the minds of men with that detestable phrase, "glory."

There is no member of the Peace Society, or issuer of peace placards, who hates war more than I do; and it is because I hate war so much that I admire Wellington, who has done more than any other man to reduce war to its proper proportion, and put it in its true light. Napoleon intoxicated men with the love of war, while Wellington made war an awful duty and a terrible necessity. I will not say there are no causes in which it is worthy to fight, but I will say that I have no right to give up the defenceless child committed to my care. If you attack my child, it is my duty to pitch into you, to do the best I can for the defence of the helpless. If this dear old land, made and continued a nation by God—the land where our fathers sleep, the land we love—if any foreign powers say to us, "we bid you cease to be a nation," and tell us to commit suicide, or they will murder us, we say in answer, "Nay, we must stand up for fatherland; we must defend the women and children of the land, the creed and soil." I love peace, but I love justice better—righteousness first, and peace second. Let us have the thing that is just and right, and leave our happiness, peace, welfare, and comfort, in the hands of the All-wise. So far I am a fighting man.

Look at the motives and ends of each of the two warriors. Napoleon held out the plunder of towns as an inducement to his men, and he was a great thief himself. Wellington was terribly severe, believing that severity was true mercy. In Spain he hung a man for stealing a looking-glass. The man watched the army, and went out to see what he could pillage. He went into a house, and took the only thing it contained—a looking-glass; but who should come up, just as he was returning with it, but the terrible Commander-in-Chief and some officers. In five minutes the tree bore strange fruit; and the first sight which the French saw was an Englishman hung up by his own countrymen for stealing other people's property. That was teaching the men that they had to do a terrible duty—not to fill an empty purse. Wellington was a great disciplinarian, but his discipline was real mercy. But what fearful things the French did; and although the English sometimes did wrong, it was against their orders. I have spoken of the refreshing nature of Napoleon's will. But while I admire the passage of the Alps, I admire the passage through Spain a great deal more. Wellington led a very poor, ill-clothed, ill-fed, and ill-paid army to a country where he received but little assistance. His officers were always grumbling and despairing, and he had a niggardly ministry at

home. What with incapable Dukes of York, put in to do duty merely because they were Dukes of York, the English came to believe that they never could conquer on land, but were always to be conquered. Notwithstanding this, Wellington never turned back till at last he reached Paris victorious, having defeated every French marshal sent against him. He did his best, and that was sufficient for him; he had simply his duty to do, and that sustained him. There was nothing more strange in modern times than his career—becoming greater than kings, but content to be a servant. Had he been unscrupulous, like Napoleon, he might have continued to lead armies; but he returned here to take his place, and become a household word with Englishmen; and his wise counsels were ever looked up to by the Queen and people in the hour of peril. He was the greatest servant of history, and that was his great glory. Napoleon's ambition was to be a master, and he became one. The ambition of Wellington was to do the duty of a servant, and he did it nobly! Wellington was a true example of self-denial and unselfishness. What a lover of truth our man was, and what a boundless liar the other was. He only spoke the truth when it suited his purpose. He played tricks with dates, and sent false reports of victories before the battles were concluded. Our man never altered a date, but put things down as they were. Napoleon never would admit of anybody's glorious services but his own. Whatever glory his marshals got, he took it from them, and disparaged their services; but Wellington could afford to be generous to others—he had only to serve his country, and had no motive for running others down, and even to his foes he gave due praise. What a man he was for sharp, emphatic words! He never compassed an object by crooked plans, but went to his mark in a straight line, and hit the right nail on the head. He remains a model of Spartan laconism, of Roman heroism, like unto them who returned to their homes, content with serving their cause, even though that cause had not served them.

Napoleon knew how to flatter the vanity of his soldiery, and could appeal to the power of enthusiasm. He talked to them of forty centuries looking down from the Pyramids, yet he could laugh at it as moonshine. The Emperor Napoleon could say, when it suited him, "there is but one God, and Mahomet is his prophet." He appealed to noble sentiments, yet did not believe in them. He used sentiment and romance and did wonders with them, but despised them all the time. But our cold-blooded Englishman had the peculiarity of our fathers, feeling much but saying little. He makes no vain addresses to his soldiers—there are no Pyramids of forty centuries to look down from. He has but one word—a cold-looking one, with no romance in it—a solemn, awful word—the word "duty!" The French, on reading his despatches, never found the word "glory;" but the Duke said, "if men do their duty, glory will follow." He knew how to work an army on the principal of duty. He did not tell them of sacked towns, or bid them keep up the memory of their sires. He only spoke of their duty to God and their country. Can peace-men say a word against such a man, who led his army through every trouble with only one word—duty? Even as a religious man, the Duke seemed to be a man under orders. He was once asked about missions, if it was not better to keep people at home, rather than to send them to China and other places. He answered, "I don't think so—what are your marching orders?"—"Go ye into all the world and preach the Gospel to every creature." "Had anyone any right to give you orders?" "Yes, the Great Captain of Salvation." "That is all I care for," said the Duke, and that principle went into the minutest details of his life. For this Englishmen respected Wellington more than they respected Napoleon for blotting out the word "impossibility," because our great Duke brought back to a generation the old abiding things of duty. It was better to write the word "duty" than blot out the word "impossibility." Though the name of Napoleon will always make the most noise in the world, yet as peace becomes more loved and war more hated, and men become just, will Wellington's name abide in far more honour than Napoleon's.

Our happiness depends principally upon ourselves, and on the goodness or badness of our dispositions—that is to say, on our being virtuous or vicious.

HARRY GORDIER; OR "I CAN'T WRITE."

In a sheltered nook, on the southern side of the oval-shaped valley of Saddleworth, there lived at the beginning of the present century, a family, consisting of father, mother, and six children, who, as their forefathers had for generations done, gained a livelihood by the united pursuits of farming and weaving. Mr. Mather, the head of the family, held in his own right a small farm which he had received in long succession from his ancestors. They, in the simple times in which they lived, had contrived to supply their wants by the labour of their hands on their ancestral property. Carrying on farming operations whenever the season required, and the weather permitted, they employed every spare hour in weaving, and that the rather because in this labour they were able to turn the diligence and dexterity of their daughters, and even of their younger children, to good account. The termination, however, of that most costly war which Great Britain waged against Napoleon Bonaparte, brought great changes into Saddleworth, and not least into Mr. Mather's family. Already had that family been severely tried. Heavy taxation had diminished its resources. The machinery applied in the cotton manufacture caused a ruinous competition with handloom weaving. With lessened resources and increased outlay, Mr. and Mrs. Mather experienced great difficulty in supporting and bringing up their children. The pressure fell with special force on the earlier period of their wedded life, and consequently affected their eldest children particularly. Thomas, their first-born child, a youth of high spirits, left his home and went to sea. This step, which gave much pain to both his parents, he would hardly have taken, had he not been grieved and wounded in feeling by frequent outbreaks of temper on the part of his father, who felt annoyed and chafed by the hard struggle he had to carry on with want. In that struggle, Mr. Mather was overcome, chiefly because, as his difficulties thickened, he most unhappily sought oblivion and comfort in strong drink. Miserable day was that for the Mather family when first the idea of such a resource entered the head of its master. No sooner was the funeral over, than pecuniary claims poured in from all quarters. Mr. Mather died penniless. In consequence, the scanty furniture which remained was sold; the farm had long been parted with; and Mrs. Mather, with five children, migrated to Oldham, in the hope of procuring bread by mill-labour.

"It will break your heart, mother; going to live in that smoky place will break you heart, I'm sure it will!" "The hand that made can uphold my heart, Fanny," replied Mrs. Mather to her eldest daughter, who had addressed her, after having with the rest walked some ten miles in mournful silence. The prospect was a dreary one. It was a November day. The surrounding hills were hung in thick misty clouds, from which small rain came ceaselessly down. The air was sultry. The heavens were silent, and the earth sad. No bird whistled; not a breeze to break the leaden stagnation. Scarcely a human being struck the traveller's eye. Wet, hot, and sad, they passed along, and at length entered Oldham, in a humour as dark and repulsive as was the aspect of the town.

Within a month the scene had totally changed. Mrs. Mather had brought with her the habits, the aims and the tastes of a good housewife. The children, though poor and almost literally destitute, were inspired by their mother's spirit, and actuated by that sense of self-respect which often ensues from recollections of past prosperity. Every member of the family was industrious, upright, sober, and religious. Specially did they possess and cherish an independent spirit. With the exception of their mother they were young and strong, and though their skill was small and they had received no school education, nevertheless they were pretty confident that in a little time they should be able to put their mother into comfort, while they gained their own livelihood. Accordingly Fanny went into service; Tom and Richard entered a mill; Alice was employed to nurse a neighbour's baby, and Jane, the youngest girl, aided her mother and "wound a little" at home.

Within a month the members of the family were thus disposed of. The change, great as it was, would have looked mean in proud eyes. Two small cellars in a narrow and dirty back street afforded shelter rather than a home. True, the rooms were very clean; but they were also nearly destitute of furniture. Clothing was the first thing to be cared for, after food and a covering had been provided; and articles of clothing came very slowly.

Richard Mather had been two months in the mill, when one evening after the day's work was done, he was discovered by the head millwright at work in one corner of the yard. Struck by the boy's industry, Mr. Thomas—such was his name—asked Richard what he was doing, and finding that he had displayed considerable ingenuity in constructing a small wooden wheel, he offered to take him into his department. The offer was gladly accepted. In two years, Richard Mather had become a clever engineer. Not only was he dexterous in executing work, but skilful and prolific in devising plans. He could not read, he could not write, but he could think and he could labour. Think and labour he did most industriously, until at length he was the best workman in the mill.

Richard had for some time observed that some secret process was going forward. Often had he seen Mr. Henry, the chief partner, and Mr. Thomas, the millwright, in close and confidential conversation. Of late he observed that the latter was at the mill before himself in the morning, and remained there after he had left at night. Once when he happened to be out very late, he noticed that there was a light in Mr. Thomas's private room Nevertheless, in that room he found Mr. Thomas at five o'clock the next morning.

What did all this mean? Richard's curiosity was piqued. At length Mr. Thomas, touching him on the shoulder as he was quitting his work in the evening, said in an under tone to him, "Come with me." Mr. Thomas led the way to his private room. "There, Richard," said he, as he entered, "there is a machine on which I have been occupied for three years, I want now to complete it that I may send it to the Great Exhibition, but I fear I shall be disappointed, one thing stops my progress, can you help me?" Richard examined the piece of work, which he pronounced beautiful. As for overcoming the difficulty, he had his fears. But, he said, he would think the matter over..

Two days from this interview had passed, when Richard Mather, who had been quietly sitting by the fireside in the outer cellar, suddenly rising from his chair, exclaimed,—

"Mother, get a house, we will quit this cellar."

"My dear boy, what do you talk of?" replied Mrs. Mather, "ah, you don't know how hard I find it to get a bit of clothing besides the food; and but for what Fanny allows me, I could not find the house on what you lads bring in."

"O, I know all that very well, but, do you see, I've just discovered a thing that will bring in some brass."

"Art mad, my lad?" exclaimed the old lady, in a terrified tone.

"No, mother, sensible and sober, too,—but wait, I'll go and speak to Mr. Thomas."

At the end of two hours, Richard entered the cellar again, his countenance radiant with joy. "It is all right!" he shouted as he came in "It is all right," whispered he into his mother's ear.

In a few weeks the machine was completed with Richard's aid. Mr. Thomas went to London, and after the absence of some days wrote to Richard as follows:—

"Dear Richard,—The machine must be sent off by the end of the week. To you its completion is owing, and by you must its construction be explained. You therefore must be ready to come up to the Exhibition in the course of a fortnight. Your present wages will be continued, and if all goes on well you shall have a full share of the benefit. I take this opportunity of saying how glad I am that I found out your natural ability, and made you an engineer.—Your friend, "HENRY THOMAS."

"London, April 14th, 1851."

Hastening home to his mother, Richard communicated to her the contents of the letter. Already he was in the receipt of two and thirty shillings a week. It was at once determined to take a house. Out they went—the whole family—Mrs. Mather, Richard, Tom, Alice, and Jane—all save Fanny, who had not yet heard of the good news. After wandering over several parts of the town, and being not a little particular and critical as to situation, accommodation, and even appearance, they found and took a house.

"Now, then, for the furniture," said Richard.

"Don't be in a hurry, my dear," replied his mother.

"Well, I have saved seven pounds, that will do to begin with; and my new suit of clothes will come in nicely for my trip to London."

"Is the letter answered, Richard?"

"*I can't write*," replied the young man.

"Dear me! no; do you think Mr. Thomas knew that?" asked Mrs. Mather; "I should not like you, dear Richard, to be disappointed."

"Well, I never thought of that writing business; but," added he, after a pause, "perhaps reading will do, and you know mother, I got a bit of reading last winter from Harry Whiting. Harry read me the letter; for, somehow, I can't very well make out writing. By the bye, I will go at once and get Whiting to write an answer."

Two days brought another letter from Mr. Thomas. He was not, he stated, aware that Richard Mather was unable to write. Some skill in writing was indispensable. For the proper explanation of the machine diagrams were necessary, figures must be employed; sometimes thoughts and statements would require to be put on paper—to say nothing of correspondence.

"Well, *it is* a disappointment, I confess," said Richard to his mother, "but I'm glad I've got Harry Whiting the job; he's a very good fellow, and promises to teach me to write when he has returned, but I am much mistaken, if I am not able to write before then."

The Mather family were seated at the tea table, Fanny as well as the rest. Of a sudden they heard a loud knock at the door, when in bounced a man in sailor's attire, exclaiming, "Mother!" The next moment the son and the mother were in each other's arms.

"I've had a long run to come across you," said William Mather, the eldest son, who, as we have said, had gone to sea, "I went into Saddleworth, but found some one else in the old house, sorry enough I was, but here you all are, except father, and he, I hope is safe aloft. How was it I never heard from any of you?"

"You know *I can't write*, and *the children can't write*," said Mrs. Mather; "besides we got only two letters from you, and from them we could not make out where you were."

"Well, *I can't write*, either," answered William, "and as for that cook's mate, that wrote for me, he handles a pen like a handspike, but never mind, here we are altogether again, and right glad am I to find you so comfortable."

Richard Mather has engaged a teacher, and spends two hours every evening, in learning to write. He will doubtless succeed in this effort, as he has succeeded in every other, and whatever his success in life, he will take special care that his mother and the other members of the family, shall share in the results.

A ROLAND FOR AN OLIVER.

A man from a distant village happened once to be in Cairo on the day of the ceremony of the Festival of the Prophet, and, hearing every one talk of the Dosch, inquired what was meant. A baker, to whom he addressed himself, being waggishly inclined, explained that those who were trampled on were aspirants for the honourable post of Sheikh-el-Beled. Our clown accordingly resolved to go through the ordeal, and, when the pavement was formed, boldly threw himself down. Ten minutes afterwards he recovered from a swoon, felt as if his back was broken, and found himself surrounded by a number of sallow-looking individuals, who shouted in his ear, "Wahad! Wahad!" "Wahad, of course," quoth he; "but let me receive my appointment at once, otherwise I shall die before I reach my village and give orders for Mahommed, the tobacconist, to be flogged." Upon this the bystanders thought he was mad, and, as he continued to talk in the same strain, they seized him, and took him to the Moristan, or madhouse, where he was stripped and chained by the neck, like a wild beast.

He now understood that he had been made a fool of, and determined to be revenged on the baker. For this purpose he remained so quiet and reasonable that he was released; and a saint, who happened to touch him that day, gained great reputation by his cure. He went immediately and bought a considerable number of hashish pills, with which he proposed to carry out his plan of vengeance. Having watched some time about the house of the baker, and ascertained that the master had gone forth, he climbed a wall, and, whilst the women were asleep, contrived to introduce one of his pills into each of a large collection of leaves ready for sale. This done, he cautiously retired, and would have been wise had he returned at once to his village; but, actuated by a desire to witness the discomfiture of the baker, he went to him a couple of hours afterwards, and, with an appearance of great simplicity, complained that, although he had submitted to the Dosch, he had not received his appointment as Sheikh.

The baker was enjoying the joke, when an old woman came in,

and said that her son had become mad after eating one of his loaves; then a man followed, himself partially intoxicated, who declared that all his family were maniacs by his means; and so on, until a large crowd was collected. The baker did his best to appease them, and succeeded in inducing them to retire for a while.

The clown, who was the cause of the mischief, could not conceal his delight, and our waggish baker understood that he had been paid off in his own coin. He felt certain, however, that the worst of the business was not yet over, and, going to his wife's room, he said to her, "My heart, it is necessary that thou shouldest play a trick to save me. Go to the icewan, and speak softly to the stranger that is there, and, if any one comes in, pretend that he is thy husband." The woman did as she was desired, and the clown was overjoyed, thinking that he should be doubly revenged on his enemy. Suddenly there was a great knocking at the door, and four or five men were heard demanding admittance. "This is disagreeable," quoth the woman, my reputation is in danger. You must go and open, and pretend to be the baker, and I will call you my husband."

The men were admitted, and, having come into the icewan, demanded the master of the house. "This is he," quoth the woman. "Nay," said one of the new comers, "I thought the baker had but one eye." "Of a truth," exclaimed the clown, endeavouring to show by his familiarity that he was really the woman's husband, "no one is the baker but I." The words were scarcely out of his mouth, when the men produced sticks from under their cloaks, and fell upon him, crying, "Woe be to the wretch that put hashish pills into our bread!" They beat him till he was insensible, and then went away laughing at their achievement. Soon afterwards the baker arrived, and with the assistance of his wife, carried the unfortunate clown forth, and left him for dead in the street, but he soon recovered, and, feeling that he was no match for a Caireen, returned to his village cursing his own folly.—*Bayle St John's Village Life in Egypt*

EGYPTIAN MARRIAGES.

As women are never seen by any of the opposite sex but their husbands—not even by their cousins or brothers, except in the streets, when it would be a gross breach of decorum to address them—a gentleman who wishes for a spouse, having no opportunity of choosing for himself, is obliged to communicate the circumstance to his mother, and this worthy matron, who, in all probability, has previously well considered the subject, soon indicates one whom she considers suitable. The candidate for matrimony then requires a list of the lady's good qualities and attractions, which, of course, are in every case of the most unexceptionable kind, and when he has made up his mind he waits on the lady's father, and makes his proposals. These are, to pay down a certain sum, varying from £100 to £2,000, not as a settlement on the wife, but as a compensation to the father, wives being always purchased here. A part, however, is laid by as a provision for the wife, in case of her being divorced; and as the husband would then have to refund this, it serves to strengthen the bonds of matrimony in a surprising manner. All being arranged, the father, suitor, and friends repair—without the lady—to a mosque, where they celebrate the marriage, which is little more than a simple question and answer. The question is put to the father by the bridegroom, who asks, "Will you give me your daughter to be my slave?" The reply is equally to the point, "My daughter is your slave." Some days now elapse, when the bridegroom, accompanied by his friends, proceeds to the house of his father-in-law, and brings away the bride, who is placed, completely veiled, in a palanquin, which is covered by a canopy borne by the bridesmaids, who are under the direction of the bridegroom's mother. The palanquin is preceded by a grand procession, composed of the bridegroom and his friends; a company of soldiers, and two or three camels, carrying young children, and the whole are marshalled forward by a band of music. In this way they traverse the town, and at length reach the bridegroom's residence, where the bride is conducted by him, with great ceremony, to the apartments prepared for her. He then offers her some magnificent presents, which she receives in silence, and his mother and the other matrons who are standing round politely recommend him to go and pray. On his return from the mosque, he returns to the boudoir of his bride, and finds her alone. What a moment! He has not seen her face, or heard her speak, and a thousand expectations of her beauty flash across him. What if these should be disappointed?—if her charms should be only imaginary, and her loveliness an invention of his mother's? With eager steps he approaches her, and, throwing off her veil, for the first time beholds his bride. Such is the lottery of marriage in the east.

LIFE AND DEATH OF VANDILLE, THE MISER OF PARIS.

In the year 1745—as we are informed by Mr. Merlyweather in his "Lives and Anecdotes of Misers"—Vandille, the miser, was worth nearly £800,000! He used to boast that this vast accumulation sprang from a single shilling. He had increased it, step by step, farthing by farthing, shilling by shilling, pound by pound, from the age of 16 to 72. For six-and-fifty years had that covetous old man lived for no other purpose than to accumulate gold which he had not the courage to enjoy. Not once during those years had he indulged himself in any luxury, or participated in any pleasure; his life was one continuous sacrifice to Mammon. The blessings which a kind and benevolent Providence has bestowed in His mercy upon mankind were never accepted by Vandille, his whole soul was absorbed, his every joy was sought for, in the yellow heap which his avarice had accumulated. His death was a singular one. The winter of 1794 had been very cold and bitter, and the miser felt inclined to purchase a little extra fuel in the summer time, to provide, to some extent, against the like severity in the ensuing winter. He heard a man pass the street with wood to sell, he haggled for an unconscionable time about the price, and at last completed the bargain at the lowest possible rate. Avarice had made the miser dishonest, and he stole from the poor woodman several logs. In his eagerness to carry them away, and hide his ill gotten store, he overheated his blood, and produced a fever. For the first time in his life he sent for a surgeon. "I wish to be bled," said he; "what is your charge?" "Half a livre," was the reply. The demand was deemed extortionate, and the surgeon was dismissed. He then sent for an apothecary, but he was also considered too high, and he at last sent for a poor barber, who agreed to open the vein for threepence a time. "But, friend," said the cautious miser, "how often will it be requisite to bleed me?" "Three times," replied the barber. "Three times! and pray what quantity of blood do you intend to take from me at each operation?" "About eight ounces each time," was the answer. "Let me see," said the possessor of three-quarters of a million, "that will be ninepence, too much—too much. I have determined to go a cheaper way to work; take the whole twenty-four ounces at once, and that will save me sixpence." The barber remonstrated, but the miser was firm, he was certain, he said, the barber was only desirous to extort an extra sixpence, and he would not submit to such a scandalous imposition. His vein was opened, and four-and-twenty ounces of blood taken from him. In a few days Vandille, the miser, was no more. The savings of his life, the wages of his vice and avarice, he left to the King of France.

LITERARY NOTICES.

THE ALTAR OF THE HOUSEHOLD, or, DOMESTIC WORSHIP. Part I. will be published on the 1st of January, 1853, price 1s. This work will contain a Series of Services for the Family, adapted for every morning and evening throughout the year, viz., portions of Scripture, Prayers and Thanksgivings, suitably adapted to each other, to which will be added short practical comments to explain the subjects read, or enforce the duties enjoined. This work will be edited by the Rev. Dr Harris, Principal of New College, assisted by a band of eminent divines in London and the country.

THE SELF AND CLASS EXAMINER IN EUCLID, containing the Enunciations of all the Propositions and Corollaries in Cassell's Edition, for the use of Colleges, Schools, and Private Students, is now ready, price 3d.

CASSELL'S ELEMENTS OF ARITHMETIC (uniform with Cassell's EUCLID), is now ready, price 1s. in stiff covers, or 1s. 6d. neat cloth.

THE ANSWERS TO ALL THE QUESTIONS IN CASSELL'S ARITHMETIC for the use of Private Students, and of Teachers and Professors who use this work in their classes, is preparing for publication.

Price 1s., beautifully printed, super-royal 8vo.,

THE UNCLE TOM'S CABIN ALMANACK; or, THE ABOLITIONIST MEMENTO FOR 1853.—The most complete work on the question of slavery that has hitherto been published. Everybody who has read "Uncle Tom's Cabin" should possess themselves of a copy of this book, which more than verifies all the statements in Mrs. Stowe's thrilling narrative. This work is splendidly Illustrated by George Cruikshank, Esq.; J. Gilbert, Esq., W. Harvey, Esq.; H. K. Browne, Esq. ("Phiz"); and other eminent artists, and contains upwards of 70 pages super-royal 8vo., replete with the most stirring incidents—Lives of Escaped Negroes; the Workings of the Fugitive Slave Law; Anecdotes, Narratives, and Historical and Descriptive Accounts of American Slavery. The sale already is very large, 30,000 copies having been disposed of within three weeks.

ILLUSTRATED EXHIBITOR ALMANACK, Thirty splendid Engravings, 6d.

POPULAR EDUCATOR ALMANACK, Notices and Essays on Education, 2d.

TEMPERANCE ALMANACK, Tale by the Authoress of Uncle Tom, &c., 2d.

PROTESTANT DISSENTERS' ALMANACK, with new Historical Notices, &c. 6d.

MISCELLANEA.

GREENHOUSES IN WINTER.—Very few persons appear to know the value of the sponge in a greenhouse—I mean for the purpose of washing the leaves of all those plants with leaves broad enough to admit of it. I took the hint some five years ago from a neighbour, the most successful plant-grower I have ever had the good fortune to know. His plants were always so especially fresh and healthy that I was for a long time puzzled to understand his secret; and he always declared he had no secret. But early one morning I caught him with a pail of clean water, slightly warm, by his side, sponging the leaves of all his choice plants. I said to myself, "I have it." I did more, I went home and practised it. My plants soon showed, by their new aspect, that I was not wrong in believing it to be the real secret of my neighbour's success.

THE NEW YORK CRYSTAL PALACE.—The preparations for the erection of the Crystal Palace at New York, which is intended to be opened on the 1st of May next, are in such a state of forwardness, that there is no doubt of the whole building being completed in sufficient time for the reception of everything sent for exhibition by the contributors from Europe, and from the United States of America. The plan of the palace at present in erection is an octagon, surmounted by a Greek cross, having a dome supported by columns, each arm of the cross is 149 feet broad, so that some idea of the magnificence of the building may be formed. The dome will be 100 feet in diameter, and its summit will be 149 feet from the ground. The whole area of the building will cover upwards of four acres. It will be constructed of glass and iron.

THE PRATAYA SALAKA — A book of moral sentences, known as the "Prataya Salaka," is in great repute among the natives of Ceylon. One passage of it is as follows —"Whoever is much bent upon another's destruction, prepares to do nothing but to pave the way for his own ruin, which will unawares fall upon his own head, as is evident from the case of the crane and the crab. The fable is this —An evil-designing crane frightened the fishes of a pond with the news of some impending danger, which would certainly fall upon them if they continued any longer to live in the pond, but which they might escape if they would listen to his admonitions, viz., to leave the pond, and seek for another. As the pond was unconnected with any other, they were unable to do this. The crane, out of kindness, promised that if they would confide in his word, he would conduct them to an adjoining pond. He would take them one by one in his mouth, and carry them. All the fishes agreed, and the crane continued for a day or two to swallow all he carried. A crab, suspecting the wickedness of the crane, asked the crane to take him also This, after some demur, he did. The crab, unlike the fish, took hold on the crane's neck, and squeezed him to death."

VULGARITY. — That much misapplied epithet, which falls with a sound so startling upon the inexperienced ear of youth and yet how vague and indefinite the ideas which it ordinarily conveys to the mind The sensitive young girl, who shrinks dismayed from the imputation of vulgarity, scarce knows from what she recoils, or else the phantom presented to her imagination takes its shape from the prejudices of those with whom she associates. Thus, with one section of society, *frugality* and *vulgarity* are synonymous terms, and an acquaintance with, and attention to, the economy of domestic concerns, is deemed a mark of an inferior mind; while, with another, some trifling infringement of the rules of etiquette, or deviation from the prescribed modes of dress, speech, or conduct imposed by those intolerant votaries of fashion, brands the unfortunate offender as "a decidedly vulgar person" Again, with a third, admission into some small privileged circle is a test of qualification which renders any other unnecessary, and which entitles all who come within its magic influence henceforth to stand out in proud relief from the common mass of "vulgar people." But, after all, none of these things, properly speaking, constitute vulgarity. Vulgarity, as we understand the meaning of the word, has its origin rather in the heart than the head, and is a defect in the moral constitution, which is neither inseparable from want of education, nor incompatible with some degree of mental cultivation. It is true that education is scarcely deserving the name, if it leave the affections uncultured, and the feelings unrefined and yet, how much of modern education is of this description, and with how many, consequently, is a high tone of moral feeling merely a poetical sentiment derived from books, instead of being the pervading principle of every thought and action. It would seem impossible that a highly principled and truly amiable person should be an inherently vulgar one; for moral worth and sweetness of disposition are in their very nature opposed to vulgarity, which is a compound of pride, meanness, and selfishness, manifesting itself in an indifference to, if not a direct attack upon, the feelings of others.

PERFUMES —Perfumers show more science in attaining their perfumes than those of former times. The Jury in the Exhibition, or rather two distinguished chemists of that Jury, Dr. Hoffman and Mr De la Rue, ascertained that some of the most delicate perfumes were made by chemical artifice, and not, as of old, by distilling them from flowers. The perfume of flowers often consists of oils and other compounds, which the chemist makes artificially in his laboratory. Commercial enterprise has availed itself of this fact, and sent to the Exhibition, in the form of essences, perfumes thus prepared. Singularly enough, they are generally derived from substances of intensely disgusting odour. A peculiarly fœtid oil, termed fusel oil, is formed in making brandy and whiskey. This fusel oil, distilled with sulphuric acid and acetate of potash, gives the oil of pears. The oil of apples is made from the same fusel oil by distillation with sulphuric acid and the bichromate of potash. The oil of pine apples is obtained from a product of the action of putrid cheese on sugar, or by making a soap with butter, and distilling it with alcohol and sulphuric acid; and is now largely employed in England in the preparation of pine apple ale. Oil of grapes and oil of cognac, used to impart the flavour of French cognac to British brandy, are little else than fusel oil. The artificial oil of bitter almonds, now so largely employed in perfuming soap, and for flavouring confectionery, is prepared of the action of nitric acid on the fœtid oils of gas tar. Many a fair forehead is damped with *eau de millefleurs*, without knowing that its essential ingredient is derived from the drainage of cow-houses!

NOTICES TO CORRESPONDENTS.

THOMAS S.—The penny postage came into operation January 10, 1840. Stamps, and stamped envelopes for prepared letters, were first issued on May 6 in the same year.

D. W. T.—There is no chance of your obtaining a free passage, as you have five children all under ten years of age.

A TEETOTALER.—Lawrence Heyworth is not at present a member of the House of Commons. He lost his election at Derby by a small majority—a majority, we believe, of five. But as there is a petition against the return, on the ground of bribery and corruption, it is probable that he may yet sit in that house during the present session

CHARLES.—We believe the sentence you quote was uttered by Lord Palmerston. There is a sentence in the writings of *Paley* which very nearly resembles it: he says, "Nothing is so indomitable, so stubborn, and so mighty as a principle"

MARY TIDY.—The wafers for destroying cockroaches and blackbeetles are made of equal quantities of red lead, moist sugar, and flour. The materials should be made up into a stiff paste, rolled out in thin sheets, and dried. A few small broken pieces should be strewed about the places haunted by the creatures, and the fragments left by them should be thrown away

A STAFFORDSHIRE MAN.—We are surprised to hear a "Staffordshire Man" putting a question to us as to the meaning of the word "porcelain." Dr. Lardner says it is a word corrupted from *porcellana*, the Portuguese word for a *little cup*. Crabb says it is taken from the material of which cups, &c., are made, a sort of earth or clay. *Argilla porcellana*, the finest kind of which is found in China hence the ware made of it is called *china*, by way of distinction

CURIOSO.—Gold of the Royal Mint standard consists, we understand, of a mixture of twelve parts of equal weight, eleven of which are pure gold, and one is copper.

A FREEMAN.—The edition of "Uncle Tom's Cabin" about which you inquire, is that published by Mr. John Cassell: no other edition has illustrations by George Cruikshank.

M. R.—Be sure that the "old coins" which are offered to you "as a great bargain" are genuine, and not Birmingham fac-similes. Many such are in the market.

A SHOPKEEPER.—We believe the act declares that gold or silver coin tendered to any person suspecting any piece to be counterfeit, may be broken or cut by such person; and if it shall appear to be counterfeit, the person tendering it shall bear the loss, but if it shall prove of due weight, and appear to be lawful coin, the person breaking it is to receive it at the rate it was coined for, and any dispute about it shall be finally determined by any justice of the peace In ordinary cases, unless where you have reason to believe that the person tendering coin is "a smasher" you will avoid much trouble by simply declining to take what you believe to be counterfeit, or of light weight.

FAIR PLAY.—You certainly are under no obligation to take the numbers the man brings you, unless you gave an order for them. Your merely giving your address if nothing, unless an order for the books was written on the same paper, or given in writing at the same time. The attempt is often made, but should be resisted.

A SUBSCRIBER.—We know of more than one person who has overcome "the habit of stammering" by reading *aloud and with deliberation* in private, at every possible opportunity. Unless there is some physical defect (in which case you should have the advice of a skilful surgeon), the habit may be overcome.

A NEW SUBSCRIBER.—We fear that you cannot claim any portion of the property of your father's brother, unless you can produce some written document containing his promise, or some witness who heard him make it.

QUID QUIS.—*Roscius* was a Roman actor, born at Lanuvium, B.C. 60. The great celebrity which he acquired on the stage is the reason that his name is given to every actor of superior merit or excellence. The *sock* was the thin light shoe or sandal worn by the ancient *comedienne* the *buskin*, the high shoe or half boot worn by the ancient *tragedians*.

THE

WORKING MAN'S FRIEND

AND FAMILY INSTRUCTOR.

NEW SERIES.—VOL. III., No. 64.] SATURDAY, DECEMBER 18, 1852. [PRICE ONE PENNY.

THE CHELSEA PENSIONER.

EVERY ONE who witnessed the funeral procession of the Great Duke must have been struck with the appearance of the eighty-three old fellows in red who followed their gallant commander to his last home. Eighty-three of them there were, to represent the number of years that Wellington, "the mightiest hero of them all," had walked the earth. It was an affecting sight. Aged, and furrowed, and grey, as were most of them, there was something martial in their appearance, after all. It was a sight—those eighty-three old warriors, many of them nearly as old as the great captain they were following for the last time—that will not easily be forgotten. Assaye, Copenhagen, Badajoz, Salamanca, Waterloo! these names rise up in the memory; and, whether war be right or wrong, we feel that we cannot but respect the actors in those mighty victories, old men and feeble now. And it is a pleasant thing to hear, too, that the great leader of these weather-beaten soldiers, declared, even in the midst of his triumphs, in the pride of his strength, and in the day of his glory, that war was an accursed thing, and only necessary that peace might follow. "There is nothing worse than a victory," said Wellington, "except it be a defeat." And so perhaps the eighty-three old pensioners

THE CHELSEA PENSIONER.—FROM A SKETCH BY GAVARNI.

—a worthy deputation from the four hundred and twenty-five in Chelsea College—may have thought as they marched in slow and solemn state in the procession of Wellington, on the 18th of November.

Not many of us, who are resident in London, are unacquainted with the appearance of the Chelsea pensioner—a red, mottled face, worn and scarred, grey hair, ill-fitting scarlet

coat, crutch-handled stick, and cocked hat!—but few of us are intimate enough with them to know any of their inner characteristics. These brave old men—relics of a former age, when Catholic Emancipation was yet a question to be agitated, and Parliamentary Reform was believed to be a thing impossible; when the great Napoleon was alternately winning and losing battles in Europe, and the French Revolution was considered, by many, as the grandest effort of modern civilisation; when London was lighted by oil lamps, and plate-glass, railways, electric telegraphs, daguerreotype portraits, spinning-jennies, and threepenny omnibuses, were as yet unimvented undiscovered, and unknown! In those "good old days," the news of "glorious victories" used to arrive in the metropolis about four days after their consummation, and folks congratulated themselves upon the fact of such wonderful speed in transmitting intelligence! and the mighty modern Babylon was not more than half its present size—Hyde-park being the extreme "West-end"—and did not contain above half its present number of inhabitants, Chelsea, in the days when these bluff old fellows were fighting the battles of their country, was a quiet suburb, and the pensioners at Greenwich wore pigtails!

All these things have changed, but the Chelsea pensioner remains the same. He is a link between the past and the present, living in the latter, but belonging essentially to the former. All his sympathies, all his recollections, all his conversations, are of the good old times "when George the Third was King." Stand on a sunny afternoon beneath the cool colonnades of the hospital, or sit on a bench beneath the shady cedars of Lebanon in the "physic garden," and listen to a group of these fine old warriors. They are not talking of the Chancellor's budget—oh dear, no, nor of the progress of emigration, nor even of the re-unption of the Empire by Louis Napoleon, and the probable extension of the militia at home. No; their thoughts and their words are of grand fights in Spain and merry bivouacs in the sunny South. See, as the speaker gets warmed with his theme, how he "shoulders his crutch and tells how fields were won," fighting "his battles o'er again" in the midst of his aged comrades. It is a pleasant and a very suggestive picture, those grey, time-worn veterans, and it is a pleasant thing to think, too, that Nell Gwynne, the much-abused favourite of Charles the Second, suggested to that thoughtless monarch the erection of the famous pile which now forms the home of so many broken "men of battle." One cannot but feel, despite all anti war-and-revolution tendencies, some kindly sympathy and respect for these old fellows; and an hour or two might be even less profitably spent than in listening to their antiquated gossip of the wars of Wellington and his great antagonist.

Before quitting the subject, we may just observe that the hospital contains about four hundred and twenty-five inpensioners, who are maintained at a cost of £36 a year each; and that the out-pensioners—about 76,000 in number—receive various small rates of payment from them "grateful country;" which payments vary, according to circumstances, from twopence halfpenny to three and sixpence a day. Foot soldiers, to be entitled to a Chelsea pension, must have served twenty-one, and horse soldiers twenty-four years. The majority of pensions are under one shilling a day, and few invalids are said to apply for admission to the hospital who can contrive to live outside. The first stone was laid by Charles II, in March, 1681; and over the frieze of the great quadrangle is an inscription which tells the history of the building:—

"In subsidium et levamen emeritorum senio, belloque fractorum, condidit Carolus Secundus, auxit Jacobus Secundus, profecere Guhelmus et Maria Rex et Regina, MDCXC."

JOY IN HEAVEN WHEN GOOD MEN DIE.

Oh! there is joy and glory in the sky,
As if there was a holiday in heaven;
And so there is—the blest eternal seven,
Bright living lamps, shoot forth their spires on high.
But is there joy in heaven when good men die?
There is, when captives die out of their chains,
When suffering Christians die out of their pains,
And when the stricken soul gets leave to fly

Hartley Coleridge.

SANITARY REGULATIONS.

The following valuable rules have been issued in the borough of Leeds, and addressed to the working classes. They have more than a local interest; therefore we re-publish them.

Houses in which you should not live.

Do not live in houses having damp floors or damp walls, or where you are annoyed with foul and offensive smells from piggeries, privies, drains, or the like, *however low the rent may be.*

Do not live in cellar-dwellings, even though you might be permitted to do so *rent free.*

Do not live in houses too small for your family, where you have not sufficient sleeping room.

Do not live in houses where the landlord has not provided an ample supply of good and pure water for the use of his tenants.

Do not live in houses where the landlord has not provided a sufficient number of privies for the convenience of his tenants.

Such houses may be deemed and taken to be in an unfinished state, until the necessary alterations have been made, and those who live in them are penny wise and pound foolish.

Houses in which you should live.

You should live in houses in which you can breathe pure air by night as well as by day; and where you can enjoy the necessary comfort and convenience, even though you have to pay threepence or sixpence a week higher rent; for by so doing you will show yourselves to be true economists—you will improve your health and prolong your lives

Household and Personal Cleanliness

Your house should be well lime-washed at least once in every three months if you have a large family, and at least once in every six months if you have a small family

In order to secure proper ventilation, your windows should always be kept open in the middle of the day, as long as the weather will permit

Your yard should not suffer anything to remain in your house which produces a bad smell, such as decayed animal or vegetable matter, mud, excrement, or dirt of any description

You should keep your house as clean as possible.

Never suffer utensils containing offensive matter to remain in your bed rooms Have your bedclothes regularly washed, and your beds kept clean.

Clean linen clean skin, and regular and temperate living, are valuable defences against disease

Those who strictly observe these rules and regulations, will improve their social condition, and have comfortable homes.

Remember, "Cleanliness is next to godliness;" and, with the help of God, the best security for health.

SIMPLE FLOWERS.

BY MARY OSBORN.

I LOVE the flowers that grow before
The cottage window, poor man's door,
The snowdrop, wallflower, the sweet-pea,
And sweetbriar, have charms for me,
They rise amid want, care, and strife,
Like hopes of an hereafter life.

I've look'd on many a label'd stem,
With flower like Oriental gem!
These I admire, but oh! far more
The flowers which cheer the low and poor.
Those "simple flowers" which lighten care,
Silence the teachings of despair.

The flowers the cottage-maiden wears
On Sundays, mingling with her prayers
Her highest wish, her holiest thought,
Their breath-like incense fragrance fraught,
Seeming to her the while a part
Of the deep meanings of her heart

The "simple flowers" which gladden earth
Where times are hard, where joys are dearth,
Which lowly cottage festals grace,
Or lie around the coffin'd face
With sprigs of rosemary and thyme,
Softening even death's cold clime.

Dear to humanity these flowers,
The dazzling dreams of childish hours,
The hopes, the joys, the griefs of years
Have dropt on these like falling tears;
They blend with every better thought
Hope hath inspired, Religion taught,
Faith hath revealed, or God hath given,
As symbols of the joys of Heaven.

A BEAR HUNT IN AMERICA.

(From Frank Forester's Field Sports in the United States.)

The hero of my tale is—alas! that I must say was—a brother of Tom Draw, than whom no braver or more honest man, no warmer friend, no keener sportsman, ever departed to his long last home, followed by the tears of all who knew him. He was—but it boots not to weave long reminiscences—you know the brother who still survives; and, knowing him, you have the veritable picture of the defunct, as regards soul, I mean, and spirit—for he was not a mountain in the flesh, but a man only—and a stout and good one—as, even more than my assertion, my now forthcoming tale will testify. It was the very first winter I had passed in the United States, that I was staying up here, for the first time likewise. I had, of course, become speedily intimate with Tom, with whom, indeed, it needs no long space so to become; and scarcely less familiar with his brother, who, at that time, held a farm in the valley just below our feet. I had been resident at Tom's above six weeks; and during that spell, as he would call it, we had achieved much highly pleasant and exciting slaughter of quail, woodcock, and partridge; not overlooking sundry foxes—red, black, and gray, and four or five right stags often, whose blood had dyed the limpid waters of the Greenwood Lake. It was late in the autumn; the leaves had fallen; and lo! one morning we awoke and found the earth carpeted far and near with smooth white snow. Enough had fallen in the night to cover the whole surface of the fields, hill, vale, and cultivated level, with one wide vest of virgin purity—but that was all, for it had cleared off early in the morning, and frozen somewhat crisply; and then a brisk breeze rising, had swept it from the trees, before the sun had gained sufficient power to thaw the burden of the loaded branches.

Tom and I, therefore, set forth after breakfast, with dog and gun, to beat up a large bevy of quail which we had found on the preceding evening, when it was quite too late to profit by the find, in a great buckwheat stubble, a quarter of a mile hence on the southern slope. After a merry tramp, we flushed them in a hedgerow, drove them up into this swale, and used them up considerable, as Tom said. The last three birds pitched into that bank just above you: and, as we followed them, we came across what Tom pronounced, upon the instant, to be the fresh track of a bear. Leaving the meaner game, we set ourselves to work immediately to trail old Bruin to his lair, if possible; the rather that, from the loss of a toe, Tom confidently asserted that this was no other than "the eternal biggest bar that ever had been known in Warwick"—one that had been acquainted with the sheep and calves of all the farmers round, for many a year of riot and impunity. In less than ten minutes we had traced him to this cave, whereunto the track led visibly, and whence no track returned. The moment we had housed him, Tom left me with directions to sit down close to the den's mouth, and there to smoke my cigar, and talk there to myself aloud, until his return from reconnoitring the *locale*, and learning whether our friend had any second exit to his snug *hæmalia*. "You need'nt be scar't now, I tell you, Archer," he concluded, "for he's deal too 'cute to come out, or even show his nose, while he smells 'bacca and hears voices. I'll be back to-rights."

After some twenty-five or thirty minutes, back he came, blown and tired, but in extraordinary glee.

"There's no help for it, Archer; he's got to smell powder anyways!—there's not a hole in the hull hill side, bat this!"

"But can we bolt him?" inquired I, somewhat dubiously.

"Sartain!" replied he, scornfully,—"sartain; what is there now to hinder us? I'll bide here quietly, while you cuts down into the village, and brings all hands as you can raise—and bid them bring lots of blankets, and an axe or two, and all there is in the house to eat and drink both; and a heap of straw. Now don't be stoppin' to ask me no questions—shin it, I say, and jest call in and tell my brother what we've done, and start him up here right away—leave me your gun, and some cigars. Now, strick it."

Well, away I went, and, in less than an hour, we had a dozen able-bodied men, with axes, arms, provisions—edible and potable—enough for a week's consumption on the ground, where we found Tom and his brother, both keeping good watch and ward. The first step was to prepare a shanty, as it was evident there was small chance of bolting him ere nightfall. This was soon done, and our party was immediately divided into gangs, so that we might be on the alert both day and night. A mighty fire was next kindled over the cavern's mouth—the rill having been turned aside—in hopes that we might smoke him out. After this method had been tried all that day, and all night, it was found wholly useless—the cavern having many rifts and rents, as we could see by the fumes which arose from the earth at several points, whereby the smoke escaped without becoming dense enough to force our friend to bolt. We then tried dogs; four of the best the country could produce were sent in, and a most demoniacal affray and hubbub followed within the bowels of the earthfast rock; but, in a little while, three of our canine friends were glad enough to make their exit, mangled, and maimed, and bleeding—more fortunate than their companion, whose greater pluck had only earned for him a harder and more mournful fate. We sent for fire-works; and kept up, for some three hours, such a din and such a stench, as might have scared the old fellow from his lair: but Bruin bore it all with truly stoical endurance. Miners were summoned next; and we essayed to blast the granite, but it was all in vain, the hardness of the stone defied our labours. Three days had passed away, and we were now no nearer than at first—every means had been tried, and every means found futile. Blank disappointment sat on every face, when Michael Draw, Tom's brother, not merely volunteered, but could not be by any means deterred from going down into the den, and shooting the brute in its very hold. Dissuasion and remonstrance were in vain—he was bent on it—and, at length Tom, who had been the most resolved in opposition, exclaimed, "If he will go, let him!" so that decided the whole matter

The cave, it seemed, had been explored already, and its localities were known to several of the party, but more particularly to the bold volunteer who had insisted on this perilous enterprise. The well-like aperture, which could alone be seen from without, descended, widening gradually as it got farther from the surface, for somewhat more than eight feet. At that depth, the fissure turned off at right angles, running nearly horizontally, an arch of about three feet in height, and some two yards in length, into a small circular chamber, beyond which there was no passage whether for man or beast, and in which it was certain that the well-known and much-detested bear had taken up his winter quarters. The plan, then, on which Michael had resolved was, to descend into this cavity, with a rope securely fastened under his arm-pits, provided with a sufficient quantity of lights, and his good musket—to worm himself feet forward, on his back, along the horizontal tunnel, and to shoot at the eyes of the fierce monster, which would be clearly visible in the dark den by the reflection of the torches, trusting to the alertness of his comrades from without, who where instructed instantly on hearing the report of his musket shot to haul him out hand over hand. This mode decided on, it needed no long space to put it into execution. Two narrow laths of pine wood were procured, and half-a-dozen auger holes drilled into each—as many candles were inserted into these temporary candelabra, and duly lighted. The rope was next made fast about his chest, his musket carefully loaded with two good ounce bullets, well wadded in greased buckskin, his butcher knife disposed in readiness to meet his grasp, and in he went, without one shade of fear or doubt on his bold, sun-burnt visage. As he descended, I confess that my heart fairly sank, and a faint sickness came across me when I thought of the dread risk he ran in courting the encounter of so fell a foe, wounded and furious, in that small narrow hole, where valour nor activity, nor the high heart of manhood, could be expected to avail anything against the close hug of the shaggy monster.

Tom's ruddy face grew pale, and his huge body quivered with emotion, as, bidding him "God speed" he griped his brother's fist, gave him the trusty piece which his own hand had loaded, and saw him gradually disappear, thrusting the lights before him with his feet, and holding the long queen's-arm cocked and ready in a hand that trembled not—the *only* hand that trembled not of all our party! Inch by inch his stout frame vanished into the narrow fissure; and now his head disappeared, and still he drew the yielding rope along! Now

s has stopped—there is no strain upon the cord!—there is a ause!—a long and fearful pause! The men without stood y to haul, their arms stretched forward to their full extent, eir sinewy frames bent to the task, and their rough linea- ents expressive of strange agitation. Tom and myself, and me half-dozen others, stood on the watch, with ready rifles, st, wounded and infuriate, the brute should follow hard on e invader of its perilous lair. Hark to that dull and stifled rowl! The watchers positively shivered, and their teeth attered with excitement. There! there! that loud and ellowing roar, reverberated by the ten thousand echoes of the onfined cavern, till it might have been taken for a burst of ubterraneous thunder!—that wild and fearful howl—half roar f fury—half yell of mortal anguish!

With headlong violence they hauled upon the creaking rope and dragged with terrible impetuosity out of the fearful cavern —his head striking the granite rocks, and his limbs fairly clattering against the rude projections, yet still, with gallant hardihood, retaining his good weapon—the sturdy woodman was whirled out into the open air unwounded, while the fierce brute within rushed after him to the very cavern's mouth, raving and roaring till the solid mountain seemed to shake and quiver.

As soon as he had entered the small chamber, he had perceived the glaring eyeballs of the monster, had taken his aim steadily between them, by the strong light of the flaring candles; and, as he said, had lodged his bullets fairly—a statement which was verified by the long-drawn and painful moanings of the beast within. After a while, these dread sounds died away, and all was still as death. Then once again, undaunted by his previous peril, the bold man—though, as he averred, he felt the hot breath of the monster on his face, so nearly had it followed him in his precipitate retreat—prepared to beard the savage in his hole. Again he vanished from our sight!—again his musket shot roared like the voice of a volcano from the vitals of the rock!—again, a mighty peril to his bones, he was dragged into daylight!—but this time, maddened with wrath and angony, yelling with rage and pain, streaming with gore, and white with foam, which flew on every side, churned from its gnashing tusks, the bear rushed after him. One mighty bound brought it clear out of the deep chasm—the bruised trunk of the daring hunter, and the confused group of men who had been stationed at the rope, and who were now, between anxiety and terror, floundering to and fro, hindering one another—lay within three, or, at most, four paces of the frantic monster, while, to increase the peril, a wild and ill-directed volley, fired in haste and fear, was poured in by the watchers, the bullets whistling on every side, but with far greater peril to our friends than to the object of their aim. Tom drew his gun up coolly—pulled—but no spark replied to the unlucky flint. With a loud curse he dashed the useless musket to the ground, unsheathed his butcher-knife, and rushed on to attack the wild beast, single-handed. At the same point of time, I saw my sight, as I fetched up my rifle, in clear relief against the dark fur of the head, close to the root of the left ear!—my finger was upon the trigger, when, mortally wounded long before, exhausted by his dying effort, the huge brute pitched headlong, without waiting for my shot, and, within ten feet of his destined victims, "in one wild roar expired." He had received all four of Michael's bullets!—the first shot had planted one ball in his lower jaw, which it had shattered fearfully, and another in his neck!—the second had driven one through the right eye into the very brain, and cut a long deep furrow on the crown with the other! Six hundred and odd pounds did he weigh! He was the largest and the last! None of his shaggy brethren have visited, since his decease, the woods of Warwick; nor shall I ever more, I trust, witness so dread a peril so needlessly encountered.

LUCIFER-MATCH-MAKING INJURIOUS TO THE TEETH.—By a decree of the local Government of Erfurt, no persons are in future to be engaged in lucifer-match manufactories who have imperfect or partially decayed teeth. It has been found that the phosphorus used in the manufacture acts on the decayed surface, and spreads to the bones of the jaw, which are in bad cases consumed. All workmen who have defects in the teeth are to be dismissed.

AMERICAN VIEWS ON ENGLISH RAILWAY MANAGEMENT.

(From the New York Times)

JOHN BULL is certainly, in many respects, an amazingly slow coach. In whatever relates to railway management especially, it seems impossible for him to keep pace with the rest of the world. He builds his roads well enough; provides reasonably for safety and regularity, and is lavish of expense in their construction and outfit. But for comfort, convenience, and the minor arrangements upon which these depend, it seems impossible to make him care a straw

Last summer we happened to be in England, when a spark from the engine set one of the rear carriages of a railroad train on fire, and the inmates of it were very soon placed in a very uncomfortable and perilous position. There was no way of communicating with any other car, or with the conductor or engineer, for the railway carriages are built now precisely as they were 20 years ago, each one isolated from every other, with cross-benches, two in each compartment, upon which the passengers sit face to face, with cramped limbs—half riding forward and half backward—and without any means of connexion with anybody else. The car was burning at a very rapid rate, the fire being fanned by the speed of the train, and the passengers were beginning to compare the merits of death by fire with death by leaping from cars running at 40 miles an hour, when the state of the case was accidentally discovered by the engineer, and the train was stopped.

The whole English press was at once engaged in a discussion of the case. The nature and extent of the evil were fully displayed; the necessity of establishing some means of communication between the several cars of a train and the engine was elaborately and eloquently enforced; and plans of all sorts were suggested for the attainment of the object. One journal proposed to have a high seat on the top of the rear car, upon which a guard should be perched, to watch the train and blow a horn in case of peril. Another objected, that the dust would fill his eyes, and that he might fall off. A third proposed that the guard should be posted upon the forward car, and overlook the train from that direction. An American gentleman in London, reading these formidable discussions, and supposing the parties to be really anxious to devise some efficacious plan, wrote to one of the papers, stating that in the United States the end desired was perfectly attained by stretching a cord just under the roof of the successive cars and connecting it with a bell. This simple expedient, he suggested, would be found equally available upon English carriages, without involving any change in their general shape.

But the editor to whom the communication was sent did not think it worth publishing. The plan proposed was either too simple, or its Yankee origin was considered decisive against it. And to this day the discussion still goes on!

Another stupidity of the same sort is perpetrated in England in the mode of collecting the tickets upon a railroad train. As there is no way of passing through the cars, they must be collected, of course, from the outside; but instead of doing as the American conductors used to do under the old system, and as is now done upon the Austrian railways—passing along from door to door upon the outside steps while the cars are in motion—the train is stopped a mile or two out of town, and there it stands until the tickets have been collected! The idea of changing the shape of the cars, so as to allow a passage from one to another, and through the middle of each, would probably shock John Bull as an innovation certain to prove fatal to the British constitution. The old style of carriages is religiously preserved; each car is divided into three compartments, and in each compartment are two benches, upon which the passengers sit face to face, under all the discomforts incident to the old system of stages. Part of these benches are cushioned; those are the first-class cars for the aristocracy. Others are of hard plain boards, as comfortless as they can well be made, and these are for the common people!

With all their boasted perfectibility, the railways in England are not half as comfortable for travellers as those in the United States, and far less so than those of France. John Bull knows all this perfectly well, but he is so obstinately and doggedly conservative, so resolute in resisting change of every sort, that years will elapse before any essential improvements will be made.

MECHANICAL AND SCIENTIFIC NOTICES.

NEW RAILWAY LOCOMOTIVE.

We have just had an opportunity of seeing and examining the first of ten railway locomotive engines destined exclusively for express trains, which are now being constructed by Messrs. William Fairbairn and Sons, at their works, Canal-street, Ancoats, for the London and North Western Railway Company. This engine was finished and tried privately two or three times before some of the engineers and officials of that company, and some authorities of other lines. The plan of this engine was wholly designed by Mr. M'Connell, of Wolverton, the locomotive engineer of the London and North-Western Railway Company, and we believe he has secured it by a patent. The object has been to attain a very high rate of speed, and it is intended to accomplish the distance between London and Birmingham (113 miles) in two hours. This new engine has several novelties and peculiarities of construction and application, its most important feature being the change in the relative proportions of the fire-box and tube surfaces. In ordinary locomotives of this class the fire box surfaces rarely exceed 100 square feet, but in this engine,—by the projection of the fire-box into the body of the boiler, and by the introduction of a longitudinal water-space, separating the fire-box into two distinct furnaces,—a heating surface of 260 square feet is obtained. The great advantage of this application was manifested in the second trial, when steam of 100lb pressure was obtained in 45 minutes from lighting the furnace, beginning with water quite cold. The same process in ordinary engines usually occupies about three hours, and the speed with which this was accomplished excited the general astonishment of those most conversant with the subject. It is expected that when running on the railway, for a distance of 50 miles, it will scarcely be necessary at all to open the fire doors, which necessarily occasions a great waste of fuel and heat The extraordinary power of one of these engines seems quite startling, but it is estimated that when an engine of this new class is running at a fair velocity, it will be capable of exerting a power equal to that of nearly 700 horses! Looking at the comparatively small extent of space within which this immense power is generated, it does seem most extraordinary Another novelty of application is that of India rubber for the engine springs, in place of the ordinary steel springs Being much more flexible, they render the motion much easier, and are consequently less destructive to the working parts of the engine Another novelty is, that the axles are made tubular or hollow, being in fact large tubes, instead of the ordinary solid and heavy axles This effects a considerable saving of weight, and does not at all diminish the strength or efficiency of the axles It is intended that this engine shall shortly make a trial of speed upon some portion of the line between London and Birmingham; and the opinion has been confidently expressed by railway engineers and scientific men that it is capable of a speed of nearly 90 miles within the hour. Notwithstanding its really large size and vast power, the engine does not appear so very much larger than the ordinary ones Its total length, over all, is 25 feet 6 inches; its average height about 11 feet. The cylinders are 18 inches in diameter, with two feet stroke, those of the ordinary engines being only 15 or 16 inches in diameter, with about 20 inches stroke. This locomotive has six wheels, the driving-wheels being 7 feet 6 inches in diameter. The total heating surface is 1,700 square feet The tender is intended to carry 3,000 gallons of water and about two tons of coke, so as to be capable of accomplishing the whole distance between London and Birmingham without stopping The other nine locomotive engines in Messrs Fairbairn and Son's order are in progress, and will be sent out in quick succession to supply the company. This is regarded as a bold experiment to attempt a speed so extraordinary on the narrow gauge, and it is also considered a great departure from past practice in regard to the relative proportions between the surfaces of the fire-box and the tubes. We expect, in a future Number, to be able to report the result of the first practical trial of this fine new engine upon the railway.

NEW SUBMARINE TELEGRAPH ROPE.

A new and simple method of protecting submarine electrical conductors has just been invented by Mr. Thomas Allan, of Edinburgh, a gentleman whose great practical ingenuity and skill have already achieved much in improving and facilitating our telegraphic system. According to Mr. Allan's design, the exterior protecting iron wires are placed longitudinally, instead of spirally, as is done in the Dover and Calais rope, and yet are quite flexible. By this means about one half the quantity of protecting wires will give a greater security against a longitudinal strain upon the copper conductors, than can be attained when the wires pass spirally around them. A submarine telegraph rope, constructed on this principle, will of course be less costly (probably one-half), while it will afford a better safeguard to the copper conductors, the mutilation or severance of which at once annihilates the circuit. No doubt a greater number of wires would better withstand the strain of a ship, should its anchor catch the rope; but when placed spirally, they must inevitable yield lengthways under any such strain, and so suffer the conductors to be snapped, and the communication entirely destroyed. We understand that this improvement will shortly be put to trial, and sanguine hopes are entertained of the entire success of the application

IMPROVED KNEADING AND BAKING APPARATUS.

Mr. Fontainmoreau, South-street, Finsbury, has secured a patent, on a communication from Messrs. Rolland and Lesobre, of Paris, for machinery for improving the manufacture of bread, biscuits, &c. In the kneading-trough is a series of teeth, placed alternately on an axle, with bars filling the whole width of the trough; and as in every instance a tooth on one side is opposite a bar on the other, the revolution of the axle gives a screw movement to the dough, forcing it to one end of the receptacle, and on reversing the motion to the other, so that the kneading is expeditiously effected The peculiarity of the oven is having a revolving disc floor, by which means any dish, or other baking, in a public oven, may be taken out with facility at the moment it is required, and others left unmolested during the time necessary for thoroughly cooking By means of pipes and flues, the top, bottom, and sides, are subject to the full effect of the fuel employed, and by a thermometer, placed at the door of the oven, the exact temperature may be always ascertained, and the fire regulated accordingly. A reservoir of water is placed on the top of the oven, kept hot by the superabundant caloric, which would otherwise unprofitably escape, and is useful in kneading the dough. The plan has already been adopted by several hospitals and other public establishments in France

NEW KIND OF PAPER.

A new kind of paper, manufactured entirely from straw, and applicable for all printing purposes, as well as for writing, is stated to have been produced by Messrs Hook and Simpson, of Tovill Mills, Maidstone It is cheaper than paper of the ordinary make, and has already in some cases been largely used.

NEW COMPOSITION FOR RAILWAYS AND OTHER CONSTRUCTIVE PURPOSES.

Mr Owen Williams, of Stratford, has patented a composition to be used in railways and other structures, in lieu of iron, wood, or stone, and for building purposes generally. One of these compositions consists of 180 lbs pitch, 14 gallons creosote, 18 lbs resin, 15 lbs. sulphur, 1000 lbs finely powdered stone, 108 lbs gypsum, and 27 cubic feet sand, breeze scoriæ, bricks, stone, or other hard materials, broken up and passed through a sieve with half-inch meshes The sulphur is first melted with 30 lbs. of the pitch, after which the resin and then the remainder of the pitch is added with the lime and gypsum by degrees, and well stirred till the mixture boils The earth and stony matters are then added, and the creosote mixed in, when the composition is ready for moulding into blocks, for which pressure is applied. The claim is for the mode of preparing such composition, particularly the use of sulphur therein.

SLAVERY IN AMERICA OPPOSED BY THE WOMEN OF ENGLAND.

On Friday, November 26, a meeting of ladies took place at Stafford House, to consider the expediency of addressing a memorial to the women of the United States from the women of England on the subject of slavery.

The ladies present were the Duchesses of Sutherland, Bedford, and Argyll; the Countess of Shaftesbury, Lady Constance Grosvenor, Viscountess Palmerston, Lady Dover, Lady Cowley, Lady Ruthven, Lady Bellhaven, Hon Mrs. Montague Villiers, Hon. Mrs. Kinnaird, the Lady Mayoress, Lady Trevelyan, Lady Park, Miss Park, Mrs. Owen, Mrs. Carpenter, Mrs. Buxton, Miss Buxton, Mrs. John Simon, Mrs. Proctor, Mrs. Binney, Mrs. Holland, Mrs Steane, Mrs. John Buller, Mrs. R. D. Grainger, Mrs. Hawes, Mrs. Sunderland, Mrs. Mary Howitt, Mrs. Dicey, Miss Trevelyan, Mrs. Milman, Miss Taylor, Mrs. Robson, and Mrs. Macaulay

The ladies whose names follow signified their concurrence:—

The Duchess Dowager of Beaufort, the Marchioness of Stafford, the Countess of Derby, the Countess of Carlisle, Lady John Russell, the Countess of Lichfield, Viscountess Ebrington, the Countess of Cavan, Viscountess Melbourne, Lady Hatherton, Lady Blantyre, Lady Dufferin, Lady Easthope, Mrs. Josiah Conder, the

Hon Mrs. Cowper, Lady Clark, Lady Paxton, Lady Kaye Shuttleworth, Lady Buxton, Lady Inglis, Mrs. Malcolm, Mrs. Sibly, Mrs. Alfred Tennyson, Mrs. Lyon Playfair, Mrs. Charles Dickens, Mrs. Murray, Mrs. Charles Knight, Mrs. Marsh, Mrs. Champneys, and Mrs. Rowland Hill.

The Duchess of Sutherland read the following paper:—"Perhaps I may be allowed to state the object for which this meeting has been called together; but very few words will be required, as all, I am sure, assembled here must have heard and read much of the moral and physical suffering inflicted on the race of negroes and their descendants by the system of slavery prevalent in many of the United States of America. Founded on such information, a proposition appeared a short time ago in several newspapers that the women of England should express to the women of America the strong feeling they entertained on the question, and earnestly request their aid to abolish, or at least to mitigate so enormous an evil. The draught of an address accompanied the proposition, and, as it is intended to offer that address for your adoption, will now read it to you:—

"'THE AFFECTIONATE AND CHRISTIAN ADDRESS OF MANY THOUSANDS OF THE WOMEN OF ENGLAND TO THEIR SISTERS, THE WOMEN OF THE UNITED STATES OF AMERICA.

"'A common origin, a common faith, and, we sincerely believe, a common cause, urge us, at the present moment, to address you on the subject of that system of negro slavery which still prevails so extensively, and, even under kindly-disposed masters, with such frightful results, in many of the vast regions of the western world.

"'We will not dwell on the ordinary topics,—on the progress of civilization, on the advance of freedom everywhere, on the rights and requirements of the nineteenth century,—but we appeal to you very seriously to reflect, and to ask counsel of God how far such a state of things is in accordance with His holy word, the inalienable rights of immortal souls, and the pure and merciful spirit of the Christian religion.

"'We do not shut our eyes to the difficulties, nay, the dangers, that might beset the immediate abolition of that long established system; we see and admit the necessity of preparation for so great an event; but, in speaking of indispensible preliminaries, we cannot be silent on those laws of your country which, in direct contravention of God's own law, 'instituted in the time of man's innocency,' deny in effect to the slave the sanctity of marriage, with all its joys, rights, and obligations, which separate, at the will of the master, the wife from the husband, and the children from the parents Nor can we be silent on that awful system which, either by statute or by custom, interdicts to any race of man, or any portion of the human family, education in the truths of the Gospel and the ordinances of Christianity

"'A remedy applied to these two evils alone would commence the amelioration of then sad condition. We appeal to you, then, as sisters, as wives, and as mothers, to raise your voices to your fellow-citizens, and your prayers to God, for the removal of this affliction from the Christian world. We do not say these things in a spirit of self-complacency, as though our nation were free from the guilt it perceives in others. We acknowledge, with grief and shame, our heavy share in this great sin We acknowledge that our forefathers introduced, nay, compelled, the adoption of slavery in those mighty colonies. We humbly confess it before Almighty God; and it is because we so deeply feel, and so unfeignedly avow, our own complicity, that we now venture to implore your aid to wipe away our common crime and our common dishonour.'

"There are many reasons why this address should be presented rather by the women than by the men of England. We shall not be suspected of any political motives; all will readily admit that the state of things to which we allude is one peculiarly distressing to our sex, and thus our friendly and earnest interposition will be ascribed altogether to domestic, and in no respect to national, feelings.

"We shall propose to form a committee for the purpose of collecting signatures to the address, and of transmitting it, when complete, to the United States. As a general committee would be too large for the transaction of the daily business, we shall propose a sub-committee, to report, from time to time, to the general committee; but there is every reason to hope the whole matter may be terminated in a short space of time.

"It only remains for me to acknowledge the kindness with which you have acceded to my request in attending here this day. I hope and believe that our efforts, under God's blessing, will not be without some happy results; but, whether it succeed or whether it fail, no one will deny that we shall have made an attempt which had both for its beginning and for its end 'Glory to God in the highest—on earth peace—good will towards men.'"

The memorial was then agreed to, and a corresponding secretary and a sub-committee were appointed. The office of business is in Ormond-street

ASPIRATIONS.

[The word Aspiration is derived from the Latin (*ad*, to; and *spiro*, to breathe), and its primary meaning is, a breathing after—a secondary meaning is, an ardent wish or desire.]

How happily would the lives of men pass, had they always some good end in view. Earnestly should we aspire to the attainment of some good purpose, and by constantly keeping this in view we should be stimulated to constant progression. Ever should our aspirations be higher than our lives; and ever should we be aiming to raise our lives to our aspirations.

If we would really progress, we must have some high and noble stimulus constantly inciting us to action. We all know how earnestly, how zealously, we work when under the influence of a stimulant; and the higher the inciting motive, the purer and better are our actions likely to become. It is incumbent on those who would march onward in the right path, to look to their thoughts and ideas. Thoughts and ideas govern mankind. We have passed the age when men were tortured on the rack, and thrown into dungeons for venturing to think for themselves. We see how powerfully the opinions of men in those ages controlled them, that life and peace when placed in the balance with their convictions were thought of less importance. So it would be in these times. Ideas govern men none the less powerfully now; and there will be found those who would now die for their opinions, should they be called upon to do so. But such we hope will never be the case. Happily, the sword, the dungeon, and the rack, are not now considered the tests of truth.

Our aspirations are influenced by our ideas, thoughts, and knowledge. Knowledge has an unmistakable and important effect upon our ideas, thoughts, and conduct—as is evident from the history of mankind as far back as we can trace it; an illustration of which is given in our own nation's egress from its state of barbarism under the Druids, and its onward march to its present civilisation. Vast are the treasures of knowledge, but to obtain them we must exert ourselves. Merely looking at them from a distance will not do—if we would derive benefit from them we must make them our own, and obtain them for ourselves. Happy, indeed, is the man whose perceptions of the true and the beautiful are awakened—who rightly appreciates the worth and charms of all around him. To such a one the spring comes with delight, when the flowers and tender grass are up-springing just above the earth, and the buds forming on the trees and hedge-rows, all claiming nurture and support from the atmosphere, the earth, the showers, and from the sunbeams as they come joyfully along on the morning, transforming the dew-drops into bright glittering gems. To him the summer, as vegetation advances, has its own charms—the expanded flowers then displaying more fully their delicate formation, the bright blue sky and the clear atmosphere making him feel lightsome and glad. The sight of the autumnal foliage, with its varied and beautiful hues, thrown together in exquisite shades, affords him delight; and winter, with its changing aspects, finds such an one enjoying each as they are presented to him in succession. How enchantingly sound the melodious strains of music, or the cadences of the human voice, as sweeping along in harmony they fall softly upon the ear, and he listens for the moment spell-bound. How are his joys heightened by beholding a beautiful prospect—hill and dale, mountain, river, and wood spreading out before him. Right well is he entertained by books, and by the intercourse he thus has with the departed worthies of the earth, deriving pleasure and instruction from

the legacies they have left. Science is full of interest to him; there are feelings of admiration called forth as the certain results of the sciences are discovered by experiment, and great joy is felt by those who perceive their long-conjectured theories gradually unfolded, till the very result they imagined has actually been produced. With what zest, ardour, and diligence will pursuits like these animate him! Such a man, on looking to the bright stars and the infinite space in which they perform their appointed motions, and on directing his thoughts to the animalcule, contrasting the smallness of the one with the greatness of the other, is led to think of the vastness of that power which governs the worlds of stars, and attends also to the most minute creeping things of life, adapting each to its sphere, and caring for it: as he thinks of these, his thoughts are elevated, and he feels there is a bountiful Benefactor on whom he, too, can rely.

How different is the condition of an ignorant or unobserving man—one whose perceptions are undeveloped! The sun as it rises in its glory, streaking the sky with many tints, and throwing light and shadow upon the landscape below, he admires not; and the beauty of the landscape he appreciates not, and scarcely notices beyond it the orb of day piling up fantastic towers among the clouds, and forming shapes which leave to imagination a pleasing task in trying to decipher them. The stars, as they shine in their splendour in the blue ethereal vault of heaven, have no charms for him. The discoveries of science, and the thousand means they possess for bettering the condition of the human family, he dwells on only so far as his own interests are concerned, or as his own limited range extends. Sculpture, literature, and painting, with their ever-increasing allurements, are lost upon him. And what of the affections of such a man? Kindness he feels, yet not as he might, because dull in perceiving those little demonstrations of regard and kindness (which ever and anon come to cheer and bless, and which constitute more than half of the pleasures of life), he loses thousands of opportunities of enjoyment which are daily and hourly offered to him; and his own self-respect is lessened when he finds how deficient he is in many of these finer feelings.

That man is really educated in whom all the faculties, powers, feelings, and affections are rightly developed—and it is to this state we should aspire. Even by adding to our means of exercising an hitherto dormant faculty or feeling of a pure kind, we are adding much to our sources of happiness, and for this we should perseveringly strive, even though we see not readily the fruits of our labour, feeling assured that the result will be good, if we only continue "to labour and wait." But we must seek our *own* self-improvement, without which the attempts of others are useless. Day by day must we add to our knowledge, learning the grand principles of self-effort and self-reliance. Even when deriving advantages from others, our *own* thoughts and abilities must be used. We do ourselves harm by relying altogether on others for thoughts, ideas, and promptings to action. We should have some good end in view to incite us to progress. Turn we but to the history of the past, and we shall see that numerous sacrifices have been made in all ages and nations, the advantages of which are reaped by us of the present day. Yes, we benefit by the forests of Britain being cleared, the wolves, at great peril, being extirpated; by the exploring expeditions which have been accomplished; and by those sturdy and noble-minded forefathers of ours winning for us political, social and religious privileges, wresting them from power, oppression and tyranny, at fearful cost. The labours of thoughtful men are subservient to each of us. Milton, Newton, Shakspeare, and a host of others, have worked for us. The present inhabitants of the globe are, in a great measure, directly and indirectly, ministering to our happiness. Religion, the sciences, steam-engines, agriculturists, sailors traversing the mighty deep, poor ignorant negroes sugar-making, Chinese tea-gathering, electric telegraphs, manufacturers, men working by hand or head, exhibitions of industry: these, and more than these, are adding to our happiness, if we but rightly use them. But to tell the history of *all* that has been done for us would be to reveal the world's history; and to enumerate what is doing for us now, would be to include *all* the actions and works of men. Seeing how these persons and things, how the earth, the atmosphere, and the Great Being who governs all, are adding to our means of happiness, should we not also aspire to be doing something towards aiding the progress of ourselves and others? Should we not aspire to do our duty? And what can be more satisfactory to reflect upon than duty, manfully, earnestly, and faithfully done? Without this satisfaction, how insipid are all other things—and with it, how content and happy do we feel, though adverse circumstances encompass us! But what is this duty, to the performance of which we should so earnestly aspire? It is following the dictates of truth, justice, reason; and doing all the good we can for others. Easily may our duty be discerned, if we stifle not the promptings of our consciences, which point out what is required of us. It is for us to carry out the pure principles which arise within us, without fear, let, or hinderance; and looking straightforward, careless of blame, and seeking not praise, to truly comply with the demands thus made upon us. The result we must deem as beyond our control, and be satisfied when we have thoroughly carried out the principles of good as far as lay in our power.

High as our aspirations may lead us, we must not allow them to overreach the bounds of reason, or we may fall. The good aspirations we form we must strive to practically carry out, regardless of failure, and hoping on, even though we do not gain the far-off reward. Franklin it was who said, though he had failed in becoming a perfect man (which he aimed to be), he was a better man for having made the attempt. Of little benefit will it be for a mariner to perceive a haven in the distance, if he lay by his glass, regard not his chart, and use no efforts to reach it, but, having *seen* the desired port, expect *therefore* to anchor in it. Nor will it do for us, on seeing a prospect of future progress opening to our view, to think that *We ought* is sufficient. It will be useless to us unless we practically attempt to carry it out. Yet how dreary, dry, and tiresome to many is the practical carrying out of ideas. They would rather be amusing rather building castles upon the clouds than doing something rather be idling away their lives in the hope of "something turning up." On the other hand, there are those who plod on day by day, without ever casting a look to the past, the present, or the future—who enjoy not pleasures which are lying about them, and which seem as it were to be offering themselves as means of soothing, cheering, and enlightening mankind, and making them better and nobler. The man who pursues the medium of these views is the one most likely to be happy himself, and do good to others. The ideal of a glowing portion of human nature would incite him to constant exertion, and the exertion would call forth better and more extended aspirations, which, having their influence, would be acted upon, and again re-action following, a series of successive meditations and actions would be produced and have a result not otherwise easily attainable.

Our march must be onward and upward, both as individuals and as members of society. It requires untiring effort and unwavering perseverance to keep pace with the age. Great are the advantages even within the reach of working men. But are these used as they might be? Do the working men, upon the whole, duly appreciate and rightly value these advantages? Some do. Unfortunately, we cannot say *all* do. The aspirations of some do not extend beyond the momentary gratification of the passions, and, ending there, unhappiness and misery to themselves and others follow. However, as we look forward to the future, we see shadows thrown across our way which seem to indicate that beyond, in the vast depths of time, are better and brighter days, when men shall use their powers aright, and successfully make their efforts conducive to their own improvement and the good of others. We, too, can do much, if we will resolutely exert ourselves towards removing the dark veil which overshadows the future; and we can assist in clearing away the ignorance retarding the full development of the capabilities of our race, and causing misery, wretchedness, and crime. As we aspire more and more towards perfection, so shall we become more happy and useful. Our influence, small though it may be, will perchance extend, even as the circle in the lake is ever extending till it reaches the furthest bound; and each one, whether as a member of society or individually, by imparting the knowledge he has acquired, and by doing all the good he can in other ways, may assist in widening the field of human improvement and happiness.

J. G. B.

UNCLE TIM AND MASTER JAMES.

BY MRS. HARRIET BEECHER STOWE,

Authoress of "Uncle Tom's Cabin," etc

IN THREE PARTS.

PART THE THIRD.—*James a decided Christian.—Pastor Griswold sickens and dies.—James Benton becomes an eloquent and successful Minister.—Uncle Tim happy.*

THE young minister, worn by long-continued ill health, by the fervency of his own feelings, and the gravity of his own reasonings, found pleasure in the healthful buoyancy of a youthful, unexhausted mind; while James felt himself sobered and made better by the moonlight tranquillity of his friend. It is one mark of a superior mind to understand and be influenced by the superiority of others, and this was the case with James. The ascendancy which his new friend acquired over him was unlimited, and did more in a month toward consolidating and developing his character, than all the four years course of a college. Our religious habits are likely always to retain the impression of the first seal which stamped them, and in this case it was a peculiarly happy one. The calmness, the settled purpose, the mild devotion of his friend, formed a just alloy to the energetic and reckless buoyancy of James's character, and awakened in him those religious feelings, without which the most vigorous mind must be incomplete.

The effect of the ministrations of the young pastor, in awaking attention to the subjects of his calling in the village, was marked, and of a kind which brought pleasure to his own heart. But, like all other excitement, it tended to exhaustion, and it was not long before he sensibly felt the decline of the powers of life. To the best-regulated mind there is something bitter in the relinquishment of projects for which we have been long and laboriously preparing, and there is something far more bitter in crossing the long cherished expectations of friends. All this George felt. He could not bear to look on his mother, hanging on his words and following his steps with eyes of almost childish delight, on his singular father, whose whole earthly ambition was bound up in his success, and think how soon the "candle of their old age" must be put out. When he returned from a successful effort, it was painful to see the old man, so evidently delighted, and so anxious to conceal his triumph, as he would seat himself in his chair, and begin with,

"George, that 'ere doctrine is rather of a puzzler—but you seem to think you've got the run of it. I should really like to know what business you have to think you know better than other folks about it," and, though he would cavil most courageously at all George's explanations, yet you might perceive, through all, that he was only uplifted to hear how his boy could talk.

If George were engaged in argument with any one else, he would sit by, with his head bowed down, looking out from under his shaggy eyebrows with a shamefaced satisfaction very unusual with him. Expressions of affections from the naturally gentle are not half so touching as those which are forced out from the hard-favoured and severe, and George was affected, even to pain, by the evident pride and regard of his father.

"He never said so much to anybody before," thought he, "and what will he do if I die?"

In such thoughts as these Grace found her brother engaged one still autumn morning, as he stood leaning against the garden fence.

"What are you solemnizing here for, this bright day, brother George?" said she, as she bounded down the path.

The young man turned and looked on her happy face with a sort of twilight smile.

"How happy you are, Grace!" said he.

"To be sure I am! and you ought to be so too, because you are better."

"I am happy, Grace—that is, I hope I shall be."

"You are sick, I know you are," said Grace, "you look so out! Oh, I wish your heart could spring once, as mine does!"

"I am not well, dear Grace, and I fear I never shall be," said he, turning away, and fixing his eyes on the fading trees opposite.

"Oh, George! dear George! don't, don't say that, you will break all our hearts," said Grace, with tears in her eyes.

"Yes, but it is true, sister: I do not feel it on my own account so much as—however," he added, "it will all be the same in heaven."

It was but a week after this that a violent cold hastened the progress of debility into a confirmed malady. He sunk very fast. Aunt Sally, with the self-deceit of a fond and cheerful heart, thought every day that "he would be better;" and Uncle Tim resisted conviction with all the obstinate pertinacity of his character, while the sick man felt that he had not the heart to undeceive them.

James was now at the house every day, exhausting all his energy and invention in the case of his friend, and any one who had seen him in his hours of recklessness and glee, could scarcely recognise him as the being whose step was so careful, whose eye so watchful, whose voice and touch were so gentle, as he moved around the sick-bed. But the same quickness which makes a mind buoyant in gladness, often makes it gentlest and most sympathetic in sorrow.

It was now nearly morning in the sick-room. George had been restless and feverish all night, but towards day he fell into a light slumber, and James sat by his side, almost holding his breath lest he should waken him. It was yet dusk, but the sky was brightening with a solemn glow, and the stars were beginning to disappear; all, save the bright and morning one, which standing alone in the east, looked tenderly through the casement, like the eye of our Heavenly Father, watching over us when all earthly friendships are fading.

George awoke with a placid expression of countenance, and fixing his eyes on the brightening sky, murmured faintly,

"The sweet, immortal morning sheds
Its blushes round the spheres."

A moment after, a shade passed over his face, he pressed his fingers over his eyes, and the tears dropped silently on his pillow.

"George! dear George!" said James, bending over him

"It's my friends—it's my father, my mother," said he, faintly

"Jesus Christ will watch over them," said James, soothingly

"Oh, yes, I know he will, for He loved his own which were in the world, he loved them unto the end. But I am dying—and before I have done any good."

"Oh, do not say so," said James, "think, think what you have done, if only for *me*! God bless you for it! God will bless you for it—it will follow you to heaven; it will bring me there. Yes, I will do as you have taught me! I will give my life, my soul, my whole strength to it, and then you will not have lived in vain."

George smiled and looked upward; "his face was as that of an angel," said James, in his warmth, continued:—

"It is not I alone who can say this: we all bless you; every one in this place blesses you, you will be had in everlasting remembrance by some hearts here, I know."

"Bless God!" said George.

"We do," said James. "I bless Him that I ever knew you, we all bless Him, and we love you, and shall for ever."

The glow that had kindled over the pale face of the invalid again faded as he said,

"But, James, I must, I ought to tell my father and mother; I ought to, and how can I?"

At that moment the door opened, and Uncle Tim made his appearance. He seemed struck with the paleness of George's face; and, coming to the side of the bed, he felt his pulse, and laid his hand anxiously on his forehead, and clearing his voice several times, inquired "If he didn't feel a little better."

"No, father," said George; then taking his hand, he looked anxiously in his face, and seemed to hesitate a moment: "Father," he began, "you know that we ought to submit to God."

There was something in his expression at this moment which flashed the truth into the old man's mind; he dropped his son's hand with an exclamation of agony, and turning quickly, left the room.

"Father! father!" said Grace, trying to rouse him, as he stood with his arms folded by the kitchen window.

"Get away, child!" said he roughly.

"Father, mother says breakfast is ready."

"I don't want any breakfast," said he, turning short about. "Sally, what are you fixing in that 'ere porringer?"

"Oh, it's only a little tea for George: it will comfort him up, and make him feel better, poor fellow."

"You wont make him feel better, poor fellow—he is gone," said Uncle Tim, hoarsely.

"Oh, dear heart! no!" said Aunt Sally.

"Be still a contradicting me; I won't be contradicted all the time by nobody! The short of the case is, that George is going to die just as we have got him ready to be a minister and all; and I wish to pity I was in my grave myself, and so—" said Uncle Tim, as he plunged out of the door and shut it after him.

It is well for man that there is one Being who sees the suffering heart *as it is*, and not as it manifests itself through the repellances of outward infirmity, and who, perhaps, feels more for the stern and wayward, than for those whose gentler feelings win for them human sympathy. With all his singularities there was in the heart of Uncle Tim a depth of religious sincerity; but there are few characters where religion does anything more than struggle with natural defect, and modify what would else be far worse.

In this hour of trial, all the native obstinacy and pertinacity of the old man's character rose, and while he felt the necessity of submission, it seemed impossible to submit, and thus reproaching himself, struggling in vain to repress the murmurs of nature, repulsing from him all external sympathy, his mind was tempest-tossed and not comforted.

It was on the still afternoon of the following Sabbath that he was sent for, in haste, to the chamber of his son. He entered, and saw that the hour was come. The family were all there, Grace and James, side by side, bent over the dying one, and his mother sat afar off, with her face hid in her apron, "that she might not see the death of the child." The aged minister was there, and the Bible lay open before him. The father walked to the side of the bed. He stood still, and gazed on the face now brightening with life and immortality. The son lifted up his eyes—he saw his father, smiled, and put out his hand. "I am glad you are come," said he. "Oh, George, to the pity, don't! don't smile on me so! I know what is coming, I have tried and tried, and I can't, I *can't* have it so!" and his frame shook, and he sobbed audibly. The room was still as death, there was none that seemed able to comfort him. At last the son repeated, in a sweet but interrupted voice, those words of man's best Friend. "Let not your heart be troubled, in my Father's house are many mansions."

"Yes, but I can't help being troubled, I suppose the Lord's will must be done, but it will kill me."

"Oh, father, don't, don't break my heart," said the son, much agitated. "I shall see you again in heaven, and you shall see me again; and then 'your heart shall rejoice, and your joy no man taketh from you.'"

"I never shall get to heaven, if I feel as I do now," said the old man. "I cannot have it so."

The mild face of the sufferer was overcast. "I wish he saw all that I do," said he, in a low voice. Then looking towards the minister, he articulated, "Pray for us."

They knelt in prayer. It was soothing, as real prayer always must be; and when they rose, every one seemed more calm. But the sufferer was exhausted, his countenance changed, he looked on his friends; there was a faint whisper, "Peace I leave with you," and he was in heaven.

We need not dwell on what followed. The seed sown by the righteous often blossoms over their grave, and so was it with this good man's. the words of peace which he spake unto his friends while he was yet with them, came into remembrance after he was gone; and though he was laid in the grave with many tears, yet it was with softened and submissive hearts.

"The Lord bless him!" said Uncle Tim, as he and James were standing, last of all, over the grave. "I believe my heart is gone to heaven with him; and I think the Lord really *did* know what was best, after all."

Our friend James seemed now to become the support of the family, and the bereaved old man unconsciously began to transfer to him the affections that had been left vacant.

"James," said he to him one day, "I suppose you know that you are about the same to me as a son."

"I hope so," said James, kindly.

"Well, well, you'll go to college next week, and none of your keeping school to get along. I've got enough to bring you safe out—that is, if you'll be careful and steady."

James knew the heart too well to refuse a favour in which the poor old man's mind was comforting himself, he had the self-command to abstain from any extraordinary expressions of gratitude, but took it kindly, as a matter of course.

"Dear Grace," said he to her, the last evening before he left home, "I am changed, we both are altered since we first knew each other, and now I am going to be gone a long time, but I am sure—"

He stopped to arrange his thoughts.

"Yes, you may be sure of all those things that you wish to say, and cannot," said Grace.

"Thank you," said James, then, looking thoughtfully, he added,

"God help me. I believe I have mind enough to be what I mean to, but whatever I am or have shall be given to God and my fellow-men, and then, Grace, your brother in heaven will not be ashamed."

"I know he does now," said Grace. "God bless you, James, I don't know what would have become of us if you had not been here. Yes, you will live to be like him, and to do even more good," she added, her face brightening as she spoke, till James thought she really must be right.

* * * * * *

It was five years after this that James was spoken of as an eloquent and successful minister in the State of C——, and was settled in one of its most influential villages. Late one autumn evening, a tall, bony, hard-favoured man was observed making his way into the outskirts of the place.

"Halloa, there!" he called to a man over the other side of the fence, "what town is this 'ere?"

"It's Farmington, sir."

"Well, I want to know if you know anything of a boy of mine that lives here?"

"A boy of yours—who?"

"Why, I've got a boy here, that's living on the town, and I thought I'd just look him up."

"I don't know any boy that is living on the town; what's his name?"

"Why," said the old man, pushing his hat off from his forehead, "I believe they call him James Benton."

"James Benton! why, that is our minister's name."

"Oh, well, I believe he is the minister, come to think of it. He's a boy of mine, though. Where does he live?"

"In that white house set back from the road there, with all those trees round it."

At this instant a tall, manly-looking person approached from behind. Have we not seen that face before? It is a touch graver than of old, and its lines have a more thoughtful significance; but all the vivacity of James Benton sparkles in that quick smile as his eye falls on the old man.

"I thought you could not keep away from us long," said he, with the prompt cheerfulness of his boyhood, and laying hold of both of Uncle Tim's hard hands.

They approached the gate; a bright face glanced past the window, and in a moment Grace was at the door.

"Father! dear father!"

"You'd better make believe to be so glad," said Uncle Tim, his eyes glistening as he spoke.

"Come, come, father, I have authority in these days," said Grace, drawing him towards the house, "so no disrespectful speeches; away with your hat and coat, and sit down in this great chair."

"So, ho! Miss Grace," said Uncle Tim, "you are at your old tricks, ordering round as usual. Well, if I must, I must;" so down he sat.

"Father," said Grace, as he was leaving them, after a few days' stay, "it is Thanksgiving-day next month, and you and mother must come and stay with us."

Accordingly, the following month found Aunt Sally and Uncle Tim by the minister's fireside, delighted witnesses of

the Thanksgiving presents which a willing people were pouring in, and the next day they had once more the pleasure of seeing a son of theirs in the sacred desk, and hearing a sermon that everybody said was the "best he ever preached;" and it is to be remarked, by-the-by, that this was the standing commentary on all James's discourses, so that it was evident that he was "going on unto perfection."

"There's a great deal that is worth having in this life, after all," said Uncle Tim, as he sat musing over the coals of the bright evening fire of that day; "that is, if we would only take it when the Lord lays it in our way."

"Yes," said James; "and let us only take it as we should, and this life will be cheerfulness, and the next fulness of joy."

LITERATURE NOT INCONSISTENT WITH BUSINESS.

"VITE SINE LITERIS MORS EST."

One of the greatest anomalies noticeable by observers of men and things in our day, is the obstinacy with which a certain class maintain that literature is inconsistent with business. Whatever their character or occupation, the maintenance of such a notion manifestly arises from an ignorance of the construction of the human mind. They assert that we continually find a studious habit associated with a repugnance to business, therefore study unfits youth for trade, and the proper way to cure such disqualification is, carefully to remove everything that may tend to encourage it. The fact is admitted, but the inferences, we will endeavour to show, are unfounded.

Are the characteristics of mind uniform in all men? No, they are as varied as the conformation of the countenance. True, man's spiritual essence is uniform, but its attributes are diverse. Are there not many minds of a superior order? Can they delight to lose themselves in grovelling pursuits? As well could young ladies labour in a coal mine. Is it not reasonable to suppose that a being of spiritual appetite must breathe a spiritual air? So with these minds, they delight in study. knowledge is their element, to rise to higher heights of wisdom is the purpose of their existence. This is their nature.

It is impossible for wisdom's children to spend their strength in amassing wealth. Their "minds are of celestial birth." We do not say they cannot labour, attend to business, be active on 'Change, give close application to the ledger, be industrious in the workshop or manufactory, but we do say that their toil *must* be relieved by times of genial study, or the consequences may be disastrous. The aversion to business so often complained of by employer and parent arises, then, not from a habit of "idling their time in reading," but from the ignorant resistance offered by them to a taste which they can no more destroy than they can root out the oak with a toothpick. Did they comprehend, indeed, the human heart, they would pursue a different course. Let youth, then, have time for mental recreation, and he will work strenuously! Such masters and parents say they cannot see it in this light, and say, perhaps, truly. As the frigidity of the arctic zone environs the traveller with optical, so coldness of heart surrounds the subject with mental, illusions. They estimate the amount of world-knowledge by the amount of monetary success. This is their world and college; and wisdom gained from other spheres is stigmatised as useless, pernicious, and therefore to be avoided by the young student of trade. The celebrated Torquato Tasso, by his determined pursuit of learning, greatly chagrined his father, who went to Padua, where his son was, to remonstrate with him; and after using many lavish expressions, which Tasso heard with a patience that made his father still more angry, who cried: "Of what use is that philosophy on which you value yourself so much?" "Sir," replied Tasso calmly, "it has enabled me to endure patiently the harshness of even your reproofs."

With many employers one day is the transcript of another, each succeeding each with planet-like order and uniformity. They rise, consult the news, eat and drink, pore over the ledger, eat, drink, and sleep! Sophism and deception surround us; where shall we gather forces to maintain the combat? We know no other sources than books, nature, and the Divine Spirit. The life of man is so brief, that, trusting in it alone, he can rarely form correct conclusions. The world's wide-scattered library is man's invincible armoury; there he best fits himself for life's stern battle. By them we hold sweet intercourse with minds angelic. They pour into the soul a ceaseless tide of thought. They are voices from ancient tombs, the more melodious as they are distant. The writers thereof are a mighty republic, free to cottager as king. There we can learn the workings of the heart, and find truth, joy, and peace.

Who has not his predilections? and with such, who can judge equitably? In study there are no such influences; we can then weigh statements, measure actions, and properly estimate opinions; we then perceive the subtlest motives which have governed and do govern the wanderings of the mind from childhood to age. This is the knowledge which, brought to bear upon the present, enables a man to wield a power, great in the proportion of its extent, in controlling the destiny of his fellow-men, and encircling himself with the sources of happiness. Books are indeed precious, for they qualify men for close observation, and extracting the largest amount of truth from experience. It is thus observation and experience become the most fruitful sources of practical wisdom. "For," after all, says Dr. Channing, "it is mind which does the work of the world, so that the more there is of mind, the more labour will be accomplished." Activity of mind is æsthetically associated with intellectual activity. He that possesses this antecedently-essential knowledge, though he mix not much in "life," far transcends him who has passed his days in intercourse with his fellows, but has it not.

Why, then, is youth repelled from study? Cannot employers see the [illegible] their interests? Far be it from us to [illegible] no labour is so uncertain, painful. But we do exclaim against the cruelty of depriving youth of mental food, and so starving the soul. "Petrarch never felt happy a day if, during it, he did not read or write, or do both. One of his friends, fearing it would injure his health, begged him to lend him the key of his library. Petrarch, without knowing the design, granted it. His friend locked it up, and forbade him to read anything for ten days. The poet consented with great reluctance. The first day seemed longer than a year, the second produced a hard headache from morning till night; and on the morning of the third day he was evidently in a fever. His friend, touched with his situation, restored the key, and with it his health and spirits." The more we struggle to remove a favourite object, the more tenaciously the passions cling to it. No wonder that, in spite of the tender appeals of parents, or the stern commands of selfish masters, he should prefer—to all the sunny landscapes drawn for him of happiness and wealth in traffic, without the hope of study—unjust obloquy, solitude, want, stark misery, yet all irradiated by the warm bright beams of wisdom. This is his happiness, not wealth.

A taste for literature can never be destroyed by the removal of the means of gratification. Wherever it does exist, take equal care of it as well as the body. It is the youth's life. In defiance of all resistance, human nature will never cease to develop, by exercise, the faculties with which it may be endowed. Train this taste, allow it that indulgence consistent with business. Deal not harshly, and we shall see him follow literature, not for subsistence, but as a solace after the anxieties of the busy day. This will sustain the balance of life equal. Which is most apt to prosper,—he that is invested with the fundamental principles of wisdom, gathered from the thousand sources of past ages, together with experience and observation, or the shrewd man, who can rely upon his own experience and skill alone? If the latter, still would we urge, the former possesses that which the other lacks and vainly toils after, and which is of ten thousand times more consequence than the most unbounded prosperity—unfailing sources of true and pure happiness.

Glory! Near St. Sevier there lives an old soldier, with a wooden leg, a false arm, a glass eye, a complete set of false teeth, a nose of silver covered with a substance resembling flesh, and a silver plate replacing part of his skull. He was a soldier under Napoleon, and these are his trophies!

A PERUVIAN EXECUTION.

BY M MAX RADIGUET.

Translated for the "Working Man's Friend," by Walter Weldon

DURING my sojourn in the Peruvian capital I was witness, in the Plaza-Mayor, of some strange scenes, which spoke but little in favour of the political life of the country. It is in the Plaza-Mayor that are executed all sentences of death against Limenian criminals, and in it have been enacted nearly all the military dramas, tragic or otherwise, of which the republic founded by Bolivar has been the theatre. A few months previous to my arrival in the country, Peru had been, as usual, in a state of civil war. Its government had only just been settled for the first time since the period when the president Gamarra expiated upon the battle-field of Ingavi his all-starred and deservedly unsuccessful attempt upon the liberties of the republic, and the supreme power had just fallen into the hands of General Vivanco, after having been contested for so long and fiercely by Menendez, Torrico, Lafuente, and Vidal.

Vivanco, wiser than his predecessors, comprehended that the only way in which the great measures of reform which were so much needed by his country could be effected was, by submitting it for a time to the dominion of an arbitrary ruler. He therefore constituted himself an absolute dictator, taking the title of Supreme Director, and had commenced with vigour and courage the realisation of his patriotic intentions, when a redoubtable conspiracy, got up in favour of General Lafuente, again plunged Peru into a state of violent agitation, and threatened to immerse the country anew in a state of anarchy and civil war. Vivanco determined to repress energetically all disorder, caused to be arrested all those who were implicated in the conspiracy, and had thus proved themselves hostile to the maintenance of peace and order, but the effects of this dictatorial act, which would have been most happy had it been properly followed up, were very much weakened, if not entirely changed in character, by the indecision by which it was succeeded. The power possessed by some of the conspirators influenced Vivanco to release them, and the fear of compromising revelations being made, procured, in a few days, pardon for the others, with the single exception of a poverty-stricken hawker, who, either more guilty or more unfortunate than his accomplices, was sentenced to undergo a military execution. The death of this poor fellow it was my lot to witness, and some of the incidents connected with it have fixed themselves in my memory as remarkable traits of manners, which consist of a strange *melange* of gentleness and cruelty, similar to those which I had previously witnessed in the Cirque del Archo.

It was merely chance that conducted me to the Plaza-Mayor on the day on which took place this execution of a state criminal I could not but observe, as I sat writing at the window of my lodgings, that the people were flocking thitherwards in unaccustomed crowds, and that every countenance wore a much more anxious look than usual. Those of the women, in particular, who were there, as everywhere else, in the majority, betrayed a far greater degree of inquietude and curiosity than customary and altogether it was easy to perceive that an event of unusual occurrence was at hand. In spite of the danger to which a French soldier was at that time exposed who was incautious enough to appear in the streets of Lima in full uniform, I ceded the *Anguillon* to curiosity, and went out without changing mine, which I then happened to be wearing, for a garb less likely to attract attention. I had not gone far, when a Peruvian approached me, politely requesting to "be allowed the favour of lighting his cigarette at my cigar" I presented to him, according to the customs there, my *panatella* by the lighted end He took it delicately between his second finger and his thumb, lighted his own, and returned it to me with that graceful gesture which expresses, in Spanish America, at the same time thanks and a parting salutation. I beckoned him to stay, however, and, service for service, interrogated him respecting the cause of the extraordinary assemblage of which we formed a part.

"What!" exclaimed he, "do you not know that they are about to shoot a conspirator?"

"I did not before," I replied, "and where will the execution take place?"

"In this *plaza*, not two feet from where you stand."

"What! in the middle of this crowd?"

"Exactly."

"But will no accident happen?" I inquired, imagining that it would be impossible to avoid their taking place, so densely packed and numerous was the crowd.

"People must take care," was the response of the Limenian; "and there will not be the slightest excuse for any victim, for every one in Lima knows perfectly well that the soldiers always fire from these steps," which were those of the palace of the right reverend archbishop. He then bade me to observe closely a wall at some paces opposite, and I perceived that it bore evident traces of preceding executions. We were standing, then, upon the exact spot from which the soldiers were to fire, and to me it seemed that the public security on these occasions must be extremely precarious, the crowds having nothing but their own prudence to keep them out of danger. The approach, however, of a regiment of the soldiers of Vivanco, soon distracted my thoughts from this subject. They came marching proudly amid a flourish of trumpets, and deployed in platoons before the national palace, which, like, that of the archbishop, is situated in the *plaza*. The rolling of the drums, the gay flourishes of the bugles, the booming of the guns, and the dazzling appearance of so much steel and brass glistening in such a sun as that which hangs above Peru, together with the *empressement* of the women, the conquering and proud air of the young military officers created by Vivanco, and all this bustle, noise, and movement, gave to the *plaza* so much the appearance of a place prepared for a public *fete*, that I began to forget the purpose for which it all had been given birth to. It was recalled, however, to my memory by hearing an individual, who formed one of a neighbouring group in which seemed to be carrying on a very animated conversation, interrupt himself as the strokes of a neighbouring church clock struck his ear, and exclaim:—

"A quarter to nine, in another quarter of an hour he will be out of prison."

"True," replied another, "but there are five churches on his route, so we shall not see him here much before noon."

The conversation was then continued as though nothing had interrupted it, but the few words I have just repeated sufficed to recall the poor *condamne* to my recollection, and I resolved to take immediately the way leading to the prison, since it seemed that the drama, of which I had determined to become an attentive observer, would not be completed in one act. I arrived at the prison gates exactly as the clock struck nine. The cortege, preceded and followed by a picquet of cavalry, was already in motion, a line of soldiers on each side of the criminal were marching to keep off from him the pressure of the crowd. A drum, covered with black crape, was beating a slow death-march, and was accompanied at intervals by a couple of shrill fifes, and the bells of a neighbouring church, towards which the course of the procession seemed to be directed, was tolling a funeral knell.

Accompanied by his confessor, who was reading prayers to him in a half-whisper, the criminal marched along with his eyes covered and his arms tied He wore no coat, and a not over-clean shirt, a pair of torn striped trousers, an old felt hat, and a pair of well-worn shoes, completed his not very elegant costume. His step was firm, and his bearing appeared fearless, and—faithful to the last to his national taste—he smoked as he went along an enormously large cigar At some distance behind him followed a group of Sisters of Mercy—*hermanos de la buena muerte*—whose part in the sad drama was to be that of performing the proper duties, after the execution, to the corpse The cortege advanced but very slowly, and it stopped before every church upon its route, in order that the condemned might be conducted within its gates, and allowed to kneel upon its steps to pray, while some sombre verses of the *De Profundis* were slowly sung in the interior. The prayers over, the bells ceased tolling, the criminal arose, those of the next church farther on began, and the procession recommenced its passage through the midst of a very numerous and mournful crowd. The people knelt and prayed with the condemned at every church, but after having done so but few of them continued to follow the cortege, the greater number being eager, after they had once *seen* the prisoner, to gain a place in the *plaza* from which his execution would be visible. I did the same as soon as we had passed two churches, as I saw that the sight which I had already witnessed would be only repeated till the *plaza* was arrived at, and I did not wish—although I was determined to learn all that the occasion would teach me of Peruvian manners—to feast my eyes any longer on so sad a spectacle.

Arrived for the second time in the Plaza-Mayor, I found there, if possible, a crowd denser than before. There was a sadness visi-

ble on every countenance, which, when coupled with the otherwise gay appearance of the *plaza*, produced an effect upon the mind which I will not attempt to describe. More soldiers had arrived during the hour I had been absent, and the beating of the drums from time to time announced that the "traitor's" sentence was being read to the various regiments. This formality had not been as yet completely gone through, when a sudden murmur and confusion near the entrance of the *plaza* announced the arrival there of the condemned.

An electric thrill ran through the whole assembly, which trembled like a field of wheat in a gust of wind. Every countenance expressed something much akin to stupor, every voice was hushed, and the procession entered amid a silence deep and still as that of death. In order to give it entrance, one side of the rectangle of troops fell back upon the neighbouring columns, and rendered visible the fatal stool, seated upon which the prisoner was about to undergo his penalty. The soldiers then prepared to fire into the middle of the crowd, as though no one stood before them but the prisoner The people seemed used to this, and those of them who were in danger made haste to extricate themselves, but neither the soldiers nor the police appeared to dream of interrupting the circulation of the populace As soon, however, as the condemned had been conducted to his stool, my attention was wholly concentrated upon him

As soon as they had seated him he threw away his cigar, and having prayed his attendants to remove the bandage from his eyes, delivered an address to those around him, in which he declared that he was entirely innocent. He then cast his eyes upon a gallery of the presidential palace, upon which were seated, as witnesses of the execution, a number of the officers of Vivanco, and, if report spoke truly, the general himself. He appeared to hope for an instant that his sentence might be commuted, and I watched the gallery for a few seconds with the most dolorous anxiety, but one could not divine the least manifestation of sympathy in any member of the group from which might have issued the word of grace It was evident that the law would be allowed to take its course, and I turned my eyes anew upon the condemned, whose calm and proud attitude had not in the least been shaken by the alternate fevers of hope and despair which in the course of the last few seconds must have filled his veins. He asked that the bandage might be again placed over his eyes, and when this was done he was pinioned to his stool, and twelve men advanced with their muskets pointed at him. I turned away that I might not observe the sickening spectacle which I knew must follow, and cast my eyes over the surrounding crowd. A discharge of muskets which made my heart leap painfully apprised me that the sentence had been carried out. Immediately the drums began again to beat; the trumpets were again sounded; and the troops, breaking up their columns, defiled before the gallery of the palace, the standard-bearers lowering their flags, and the officers saluting their superiors with the sword, and shouting *vivats*. This noise and bustle had already begun to efface the sorrowful expression which was imprinted upon every countenance, and we had all begun to breathe again, as though just delivered from the terrors of a nightmare, when an unspeakable dread seemed to seize upon all present, and began to scatter the multitude with the rapidity of lightning Carried away, in spite of myself by the strong human current, I demanded of them near me the cause of all this terror, but "*El muerto! El muerto!*" was the only answer I could gain. The report, however, of a second discharge of musketry, which was heard soon after, served to stop the flying, and caused them to retrace their steps towards the *plaza*, again bearing me with them,—this time not unwillingly.

Having a third time gained the place of execution, I saw that the poor wretch was breathing still, in spite even of this second fusillade, and notwithstanding that he had been struck by more than a dozen balls! He was writhing in the cruelest of tortures, and so fearful was the sight which he presented, that the populace, which again had gathered round him, rushed from his neighbourhood, after a second or two, smitten with fright and horror. Horrible to relate, his torments lasted for some *minutes*, without any officer giving command that they should be put an end to, and he was only released from them by the mercy of half a dozen private soldiers, who—committing, however, by doing so, seeing that they were not bidden, a breach of discipline—gave the multilated wretch the *coup de grace*. Some of the random balls which were fired by these soldiers grievously wounded several of the lookers-on, and one of them, an officer I believe of high [illegible] the next morning, a few hours after.

The *hermanos* before mentioned now approached the corpse, straightened it and tied it to the back of the wooden stool, and—as it was necessary that it should remain there till the evening—placed near it a cross and a bason of holy water. This done, they knelt beside it and began praying, and continued to do so without intermission till after sunset.

During the afternoon the *plaza* remained almost empty, a few individuals only coming now and then to scatter holy water out of the bason on the corpse, and to place offerings of money in the dead man's hat, upon which was placed an inscription which solicited alms to be devoted to the purpose of paying for prayers for his soul's repose. After, however, the *oracion* of the evening, the *portales* were filled as usual with elegant promenaders; the corpse having been removed, the *plaza* lacked none of its customary noise and gaiety, and it seemed as though the tragic scene of which it had been the theatre in the morning was already forgotten by the joyous crowds who filled it. I wondered much at the time how that which had been felt so keenly in the morning should have been so well forgotten as it appeared to be by the evening of the same day, but I discovered afterwards that it had not entirely escaped the recollection of the gay Limenians, for chancing to witness, a few weeks later, the drawing of the national lottery, I was astonished to find repeated a great number of times, among the other devices which accompanied the various numbers, the words *El alma del hombre fusillado*. Were these the words of remorseful accomplices, or those of tender and unforgetting friends? Did they who wrote these words upon their tickets intend, if fortune favoured them, to endow some chapel or found some mass, or—entering into a regular account with the dead "traitor"—to keep the money, and give him a prayer or two in return? The latter is by far themost probable supposition.

DICK WHITTINGTON.

A LEGENDARY BIOGRAPHY.

Such is the name of the hero of our most popular legend. He came up to London a poor orphan boy, and a rich merchant, named Fitzwarren, pitying his condition, received him into his household. Here he was put into the kitchen to help the cook, who treated him with great severity, but for this there was some compensation in the kindness of his master's daughter, Miss Alice. The garret in which he slept was infested with rats and mice, causing him much trouble; and with a penny, of which he had happily become the possessor, he purchased a cat On Mr. Fitzwarren, some time after, despatching a vessel to sea, he gave all his servants leave to send out a venture in her, and Dick, by his master's orders, brought down from the garret his whole property—his much-valued cat—and gave it to the captain, with tears in his eyes, saying that he should now be unable to sleep for the rats and the mice. The servants laughed loudly at such a venture as Dick's, but Miss Alice kindly gave him money to purchase another cat.

The ship was driven to the coast of Barbary, and the captain having sent out specimens of his cargo to the king of the country, he and his chief mate were invited to court. Right royally did it appear they were about to be entertained, but the moment the dishes were placed on the table, it was besieged by hosts of rats and mice, who speedily devoured all the luxuries that had been set out. No wonder that the captain was told the king would give him money in abundance to be delivered from such tormentors, or that at such a crisis Dick Whittington's cat should be remembered. Forthwith the cat was brought from the ship under the arm of the captain, and when the tables were again spread, and their assailants appeared, such havoc did she make among them, as to fill the king and his court with amazement and delight. A princely sum was given for the cat,—the whole cargo of the vessel was purchased by the king,—and with such wealth as he had not hoped to gain, the captain set sail for the English coast.

Dick's position, meanwhile, so far from improving, had become worse and worse. The ill-treatment of the cook increased till it became intolerable, and with a heavy heart the poor boy hurried away from his master's house. Many a weary step did he take, until arriving at Holloway, he sat down to

rest himself on a stone. While there, Bow Church bells began to ring, and as he listened he thought he heard them say—

"Turn again, Whittington,
Thrice Lord Mayor of London!"

And so he went back; was put in possession of the wealth which his cat had obtained; married Miss Alice, the kind daughter of Mr. Fitzwarren, and was three times chief magistrate of this great metropolis.

Various means have been employed to perpetuate the legend. Not only has it been told, in diverse forms, in books for the young, but it has repeatedly furnished a subject which the artist has rendered available. An old print exhibits the chief magistrate, attired in full costume, and though his right hand rested formerly on a skull, the figure of a cat was afterwards substituted for this relic of mortality. As the pedestrian wends his way in one of the northern suburbs of London, he will observe, just at the foot of Highgate-hill, the neat and comfortable range of buildings called "Whittington College." In the centre of the principal court may be perceived a figure of the founder, suggesting the very image of the poor orphan boy, when he ran away from the hard-hearted cook, and sat on the Holloway stone, listening to the prophecy of his future wealth and authority. Nor will any one who has seen it easily forget the charming picture of Mr. Frank Stone, in which Whittington is depicted in the same circumstances. This picture may now be seen in the Drawing-room of the Whittington Club, to which it was presented by Douglas Jerrold, the founder of that valuable institution.

In all this we have a striking illustration of a strong propensity in human nature to indulge in the imagination, even to the sacrifice of truth, and of all the benefit it is calculated to yield. Mr. Keightley remarks, in reference to Ireland, "I hardly ever knew a man who, as the phrase goes, 'had risen from nothing,' that there was not some extraordinary mode of accounting for his wealth. The simple and most usual explanation of the wonder was, to assert that he had gotten a *treasure* some way or other. Thus, for example, I once knew a man whose original name had been Halfpenny (when he rose in the world he refined it to Halpen), and who had grown rich from the humblest means. I was one day, when a boy, speaking of him and his success to our gardener. 'Sure, then, you are not such a *gommaul* (fool), Sir,' said he, smiling at my simplicity, 'as to believe it was by honest industry he made all his money? I'll tell, you, Sir, how it *rale*y was: you see he sent one time to the Castle for a keg of halfpence, and, by the laws! what did they send him in mistake, but a keg full of *goulden* guineas! And, Jemmy, you see, was '*cute*, and he kept his own secret, and by degrees he throve in the world, and became the man he is. That's the *rale* truth of it for you.'"

Such is a specimen of a large number of stories, and among them that of Dick Whittington. It is true that when America was first colonised by the Spaniards, cats were very valuable. Two of them are said to have been taken out to Guyana, where was a plague of rats, and they were sold, in consequence, for a pound weight of gold. It is stated that their kittens fetched a large sum, but that the price decreased as the colony became stocked with these animals.

It is equally true that in the year 1419 Sir Richard Whittington filled the chair of the chief magistrate of London for the *third* time. But, then, where is the authority for the story of the orphanhood in poverty, the ever-despicable tyrant of the kitchen, the flight, the cheering sound of Bow-bells, and the fortune obtained for the cat? It is just as stable as the "*rale*" story of the rise of Mr. Halfpenny.

The only fragment of truth in the legend appears to be that Alice Fitzwarren became the wife of Richard Whittington. He was born in the year 1360, followed the business of a mercer, and acquired great wealth. Having been Sheriff of London in the year 1393, he was elected Lord Mayor, and sustained that office in the years 1397, 1406, and 1419. He is said to have been knighted by Henry V., to whom he lent large sums of money for his wars with France, and to have died full of years and honours in 1425.

One of our old Chroniclers recites at length his various charities, which were great, among which he mentions his foundation of "Whittington College," and thus concludes his narrative. "But among all other good works, I will show you one very notable, which I received credibly by a writing of his own hand, which also he willed to be fixed as a schedule to his last will and testament. He willed and commanded his executors, as they would answer before God at the day of the resurrection of all flesh, that if they found any debtor of his that owed to him any money, if he were not, in their consciences, well worth *three times* as much, and also out of the debt of other men, and well able to pay, that then they should never demand it, for he clearly forgave it, and that they should put no man in suit for any debt due to him. Look unto this, ye aldermen, for it is a glorious glass!"

The *true* story of Whittington should be told, to disabuse the popular mind of the error into which it is so prone to fall. It is one in which, doubtless, the high qualities of industry, prudence, integrity, and perseverance, became—as they have done in innumerable instances—the great elements of wealth and fame. When these are cultivated, there may be high hope of their customary rewards; when they are neglected and contemned, in the expectation of some suddenly-sprung mine of wealth, the most disastrous results alone can be anticipated.

It is singular, that a tale like that of Whittington and his Cat should be found in the East; yet that it is so appears on the authority of Sir Gore Ouseley. He states, that according to a Persian MS., one Keis, the son of a poor widow in Sirâf, embarked, in the tenth century, for India, having, as his only property, a cat. There he fortunately arrived at a time when the palace was so infested by rats or mice, that they invaded the king's food, and persons were employed to drive them from the royal banquet. Keis now produced his cat, the noxious vermin soon disappeared, and magnificent rewards were bestowed on the adventurer of Sirâf, who returned to that city, and afterwards, with his mother and brothers, settled in an island in the Persian Gulf, which from him has been denominated *Keis*.

BEFORE AND AFTER DINNER.

On my return from Russia into France, I chanced, among many other travellers of different nations, to occupy a seat in the post-chaise between Riga and Breslau. We sat, two by two, on wooden benches,—our trunks under our feet, the sky over our heads,—travelling day and night, exposed to all the inclemencies of the weather, and finding, at the inns on the road, only brown bread, whiskey, and coffee.

Such was the style of travelling in Russia, Prussia, Poland, and in most of the northern countries. After traversing, sometimes great forests of open hemlock and birch, sometimes, wide dreary tracts of land, we came among the mountains, covered with ash and oak growth, which separate Poland from Silesia.

Although my travelling companions understood French—the universal language of Europe—they conversed very little. One morning about dawn, we found ourselves upon a hill, near a castle, charmingly situated. Many brooks wound through its long avenues of lindens, and formed below little islands, planted with orchards, in the midst of meadows. Afar off—as far as sight could extend—we perceived the rich countries of Silesia, covered with harvests, villages, and handsome residences, watered by the Oder, which traversed them like a riband of gold and azure.

"Oh, what a lovely scene!" exclaimed an Italian painter, who was going to Dresden, "I seem to see Milan."

An astronomer, of the Academy of Berlin, remarked: "Here are wide plains, one might take a long base, and by those steeples, have a fine suite of triangles."

An Austrian baron, smiling scornfully, replied to the geometrician, "Know that this land belongs to one of the greatest nobles of Germany, all the churches that you see below there are on his estate."

"That being the case," said a Swiss merchant, "the inhabitants are then serfs. By my faith, a poor country!"

A Prussian officer of hussars, who was smoking his pipe, withdrew it gravely from his mouth and said, in a firm tone: "No one here holds title, but under the King of Prussia. He has delivered the Silesians from the yoke of Austria and of nobles. I remember his making us encamp here four years. Oh, what a fine country this is to fight in! I would establish my magazine in the castle, and my artillery upon those terraces. I would flank the river with my infantry; I would place my

cavalry upon the wings, and with 30,000 men, I would here face all the forces of the empire. Long live Frederic!"

Hardly had he resumed his pipe, when a Russian officer replied: "I would not live in a country like Silesia, open to all armies. Our Cossacks ravaged it during the last war, and had not our regular troops restrained them, they would not have left a cottage standing. It is now still worse there, the peasants can carry on lawsuits with the lords! and the citizens have still greater privileges in their municipalities! I prefer the environs of Moskwa."

A young Leipsic student replied to these two officers: "Gentlemen, how can you speak of war in such charming places! Permit me to inform you that the very name of Silesia is derived from *Campi Elysii*—the Elysian fields. It is better to sing with Virgil:

'Lycori;
Hic ipse tecum consumerer ævo.'
'Here with thee should my life smoothly flow.'"

He spoke with so much animation as to wake up an amiable Parisian mantua-maker, who, at the aspect of this beautiful scenery, exclaimed, "O the delicious country! It lacks nothing but Frenchmen." "Why do you sigh?" she inquired of a young Rabbin beside her.

"Look!" said the Jewish Doctor; "that mountain below, with its peak, resembles Mount Sinai."

Everybody began to laugh. But an old Lutheran minister, of Erfurt, in Saxony, frowning, rejoined, "Silesia is an accursed country; for the truth is banished from it. It is under the yoke of Papacy. You will see, at the entrance of Breslau, the palace of the former Dukes of Silesia, which now serves as a Jesuit College, though they have been chased from every other part of Europe."

A heavy Dutch merchant, commissary for the Prussian army during the last war, replied to him: "How can you call a country cursed, which is covered with so much that is good? The King of Prussia has done well to Silesia: it is the finest flower of his crown. I would rather own an acre there for my garden, than a mile square in the sandy Marquisate of Brandenburg."

Thus disputing, we arrived at Breslau, where we alighted at a very fine hotel. While waiting dinner, we spoke of the owner of the place. The Saxon minister assured us that he was a scoundrel, who commanded the Prussian artillery at the siege of Dresden; that he had crushed that unfortunate city with poisoned bomb-shells, half of its houses being still destroyed, and that he had acquired his property by levying contributions on Saxony.

"You are deceived, answered the Baron; "he got it by marriage with an Austrian countess, who made a mesalliance in wedding him. His wife is now much to be pitied, none of her children can enter the ranks of the German nobility, for their father is only an officer of fortune."

"What you say," replied the Prussian hussar, "does him honour, and he would be crowned with honours this day in Prussia, had he not left the king's service on the return of peace. He can now no longer show himself."

The host, who now ordered in dinner, said, "Gentlemen, it appears that you do not know this nobleman of whom you speak; he is a man loved and respected by every one; there is not a beggar on his estates. Although a Catholic, he assists poor passengers of every country and religion. If they are Saxons, he lodges and feeds them three days, in compensation for the harm he was obliged to do them during the war. He is adored by his wife and children."

"Learn," replied the Lutheran minister to the host, "that there is neither charity nor virtue in his communion. All he has done is pure hypocrisy, like the virtues of Pagans and Papists."

There were several Catholics among us, who were about to raise a terrible dispute, when the host, taking the head of the table, invited us to be seated. We were all then silent, and began to eat and drink in travellers' fashion. The cheer was fine. At the dessert, peaches, grapes, and lemons were served. The host then told his wife to bring, while he waited for the coffee, some bottles of champagne wine, with which he wished to regale the company, in honour, he said, of the lord of the manor, to whom he had particular obligations. When the bottles came, he placed them by the French lady, requesting her to do the honours.

Joy then appeared on all countenances, and conversation was re-animated. My fair compatriot offered the host the first glass, saying that we were as well served at his house as at the first hotels of Paris, and that she knew no Frenchman of more gallantry.

The Russian officer agreed that there were more fruits at Breslau than at Moscow; he compared Silesia to Livonia for fertility, and added that the liberty of the peasants rendered a country better cultivated, and its lord happier.

The astronomer observed, that Moscow was nearly in the same latitude as Breslau, and consequently, susceptible of the same productions.

The hussar officer said, "Truly, I think the lord of this manor, has done very well in leaving the service. After all, our great Frederic, after earning laurels on the battle-field, passes part of his time in gardening and cultivating melons himself at Sans Souci."

Every one shared the hussar's opinion. Even the Saxon minister said that Silesia was a fine and good province, and that it was a pity it was in error, but that he doubted not, since liberty of conscience was established in the estates of the King of Prussia, that all the inhabitants, and especially the owner of that hotel, would return to the truth, and embrace the Confession of Augsburg; "for," added he, "God never leaves a good action without reward, and it is one that cannot be too much praised in a soldier, who has done ill to the people of my country during war, that he does them good in time of peace."

Even the young Rabbin entered into the spirit of the occasion. He was dining alone and sadly in a corner of the hall, according to the custom of Jews in travelling; he arose, and presented [illegible] other cup to the lady, who filled it to the [illegible] It at one draught, then she said to him, "How does it seem to you, Doctor? is not the soil that produces such wine well worthy the promised land?"

"Do bless, Madam," he replied, smiling, "especially when it is found out by such fair hands."

"Hope, then," said she to him, "that your Messiah may be born in France, so that he may there re-assemble your tribes from all parts of the world!"

"Would to God!" replied the Israelite; "but first, he would have to make the conquest of Europe, where we are almost everywhere so wretched. He would have to be a new Cyrus, who should force the different peoples to live in peace among themselves and with the human race."

"God hearken to you!" cried most of the guests.

I admired the variety of opinions among so many persons, who were disputing before they were seated at table, and who were in such perfect accord when they arose. I concluded that man is wicked in his misfortunes,—for it is really a misfortune to fast too long, and that he was good when he was happy,—for when he has dined well he is at peace with all the world. I drew another consequence, of more importance that all these opinions, which had, for the most part, alternately influenced me, came entirely from the different educations of my travelling companions, and I did not doubt that each of them would return to his own, when his blood should cool. Desiring to fix my judgment on the subjects of conversation, I addressed a neighbour, who had been all the while silent, and seemed to possess an even temper. "What think you," said I, "of Silesia, and of the master of the house?"

"Silesia," he replied to me, "is a very good country, since it produces fruits in abundance; and the master of the house is an excellent man, since he does good to all the unfortunate.

As to the manner of judging in each individual according to his religion, his nation, his estate, his temperament, his sex, his age, the season of the year, even the hour of the day, and especially his education, which gives the first and last colour to our judgments; but when we refer everything to the happiness of the human race, we are sure of judging as God acts. It is upon the general reason of the universe that we ought to regulate our particular reasons, as we regulate our watches by the sun.

Since this conversation, I have even found that, concerning our globe and its inhabitants, it was like Silesia; every one gets an idea of it according to his education. The astronomers

see in it only a globe, shaped like a Dutch cheese, which turns around the sun, with some Newtonians on it. Soldiers find battle-fields and grades of distinction; nobles, seignorial titles and vassals; priests, communicants and excommunicated; merchants, branches of commerce and money; painters, landscapes; epicureans, terrestrial paradises. But the wise man considers it in its relations with the needs of men, and men themselves by those which they sustain with each other.

ADA BYRON (LADY LOVELACE).

Last week was chronicled in our columns the death, in extreme old age, of a lady intimately connected with the prince of English letter writers:—this week we have to record the untimely death of another lady, yet more closely connected with the prince of English poets in his time. Mary Berry, the friend of Lord Orford, died in November, 1852, at the age of ninety,—and Augusta Ada Byron, the only child of Lord Byron—"sole daughter of his house and heart"—died in the same month and year, at the age of thirty-seven. Walpole and his fair friend both outlived the scriptural threescore and ten, but Byron and his daughter died each at the same age, when little more than one-half of the scriptural allotment had been fulfilled. Some presentiment that her life was not to exceed in duration of years the life of her father, is said to have been uppermost in the daughter's mind for some years past, and that presentiment, if it in truth existed, may have contributed to its own accomplishment.

The married life of Lord Byron—or rather the period during which Lord and Lady Byron lived together—was a year and some few days They were married in January, 1815 On the 10th of December, in the same year, Ada, their only child, was born, and, in January, 1816, the husband and wife separated for ever. When her mother removed her into Leicestershire, and when her father saw her for the last time, Ada was a month old. The solitary poet's feelings would seem to have clung to his child; and the third book of 'Childe Harolde'—written in 1816, immediately after the separation, is dedicated as it were to the father's love. The song begins with Ada —

Is thy face like thy mother's, my fair child!
Ada! sole daughter of my house and heart?
When last I saw thy young blue eyes they smiled,
And then we parted,—not as now we part,
But with a hope.

And with Ada it ends:—

My daughter! with thy name this song began—
My daughter! with thy name thus much shall end—
I see thee not,—I hear thee not,—but none
Can be so wrapt in thee, thou art the friend
To whom the shadows of far years extend
Albeit my brow thou never shouldst behold.
My voice shall with thy future visions blend,
And reach into thy heart, when mine is cold,—
A token and a tone, even from thy father's mould.

To aid thy mind's development,—to watch
Thy dawn of little joys,—to sit and see
Almost thy very growth,—to view thee catch
Knowledge of objects,—wonders yet to thee!
To hold thee lightly on a gentle knee,
And print on thy soft cheek a parent's kiss,—
This, it would seem, was not reserved for me;
Yet this was in my nature —as it is,
I know not what is there, yet something like to this

Of this prophecy we know that nearly all was fulfilled. Ada Byron never looked consciously into the face of her father Whatever wholesome and ennobling joys his wayward "nature" might have found in watching the growth of his young daughter's mind, it was *not* reserved for the poet ever to know. How far the voice of the illustrious father did blend with the future visions of the orphan girl—how far the echoes of his harp and of his heart did "reach into her heart"—how far the token and the tone from Her father's mould had part in her after-musings, the world perhaps has no right to inquire. Still, many will find it pleasant to learn that by her own desire the remains of Ada Byron were laid where they will mingle with her "father's mould"—in Hucknall Church.

At her father's death Ada was little more than eight years old. She had small resemblance to her father. No one, we are told, would have recognised the Byron features—the finely chiselled chin or the expressive lips or eyes of the poet—in the daughter. Yet, at times the Byron blood was visible in her look; and those who saw her in 1835, on her marriage with Lord Lovelace (then Lord King), fancied that they saw more traces of the poet's countenance in the bride than they remembered there at any other time. But dissimilarity of look was not the only dissimilarity between Byron and his daughter. Lady Lovelace cared little about poetry. Like her father's Donna Inez, in 'Don Juan'—

Her favourite science was the mathematical.

Mr. Babbage is said to have conducted her studies at one time, and Lady Lovelace is known to have translated, from Italian into English, a very elaborate Defence of the once celebrated Calculating Machine of her mathematical friend.

It is impossible to contemplate the early death of Byron's only child without reflecting sadly on the fates of other families of our greatest poets. Shakspeare and Milton each died without a son, but both left daughters, and both names are now extinct. Shakspeare's was soon so. Addison had an only child—a daughter, a girl of some five or six years at her father's death She died unmarried, at the age of eighty or more. Farquhar left two girls dependent on the friendship of his friend Wilks the actor, who stood nobly by them while he lived. They had a small pension from the Government; and having long outlived their father, and seen his reputation unalterably established, both died unmarried. The son and daughter of Coleridge both died childless. The two sons of Sir Walter Scott died without children,—one of two daughters died unmarried,—and the Scotts of Abbotsford and *Waverley* are now represented by the children of a daughter. How little could Scott foresee the sudden failure of male issue! The poet of the 'Faerie Queene' lost a child, when very young, by fire—when the rebels burned his house in Ireland. Some of the poets had sons, and no daughters. Thus we read of Chaucer's son,—of Dryden's sons,—of the sons of Burns,—of Allan Ramsay's son,—of Dr Young's son,—of Campbell's son,—of Moore's son,—and of Shelley's son. Ben Jonson survived all his children. Some—and those among the greatest—died unmarried:—Butler, Cowley, Congreve, Otway, Prior, Pope, Gay, Thomson, Cowper, Akenside, Shenstone, Collins, Gray, Goldsmith Mr. Rogers still lives—single. Some were unfortunate in their sons in a sadder way than death could make them

Lady Lovelace has left three children—two sons, and a daughter Her mother is still alive,—to see perhaps with a softened spirit the shade of the father beside the early grave of his only child. Ada's looks in her later years—years of suffering, borne with gentle and womanly fortitude—have been happily caught by Mr Henry Phillips,—whose father's pencil has preserved to us the best likeness of Ada's father.

LITERARY NOTICES.

Mrs Harriet Beecher Stowe, Authoress of "Uncle Tom's Cabin," [illegible] of the Illustrated Exhibitor and Magazine of Art, for the week ending December 25, John Cassell feels highly honoured by the kindness of Mrs H. Beecher Stowe in furnishing him with her portrait, and thus enabling him to present to the British public a striking likeness, engraved in the first style of art, in a cheap and popular form. The Illustrated Exhibitor and Magazine of Art is published in Weekly Numbers, price Twopence each A new and improved Series, under the title of the Illustrated Magazine of Art will be commenced on January 1, price 3d. in a neat cover, when, in addition to numerous Engravings in the text, each Number will contain a fine Engraving worked on Plate Paper, and with No 1 will be presented gratis, a splendid View of the Interior of St Paul's Cathedral, during the Interment of the late Duke of Wellington, printed upon fine Plate Paper, measuring eighteen inches by thirteen. This Engraving will be worth four times the cost of the Number of the Magazine of Art.

The Self and Class Examiner in Euclid, containing the Enunciations of all the Propositions and Corollaries in Cassell's Edition for the use of Colleges, Schools, and Private Students, is now ready, price 3d.

Cassell's Elements of Arithmetic (uniform with Cassell's Euclid), is now ready, price 1s. in stiff covers, or 1s. 6d. neat cloth.

The Answers to all the Questions in Cassell's Arithmetic, for the use of Private Students, and of Teachers and Professors who use this work in their classes, is preparing for publication.

MISCELLANEA.

AMERICAN DINNERS.—The rapidity with which dinner and dessert are eaten by our go-a-head friends is illustrated by the boast of a veteran in the art of speedy mastication, who "could *get from soup to nuts in ten minutes.*" The following is rich in its way —A lady dining in New York, seeing some peas in her immediate vicinity, requested the waiter to hand them He was in the act of doing so, when a person sitting near, who heard the application, suddenly seized the dish as it passed him, swept the whole of its contents briskly into his own plate, and addressing the disappointed lady, said with a facetious grin, "*I guess I'm a whale at peas!*"

A MARRIAGE IN HIGH LIFE —More than fifty years have passed since the following narrative was related by an old gentleman, above seventy years of age, as having occurred in his youth. Its date may therefore be about 1740 A nobleman, having broken his constitution and injured his estate by a career of dissipation, determined to marry and reform, and, having paid his addresses to an heiress, and been duly accepted, the wedding day was fixed, and great preparations made for its celebration. In those times news travelled slowly, and the intelligence of the courtship only reached the lady's aunt, from whom she had large expectation, three or four days before the bridal day She was, however, an energetic lady of the old school, she posted to London, and made such good use of her time that she succeeded in setting the match aside. But the letter announcing this was only written by her niece late on the preceding night, and was despatched very early on the purposed wedding-day, and, being taken to the bridegroom's bedside, was read by him there A short time after, he told his valet to go into the servants' hall, and enquire if any of the women would be married that morning The servant, knowing their lord's generosity and fondness for joking, thought that he wished to signalise his own marriage by portioning another couple, and laughingly declined The valet returned, and said—"There is nobody that can be married to-day, my lord, but the country wench that came up last week, and she says that she has no sweetheart " "Oh!" he replied, "tell her to put on her Sunday dress, and come to me in the blue breakfast-room." He dressed in the suit prepared they met; and the result of that interview must be known by its consequences A mantle and veil of lace were thrown over the country dress of a modest, handsome, and lively village girl, and she became that morning a peeress of England! Much sensation was caused, but in the world of fashion it was only a nine days' wonder, for the married pair went immediately from London. She possessed an excellent disposition, and strong good sense. With renewed health and spirits, his lordship's enjoyment of country life increased, his property improved by care; and, above all, a beautiful progeny surrounded him and their devoted domestic mother, who affectionately closed her eyes in peace, receiving his parting blessings many years after his happy choice.—*Notes and Queries*

A ROYAL BOTANIST.—There is one king in Europe who is a good practical botanist, and who must look back upon the hours spent in the arrangement of his fine herbarium with far more pleasure than upon those wasted in a vain and retrograde course of politics. The monarch in question is his Majesty of Saxony, who, in his scientific career at least, has gained honour and respect. Many are the stories told by his subjects of their ruler's adventures when following his favourite and harmless hobby, how, more than once, astray from his yawning courtiers, he had wandered in search of some vegetable rarity across the frontier of his legitimate dominions, and, on attempting to return, was locked up by his own guards as a spy or smuggler, since he could produce no passport, nor give any more proper account of himself than the preposterous assertion that he was their king. Fifteen years ago he made a famous excursion to the stony and piratical little republic of Montenegroe It was literally a voyage of botanical discovery, and the potentate sailed down the Adriatic in a steamer fitted out with all the appliances of scientific investigation. On its deck he might be seen busily engaged in laying out his plants, ably and zealously assisted by his equerries and aides-de-camp, and guided by the advice of eminent botanists, who accompanied him as members of his suite Such a kingly progress had surely never been seen before, unless Alexander the Great may have relieved the monotony of conquering by making occasional natural history excursions with his *quondam* tutor, Aristotle The Montenegrins, on ordinary occasions very troublesome and by no means trustworthy people—folks who still keep many of the worst habits of the old Scottish Highlanders—were mystified into tranquillity by the peculiar proceedings of their royal visitor and his noble attendants Resolved, however, to render due honour to so distinguished and unusual a guest, they furnished a guard of state to accompany him in all his peregrinations, and, whenever his botanical majesty stooped to gather a new or rare specimen, the soldiers halted, and with much ceremony presented arms

TRANSCENDENTALISM. — An American writer gives the following as his idea of Transcendentalism —"Transcendentalism is that spiritual cognoscence of psychological intefragibility, connected with conscientient ademption of incolumbment spirituality and etherialised connection, which is derived from a profound contemplation of the irragibility of those incessimable divisions of the more minute portions of subdivided particles of invisible atoms that became anatom-atically tanallable in the circumnambulating commotion of ambiloques voluminousness, preposterated in the tecurable phlogiston of a refined idearity—trequerably protuitous in rendering visible calamity orationable on the intensest infinitissitudes of labyrinthetical oleration — palemonial compunctability, and composterated somnolescence "—A translation of the above wanted immediately!

PURCHASE OF A PRIME MINISTER.—The following account by Lord Wilmot, of the manner in which he had bribed Sir Robert Walpole with a Murillo, is extracted from Sir E. Bulwer's new comedy, "*Not so Bad as we Seem,*" and is a good specimen of lively dramatic narrative —"Hit him plump on the jolly blunt side of his character! I must tell you about it. Drove home from Will's, put my Murillo in the carriage, and off to Sir Robert's. Shown into his office,—'Ah! my Lord Wilmot,' says he, with that merry roll of his eye, 'this *is* an honour, what can I do for you?" Sir Robert, says I, 'we men of the world soon come to the point, 'tis a maxim of yours that all have their price.' 'Not quite that,' says Sir Robert, 'but let us suppose that it is.' Another roll of his eye, as much as to say, I shall get this rogue a bargain! 'So, Sir Robert,' quoth I, with a bow, 'I've come to buy the prime minister' 'Buy me,' cried Sir Robert, and he laughed till I thought he'd have choked; 'my price is rather high, I'm afraid' Then I go to the door, bid my lackeys bring in the Murillo, 'Look at that, if you please—about the mark—is it not?' Sir Robert runs to the picture, his breast heaves, his eyes sparkle,—'A Murillo!' cries he, 'name your price!' 'I have named it' Then he looks at me *so*, and I look at him *so*—turn out the lackeys, place pen, ink, and paper before him. 'That place in the Treasury, just vacant, and the Murillo is yours.' 'For yourself?—I am charmed,' cried Sir Robert. 'No, 'tis for a friend of your own, who's in want of it' 'Oh, that alters the case—I've so many friends troubled with the same sort of want' 'Yes, but the Murillo is *genuine*—pray what are the friends?' Out laughed Sir Robert. 'There's no resisting you and the Murillo together? There's the appointment, and now, since your lordship has bought me, I must insist upon buying your lordship. Fair play is a jewel' Then I take my grand holyday air,—'Sir Robert,' said I, 'you've bought me long ago! you've given us peace where we feared civil war, and a constitutional king instead of a despot. And if that's not enough to buy the vote of an Englishman, believe me, Sir Robert, he's not worth the buying.' Then he stretched out his bluff hearty hand, and I gave it a bluff hearty shake. He got the Murillo—Hardman the place And here stand I, the only man in all England who can boast that he bought the prime minister!"

NOTICES TO CORRESPONDENTS

TWO SUBSCRIBERS —You may solder the edges of brass, copper, iron, &c., together with an alloy consisting of brass and zinc, or, in some cases, with a little tin or silver. The surface to be united must be filed perfectly bright, and not be soiled with the fingers, or in any other way The alloy, being first reduced to a granular or powdery form, must be made into a sort of paste with ground borax and water, applied to the metal in this state, then dried, and exposed carefully to bright ignition at a clear forge fire.

A. B. C.—We think of publishing a dictionary of the kind you wish. The price, we hope, will not exceed 3s or 4s 6d.

SINGLE RENT.—We very much doubt the legality of the transaction to which you refer.

J. BARKER.—You, or any bookseller to whom you may give the order, may have the numbers you want by applying at our office.

W. LEECH.—Please to let us know the titles of the two papers you wish to have returned, we will find them for you if possible.

G. H. O.—We question whether your having for years been engaged in the grocery business will qualify you to get your living in "Ostralia" (*Australia*, we presume)

E. POOL.—We cannot speak with certainty as to the salary of drapers' assistants in Australia. We gave the letter as we received it, supposing that the statements it contained might be depended upon.

TYRO.—Marathon was the name of a town in Attica, where Theseus is said to have killed a monstrous bull; and where Miltiades, with only 10,000 brave Athenians, routed a Persian army, consisting of 100,000 foot and 10,000 horse.

H. W. (Liverpool), and others.—We cannot insert any more lines on the Death of Wellington.

All Communications to be addressed to the Editor, at the Office, Belle Sauvage Yard, London

THE SHADOWS ON THE WALL.

A STORY FOR CHRISTMAS.

It was Christmas-eve, and old Jabez Craggs sat in his back office waiting for the last post. The boy, who acted in the treble capacity of clerk, light porter, and messenger, had some time since gone home, with strict injunctions to be early at the office on Monday—for Christmas-day fell on a Saturday—and "no" to make a beast of himself with eating and drinking." Jabez, as we said, was waiting for the last post, and, as he sat in his dull, fireless room by the light of a fat, unwholesome oil lamp, he could not but fall to thinking and talking to himself. "Christmas," said he, in a harsh grating voice, "is a humbug. Here am I, losing a whole day's work from my people, and all because to-morrow's a holiday. What do people want with holidays. *I* never make holidays,—a regular humbug! Why, if I had'nt stopped a day's pay from their wages, I should have been I don't know how many pounds out of pocket. Faugh!" And he drew nearer to the grate, and beat his feet impatiently upon the dusty floor. "Christmas, indeed! I wonder folks don't want a holiday *every* Saturday. I should'nt wonder at all if they did'nt some of these days. Business is neglected in a most shameful manner by these working people, the humbugs! Everything's humbug. Holidays are a humbug,—gratitude's humbug,—religion's all humbug!"

Just then the waits struck up a tune in the next street, and Jabez could hear the windows thrown up in the next house, and at the tailor's over the way, and at the widow's round the corner; and he could distinguish in the stillness of his little back office—the place where he received the folks who came to borrow money at usurious interest—the footsteps of the pedestrians as they lingered on their way and gathered about the street minstrels, when the tune grew louder and more joyous. "That's another humbug," he said, "if ever there was one. What do those brawling beggars mean by coming near *my* door with their wretched noise! I dare say they will be coming, by and bye, to ask for some money—Christmas-boxes—the noisy numbskulls! well, I only hope they'll get it, that's all."

The waits moved further off, and then a knot of 'prentice lads came laughing and singing past the house, and woke the echoes again in the old mouldy church which formed one side of the narrow street—so that Jabez was fain to beat the old gentleman's tattoo yet more loudly and impatiently on the hearth, and declare all boys to be especial humbugs—as if he had never been a boy himself. As indeed he never had, in the true sense,—the sordid love of gain, and the spirit of petty trading in its worst features, having long ago, even when he was at school, taken the place of the thoughtless and generous spirit of childhood.

And the light of the lamp grew duller as the thick oil ascended lazily to the cotton wick, and the shadow of Jabez on the dusky wall assumed larger and more indistinct proportions as it waned. And Jabez fell into a discontented sort of brown study, from which the noises outside did not seem likely to awaken him. On the contrary, they appeared to mingle with his thoughts, as if their irregular occurrence was necessary to his present state of mind. Thus it was that he did not notice a succession of timid knocks at his outer door, nor become aware of the presence of a little child in his room; till, turning uneasily in his chair, he looked down upon it as if it were a spectre.

"Hallo! why, what in the name of fortune do *you* want?" he inquired in a harsh growl. "How came you here?"

"Please, sir, I couldn't make you hear, and so I pushed the door open and came in," said a thin starved voice, which belonged to the thin, half-starved, shivering figure on the floor.

"Well, and now you have come in, what do you want?" said Jabez, with another growl.

"Please, sir," said the child, in a frightened voice, "mother sends her compliments, and begs you would be good enough to let her have a few shillings on account of the work she has in hand. She'll be sure and have the order done by Monday night."

"Oh!" said Jabez, in a sort of human grunt; "and does your [illegible] to find boots to make [illegible] done? Tell your mother I can't do anything of the sort."

Jabez, though a money-lender by choice and interest, was a wholesale slopseller and shoemaker by trade.

"Oh, do, please, sir," pleaded the child, "to-morrow's Christmas, and father hasn't had any work all the week."

"More shame for him," said Jabez. "I daresay he got drunk and lost it, as most of his class do. And as for its being Christmas, tell your mother, young —— what's your name?"

"Judkins, please, sir."

"Well, then, tell your mother, young Judkins, that I don't approve of poor people wasting time in holidays and merry-making, and that I sha'nt pay her a single farthing till the work is brought home. Christmas, indeed! I hate Christmas, and so you may tell her."

"It is Christmas, uncle!" said a loud cheerful voice in the passage. "You must be joking, surely!"

"No, I am *not* joking, *I never* joke; especially with impertinent boys, who break into people's houses at all times of the night without so much as knocking at the door," said Jabez, in answer to the voice, the owner of which had now made his way into the room.

"Now, my dear uncle"—began the young man.

"Don't dear me, sir, I'm not to be humbugged by fine speeches if you have anything to say, say it, and go home."

"Really now, that's not civil of you, uncle, on Christmas-eve. I found the door open, and I came in because I heard your voice, that's all."

"Well then, Mr Impudence, now you are come in—"

"No, no, uncle," replied the nephew, with the most imperturbable good humour, "not Mr. Impudence, but Mr. Charles Goldsworthy, at your service."

"Well, *Mr* Charles Goldsworthy," sneered Jabez "what may it please your mistership to want with me?"

"I only came," replied Charles, "to wish you a merry Christmas, and to ask you if you would spend it with us."

"I don't want to be merry, and I won't come," said Jabez.

"And that's the answer I am to give to Emma, is it? Well, I only hope you will be as merry at home as we shall be, that's all. Good night, good night, uncle. What! not shake hands, at this time of year too?—why, what a singular old fellow you are to be sure."

Jabez Craggs turned his back to his merry-faced nephew, and grumbled out a string of anathemas to himself, which are not worth recording—especially as the merry-faced nephew paid no sort of attention to them, but only seemed the more determined not to be put out of temper by anything the old man did or said.

"Good night, uncle," said he, once more; "I wish you a merry Christmas and a happy—hallo! what's this?" He

turned to where the shivering child, hitherto unnoticed, had shrunk into a corner, unable to get out because the door was closed, and afraid to speak.

"If you please, sir," whined the little creature, going over its message afresh like a parrot, "mother would feel obliged if you would advance her a few shillings on the work she has in hand, as it's Christmas-day to-morrow."

"Here, uncle," cried the nephew, "here's an opportunity for the exercise of your benevolence. Here's a little skit of a baby come to beg assistance for its mother, and I'm sure—"

But before he could finish his sentence an inkstand came bounding and splashing heavily against the panels of the door, and warned him to make a hasty retreat. Which he did with a loud laugh and a fervent hope that his uncle would not disembowel himself on any account whatever. "Here, little one," added he, putting a gold coin into the child's hand, "take this to your mother, and say that Mr. Craggs sent it to her with his compliments, and that she need no. trouble herself about its repayment."

And the light in Jabez Craggs' back office grew duller and more dull, and at last sank into the last tolly wick, and went spluttering out. And the hand of Jabez Craggs fell lazily upon his breast, and his eyes closed heavily in sleep, and the noises in the street grew fewer and fewer, and the waits went home to rest, and the singers of Christmas songs in the highways were heard no more. How long Jabez sat in the dark he knew not, but suddenly he awoke to a consciousness of the presence of more light in the little back office than he had ever seen there before. And it was a strange vivid light, too, which appeared to illumine only a portion of the apartment, for all around the chair on which he sat there was deep gloom. He could not understand it. He felt on the table, and there was the lamp, cold and dull and grimy as ever, he glanced upwards to the high windows which looked out into the little street, and he knew that it was dark wintry night beyond, he would have sought the sky, but the shadow of the ancient church was upon him, and hid the bright stars from his wondering gaze. He saw the light change upon the wall in a great circle that illuminated no other part of the room, and he began to feel a strange creeping sensation of fear come over him. Now, Jabez was by no means a superstitious man, and by no means a cowardly man, and so, after considering a minute or two, he concluded that some trick was being played upon him. "She uld'nt wonder," thought he, "if that scapegrace nephew of mine has'nt been here with his magic lantern, or some of his scientific nonsense, thinking to frighten me." And then getting bolder, as this thought suggested itself to him, he said aloud—"It's all humbug! I'll go and put an end to this in a minute."

But when he tried to rise he found himself fixed immoveably in his chair. And now he really did begin to feel frightened; especially as, looking again towards the illumin ted wall, he thought he discerned strange undistinct shapes and figures trying to form themselves out of the lighted circle.

"What does this mean?" ejaculated Jabez in a whisper.

"Its meaning," said a voice unlike his own that he was startled at the resemblance, and struck his hand upon his breast as if to still the beating of his heart—"its meaning, old man of doubtful ways and undoubting, you shall not discover. Look! and learn a lesson from the Shadows on the Wall!"

Jabez had no words to answer, his heart sank within him, and a cold shiver ran through all his limbs. Still he could not help moving his lips even then as if he would have said, "Humbug!" But he did not say it, for his attention was fixed immediately on a sight which brought the blood into his face again in one tumultuous flush. The light upon the wall grew still more vivid, and clouds and vapours passed too and fro, and presently resolved themselves into shapes and colours and proportions. "It is no fancy now," thought Jabez; "but it cannot be true."

"Look!" said the Voice again.

There was little need of the adjuration, for the eyes of Jabez were fixed upon the wall.

A quiet scene was pictured there. In a little room, poorly furnished, but very neat and clean, sat a woman with a little child upon her knee. She was dressed in black, and wore a widow's cap, and as she fondled and caressed the boy upon her lap, she looked up into Jabez' face; and he knew that it was his mother, and that that child was he. It was a very poor, puny child, but the mother only seemed to cling to it the closer from her knowledge of its weakness. And Jabez recollected—oh, as well as if it were yesterday—that it was on the first Christmas-day after his father's death, when, long years ago, that scene took place at home. He was a little softened, and would have spoken, but an invisible hand came before his mouth, and a voice whispered in his ear—"Don't believe it, Jabez! It's all humbug! That mother never loved that child, nor that child that mother. Look again!"

The scene vanished into cloud and shadowy smoke, and another took its place upon the wall.

It was a spacious apartment, filled with gay company, and among them Jabez saw the figure of himself, as he was at twenty standing beside a beautiful girl who looked up lovingly in his face. And Jabez knew that it represented another Christmas-day, too well remembered now. "And oh, Jabez!" said the girl, "think you I could not share your sorrows and your poverty with as true a heart as any could your joys and riches?"—"No, no," said he, with a false smile upon his lips, "I would not expose you, Ellen, to the cares and trials of the world. We are too poor, too young to marry." And the girl's head sank upon his shoulder, and Jabez saw the great tears roll down her fair cheeks; and he knew what a villain he must have been. And the Voice said, "See! on that past Christmas-day, oh, man of wealth! what a dismal wreck you made!"

And the scene changed to a wide room in a great building, with many little beds placed side by side. And upon a pallet lay a dying girl, and Jabez heard her forgive her deceiver, and then die. He would have spoken now; he would have rushed to that humble bedside, and claimed her for his wife, but it was too late, for the vision vanished, and the room was left in darkness.

He felt about with his hand like a blind man, and he would have wiped the tears from off his cheeks, too long unused to sympathy and sorrow, but the stern Voice came again and whispered in his ear. "Remember, Jabez, how you quenched the light that might have cheered your wayward path through life. But it is all humbug! See! the shadow of another gone-by Christmas-day come upon the wall!"

It was even so. In the midst of a rich man entertained his friends, and their voices crowded round a festive board. Jabez recollected well the incident. Noise and mirth and welcome were in the room, and Jabez noticed how little knots of guests were gathered together here and there, and grouped round themselves, and whispered. Jabez would have turned from his sin, but the Voice said—"See, Jabez Craggs, these were your kind noble friends,—these were your patrons. That's humbug, if you like."

Jabez groaned aloud, and intreated that he might be spared the sight of past Christmases. "Show me," said he, "a Christmas where my name is honoured."

And the scene changed again, and he saw before him a picture of the Judkin's humble home. It was a glorious sight. Upon the table smoked a great plum pudding, and round it were seated a poorly-dressed but very happy group. There was an aged grandfather, and a crowd of little children, and the father and mother of them all, in high glee and merriment. And the father, taking a glass in his hand, rose up to propose a toast. "Here's to the giver of the feast, good Jabez Craggs." And Jabez was confounded, for he knew that he had sent the little girl away the night before with an angry message to her home. And the Voice whispered,—"All humbug, Jabez! they don't mean it. Gratitude's all humbug!" And when, the dinner over, the master of the house put up his hands and returned thanks to the Giver of all good for having provided once and again for the dear pledges of their love, the unrelenting Voice exclaimed: "Don't believe it, Jabez, religion's all humbug, especially among the poor: you know it is!"

And Jabez Craggs began to perceive the meaning of the various scenes he had witnessed, but he dared not speak, and as he looked upon the happy faces shadowed so visibly upon the wall, the scene suddenly vanished away, and another picture took its place.

In a comfortable apartment were a number of little children dancing round a Christmas tree. And there was joy and gladness in their faces. And Jabez saw that the picture was meant

for his nephew's house. And Charles and Emma played and frolicked among the little ones, and the spirit of harmless mirth seemed to dwell upon that happy household. "Complete humbug!" said the Voice to Jabez, to his great indignation and disgust. But his attention was presently attracted to the glowing face of his nephew, and he heard him say—"Well, now, I wish old Uncle Craggs were with us now, I think we could persuade even him that it is possible to be both merry and wise on Christmas-day." "Oh, don't alarm yourself about the old curmudgeon," began the wife; but Charles stopped her with a word—"Christmas, dear," said he. And then Jabez began to feel how much better a man he might have been had he allowed his natural feelings to overcome his miserable, grasping, discontented, unbelieving spirit. And as he looked upon the innocent mirth of that happy group, he felt that he had been mistaken all his life. And the singing, and dancing, and romping were at its very topmost height and joyousness, when the vision suddenly fled away, and the room was left once more in dreadful gloom and darkness.

But not for long, for the light came once again, but not so vividly. And the scene before his eyes was one of dread and misery and death. Upon his bed upstairs there lay a figure strangely swathed and covered up. And Jabez, horror struck and bent with fear, went towards the bed, and raised the sheet from off the sleeper's face. Great heavens! it was himself! And no mourner was beside his corpse; and none were there to straighten the crooked limbs, or close the staring eyes, or do decent office to the dead. "Oh, Jabez! Jabez!" said the Voice, "see now the end, the light you might have thrown o'er many a humble homestead is extinguished now for ever The wasted opportunities of life are past, and the day of repentance and retribution vanished away Of what avail are all your riches now? They cannot bring one solitary mourner to your grave, or unpaid follower to your blighted death-bed, one little child with tearful eyes beside your lonely corse. Oh, Jabez Craggs, there's no humbug in such a death as this!"

The old man bowed his head in shame and sorrow at the thought of such a future Christmas, and, as the shadow of that unhonoured death-bed faded slowly, slowly, from his sight, the tears came freely from his eyes, and coursed their way adown his furrowed cheeks He tried to speak, he tried to move,—he knew that there was yet time, even for him!—and, with one strong effort, woke.

The morning—a bright, cold, cheerful Christmas morning—was shining in upon the little room, and he knew it was a dream

What was that knocking at the outer door? He would go and see. He went; and admitted a poor woman, meanly clad.

"Oh, sir," said Mrs. Judkins, "I fear there has been some mistake: my little girl brought home a sovereign last night, and my husband thinks you gave it her for a shilling and,—"

"No, no, my dear madam, no mistake at all, I assure you. Here, take another," said the now repentant Jabez. "I am not the man I was last night; I hope and trust I am changed—and the change cannot surely be for the worse. Go home, my good woman, and be merry. This is Christmas-day, and I wish you to enjoy yourselves. And Mrs. Judkins," cried Jabez, as the astonished woman, with many curtsies and thanks, was preparing to depart—"do pray give my compliments to your husband, and tell him if he will come here on Tuesday morning, I will give him plenty of good work. And, Mrs. Judkins, would it be asking him too great a favour to request him to go round to the houses of my people, and say that I will give them all an extra three day's pay, and to say that I don't expect any of them to come to work till Tuesday morning. And Mrs. Judkins, my dear good woman, tell your little girl that if she will come to me I will give her a kiss and a new dress. And Mrs. Judkins do, there's a good soul, say all the good things you can of your poor miserable, repentant master!"

There never was such a man as Jabez Craggs that morning—never!

To see how he dressed himself as sprucely as a bridegroom, and made his way through the joyous streets, and bade complete strangers a "merry Christmas and a happy New Year;" and to see how he went with a light upon his face into the church he had not entered for years, and poured out his heart in thankfulness to God! and to see how merry he made himself over the turkey and plum pudding at his nephew's table; and to see how he romped with the children, and told them stories, and sang them songs, and took them upon his knees, and kissed them over and over again; and to see how different a man he was to the Jabez Craggs of yesterday; and to see what a fund of happiness and good humour he really possessed, only he had not hitherto discovered it; and to tell what a capital master he was for ever after—honouring Christmas and all other proper times of holiday and innocent recreation,—would be only to tell that Jabez the scorner and Jabez the faithless became a good man, a good master, and a good Christian for many happy, happy years!

And so, if this imperfect story make but one heart glad at this glorious Christmas time—this time when a little child was born in a manger, "because there was no room in the inn"—the writer's purpose will be fully attained. To one and all who read it, he wishes "A Merry Christmas and a Happy New Year!"

ANCIENT CHRISTMAS

And well our Christian sires of old
Loved, when the year its course had roll'd,
And brought blithe Christmas back again,
With all its hospitable train
Domestic and religious rite
Gave honour to the holy night
On Christmas-eve the bells were rung,
On Christmas eve the mass was sung,
That only night, in all the year,
Saw the stoled priest the chalice rear.
The damsel donn'd her kirtle sheen;
The hall was dress'd with holly green,
Forth to the wood did merry men go,
To gather in the mistletoe
Then open wide the baron's hall,
To vassal, tenant, serf, and all,
Power laid his rod of rule aside,
And ceremony doff'd his pride.
The heir, with roses in his shoes,
That night might village partner choose
The lord, underogating, share
The vulgar game of "post and pair.
All hailed, without repute or fear,
And general mirth, the merrier,
That to the cottage, as the crown,
Brought tidings of salvation down.

The fire, with well-dried logs supply'd,
Went, roaring, up the chimney wide,
The huge hall table's oaken face,
Scrubb'd till it shone, the day to grace,
Bore then upon its massive board
No mark to part the squire and lord
Then was brought in the lusty brawn,
By old blue-coated serving man,
Then the grim boar's head frown'd on high,
Crested with bays and rosemary
Well can the green-garb'd ranger tell,
How, when, and where the monster fell;
What dogs before his death he tore,
And all the baiting of the boar,
While round the merry wassel bowl,
Garnish'd with ribbons, blithe did trowl.
There the huge sirloin reek'd, hard by
Plum-porridge stood, and Christmas pie.
Nor fail'd old Scotland to produce,
At such high tide her savoury goose
Then came the merry maskers in,
And carols roar'd with blithesome din
If unmelodious was the song,
It was a hearty note and strong.
Who lists may in their mumming see
Traces of ancient mystery,
White shirts supply the masquerade,
And smutted cheeks the visor made,
But, oh! what masquers, richly dight,
Can boast of bosoms half so light!
England was merry England when
Old Christmas brought his sports again
'Twas Christmas broach'd the mightiest ale,
'Twas Christmas told the merriest tale,
A Christmas gambol oft would cheer
A poor man's heart through half the year

Sir Walter Scott.

CHRISTMAS MUSINGS.

I AM an old man. More than that, I am an old bachelor. Time and care have notched their own unmistakable marks upon my forehead, have made my hair white and my step feeble, but my memory is still unimpeired, and I can look upon the past, and recall old faces, and hear again old voices, and be my former self at will. And I love to do so. It is a great solace to me, and a blessed thing it is that memory with its own wondrous witchery can thus bring back the past. I have few friends except shadowy ones, who come at my call and vanish at my will, and it should be so, says the poet —

> "My own friends, my old friends
> Time's a soldier bold, friend,
> He can mock the conqueror—
> Win the miser's gold, friend
>
> * * *
>
> Why? the tyrant cannot do,
> Is to make us old, friend!"

It is my case, and I am very thankful that it should be so.

Perhaps there is no season in the year when my memory is so active as at Christmas time. Alone, yet not alone am I, when others gather round the roaring fire, and begin to spend that festive season of the year No, I am very still and quiet, and the people of the house wonder how it is that I do not go out like the rest, to keep up Christmas I keep it alone with the shades of the past' say, and keep it merrily.

Sometimes I am a little child, and am altogether in a state of wonderful surprise about the preparations that are making I begin to wear out the note of interrogation in demanding What is Christmas? Why do we keep Christmas? Why do we dress the house with holly? Why get so boisterous in our merriment? Why should people be more happy then than at any other time? And in a perfect state of amazement are carried about the house, playing with the long ringlets of a pretty cousin, who is always laughing, and sings, to my childish fancy, in a first-rate style Then I watch the busy excitement in the kitchen, and presently begin to hear the pudding singing in the copper, then the company begin to come—no end of friends and cousins, and aunts and uncles, decked out in all their bravery, a perfect marvel to behold. Then the nursery all dressed with green boughs, dark shining leaves, and bright berries that look like coral beads, and are not to be eaten upon any account Then the lights and glitter, and almonds and raisins, and all sorts of things, and all sorts of people among which we presently find ourselves, and the laughter that is going on, and the sly jokes that are made about the said pretty cousin in connexion with a certain mistletoe. All these things blend themselves together with deep, thick snow, like a soft carpet of feathers, and a dog, two or three houses off, that kept baying at night in a dismal manner. Well, I like the quiet company I am keeping, for it is not quiet to me, it is full of hilarity. There is a dance, a grand dance, and the pretty cousin sings and plays upon a great instrument with white and black keys, and a young man—I remember loving him very much, he seemed so kind and pleasant—is turning over the leaves of her music I do'nt know what she sings, though the strain is even now upon my ear, but I have no doubt it was well done Poor Janet! Happy days were those, would that for thee they could have lasted longer!

I remember, too, my first visit to a theatre. What was a theatre? A wonderful place, by all accounts, containing everything, and more It was on what they called "boxing night," and I was to see a pantomime. What was a pantomime? Stop till the evening, and I should see. But it was a wet day. Not a nice hard Christmas frost, but a slippy-sloppy, pelting wet day. How I wished it would leave off. I remember sitting upon a window-seat, and watching the pelting rain, which kept falling in a heavy shower. Presently it cleared off. We got ready. We went to the theatre in a coach. Oh, wonderful land of enchantment! Oh, glorious dream, realised beyond all expectation! Oh, fairy-land on earth, what a noble place was that theatre! The boards did not smell damp and mouldy. Everything was real, and good, and beautiful, and true Who ever looked upon such a mysterious scene before? So much gold and paint, so many lights, so many people, such a pleasant rustle—it was an intoxication of pleasure. The long green curtain hung down, and hid for the present the glories yet to be revealed. There was music, and sometimes the curtain rustled, and a foot or two was seen hastily crossing the stage. Presently the bell rings. What is it? What does it all mean? Does that man in sky blue velvet really mean to stab the lady in yellow satin with unmistakable pearls upon her head? I trow not. But as to this first play, I have almost forgotten it, in the glories of the succeeding pantomime. What a world of wonders was that pantomime. The song of the fairies was a great reality—surely they were the very fairies who could have hidden in hare-bells and rested on thistle-down—to me they were not poor wretched hangers-on at the play-house for so much a week, but happy sportive elves, whose whole existence was one of preternatural delight. And harlequin, with his tightly fitted dress of many colours, writhing and wriggling like a spangled serpent, and the clown, with his wonderfully comic expression, which made me clap my hands in wild excitement, and the tricks which transmitted all sorts of things into all sorts of other things, and the columbine all life and gaiety—I fell in love with the columbine, and I dreamed of her three succeeding nights—it was a wonderful vision of delight, and I look back upon it with intense enjoyment. No eastern story was half so full of wonders as that first night at the theatre.

I remember another Christmas. It was my first at school. I had been looking forward to it with a longing desire and a fond anticipation that was never absent for a moment Not in school hours, not in the play-ground, not at night in the dormitory. I never longed for Christmas so much as I did then It came at last. What a delightful ride was that to London What a jovial fellow was the guard. I recollect he told me a droll story, which I profoundly believed, of how one frosty night he played, as usual, on his bugle horn, but never a sound came forth, not the smallest squeak, not a note, not half a note, but that when the thaw set in, lo, the frozen music began to pour forth, and the bugle horn let out its prisoned harmony in a manner wonderful to hear I remember, too, the coach was covered thickly with presents There was a barrel of oysters, and a great fish in a clumsy basket, and no end of game and poultry, and everybody was wishing everybody happy Christmas and merry new year. And the guard drank so much that he became at last quite solemn, and, when we began to rattle over the stones of London, poured forth the National Anthem in a manner deeply pathetic, and which left rather an unhappy impression on my mind. I recollect that Christmas was a very jolly one. The pretty cousin who had bloomed forth into a beautiful woman was to be united to the young man I talked about before. It was a gallant wedding. A wedding at Christmas, a happy, happy wedding—the orange blossoms were all tremulous with the excitement of the wearer. The many good wishes expressed and multiplied again and again—the heightened fun which prevailed in consequence of this hymeneal worship—render that Christmas a notable one in my memory. Poor Janet!

I remember another Christmas. I was older then, and beginning to take my share in the world's rough struggle. A letter came to me on Christmas Eve, and told a sad sad story Poor Janet was no more! The five years which had rolled by had done their work. Her little fortune had soon been spent. Then came coldness, then indifference, then neglect. The baby-boy, which should have been a fresh link of love, was disregarded by the father. He cared not for home, he had lost all relish for domestic enjoyment, the tavern parlour had dearer charms, and having made his home wretched, he neglected it because it was so, and step by step disease and poverty—fell twins—came upon poor Janet. She sickened, and her baby-boy became the sharer of her sickness—gloomy days and gloomy nights. The man had lost his manhood. With neglected business and blighted hopes, he cowered before the coming destruction. Then came the end, and in the cold cheerless winter, without one comfort or soothing word, poor Janet breathed her last! and the child died too, and they buried them in one grave on the last day of the old year.

Well, sitting thus alone, I picture to myself the varied scenes of my life, and talk with my past hours about the things that were. Where is that strong-built school-fellow of mine that was always the lag of the lowest form? He is keeping Christmas, feet to feet with me, in the new world .Where is that old uncle of mine, in the blue coat, who was always telling the story of some old engagement? Where are the girls and boys who always spent their Christmas at our house, and who were wont to play at old soldiers who went about on begging expeditions, and were

always on the look-out for some forfeit charity? Where are the men and women that were my own dear fond companions once? They are all gone. East and west and north and south. Some have grown cold and become estranged, some are asleep beneath the daisy quilt—but sitting here alone on Christmas day I conjure up their forms before me, I am young again, and they are young and buoyant, and completing the circle which time and death have so rudely broken in upon. I get hope and peace and comfort from the past, and thinking happily of those whom I have formerly known and loved—forgetting all their faults, and thinking only of their virtues—the future becomes a goal starred and luminous that proclaims a meeting free from parting in a city beyond the sky. J. T.

A CHRISTMAS-EVE IN RATHNAGRU.

By Edwin L. Godkin.

In the year 18—, I was watching a few students in the gardens of Trinity College, Dublin, trying to persuade a freshman to clasp in his arms a tree which was begrimed by many a winter of city smoke and soot, but fresh as he was, he was not "green," and resolutely refused to perform the desired feat, notwithstanding the doubts which were expressed as to the length of his arms and the breadth of his chest. Though leaning out of a window at some distance, I could hear the conversation distinctly, and soon perceived that the jesting had reached its limits, and that the freshman was getting angry. I heard the lie given twice in rapid succession, and one of the party immediately afterwards struck him across the face with a short riding-whip. Dead silence followed, the stranger made no attempt at resistance, as the whole group seemed to side with his antagonist. He took off his gown, threw it across his arm, and strolled slowly out of the gardens towards the chapel. As he passed out of the gate, I saw he was a man of twenty-five years of age or more, of middle height, and very fair. He was past the age at which men generally enter college, but his cap and gown testified to his academical youth.

"Hallo!" said I, as he was about to turn the corner.

"What's the matter?" said he, looking up.

"I was just going to ask you the same question. You look a little excited, will you step up to my room, and take a glass of wine?"

"Thank you," he replied, and entered the passage. I opened the door for him, and in a few minutes each was sprawling across two chairs *a l'Americaine*, at each side of the fire.

"I have not had the pleasure of seeing you in the college before," I said, "you must have entered lately."

"At the beginning of this week; but I hardly left my rooms except to go to the examination-hall until to-day." I waited, hoping he would tell more of himself, but he stopped. "That clasping the tree is an old trick practised on every freshman," I continued.

"Pshaw! it's transparent," said he haughtily, "but I'll teach those fellows not to play tricks on me. What's the rule here when a man's struck?"

"Why, the *rule*," said I, "is to bring the striker up before the board; but the *custom* is to fight him."

"Well, I always follow the custom; a fellow struck me across the face ten minutes ago, and before night the affair must be settled. You'll do the needful for me. I haven't the pleasure of your acquaintance, but I suppose you're a college-man."

We exchanged cards, drank off half a bottle of wine, took our hats, and walked out. At three o'clock precisely, all arrangements having been made, I and my man hailed a jarvey in Dame-street, dashed across the Portobello-bridge, up the Rathgar-road, at the top of which we dismissed our Jehu. Five minutes' walk down the hill to the left brought us to a shady silent spot on the banks of the classic Dodder. Our two opponents were there waiting, and the second produced two rapiers from under his cloak. They were duly measured, and lots cast for a choice of them. We, the seconds, then lighted our pipes, sat down on the bank, and one of us, I forget which, gave the word, "Fall on!" After battering their weapons together for the matter of half an hour, my man ran his opponent through the fleshy part of the sword arm, and the combat came to an abrupt close. The wounded man was taken in a covered car to his rooms, and doctored by a surgeon, who made a solemn promise of secresy. The other three of us celebrated the *denouement* by a dinner at the victor's expense, from which we did not go home till morning, and then looking so desperately "seedy," that the porter eyed us suspiciously as we passed the gate, but as we walked steadily, we bid him defiance.

And thus commenced my acquaintance with Robert Courtenay. During the remaining two years of my course we were almost constantly together, and it was with smiles that might as well be tears, "so faint, so sad their beaming," that we shook hands at parting on board the Holyhead packet, when fate called me away to England to buffet with the world in the great metropolis.

We continued, however, to correspond regularly, and every year were looking forward to another merry-making. He left college in due course, and in a month afterwards the death of his father made him undisputed master of a fine estate in the County Wicklow, unencumbered, and with no relative on earth to share or mar his pleasures. After this I received pressing invitations to visit him every month, until, in November, 18—, I positively promised to spend the Christmas with him. I received a warm letter by return of post, informing me that he would expect shortly to hear from me the day on which I would arrive, that he might send a car to the coach to meet me. One engagement after another protracted my stay in town, so that it was but Christmas eve that I found myself, after a cold uncomfortable drive, dropped by the caravan in Baltinglass at the door of a small public-house. Imagine me shivering in the street, my portmanteau at my feet, and my eye vainly searching among the frieze-coats around for my friend's livery. The car he promised had not come. I inquired at the various inns—nothing of the kind had been heard of, and this in a small Irish town, where everybody attends closely to everybody else's business, was sure proof that my disappointment was complete and hopeless.

I am almost ashamed to confess, in this temperance age, that my first step, when satisfied of my forlornness, was to drive out the cold by a tumbler of very hot punch, "uncommon hot," as the landlord of the hostelry remarked when handing it to me, wishing me at the same time a merry Christmas "and plenty of 'em." My next, to inquire whether I could get a conveyance to Rathnagru. No, there was no conveyance there, but at the "hotel." I was told I could get it and everything else I wanted. So I ordered a strapping fellow, whom I saw lounging at the door, to take my portmanteau and show me the way to the hotel. This he did with alacrity, volunteering at the same time, with that inimitable impudence so seldom met with at any place out of Ireland, to make them "purvide me wud the best of everything," and assuring me that 'Paddy Blake', (meaning himself), was the fellow for that."

As we passed up the street, the moon broke out with a cold light upon the deserted muddy roadway, making the raindrops on the thatch glisten like pearls, and the distant summit of Lugnaguilla, with its snowy cap, freeze you with the look of it. Slop, slop, through the wet, light in all the windows, merry laughter ringing in all the houses, turf-fires blazing brightly, and clear voices singing cheerily those fine old Irish songs, so many of which have now died out, or have taken refuge in the backwoods of America. Ah! "God be wud the good ould times!"

When we reached the hotel, we found the door open, the signboard swinging freely in the night breeze, but no one to welcome us,—no obsequious waiter with a towel or white neckcloth rushing to lay hold of our luggage, and hurry it up to No. 999, asking us in hurried accents upon what we would dine or sup, and if we expressed a wish for a slice of a rhinoceros, promising that it would be "coming directly," there was no bustling host, all smiles and blandishment, waiting to usher us into his best apartment, and assuring us, not in formal politeness but in the sincerity of his heart, that every thing in his house was at our service. Nothing of the kind, not a creature was visible. The stillness of death reigned over the whole house; all the doors within sight appeared wide open, and all the rooms empty. We knocked twice, thrice, but no one came, and at last we went boldly forward and found our way into the parlour. It was a small, but neatly-furnished

room, but had about it that indescribable coldness and stiffness of appearance, which every one can understand, but no one can tell in what it consists, ever belonging to a room which is but seldom used. The blinds were all up, and the moon shone brightly in upon the figure of a man in a very dirty jacket, and a cravat that had once been white, lying fast asleep on the sofa, so fast that he didn't even snore, as we believe all waiters do. Blake went over, and gave him a tremendous poke in the ribs: "Arrah, Jack," said he, "if you ain't the boy, and if yer long sleepin' doesn't injer ye, yer hard workin' won't do ye anny harum. Get up, I tell ye, immadiately, and get his honnor something to ate, and light a fire, and behave like a Christian, and not like a brute baste on this blessed Christmas-eve."

Ere this admonition was finished, I had recognised the sleeper as an old college servant, whom I had employed for a long time in my green days, and who had plundered me most unmercifully, but with imperturbable impudence that took the edge off my vexation.

"Musha bad cess to ye, Kitty," said Jack, turning himself heavily, but without opening his eyes; "can't ye let a body alone and let 'em take their nathral rest in pace? Begor, yer'e the nice oleyawn that can't get yer own food. Faix, if ye go on wid anny more o' yer nonsense, I'll get up and kiss ye."

The roar of laughter which broke from us both at this address aroused him in earnest, and looking up in utter bewilderment, he regarded us fixedly for some minutes. At last a smile of recognition began to gather over his features, and jumping off the sofa he exclaimed, "Arrah, Masthur Gilbert, is that you? Well, who the devil 'ud think o' seein' you here! How long am I sleepin' or why didn't yez waken me sooner? Are ye afther comin' be the caravan, or how did ye come?"

"Oh, what matter how long I'm here, or how I came," said I; "I see you're as lazy a rascal as ever. What I want now is something to eat, and then a car."

"Begor, then, ye must have both, an' welcome. The masthur went and had the hounds yisthurday mornin,' an' hasn't come back yet, and we're a most afeared he's bruk his neck, but we don't know where to look for him. It's himself ud be proud to see ye if he was here, it's so long since you wor in this counthry."

"None of your soft sawder," replied I, "you know he never saw me in his life, get me something to eat and put a fire in the room, will you?"

"Faix, I'll get ye somethin' to ate, fast enough, but I'm not so sure about puttin' a fire in the room, for I'm afeard the misthress 'ud ate me if I touched the fire-place, an' she afther fixin' it no lather nur yesthurday afore she went to Dublin. Don't ye see the way it's ornaminted to the hoith wid ribgrass and posies uv all kinds and discriptions. Bedad, ye wouldn't see annything aiqual to it between this an' the city."

"Well, get me tea and something with it, at all events."

"What would ye like wid yer tay, sir?"

"Would you like a beef-steak?" said Blake, thinking it was high time for him to put in a word now.

"Ye needn't be axin him, ye spalpeen," said Jack Driver, eyeing him contemptuously; "whither he would or not, if I may make so bould as to say so, for the divil a beefsteak can be got in this house, till Larry Dimpsey kills his heifer, an' Lord knows when that'll be. He's threatenin' to do it every day these tin weeks, but bedad its not done yet."

"Well, get me a mutton chop then," said I.

"Sorra mutton chop there's to be had either for love or money, barrin' ye'd go to the fair and buy a whole sheep for yerself. Lud love ye, Misthur Gilbert, I thought ye knew enough o' the counthry to know there's nothin' o' the kind is to be had here but on fair days an' the like, an' ye know the quality kills all their own mate. But if ye like, I can give ye bacon an' eggs and tay, and ye can take a tumbler of hot sthrong punch afther, that'll be flannel to yer heart." So saying, up he sprung, brushed the soles of his feet, and popped on his shoes with great show of activity. I stood at the kitchen fire till all was ready, and in about ten minutes after I was mounted on the car, Jack assuring me, "it was well it wasn't summer, as thin the horse ud a' been out at grass, and thin there'd have to be a party o' the neighbours gother to ketch him, he was so divilish wild."

A rapid drive brought me across the hills to Rathnagru, in two hours, although the distance was nearly twelve miles. I was at some loss to account for Courtenay having sent no conveyance to meet me, but concluded that some accident had happened to his horses or his car. I alighted at the door with pleasant anticipations of a hearty welcome, a blazing fire, good wine, and a good talk, and determined for one fortnight to give myself up completely to hearty Christmas pleasure. But, strange, there was no light in the windows, no hum of life in the yard, no watch-dog "bayed deep-mouthed" welcome; all was cold, dark, and silent. I knocked and rang. After a long pause, there was a sound of unlocking and unbolting, the door was opened, and an old dame, verging on threescore and ten, stood before me, with a candle in her hand, and eyed me doubtfully and cautiously.

"Is Mr. Courtenay at home?" said I. She paused, and scrutinised me still more keenly. "Maybe you're Misthur Gilbert," said she at last "that he was expectin' ?"

"The same," I replied.

"Ah, sir, honey, will you come in? I suppose you hav'nt heard the news, and a sad and sorrowful news it is for ould Biddy Kavanagh to have to tell, in her masthur's house to her masthur's friend. Sure Masthur Robert's dad, sir, he was killed when he was out hunting, and here we are sick sore an' sorry, but he'll see no more Christmases. Ochone, ochone!"

The poor old hag wrung her hands in a burst of grief, while she was shewing the man the way up to a bed room with my portmanteau, leaving me speechless with surprise and grief in the hall. When she came down, she asked me to walk into the kitchen, while she was lighting a fire in the dining room, and getting things ready to make me comfortable at least till morning. But when I saw the kitchen, I determined to take up my abode in it for the night, and so told her she need not give herself any trouble.

It was a large room, with a yawning fire-place and capacious chimney, up which a mountainous fire of turf was seen to fling a cloud of smoke. A huge oak table stood before it, and on it two braces of pistols, two muskets, two sabres, a whiskey bottle, hot water and sugar, and in two chairs on either side two men with broad shoulders, brawny arms, and huge heads, slept heavily and snored loudly. The candle which stood on the table, was flaring in the socket, and the clock in the corner pointed to [illegible] before midnight. As we had neared the end of our journey, the moon had again become shrouded, and black clouds gathering among the mountains frowned on us heavily as we dashed along the valley towards the house. The storm was now bursting forth in its fury, and it howled fitfully in the yawning chimney and rattled in impotent rage against the well barred windows, and made the kitchen look all the cosier. The pots, and pans, and dish-covers, and plates, shone brightly on the dresser, and the big oak rafters on the ceiling, doubly blackened by the smoke of a century, glistened like ebony.

"God save all here!" I said loudly, after surveying the scene for a moment. The sleepers roused themselves, and muttered half mechanically, "God save ye kindly, sir." The old housekeeper by this time came in, and placed an easy chair for me that she had brought from the parlour. "Now," said, I, "will you tell me all about this unhappy accident?"

The old woman's story lasted nearly an hour, and while telling it she rocked herself to and fro in her chair, wringing her hands, and apostrophised her deceased master in the old Irish fashion, with a pathos that sometimes rose into passion. I shall not trouble the English reader with her words, as to strange ears, without the voice, the brogue, and above all without the associations which they carry with them in my mind, they lose all their effect. The men slept on, and I listened in wrapt attention. On that night my philosophy, my reading, my knowledge, all took flight—availed me not,—and I became once again an Irish child, devout, fearful, superstitious.

Here is old Biddy's story. The previous week, she was awakened in the middle of the night by a low wailing close to her bed side, like a prolonged but half stifled shriek of mortal agony, or heartrending grief, now sinking into a shrill whisper or long drawn sigh, heaved from the breast of woman in the hour of her worst earthly need, now raising into a wild unearthly scream, that made the flesh creep, and the hair stand on end. In the first moment of terror and surprise on awakening she had covered up her head, but in a minute she looked

out round the room, and found it half illuminated by a reddish light, and on the wall opposite the window a moving shadow waved to and fro, now quickly, now slowly, as if keeping time with the voice of the mourner. A glance at the window sent a thrill to her heart, like the sound of the hammer on the coffin nails of her nearest and dearest. Ah, it was the banshee! The little old woman sat in the window waving her fleshless arms, and rocking herself to and fro, mournfully,—oh, so mournfully,—and crying as if her heart would break. And her long flaxen hair, from which she derives her name, fell thickly about her shoulders, and ever and anon she combed it back, and wailed more bitterly than ever, and at last disappeared.

Long before dawn, Biddy descended into the kitchen, and without rousing any of the other servants, lighted the fire and sat over it praying. For the fourth time in her long life she had heard the banshee, and she too truly knew what that portended. Just as day was breaking Mr. Courtenay came down in white buckskin breeches, top boots, and red jacket, and after expressing his surprise at seeing her up so soon, asked her the cause of it.

"Oh, sir, sure I've seen the banshee, and she never keened yit that something wasn't goin' to happen to somebody in the family. Didn't I see her when yer mother died! Didn't I see her when yer brother was dhrownded. And now I'm afeard, God bless us an' harum, that somethin's wrong with the captain at Gibraltar. Whin did ye hear from him?"

"Oh, a few days ago, but if that be all, you'd better get my breakfast. I'm going to the meet, and I've to be there at nine."

Biddy's fears broke out in wild entreaties for him to stay at home, and not to neglect a warning that was never given in vain. But Courtenay was not the man to be moved from his purpose by an old wife's tale, and in half an hour he rode off. At night he had not returned. Biddy sat up watchful and anxious, and on the morrow, when the daylight dawned, the horse stood at the stable door, but the saddle was empty, and the stirrup leathers were broken. The unfortunate rider was found in a ditch about three miles away, but he was quite dead. It seemed he had attempted to ride home across the country for the day's sport, and his jaded steed had fallen back on him when attempting a leap too great for her strength.

He was buried the day before I came there, the two men were put to guard the property until the arrival of the deceased's brother from Gibraltar, where he was a captain in the Artillery.

She had hardly finished her story, when I dozed off in a troubled sleep; and was dreaming of goblins, ghosts, and fairies, when a wild shriek, as if from the ground under my feet, made me start up in terror. Biddy was on her knees telling her beads with nervous fingers, and the two watchers were on their feet clutching their guns, and looking aghast with fear. We spoke not a word, again the cry came, for all the world like a young child screaming in great agony, and then again like a female sobbing in hysterics, now as if it came down the chimney, now from the hall, now from the back yard, but every where piercing in its sadness.

"It's the banshee again," said Biddy, "may the Lord have mercy upon us now an' at the hour of our death!"

"Pshaw!" said one of the men, who was a thorough Orangeman, "it's somebody wanting to scare us, and then plunder the premises, ye mane. But I'll tache 'em manners. Here, Fiddler!" calling a Newfoundland dog. The animal refused to move, and crouched close to his master's feet. The man suddenly seized him, and opening the kitchen door flung him out into the yard. The dog gave a loud yell, was whirled a few feet in the air, and was dashed to pieces on the pavement. We now grasped the arms and prepared to sally out. The cry suddenly ceased.

Old Biddy ran forward and implored us to remain within, "for she never knew luck nor grace to attind anny man that hunted the banshee." One of my companions was evidently faltering, but the jeers of his friend roused his courage again, and we proceeded. We searched the whole premises, but neither saw nor heard anything. We were standing in the haggard, silent and wearied, when the cry suddenly burst out from behind the cornstacks more wildly than ever. Hopkins, the Orangeman, levelled his musket. "Don't fire," said Doyle, imploringly. In a second he pulled the trigger. There was a loud report, a fearful shriek, and an old woman tottered across the yard in a moment afterwards, half enveloped in a bluish flame, her long hair flowing in the wind, and waving her hands at us half reproachfully, half sorrowfully. As she disappeared behind the house, we heard the old Celtic air, "*Ma 'til, ma 'til, 'n tulidh*," sung in a low plaintive voice, and then all was still. We returned to the kitchen without speaking a word. Biddy prayed all night. In the morning early I set out for Dublin, and have never since had an interview with the banshee. I saw my old friend's brother at the Great Exhibition in 1851, but he assures me the banshee never since visited Rathnagru Hall. May she long remain absent, and may all my readers have their Christmas morning ushered in with gayer music than her death-boding *caoine*.

THE NORMAN BARON.

A CHRISTMAS CAROL, BY LONGFELLOW.

In his chamber, weak and dying,
Was the Norman baron lying;
Loud without the tempest thunder'd,
And the castle-turret shook.
In this fight was Death the gainer,
Spite of vassal and retainer,
And the lands his sires had plunder'd,
Written in the Doomsday Book.

By his bed a monk was seated,
Who in humble voice repeated
Many a prayer and psalm-master,
From the missal on his knee;
And, amid the tempest pealing,
Sounds of bells came faintly stealing,
Bells, that from the neighbouring Kloster,
Rang for the Nativity.

In the hall, the serf and vassal
Held that night their Christmas wassail;
Many a carol, old and saintly,
Sang the minstrels and the waits.
And so long those breezy minstrelsy
Sang, to slaves the songs of freemen,
That the storm was heard but faintly,
Knocking at the castle gates.

Till at length the lays they chanted
Reached the chamber, terror-haunted,
Where the monk, with accents holy,
Whispered at the baron's ear
Tears [illegible]
And [illegible]
And the dying baron slowly
Turned his weary head to hear.

"Wassail for the kingly stranger,
Born and cradled in a manger!
King like David, priest like Aaron,
Christ is come to set us free!"
And the [illegible] pointed
And exclaim'd the [illegible] baron,
"Miserere, Domine!"

In that hour of deep contrition,
He beheld with clearer vision,
Through all [illegible] and fashion,
[illegible]
All the pomp of earth had vanish'd,
Falsehood and deceit were banished,
[illegible] more loud than passion,
[illegible]

Every vassal of his manor,
Every serf born to his manor,
All those wrong'd and wretched creatures,
By his hand were freed again
And as on the sacred missal
He recorded their dismissal,
Death relax'd his iron features,
And the monk replied, "Amen!"

Many centuries have been number'd
Since in death the baron slumber'd,
By the convent's sculptur'd portal,
Mingling with the common dust
But the good deed, through the ages
Living in historic pages,
Brighter grows and gleams immortal,
Unconsum'd by moth or rust.

A GOSSIP ABOUT CHRISTMAS IN THE OLDEN TIMES.

BY JOHN TILLOTSON.

A thousand, thousand welcomes to the merry Christmas time. Church bells high up in lofty steeples are ringing out their cheerful peals, and shouting into the world's ear that the great holiday has arrived at last, and that with laugh and jocund song, and cheerful smiles and dancing feet, and, better still than all, with loving hearts, we greet the glorious festival, and hail it as the day when every grudging, hard, and bitter thought is cast away, and love and kindness put on with holiday suits, befitting the season of the year.

Fires are leaping and roaring joyfully, and there are pleasant meetings and cheerful greetings, and childish sports are going on—childish sports in which manhood and womanhood engage right heartily, and for the nonce forget the noise, anxieties, and care of the world, and love their loves from A to Z, and hunt the slipper with persevering alacrity, and play at forfeits—wondrous forfeits, or anything and everything which wakens up old memories deep and tender. And while the bright flame leaps upwards, and the clear red fire grows brighter and clearer, ghost stories are told, and still the lusty bells ring out a greeting to old Christmas. The old year is dying, but he dies in glory like an old Norse King.

Ours is a practical age. We are becoming more and more scientific and mechanical every day. We command the elements. We turn the sun into a portrait painter, and the lightning into a postman, fire and water become our hard-working nags—a very Pegasus in harness—we go a-head in everything, and leave the men of former times so far behind that it almost seems as if they were another race. Our sports and pastimes have changed most wonderfully, but we have not out-run Christmas yet—and Christmas thoughts, and Christmas feelings, and Christmas associations, and the jolly of bell metal, and the holly boughs, and the mistletoe, and the steaming Christmas fare, still show that we cherish the day our fathers loved and honoured —

> With footsteps slow, in furry pall yclad
> His brows enwreathed with holly never sere,
> Old Christmas comes to close the warned year,
> And aye the shepherd's heart to make right glad,
> Who when his teeming flocks are homeward had,
> To blazing hearth repairs, and nut brown beer,
> And views well pleased the ruddy prattlers dear,
> Hug the grey mungrel, meanwhile maid and lad
> Squabble for roasted crab. Thee, Sire, we hail,
> Whether thine aged limbs thou dost enshroud
> In vest of snowy white and many veil,
> Or wrap thy visage in a sable cloud,
> Thee we proclaim with mirth and cheer, nor fail,
> To greet thee well with many a carol loud

How did they spend Christmas in the old times? Let us see. A modern poet tells us :—

> The Great King Arthur made a sumptuous feast,
> And held his royal Christmas at Carlisle,—
> And thither came the vassals, most and least,
> From every corner of this British isle,
> And all were entertained, both man and beast
> According to their rank in proper style.
> The steeds were fed and littered in the stable
> The ladies and the knights sat down to table.
> The bill of fare (as you may well suppose)
> Was suited to those plentiful old times,
> Before our modern luxuries rose,
> With truffles and ragouts and various crimes,
> And therefore from the original in prose
> I shall arrange the catalogue in rhymes,
> They served up salmon, venison, and wild boars
> By hundred, and by dozens, and by scores
> Hogsheads of honey, kilderkins of mustard,
> Muttons, and fatted beeves, and bacon swine;
> Herons and bitterns, peacock, swan and bustard,
> Teal, mallard, pigeons, widgeons, and in fine
> Plum pudding, pancakes, apple-pies and custard,
> And therewith they drank good Gascon wine,
> With mead, and ale, and cider of our own,
> For porter, punch and negus was not known.
>
> All sorts of people there were seen together,
> All sorts of characters, all sorts of dresses;
> The fool with fox's tail, and peacock's feather,
> Pilgrims and penitents, and grave burgesses,
> The country people with their coats of leather,
> Vintners and victuallers with cans and messes,
> Grooms, archers, valets, falconers, and yeomen,
> Damsels and waiting maids, and waiting-women.

Old Saxons kept up merry Christmas in a cheerful manner; and when the feet of Norman soldiery had pressed our English ground, and the mild government of the Saxon kings was succeeded by the arbitrary sway of their imperious conquerors, old Christmas still was kept and honoured, and kings and priests and knights and people welcomed it as a day of general rejoicing. William I. and his son Rufus kept Christmas at Windsor, and kept it in a sort of barbaric splendour. The conquered as well as the conquerors united in the keeping of the feast, and the peasants hailed its coming as a boon. Chivalry helped to add grace and grandeur to the festival, and at the Christmas tide, merry meetings and tournaments were held. And when the preacher of the crusade awoke in the breasts of European champions the desire to fight in the Holy Land, the love of Christmas was but deepened and increased, and when it came, the host in Palestine rejoicing at its return, and there beneath an eastern sky—there in the very neighbourhood where long ago the faith they held was first proclaimed, Christian chivalry kept Christmas. One can imagine the feelings of one of those stout, stern, warriors on such a day. He is far away from his own native land, and bright eyes watch for his return, and loving hearts are longing for his coming—there at home they keep old Christmas in the brave baronial hall—there the yule log blazes, there the minstrels sing, there the merry dancers go round about the fire, there the boar's head all garnished for the feast is brought in with a flourish—and here the good knight clad in his steel harness finds himself far away from home. But homewards sends his thoughts, and he thinks of the first lance he ever broke, of the day when he did such gallant deeds because the eyes of one were on him whose favour he would win. And Christmas in the Holy Land seems to him more holy, more suggestive then it ever did on English ground. The tall palm trees, the vineyard and the olive gardens, are appropriate to the season, and there is Bethlehem and as he traces its dark outline against the evening sky, his thoughts have wandered centuries away, and he seems to see above it the bright star in the East, and to hear the strange mysterious music of angels in the air.

There were strange notions in those old days relative to the character of the birthnight of the Saviour. Hamlet says —

> Some say that ever 'gainst this season come,
> Wherein our Saviour's birth is celebrate
> The bird of dawning singeth all night long
> And they say no spirit stirs abroad;
> The nights are wholsome, then no planets strike,
> No fairy takes, no witch has power to charm,
> So hallowed and so gracious is the time.

At twelve o'clock on Christmas-eve the ox knelt down in adoration. All water blushed, and for a moment became wine. At that season, says an old author, merry is the cock, and the owl for twelve days is sprightly.

When chivalry was no longer displaying its powers in the valleys and in the hills and plains of Palestine, and the gallant knights withdrew from the conflict, Christmas was still honoured and beloved. Now-a-days we listen to the music that wakes us in the night, and a strange sound it has withal—but it is an old, old practice; though far different in ancient times from what it has now become. The waits in former days were the ministrels of the court, who were honoured with the name of Royal Watchers. In the time of Edward the Fourth, the waits were bound at the Christmas season to pipe within the court four times each night, as is duly recorded in Rymer's Fœdera. Then there were the mummers, all dressed in the most grotesque fashion. Strange hobgoblin headed wights, armed with wooden swords to enact curious plays and mysteries, which did much delight my lords and my ladies. Then the canticles and carols sung in palaces by men of high degree. When Henry VII. kept his court at Greenwich, Leland tells us the dean and royal chaplains sang him a carol after the first course. And when, at these old feasts,

the henchman brought in the crowning dish, the boar's head, all decked with rosemary and bay, a special festal song welcomed its coming But of all days and all festivals, twelfth-day, or the day of kings, outstripped in everything all competition, and became the king of days. This day was first observed as a separate feast in the year 813. The customs of the day differed in various countries, but then the same in the end and purpose, that of rendering honour to the wise men, the eastern magi or kings, who visited and made offerings to our Saviour at his birth. The custom of eating twelfth cake, and especially of drawing for king and queen on this day, is of very ancient date In the calendar of the Romish Church is an observation of the vigil, " the sixth is called the festival of Kings, with the additional remark that the ceremony of electing kings was continued with feasting for many days. In France during the ancient regime, one of the courtiers was chosen as king, and the nobles attended at an entertainment whereat he presided In the student life of the English Universities may be traced this same custom, when the choosing of a king was by a bean found in a piece of divided cake. The pea was used as well as the bean, thus in Ben Jonson's masque of " Christmas," the character of Baby-cake is attended by an usher bearing a great cake with beans and peas. Elsewhere, both are alluded to —

Now, now, the mouth comes,
With the cake full of plums,
Where Bean's the King of the sport here,
Beside we must know,
The Pea also
Must revell as Queene in the court here
Begin then to choose
(This night as ye use)
Who shall for the present delight here,
Be a King by the lot,
And who shall not
Be twelfth day Queene for the night here.
Then crown the bowl full
With gentle lamb's wool,
Add sugar, nutmeg and ginger,
With store of ale, too,
And thus ye must doe
To make the wassaile a swinger
Give then to the King
And Queene wassailing,
And though with ale ye be whot here,
Yet part ye from hence
As free from offence
As when ye innocent met here

Evelyn records that on twelfth night, 1662, his majesty (Charles II.) opened the revels of the night by throwing the dice himself in the privy chamber, where was a table set a purpose, and lost his £100. (The year before he won £1,500) The ladies also played very deep. Neither was keeping twelfth night an exclusive court custom, but was equally blended with the joined observances of rural life. Thus in an old ballad we find a country swain singing of twelfth-night glories, but intimating that his heart has a dearer wish then anything belonging to the kings' day .—

Now twelfth day is coming, goodwife, I trowe,
Get readie your churne and your milk from the cowe,
And fire your oven all ready to bake,
For Emma bring hither a bonnie twelfth cake
The lads and the lasses at night will be seen,
Round the wassaile bowle drawing for King and for Queen,
But could I possess the three kingdoms by lotte,
I would rather have Emma and dwell in a cotte

With the wassail bowl at Christmas, by the way, roasted apples were formerly carried about, long after this was discontinued, apples were roasted on Christmas-eve, and this little observance was kept up for a long, long time. In Devonshire the people carried cider to the orchard, and there encircling one of the best bearing trees, they sung a strange old rhyme —

Here's to thee, old apple tree,
Whence thou mayst bud, and whence thou mayst blow!
And whence thou mayst bear apples enow!
Hats full! caps full!
Bushels, bushels, sacks full,
And my pockets full too, Huzza!

The custom of making offerings to the three kings was performed so late as the year 1731; when at the Chapel Royal, St. James's, on twelfth-day, George II. and the Prince of Wales made " the offerings according to custom "

In the reign of King Edward III. the title of King of the Bean was conferred upon one of the King's minstrels, as we find by an entry in a computer so dated, that sixty shillings were given by the King on the day of Epiphany to Regan the trumpeter and his associates, the court minstrels, in the name of the King of the Bean.

This Gossip of the Old Time might be continued at great length, for rising up before us, as we think of bygone Christmas customs, comes scene after scene, strangely interesting as fragments of the past. Here we see the learned, grave, and reverend justices dancing about a coal fire like so many shoolboys; here in broad-skirted coats, and frills, and ruffles, are a party of worshipful gentlemen of Queen Anne's day, doing honour to that speckled cannon ball, the pudding, and playing at snap-dragon with right good will; anon the Thames is frozen over, and on its icy surface a bonfire blazes, and an ox is merrily roasting. Again, we are in country precincts, and keep Christmas with roystering King Charles II. Further still away we greet old Christmas in Queen Bess's time, and find ourselves in an ancient hall, whose rafters ring to our songs and laughter, where the yule log blazes, as only yule log can, where up in a little gallery yonder quaintly-dressed minstrels are sounding out a welcome to the king of days And here a company of mummers tumble and dance, and dance and tumble, as only mummers know how, singing.—

Bouncer Buckler velvet's dear,
And Christmas comes but once a year,
Though when it comes it brings good cheer;
Then welcome Christmas once a year

And there, too, in the stiff brocade and wondrous ruffs, and stately step, elongated waists, and powdered wigs, and sparkling in the fire light, and glittering here and there like wildfire, come my ladies. And here in slashed doublets and placarded vests, and satin shoes, and with jewel hilted rapiers, come my lords, and there comes the dancing, and then the wassail, and then the supper, and then the boar's head, and then more dancing, and then more fun with the mummers, and so the scene changes, and we are keeping Christmas with a London citizen, in the days when cowards were made heroes by the cry of Harry and St. George! Further still away, we jostle in the crowd at Smithfield to see the Christmas joustings and cheer, as the men of mail meet in their gallant charge, or shiver lances on each other's breast-plates. Now we are singing with a company of minstrels in the streets of London, when London was a picturesque old place; now we are reverently kneeling in a lofty church, and listening to the solemn music of the Christmas festival, now we are feasting at the table of a Saxon nobleman, in grand barbaric style, and in our heart of hearts defy all Danes and Normans too, and further still away, wandering on a mountain, in that land which flowed with milk and honey, we watch some Jewish shepherds abiding in the field, and hear from heaven a birthnight song.

* * * * *

Ring, tug, strain,—the bells still sound a welcome to the Christmas time. The music is sprinkled all over the land,—from spire to spire, from tower to tower, the wondrous harmony is sounding forth. There is a very volley of sound that seems to shake the steeple, louder, louder, faster, faster, little bells and big bells, one great rattling chorus that says as plainly as bells can say it,—a thousand thousand welcomes to the merry Christmas time!

The Lord of Misrule.—Holingshed, speaking of Christmas, calls it, "What time there is always one appointed to make sporte at courte called commonly lorde of misrule, whose office is not unknowne to such as have bene brought up in noblemen's houses and among great housekeepers, which use liberal feasting in the season " Again "At the feast of Christmas," says Stow, "in the king's court wherever he chanced to reside, there was appointed a lord of misrule, or master of merry disports; the same merry fellow made his appearance at the house of every nobleman and person of distinction, and among the rest the lord mayor of London and the sheriffs had severally of them their lord of misrule, ever contending, without quarrel or offence, who should make the rarest pastimes to delight the beholders. This pageant potentate began his rule at All-hallow eve, and continued the same till the morrow after the Feast of the Purification; in which space there were fine and subtle disguisings, masks, and mummeries."

A CHRISTMAS-DAY IN OLD CALIFORNIA.

BY MISS H. M. RATHBONE.

Close to the bay of San Francisco, and surrounded by a group of splendid Spanish chestnut trees, stood the plain white dwelling of James Hancock and Edward Webster, two ministers of the Gospel, who had braved all the horrors of a near residence to the wildest Indian tribes, in order to spread the knowledge of Christianity amongst the heathens. No civilised community, either of their own or of any other nation, lived within fifty miles of the mission-house, which had repeatedly been plundered by bands of predatory hordes, who successively rifled it of every article which it contained. Still the missionaries had persevered, and having obtained a fresh supply of absolute necessaries, they cultivated patches of the adjoining land, and lived on its produce, on the fish out of the bay and river, and game from the forest, until each time they had succeeded in re-establishing their despoiled station.

It was Christmas-day, and Mabel Hancock rose early to procure evergreens to adorn their parlour and chapel in honour of the sacred anniversary, and in memory of the time-honoured customs appertaining to the season which she had often seen observed in her native England during her early childhood; but she performed her task in some trepidation, for the frequent attacks of the Indians had rendered her very timid; besides she well knew that certain recent signs had made her father and Mr. Webster afraid that a fresh onslaught might now be expected. Her fears were confirmed, on her entering the room where breakfast was prepared, by her father's unusual gravity and the trembling fervour with which he pronounced his customary morning blessing upon her.

During the meal little passed save disjointed conjectures about their English friends, and remarks on the keen frost which probably compelled them to crowd round blazing fires—in strange contrast to the inhabitants of the mission, who could have basked in summer sunshine in the lofty woods, had they only felt it safe. Presently the two missionaries withdrew to decide upon their proceedings in case of attack, necessarily however of a peaceful nature, since they looked on war as unchristian—Hancock saying to his daughter as they left the apartment, "Remember, my child, that upon thy courage and presence of mind the fate of us all may this day depend."

This consideration did not at first console Mabel at all, and seeking her own little room she prayed for strength to do her duty, should she indeed be tried as her father seemed to expect, and then taking out her prayer-book, she tried to read the morning service, which she knew was at that hour being performed in her own beloved country But finding it almost impossible to fix her attention on those solemn thoughts, she began to turn over her little hoard of keepsakes from beloved friends now thousands of miles away, and to read the highly-prized letters which at rare intervals had been brought them by English merchant vessels on their way to South America. Gradually she became absorbed in pleasant remembrances of the happy past, and forgetting all about her present situation, she was additionally startled when a distant war-whoop painfully recalled time and place to her recollection.

Immediately afterwards her father came in, grave and composed, though the warmth of his reiterated embrace, as he folded her in his arms, showed her that he felt it might be for the last time. He took her down stairs, where she found their small band of labourers, with three faithful negro women, clustered together and awaiting their master's order to throw open the gates of the station, when a nearer war-whoop should proclaim the enemy close at hand. But several hours passed away without any attack taking place, though every now and then distant shouts kept every heart trembling in expectation, and Mabel thought these hours of suspense were harder to endure than any actual danger could have been. Bread and wine were distributed to the little party as the day wore on, both missionaries urging the necessity of taking food upon their terrified dependants, who, frightened to the last degree, most unwillingly consented to leave off watching in order to partake of some refreshment. About four o'clock notice was given by Mr. Webster, who had stationed himself on the roof of the house, that a most formidable body of dusky warriors armed with spears, bows, axes, and bowie knives, were swiftly approaching, and in five minutes afterwards a dreadful yelling and loud terrible war-whoop told the missionaries the season of trials had arrived. Throwing open the gates of the station, and with Mabel leaning on his arm, Webster on his other side, and the servants close behind, Hancock walked boldly out to meet the foe, unarmed and undismayed. This daring act seemed to stagger even the wildest of the wild men whom they now confronted, who were a large party of Wallacks and Snake Indians; and taking no notice of so despicable a prey, many of the red men filed past into the house, leaving the chief body of the men standing outside in profound silence.

Mabel behaved admirably, though it may be questioned whether she did not partly retain her composure from their fright rendering her incapable of any demonstration; but she stood calmly by her father, and probably this appearance of perfect indifference on her part aided not a little in preserving the lives of the English during that trying interval which elapsed while the chiefs remained within. They searched the entire establishment minutely over for guns or ammunition, and finding nothing but a few well-worn spades and other agricultural implements, they kicked them about with feelings of the most profound contempt, and then, rejoining their comrades below, the whole party chiefly left the mission, except a head chief of the Wallacks, who knowing a little Spanish, came up to the missionaries and said: "What use live here? No gun, no deer, plenty of buffalo, plenty elk, plenty everything, no gun, no shoot! pshaw! dig! dig the ground, no good, big fool, you big fool all, go to sleep," and casting a withering look of scorn at the ministers and Mabel, he set off to join his own people, who were again heard yelling and shouting with derision as they withdrew in the distant forest.

It was then evening, and, relieved and thankful, the English closed the station-house for the night, their servants hastening to prepare an abundant meal, and soon becoming riotous in their joy, the missionaries uniting in grateful prayer for the deliverance they had experienced from their insatiable enemies, and rejoicing that their peaceful line of conduct had been blessed not only by their personal safety, but by the preservation of everything in their possession, since examination proved that the savages had taken nothing away with them.

Mabel's last reflection that night on laying her head on her pillow in safety, was "This morning I was lamenting our absence from dear England, and from all my best friends and nearest relatives, but to-night I feel as if the privilege of dwelling in peace with my dear father and Mr. Webster were all I cared for, and much more than three hours ago I deemed possible could ever be mine again. Should I live to see our native land once more, how strangely different will one of our merry Christmas-days in the old country seem to this awful day which we have just passed. But it will make me feel how happy England is, where peace and freedom are the birthrights of all her children!"

CHRISTMAS.

DESCRIBED BY A CRABBED PHILOSOPHER.

To the Editor of the Working Man's Friend

Mr Editor—Sir,—Who does not think of Christmas, while at his very stomach rising at the thought? What visions of feasting and joyousness run through his brain? All the glories of roast beef and plum-pudding rise in splendid review before him! The recollection of the Christmas goose makes him as hot almost as the touch of a tailor's goose, and nearly as stupid! But what is all this for? Why do men make gluttons of themselves on that particular day? Why do they rejoice in a good dinner and a rich pudding? Why do they think more of roast beef and horse-radish, currants boiled in a mixture of fat and flour, with malagas, and sultanas to boot, on the day commonly, but unwarrantably, called Christmas-day? There is not a line, a sentence, or a word in the New Testament to prove that the 25th of December is the day on which Christ was born. Still less is there a line, a sentence, or a word to prove that mass, holy-mass,

should be held on that day? Ah, but say the Roman Catholics, the tradition of the church declares that the 25th December is the true day, and we must obey! Good; the Roman Catholics must obey, if it so please them, we have nothing to say against it. But how should the Protestants obey? They have abjured the Church, so called, and have established sects of their own, how comes it, then, that they keep Christmas-day? The reason is plainly this, that they love good cheer, and they are fain to imitate the Roman Catholics in this observance. It is agreeable to their taste and far more agreeable to their stomach, and therefore they wish to enjoy it. Well, if they wish to meet their brethren,—we mean if the Protestants wish to meet their brethren the Roman Catholics on the broad platform of a good dinner, we have nothing to say against it, it is but a right and proper thing, but if they mean to proselyte us by means of the belly, we say no; we shall dine on Christmas-day, if you please, and we shall enjoy all the good cheer we can get, but we will not for this be called Roman Catholics, or Protestant Catholics, or any other Catholics. We have a universal desire to see all men happy, and enjoying good cheer, but we wish to see all mankind at liberty to enjoy their own opinion as to whether the occasion be really Christmas or not, that is, as to whether it be the real day of the nativity of our Lord. We say this can not be proved from Scripture, and by this we do not find fault in our opinion. We would, therefore, recommend to all parties to enjoy all the good things that come in their way on Christmas day, as the Roman Catholics and the Church of England can it, but we humbly suggest that it is only the 25th of December after all, and further, that there is no law in the Bible, and we hope none in the statute-book, to compel us to observe the day as a holiday, that is, a day holy unto the Lord. We would strongly advise the people of England, henceforth and for ever, to call this miscalled day, *Midwinter*, and not *Christmas*, as the latter name only tends to perpetuate the creed of particular sects; for, after all, the Church of Rome and the Church of England constitute only particular sects of religionists, and we hope that they contain, within their pale, all their errors and their bigots, many members of the true Church. R W.

[In "Crabbed Philosopher" seems to us to think, that when the Apostle desired the brethren to "be instant in season and out of season," he did not say all he had to say, and the "Philosopher" takes upon himself to supply the omission by adding, "but especially out of season." No man but a sour buttermilk philosopher would think of discussing the authority of tradition in matters of belief, on a day when nobody else thinks of discussing anything but turkey and roast beef. Who but he would stop a boy or girl under the mistletoe, and ask her before he kissed her, whether she believed that Holy Orders of Matrimony were amongst the Seven Blessed Sacraments, and whether Thomas a Kempis wasn't wrong on the questions of Transubstantiation and Extreme Unction. Wouldn't the dew leave her lip, and the light be quenched in her eye, at the sight of his unpicturesque visage, and wouldn't he appear at once in his true shape, the charred stump of an old Smithfield stake? Who but one of the doggish disciples of the precise of the tub, would eat mince pies with a protest against Popery, and call upon controversialists to hurl their texts at each other, and ask them if it don't sound hollow, and if they don't abjure the Pope in it. What Christian man or woman cares much whether Christ was born exactly on the twenty-fifth of December or not. We all know he was born, and there is a general opinion abroad that the twenty-fifth of December was the day, and for a thousand years or more, the common consent of all Christian men have made it a time of rejoicing, of happy re-unions, of forgetfulness of differences. We strongly recommend all families not to invite the "Crabbed Philosopher" to dinner upon next Christmas-day; and if he dines at home, we doubt not, the very policeman will make wry faces and feel chilly as he passes the house. We offer no remark upon his suggestion to change the name of the festival from Christmas to "Midwinter," further than that if it were in his power to communicate it to all mankind, they would receive it with a howl of derision, and the very news-boys would tweak his frost-bitten nose. The worst enemies of national and harmless amusement are they who seek to degrade it by calumniating it, and the worst enemies of religion are those, who, like the "Crabbed Philosopher," associate its sublime truths and consoling promises with the ignorant hallucinations of their own dwarfed intellects.]

CHRISTMAS IN SWEDEN.

FROM THE SWEDISH OF FREDERIKA BREMER.—TRANSLATED BY MARY HOWITT.

It is Christmas-eve, dear brother, a day which, through the whole of Sweden, is consecrated in castle and cottage with gifts given and received, with the best that people have of this world's wealth. For a month past one has seen that the festival was coming by the increase of life and bustle over the whole country, as if the whole country got itself ready for a feast. In the capital it seems as if a population of 80,000 souls had, all at once, increased to 100,000, and as if the bodies of all their souls had no more rest within the house. People drive, people walk, or rather people trudge up and down, from morning till night. People meet, people cross, people jostle one another in the crowds, in streets and lanes. At the turning on each hand one hears the words, "Your most humble servant!" And in the Great West-street in particular, people are in peril of their life—if they are poor foot passengers, like me. In the shops the ladies elbow one another, under the pleasant pretence of desiring to see this and that, examine, consider, turn over and over, ask questions, chatter, cheapen, and finally open their pocket-books and put in the bill, and then, without any impropriety, go out with their parcels, be they large or small, oblong or four-cornered, wrapped up with ingenuity in waste paper, and tied with pack-thread. The ladies, in their elegant pelisses, float to their elegant carriages, attended to the door by the gentlemen of the shops, who ask, with low bows, "Shall I send them home?—shall I add them to the account?" A nod, or gracious "be so kind!" the window is pulled up, the whip cracks—the bills swell out! 500 rix-dollars for fine dresses, 1000 for gold and silver stuffs, 2000 for fine wines. Such purchases make they, the powerful money-potentates, and then drive home to scold about a few pence and grumble over the dear times. "Two farthings' worth of ginger-bread!" demands little Janne, in his ragged coat, and with his nose-end red with the cold, standing before the paradise of the huckster's stall, gets called little friend by its red-breasted cherub, receives two brown hearts, pays his money contentedly, goes his way as happy as a—prince? No, because a prince has too much to be happy with so little—but as a little, poor, good-hearted lad who is as proud as can be to bid his little sister to a feast.

In the great market-place, booth after booth is opened in long rows, each one filled with bread, books, stuffs of all kinds, confectionery, and with every thing in the world. It is the Christmas-market. And all the world—in Stockholm—goes to the Christmas market to make purchases and to look about. Behind all this visible movement there is another movement in operation which is invisible. There are at this time in Stockholm, tailors, translators, shoemakers, carriage builders, furriers, lace-weavers, glovers, in a word, makers and workers of every kind, who are not so lucky as to deceive more than twenty times in the day with their "it shall be ready this evening" "in the morning" "by the end of the week!" "the very first of all" which means the very last.

Thus it goes on in the month of December in the capital, and thus, no doubt, down to the very least of Swedish towns. In the country it is fresh life. Every mistress of a house steeps the fish, makes candles, and stuffs puddings. Every maid-servant is overhead in business. All heads and all hands are busy for Christmas. All men and all domestic animals will be fed plentifully, even sparrows will sing of Christmas on their appointed sheaf of oats, and human sparrows—the beggars—will be abundantly fed from rich men's tables. The earth experiences the truth of the Lord's words, "it is more blessed to give than to receive."

At this time there is an end of all candour and confidence in the family. Husbands and wives, parents, children, brothers and sisters, relations and friends, all conceal themselves from one another, all have secrets from one another, all have something to hide or withdraw from each other's sight. And as observe, might think that such things testified but indifferently for the happiness of Swedish homes, if the mirror of the soul, the eye, was not in the meantime become, more loving and friendly than ever. But with roguish gravity, and repressed breath, the spirit of secrecy goes about sealing all lips, until, all at once as if by a

magic stroke, amid the darkest night of the year, millions of lights are kindled, and like a festive board, stands on the twenty-fourth of December the whole kingdom of Sweden, from Lapmark down to Skone, and millions of voices exclaim the while, It is Christmas! it is Christmas!

The genius of equality never reigned thus absolutely in the old states of the republic, as this evening throughout Sweden. A great-ladie is the sceptre in his hand. The odour of sweet groats prevails over the whole kingdom, and in its atmosphere breathe all, in a brotherly concord, high and low, great and small. Christmas-candles burn in castle and cottage. Such is Christmas-eve. But the light which is thus kindled extends much farther, and, like a circling wheel, pleasure follows pleasure for a long succession of days. There is dancing in cities, in towns, in hamlets. People drive, people feast, people play, and amid the sportive hours a more gladsome turn is often given to serious life Many a grudge; much ill-will disappears amid the "borrowed fire," and, Spirit, dost not observe something? Many a happy bond is knit for life amid blind-man's-buff and "hide-the-ring—hide the ring, show it to no one'" And so people go on till the twentieth day of Christmas, which is also called "Knot," and which puts one upon the thread of Christmas pleasures Christmas ends then; and on this evening, conformably with old Swedish custom, Christmas is danced out

In the midst of this garland of sports and pleasures occurs the great festival of the Church, full of solemnity and light On this occasion the churches are filled with people The true religion of God is the friend of joy and animation. Therefore we rejoice at Christmas.

And now again is this festival come, and everywhere people think about giving pleasures to themselves, and, what is better, of giving pleasure to others. Oh! what delight I had in childhood for many weeks before Christmas, in thinking upon the Christmas boxes with which I should surprise my parents, and brothers and sisters I remember in particular, a sketch, a landscape of my own composition, with which I designed to astonish and delight my father. I awoke every morning with this in my mind. It was a very ambitious work. Everything was there, the Alps, the Mediterranean Sea, sun-rise, a vessel under sail, a Roman aqueduct in ruins, a rushing mountain torrent, beside which sat a shepherd, playing on his flute to his flock, (a union of the sublime and the beautiful!), two travelling gentlemen, (the one was to represent my father) who, from a path down the Alps, observed all this, and were enraptured The joy of the artist,—the child's love, the child's, or rather human nature's, self-love united to make my heart beat with the thought of the evening on which this sublime composition should be exhibited to the light, be admired by my father and the whole family, perhaps even by the provost and burgomaster, and—who knows?—perhaps the fame of it might go over the whole city I did not remark, until the picture was finished, that the Mediterranean chanced to lie above the aqueduct, that the ship could not avoid striking against the sun; that the Alps looked like confectionery, and my father like a highwayman. My good father had not the heart to enlighten me on the subject, so that, although my masterpiece did not, by any means, cause the rapture which I expected, yet I remained for this time unpunished for my presumption But ah! I fear that the hour of retribution is come, that my first-born son inherits my artistical talent and designs, to prepare for me a surprise like that which I once upon a time prepared for my father I have seen something horribly shining forth from his drawing-board, and which, as I came nearer, was concealed with mighty haste I wish, that when my hour comes, I may restrain myself as well as my deceased father did. We have now for several days been so full of mysteries one with another, and have attempted to hide in all corners with our intrigues, that I am quite weary of it, and long for the Christmas-goat, which will explain all. And, anon, this hour will come. The clock strikes seven, I hear the voice of my wife, which orders tea and saffron cakes, "and lights in the parlour." Now beat the hearts of the children, and I almost think—mine also! I leave you, and will continue my letter to-morrow.

Christmas day.

You should have seen them, my four children, dancing round the Christmas-tree, which hung full of apples, gingerbread, and other gimcracks, you should have seen them in the light of the Christmas candles, beaming with joy, skipping, singing, laughing in unrestrained life-enjoyment, and you would not have wondered that I, absorbed by the observation of the joyous picture, did not remark that the contents of my tea-cup which I poured into the saucer ran over, until I perceived something warm at my side, and to my horror saw a grey pool upon the red worsted damask of the sofa. I immediately wiped it up, fortunately unobserved by my wife; but many will be the wonderings as to how and when that stain came upon it!

And now we were all assembled; my wife—an excellent wife, I assure you, but almost too great a hater of stains upon furniture—my wife, my wife's husband, two young relations, the Student N, and Mamsell Mina, and my four children We drank tea and dipped in great slices of saffron-bread. We ought to have talked and made believe that nothing was going to happen But it would not do. The state of the weather was attempted. I thought we should have snow, the Student, that we should have thaw, my wife's idea was that we should soon have winter, mine, that we had winter already, Mamsell Mina's, that we should have an early spring, and so on In the meantime, the children began to cast expressive glances at one another, and then quickly I saw my eldest daughter, with diplomatic address, steal out of the room, and then the rest, one after another. Nobody observed it—Heaven forbid! but my wife smiled, and so did I In a little while the children again entered, and now in solemn procession, the eldest first, the youngest last.

My eldest daughter, a twelve-year old, and very patriotic girl, stepped forward towards me with a waistcoat in her hand, which she herself had worked for me, and which blazed with the colours of the Swedish flag—yellow and blue: both waistcoat and girl I clasped tenderly to my heart. My first-born son, a promising youth of thirteen, presented at the same time to his mother, with some pride, a colossal long-legged footstool, which, with a certain fear and circumspection, she received into her hands, uttering a joyous exclamation of applause at this, his first masterpiece of carpentry. After this he approached me, and, with a certain degree of horror, I saw a great paper in his hand. "Now it comes!" thought I. I saw, in spirit, the Alps, the Mediterranean Sea, the sun, myself—myself even! but, the gentle stars be thanked! it was better than I expected, for, as with terror I took the paper into my hands, I saw no Alps, only a pair of human heads, which seemed to be goring one another- although it was meant to represent kissing—yet, still, the whole thing was so human, that I could with great truth answer my wife's somewhat uneasily questioning glances by—"Ay, ay! look here, now. At his age I could hardly have done better myself!"

My six years-old Wilhe, a little quiet lad, given to looking after relics, and who must be designed for an antiquary—I had a presentiment regarding the Christmas gift which, with some importance, he presented to his mother. This was a collection of remarkable things which he had found—crooked pins, broken-pointed needles, headless nails, glittering grains of sand, little pieces of gilding, a passible piece of money, and such-like curiosities, which caused us to burst into a hearty laugh. This embarrassed the little collector, and filled his eyes with tears, which we immediately kissed away, and assumed that demeanour of respect with which one regards relics from Herculaneum And as among these treasures we discovered an old northern coin of real value, then were my little fellow and I proud and glad Bertha, my little darling—she, with her own small dear fingers, had made her first essay at hemming on a pocket-handkerchief, which father and mother were to use alternately, or in company. The two young relations also came forth modestly with their presents. The student, with verses, which he dedicated to my wife and me, in which "the strength of the North" was spoken of, Ygdrasil and Ragnorak, and again "the strength of the North." Mamsell Mina presented us with an especially beautiful piece of work, for which, with crimsoning cheeks, she received our thanks

Whilst we—my wife and I—were more closely examining our Christmas gifts by the light, turning them in every direction, and finding them all remarkable, there suddenly was heard a thundering noise at the door. Great sensation! especially among the younger part of the company. Immediately afterwards the door opened, and there entered a beast which might have put to flight all the wild beasts of Africa, but which saluted with great goodwill the small community in the room This was the Christmas-goat, with great horns, with wild shaggy eyebrows, and many characteristics of the monster behind him came a young servant-

maid with a baking trough full of Christmas-boxes. And immediately was the room bombarded with these. They rolled about, and flew here and there, and after them the four children, amid a tumult of delight. A terrible tumult was this. The long legs of my first-born occasioned a dreadful convulsion among chairs and tables, and, as I feared, even upon his own masterpiece of capentry. Amid the universal tumult, I happened to see my wife wrap something up in her shawl it seemed to me to be the ruins of the colossal footstool, and I fancied that three legs were missing!

Every seven or ten minutes the Christmas-goat made a volcanic movement, upon which a many little packets were flung up into the air. At one time a half-anker, and then a half-cask, was rolled in; and all these had to be brought to the light, and there, in presence of all, their inscriptions read, which contained many odd and significant puns, *jeux d'esprits*, which were duly interpreted In various of the verses I perceived the young genius of the student, and in many of the jokes the merry humour of the Mina Two hours were spent amid frolics of this kind, and the peals of laughter which they excited. At the end of that time the young student stood in a new black suit, and, striking his hand upon his breast, declaimed, I know not what sort of tragic-comic oration before Mamsell Mina, a[illegible] almost killing herself with laughter, attempted to answer him in the same spirit. My first-born made *entrechats* on *entrechats* around a library of ten volumes, my eldest daughter danced before her new hat, Willie beat a drum, and little Bertha embraced a cat of pasteboard, and gave it the most loving of pet names That was a confusion, but it was a confusion which did the heart good All the young ones found their wishes gratified, and each and all had therein his sugar-plum to suck at a future time

And now we had to eat, and after that to sleep, which was almost impossible under the circumstances. Many Christmases I remember when I was a boy, but I have become a man, I have experienced the sorrows as well as the joys of life Many a pleasure, many a breeze of spring, many a bright beam of autumn sunshine may still cheer the aged, but the joy of Christmas time, that indescribable, unmixed, innocently intoxicating delight, experiences he never more! Yet still can he enjoy it in the gladness of children Come to Sweden, let us together pledge all good children and happy parents for Christmas this year, and every year until the end of time!

HYMN TO DECEMBER.

BY THE LATE DR MOIR

(The Delta of Blackwood)

O'er the bare hill-top moan the gushy breezes,
Now the dark branches sweeping the sere leaves,
Blue skies have waned, and earth obeys thy sceptic,
Tyrannous December!

All inefficiently glimmers out the pale sun,
'Twere brooding raineloud, o'er the faded landscape,
Comfortless is noontide—desolate is evening,
Stormy and starless.

Drear is the aspect of old rugged ocean,
To his caves of basalt riding on his foam steed,
South comes the polar duck, and the gliding grey gull
Shrieks to its shelter!

Of hail the tremendous magazines thou openest,
Spreadest thy snow-white mantle o'er the bare hills,
Chainest up the floods, and hangest on the red moor
Icicles of crystal!

Hast thou no mercy for the wanderer houseless?
See the lean pauper shivers by the dim hearth;—
How the starved fox-cubs, and the little field birds,
Die of cold and hunger!

Yet joy to earth,—grim, pitiless December,
'Twas 'mid thy storm-clouds that our Lord descended.
Christmas is thine, and man shall rejoice him,
Dark though thy scowl be.

CHRISTMAS IN SCOTLAND.

BY ANDREW HALLIDAY.

It sometimes shakes our faith in the approved accounts of countries beyond seas, when we read the gross misrepresentations of English writers on the Christmas customs of Scotland —a country only a few hours distant from their own. Whether the writers we are speaking of draw their descriptions from personal knowledge, we do not know, but our own acquaintance with Scotland convinces us, that what they have at different times stated has no foundation in fact.

We remember it stated in a popular periodical, one Christmas season not long ago, that Christmas-day was not kept at all in Scotland Such is not the case; the Scots do keep Christmas-day, and in the same kindly Christian spirit that we do, though the Presbyterian austerity of their church does not acknowledge it as a religious festival. Nor is there any spirit of heterodoxy in the intention of the kirk. Christmas-day, with every other species of fast and feast-day, was originally ignored, because Presbyterian zeal desired to be as far removed from the doctrines of Rome as possible. In fact, such was [illegible] aversion to anything savouring of Romanism, even in appearance, that they rejected many harmless and even venerated customs, in order to avoid what they considered the appearance of evil. The spirit of Christmas, or Yule as they call it, remains with them nevertheless. In the country districts, the duty of Christmas-day falls on the month of January. The country people, with a tenacious love for the O. S., or the old style of chronological computation, hold that Yule falls on the 6th of January, our Twelfth-day. The 25th of December, regarded as Christmas-day, is considered new-fangled and worthy of the most supreme contempt, indeed so strong is this partiality for the old style, that any attempt to introduce the new would be resisted as an aggression on their civil liberty.

With the Scots, New Year's-day is the commencement of the festive season. On that day, as in England, the yearly custom of expressing good wishes for the happiness of friends and acquaintances, is religiously observed, and other demonstrations of friendliness and good feeling peculiar to the season are cordially exchanged Feasting, dancing, and other amusements are freely indulged in, and the poor are made glad by the munificence of the rich.

On Yule morning, that is, the 6th of January, the country people rise at twelve or one o'clock,—that is if they have gone to bed—to drink sowens by the light of the lamp. Sowens is a kind of gruel, made from the glutenous particles of oats, boiled and sweetened with sugar or treacle. The rural population enjoy this ceremony amazingly. We remember being present in the large kitchen or hall of a farm-house, on one of these occasions, and we are bound to confess we never saw so much enjoyment over so harmless a beverage. At daylight, the guests, who were principally farming men and mechanics, were treated in common with the female domestics to a "tae breakfast," or tea breakfast, as it is called, in contradistinction to the usual national meal of porridge and milk. The festive scene was after a time broken in upon by the sound of a chorus, lustily bellowed forth by some voices without. All rose up and rushed to the doors with the cry of "The beggars,! the beggars!" And the beggars they proved to be, singing their Yule song. The words of the chorus have been the subject of much disputation among the curious in folk lore, especially the last line, which is repeated as a refrain, viz.—

"And awa' by soothen town"

The song is generally an extemporaneous ditty, setting forth the claims of some "auld wife," whose slender means constitute the plea for the begging expedition. The "beggars," as they are called, are handsome strapping fellows, the sons of respectable farmers, who are not too proud to carry a "meal bag" over the country to assist their poor neighbours When the song is finished, the lasses come in for the salute usual on such occasions, a ceremony in Scotland that does not require to be excused by the mistletoe or any thing else. The "gude wife," or lady of the house, then regales the young fellows with a "dram" of Scotch whiskey, and with her own hands, like the ancient *lef-day* or lady of the Saxons, con-

tributes a quantity of oatmeal to their sacks, for the benefit of the "auld wife" whose case they are pleading. Many poor persons, especially widows and "lone women," depending upon their own exertions, are enabled in this manner to pass the winter in comfort without being chargeable to the parish.

From New Year's-day to Yule, the 6th of January, there is little or no work done in the rural districts of Scotland. The reason of this is not altogether to be ascribed to the holiday claims of the season, but, partly to the weather, which generally about the beginning of January is so severe as entirely to put a stop to all farm operations. These long holidays are principally spent in attending shooting matches, dances, and card parties. With the young people, a favourite amusement of the season is playing for pins with the teetotum on a tenboard.

Those persons who have endeavoured to depreciate the influence of Christmas upon the Scotch people, are entirely wrong when they state that "Christmas is not kept in Scotland" True, the customs and ceremonies are different from those of England. There is no church service for the day, no Christmas chimes from the church bells, no characteristic fare, such as roast beef and plum pudding; the houses are not adorned with holly and mistletoe; the shops in the towns are not shut up,—but there is the *spirit* of Christmas abroad, of which these are but the physical signs. There is good will and fellowship, charity and benevolence, mirth and festivity, as much as in England, where Christmas sits in all the pomp and circumstance of outward state.

CHRISTMAS IN FRANCE.

From a newspaper of 1823, (the name unfortunately not noted at the time, and not immediately a certainable), it appears that Christmas in France is another thing from Christmas in England

"The habits and customs of the Parisians vary much from those of our own metropolis at all times, but at no time more than at this festive season. An Englishman in Paris, who had been for some time without referring to his almanac, would not know Christmas-day from another by the appearance of the capital. It is, indeed, set down as a 'jour de fete' in the calendar, but all the ordinary business of life is transacted, the streets are, as usual, crowded with waggons and coaches, the shops, with few exceptions, are open, although on other *fête* days the order for closing them is rigorously enforced, and if not attended to, a fine levied, and at the churches nothing extraordinary is going forward. All this is surprising in a Catholic country, which professes to pay such attention to the outward rites of religion.

"On Christmas-eve, indeed, there is some bustle for a midnight mass, to which immense numbers flock, as the priests, on this occasion, get up a showy spectacle which rivals the theatres The altars are dressed with flowers, and the churches decorated profusely: but there is little in all this to please men who have been accustomed to the John Bull mode of spending the evening The good English habit of meeting together to forgive offences and injuries, and to cement reconciliations, is here unknown. The French listen to the church music, and to the singing of their choirs, which is generally excellent, but they know nothing of the origin of the day and of the duties which it imposes The English residents in Paris, however, do not forget our mode of celebrating this day. Acts of charity from the rich to the needy, religious attendance at church, and a full observance of hospitable rites are there witnessed. Paris furnishes all the requisites for a good pudding, and the turkeys are excellent, though the beef is not to be displayed as prize production.

"On *Christmas-day* all the English cooks in Paris are in full business The queen of cooks, however, is Harriet Dunn, of the Boulevard. As Sir Astley Cooper among the cutters of limbs, and d'Egville among the cutters of capers, so is Harriet Dunn among the professors of one of the most necessary, and in its results, most gratifying professions of existence; her services are secured beforehand by special retainers, and happy is the peer who can point to his pudding, and declare that it is of the true "Dunn" composition. Her fame has even extended to the provinces For some time previous to Christmas-day, she forwards puddings in cases to all parts of the country, ready cooked and fit for the table after the necessary warming. All this, of course, is for the benefit of the English. No prejudice can be stronger than that of the French against plum-pudding—a Frenchman will dress like an Englishman, swear like an Englishman, and get drunk like an Englishman, but if you would offend him for ever, compel him to eat plum-pudding. A few of the leading restaurateurs, wishing to appear extraordinary, have *plomb pooding* upon their cartes, but in no instance is it ever ordered by a Frenchmen. Everybody has heard the story of St. Louis—Henri Quatre, or whoever else it might be, who, wishing to regale the English ambassador on Christmas-day with a plum pudding, procured an excellent recipe for making one, which he gave to his cook, with strict injunctions that it should be prepared with due attention to all the particulars. The weight of the ingredients, the size of the copper, the quantity of water, the duration of time, everything was attended to except one trifle—the king forgot the cloth, and the pudding was served up like so much soup, in immense tureens, to the surprise of the ambassador, who was, however, too well bred to express his astonishment. Louis XVIII., either to show his contempt of the prejudices of his countrymen, or to keep up a custom which suits his palate, has always an enormous pudding on Christmas day, the remains of which, when it leaves the table, he requires to be eaten by the servants, *bon gré, mauvais gré*, but in this instance even the commands of sovereignty are disregarded, except by the numerous English in his service, consisting of several valets, grooms, coachmen, &c, besides a great number of ladies' maids, in the service of the duchesses of Angoulême and Berri, who very frequently partake of the dainties of the king's table."

A SONG FOR CHRISTMAS.

JOIN merry hearts in merry voices to keep old custom up,—
To dress the house with holly boughs and drain the lusty cup!
We'll hold the mirth the season claims, with all its jovial skill,
As firmly as the ivy clings around the sprig of holly

O holly! 'tis a sight as rare as summer's gaudy scene,
To see both hall and cottage wear such livery of green,—
To see, in spite of winter's nips, thy little bright red berry,
Reminding us of love-warm lips that bid us all be merry

Bright Vesta, hail! Hence, smirky care, evaporate in fog!
Look on our little summer here, where burns the bright yule log.
Christmas and thee are not of kin—he scorns thee, base sojourner!
There is no place for thee within his cheerful chimney corner

Welcome the midnight minstrels' lay—that simple rustic prayer,
That, like the [illegible] is heard there!—
Welcome the [illegible] whiteness!
Or can spring's sweetest dew bestow the [illegible]

If Molly innocently trips beneath the mistletoe—
And if Ralph pounces on her lips, how can she say him "No?"
To quarrel with so fair a kiss were little short of treason,
And [illegible]

Gay youth with dance and mirthful song scarce feels the minutes fly,
[illegible] lightens every eye.
[illegible]
We'll [illegible]

And old age loves the lively noise—each youthful happy face
Appears to speak of by-gone joys, that memory may trace
They too have had their early prime—*their* eyes have beamed as brightly,
Their voices joined the cheerful chime, *their* feet have tripped as lightly!

Then, pass the song and jest about, the merry feast begin,
He cares not for the cold without whose heart is warm within!
Hail! glorious Christmas, graver cares we in the [illegible]
Let him be dismal now who dare,—our Christmas [illegible]

A M P

THE KING OF CHRISTMAS.—The society belonging to Lincoln's Inn had anciently an officer chosen at this season, who was honoured with the title of King of Christmas-day, because he presided in the hall upon that day. This temporary potentate had a marshal and a steward to attend upon him: the marshal, in the absence of the monarch, was permitted to assume his state, and upon New-Year's-day he sat as king in the hall when the master of the revels, during the time of dinner, supplied the marshal's place. Upon Childermas day they had another officer, denominated the King of the Children:

CHRISTMAS DAY.

(From "Hone's Every-day Book.")

The festival of the nativity was anciently kept by different churches in April, May, and in December. It is now kept on this day by every established church of Christian denomination; and is a holiday all over England, observed by the suspension of all public and private business, and the congregating of friends and relations for "comfort and joy."

Our countryman, Barnaby Googe, from the Latin of Naogeorgus, gives us some lines descriptive of the old festival.—

Then comes the day wherein the Lorde
did bring his birth to passe,
Whereas at midnight up they rise
and every man to Masse.
This time so holy counted is,
that divers earnestly
Do thinke the waters all to wine
are chaunged sodainly,
In that same houre that Christ himselfe
was borne, and came to light,
And unto water streight againe
transformde and altred quight
There are beside that mindfully
the money still do watch,
That first to aultar commes, which then
thy privily do snatch
The priestes, least other should it have,
takes oft the same away,
Whereby they thinke throughout the yeare
to have good lucke in play,
And not to lose: then streight at grene
till day-light do they strive,
To make some present proofe how well
their hallowde peace will thrive
Three Masses every priest doth sing,
upon that solemne day,
With offrings unto every one,
that so the more may play
This done, a woodden child in clowtes
is on the aultar set,
About the which both boy and gyrles
do daunce and tryvally jet,
And Carrols sing in prayse of Christ,
and, for to helpe them heare,
The [illegible]
with [illegible]
The peperetus doe rore aloude,
about the parentes sonde
To see the sport, and with their voyce
do helpe them and their hande

The commemorations in our own times vary from the above in the diversifyings. An accurate observer, with a hand powerful to seize, and a hand skilled in preserving, could [illegible], as a beautiful sketch of Christmas-[illegible] in the "New Monthly Magazine" of December 1, 1825. Foremost in his picture is the most estimable, because the most useful and ornamental character in society,—a good parish priest

"Our pastor was told one day, in [illegible] of Christianity were opposed to [illegible] shall not easily forget his answer. 'I [illegible] society,' said he, 'are the same as the interests of society. It has no other meaning. Christianity is the very enlightenment you speak of. Let any man find out that thing, whatever it is, which is to perform the very greatest good to society, even to its own apparent detriment, and I say *that* is Christianity, and I know not the spirit of its founder. What?' continued he, 'shall we take Christianity for an arithmetical puzzle, or a theorem in terms, or the bitterness of a bad argument, or the evil deeds, real or supposed, of any particular set of men? God forbid. I wish to speak with reverence (this conclusion [illegible] me very much) - I wish to speak with reverence of whatever has taken place in the order of Providence. I wish to think the best of the very evils that have happened; that a good has been got out of them, perhaps that they were even necessary to the good. But when once we have attained better means, and the others are dreaded by the benevolent, and scorned by the wise, then is the time come for throwing open the doors to all kindliness and to all knowledge, and the end of Christianity's attainment in the reign of beneficence.'

"In this spirit our pastor preaches to us always, but most particularly on Christmas-day; when he takes occasion to enlarge on the character and views of the divine person who is supposed then to have been born, and sends us home more than usually rejoicing. On the north side of the church at M. are a great many holly-trees. It is from these that our dining and bed-rooms are furnished with boughs. Families take it by turns to entertain their friends. They meet early; the beef and pudding are noble; the mince-pies—peculiar; the nuts half play-things and half-eatables, the oranges as cold and acid as they ought to be, harmonizing us with a superfluity which we can afford to laugh at; the cakes indestructible, the wassail-bowls generous, old English, huge, demanding ladles, threatening overflow as they come in, solid with roasted apples when set down. Towards bed-time you hear of the elder-wine, and not seldom of punch. At the manor-house it is pretty much the same as elsewhere. Girls, although they be ladies, are kissed under the mistletoe. If any family among us happen to have hit upon an exquisite brewing, they send some of it round about, the squire's house included, and he does the same by the rest.

"Riddles, hot-cockles, forfeits, music, dances sudden and not to be suppressed, prevail among great and small, and from two o'clock in the day to midnight, M. looks like a deserted place out of doors, but is full of life and merriment within. Playing at knights and ladies last year, a jade of a charming creature must needs send me out for a piece of ice to put in her wine. It was evening and a hard frost. I shall never forget the cold, cutting, dreary, dead look of every thing out of doors, with a wind through the wintry trees, and the snow on the ground, contrasted with the sudden return to warmth, light, and joviality.

"I remember we had a discussion that time, as to what was the greatest pest and drawback of Christmas. Many were for mince-pie, some for the beef and plum-pudding; more for the wassail-bowl, a maiden lady timidly said, the mistletoe, but we agreed at last, that although all these were prodigious, and some of them exclusively belonging to the season, the fire was the great indispensable. Upon which, we all turned our faces towards it, and began warming our already scorched hands. A great blazing fire, too big, is the visible heart and soul of Christmas. You may do without beef and plum-pudding, even the absence of mince-pie may be tolerated, there must be a bowl, poetically speaking, but it need not be absolutely wassail. The bowl may give place to the bottle. But a huge, heaped-up, ever heaped-up, all-attracting fire, with a semicircle of faces about it, is not to be denied us. It is the *lar* and genius of the meeting, the proof positive of the season, the representative of all our warm emotions and bright thoughts, the glorious eye of the room, the meeter to mirth, yet the retainer of old, the amalgamater of the age and sex, the universal relish. Tastes may differ even on a mince-pie; but who dislikes a fire? The absence of other luxuries still leaves you in possession of that, but

'Where can he find a fire in his hand
With the king on the frostiest twelfth-cake?'

'Let me have a dinner of some sort, no matter what, and then give me my fire, and my friends, the humblest glass of wine, and a few penn'orths of chesnuts, and I will still make out my Christmas. Why! have we not Burgundy in our blood? Have we not joke, laughter, repartee, bright eyes, comedies of other people, and comedies of our own; songs, memories, hopes? [An organ-grinder struck up in the street at this word, as if to answer me in the affirmative. Right, thou old spirit of harmony wandering about in that ark of tone, and touching the public ear with sweetness and an abstraction! Let the multitude bustle on, but not unarrested by thee and by others, and not unreminded of the happiness of renewing a wise childhood.] As to our old friends the chesnuts, if anybody want an excuse to his dignity for roasting them, let him take the authority of Milton. 'Who now,' says he, lamenting the loss of his friend Deodati,—'who now will help to soothe my cares for me, and make the long night seem short with his conversation; while the roasting pear hisses tenderly on the fire, and the nuts burst away with a noise,—

'And out of doors a washing storm o'erwhelms
Nature pitch-dark, and rides the thundering elms.'"

CHRISTMAS CUSTOMS.

SELECTED FROM HONE, BRAND, AND FOSTER.

COMMON CUSTOMS OBSERVED IN DEVONSHIRE ON CHRISTMAS EVE.—A superstitious notion prevails, in the western parts of Devonshire, that at twelve o'clock at night, on Christmas Eve, the oxen in their stalls are always found on their knees, in an attitude of devotion; and that (which is still more singular), since the alteration of the style, they contrive to do this only on the Eve of old Christmas Day. An honest countryman, living on the edge of St Stephen's Downs, near Launceston, Cornwall, informed me, October 28th, 1790, that he once, with some others, made a trial of the truth of the above, and watching several oxen in their stalls at the above time, at twelve o'clock at night, they observed the two oldest oxen only fall upon their knees, and, as he expressed it in the idiom of the country, make "a cruel moan, like Christian creatures;" I could not but with great difficulty keep my countenance he saw, and seemed angry that I gave so little credit to his tale, and, walking off in a pettish humour, seemed to "marvel at my unbelief." • There is an old print of the Nativity, in which the oxen in the stable, near the Virgin and Child, are represented upon their knees, as in a supplant posture. This graphic representation has probably given rise to the above superstitious notion on this head

CHRISTMAS DAY was observed in the Primitive Church as a Sabbath Day; and was preceded by an eve or vigil—hence our Christmas Eve. On the night before Christmas our ancestors were wont to light up candles of an uncommon size, called Christmas Candles, and lay a log of wood upon the fire, called a Yule Log, or Christmas Block, to illuminate the house, and, as it were, to turn night into day. This custom is, in some measure still kept up in the North of England. And in the South say others. In truth, it is a custom lingering, or *revived*, more or less, in all parts of the country

CHRISTMAS CAROLS.—Bishop Taylor observes, that the 'Gloria in Excelsis," the well-known hymn sung by the angels to the shepherds at our Lord's Nativity, was the earliest Christmas Carol Bourne cites Durand, to prove that in the earlier ages of the churches, the bishops were accustomed, on Christmas Day, to sing Carols among their clergy He seems perfectly right in deriving the word carol from cantare, to sing, and vola, an interjection of joy. This species of pious song is undoubtedly of most ancient date. "On Christmas Day,—says Mr Taylor, in his work on the subject—the Carols took the place of psalms in all the churches, especially at afternoon service, the whole congregation joining, and, at the end, it was usual for the parish clerk to declare, in a loud voice, his wishes for a merry Christmas and a happy new year." This custom would seem to exist in the present day, "just before Christmas Day," says Leigh Hunt, "I was awakened in the dead of the night by the playing of the waits on the conclusion of their solemn tunes, one of the performers exclaimed aloud, "God bless you, my masters and mistresses, a merry Christmas to you, and a happy new year." The Christmas Carol is still an "institution" The wood-cuts round the annual sheets, and the melody of "*God rest you, merry Gentlemen*," delighted my childhood; and I still listen with pleasure to the shivering carolist's even chaunt towards the clean kitchen window, decked with holly, the blazing fire showing the whitened hearth, and reflecting gleams of light from the surfaces of the dresser utensils

CHRISTMAS BOXES.—The customs of annual donations and love gifts on Christmas and New Year's Day is very ancient, being copied by the Christians from the Polytheists of Rome, at the time the public religion was changed. These presents, now-a-days, are more commonly made on the morrow of Christmas. From this circumstance, the festival of St. Stephen has got the nick-name of Christmas-Boxing Days, and, by corruption, Boxing Days. In London, and in many other parts of Europe, large families and establishments keep regular lists of tradesmen's servants, apprentices, and other persons who come about making a sort of annual claim on them for a Christmas Box on this day. This practice, however, is declining; and, in many places, is now confined to children The parish boys and children at schools bring about their samples of writing, and ask for money; and the Bellman, the Watchman, the Waits, and the Church-Band, still repeat their wonted annual calls on the hospitable feeling with which a smoking Christmas board of turkey, plum pudding, and minced-pies, inspires the pious head of an oldfashioned family mansion. We are told in the "Athenian Oracle," vol. 1, p 360. that the Christmas Box money is derived from hence The Romish priests had masses said for almost everything If a ship went out to the Indies, the priests had a box in her, under the protection of some saint, and for masses, as their cant was, to be said for them to that saint &c. the poor people must put something into the priests' box, which was not open till the ship's return The mass, at that time, was called Christ-mass; the box, called Christ-mass box, of money gathered against that time, that masses might be made by the priests to the saints to forgive the people the debaucheries of that time; and from this, servants had the liberty to get box-money, that they, too, might be enabled to pay the priest for his masses, knowing well the truth of the proverb,—"No Money, no Pater Noster."

CURIOUS CUSTOMS IN WARWICKSHIRE.—The following is given by a writer in the "Gentleman's Magazine" for 1795, as a common sport in the houses of the well-to-do in Warwickshire, on the eve of the great Festival:—"As soon as supper is over, a table is set in the hall; on it is placed a brown loaf, with twenty silver threepences stuck on the top of it, a tankard of ale, with pipes and tobacco; and the two oldest servants have chairs behind it, to sit as judges if they please The steward brings the servants, both men and women, by one at a time, covered with a window-sheet, and lay their right hand on the loaf, exposing no other part of the body, the oldest of the two judges guesses at the person, by naming a name, then the younger judge, and lastly, the oldest again If they hit upon the right name, the steward leads the person back again, but if they do not, he takes off the window-sheet, and the person receives a threepence, makes a low obeisance to the judges, but speaks not a word. When the second servant was brought, the younger judge guessed first and third; and thus they did alternately, till all the money was given away Whatever servant had not slept in the house the preceding night, forfeited his right to the money No account is given of the origin of this strange custom, but it has been practised ever since the family settled there. When the money is gone,—the servants have full liberty to dance, sing, and go to bed when they please"

THE MUMMERIES AND MASQUERADES AT CHRISTMAS.—In the middle ages, says Strutt, in his "Sports and Pastime of the People of England," mummings were very common Mumm is said to be derived from the Danish word mumme, or momme in Dutch, and signifies to disguise oneself with a mask hence a mummer, which is properly defined by Dr. Johnson to be a masker, one who performs frolics in a personated dress The following occurs in Milton's "Samson Agonistes," line 1325

Jugglers and dancers, antics, mummers, mimics.

At court, as well as in the mansions of the nobility, on occasions of festivity, it frequently happened that the whole company appeared in borrowed characters and, full licence of speech being granted to every one, the discourses were not always kept within the bounds of decency. These spectacles were exhibited with great splendour in former times, and particularly during the reign of Henry VIII they have ceased, however, of late years to attract the notice of the opulent, and the regular masquerades which succeeded them, are not supported at present with that degree of mirthful spirit which, we are told, abounded at their institution, and probably it is for this reason they are declining so rapidly in public estimation The mummeries practised by the lower classes of the people usually took place at the Christmas holidays, and such persons as could not procure masks rubbed their faces over with soot, or painted them, hence Sebastian Brant, in his "Ship of Fools," alluding to this custom, says —

The one hath a visor ugly set on his face,
Another hath on a vile countenance vesture,
Or painteth his visage with fume in such case,
That what he is, himself is scantily sure.

It appears that many abuses were committed under the sanction of these disguisements, and for this reason an ordinance was established, by which a man was liable to punishment who appeared in the streets of London with "a painted visage." In the third year of the reign of Henry VIII., it was ordained that no persons should appear abroad like mummers, covering their faces with vizors, and in disguised apparel, under pain of imprisonment for three months The same act enforced the penalty of 20s. against such as kept vizors in their houses for the purpose of mumming. Bourne, in his "Vulgar Antiquities," speaks of a kind of mumming practised in the north about Christmas time, which consisted in "changing of clothes between the men and the women, who, when dressed in each other's habits, go," says he, "from one neighbour's house to another, and partake of their Christmas cheer, and make merry with them in disguise, by dancing and singing and such like merriments."

PAINTED AND STAINED GLASS.

SHAKSPEARE AT THE COURT OF QUEEN ELIZABETH; A WINDOW IN STAINED AND ENAMELLED GLASS, AS SHOWN AT THE GREAT EXHIBITION OF 1851, BY MR. E. BAILLIE, OF WARDOUR STREET.

PAINTED AND STAINED GLASS.

Among the earliest of our recollections—and, perhaps, also in the youthful memories of most of us—there is a picture of a quaint old village church, with a great painted window over the communion table. Something like this is, or was at least with the writer, our very first acquaintance with the beautiful art of painting on glass. And, in spite of the knowledge acquired by contact with the every-day world—in spite of the angles in our minds which we have rubbed smooth by abrasion with other minds—in spite of the cold, hard, money-getting feelings which *will* come uppermost at times—we still associate stained glass windows with the decent ordinances of religion in the houses of God in the world.

But as our purpose now is with the manufacture of stained and painted glass rather than with the associations connected with particular specimens of it, we refrain from following out the train of ideas to which we have referred.

In the Great Exhibition of all Nations in 1851, was to be seen the original of the engraving we have chosen for illustrating our remarks. In the production of stained glass—the most elaborate no less than the most simple specimens—the means employed are so nearly identical, that one description will serve for all. When certain metallic oxides (rusts) and chlorides (salts) ground up with proper fluxes, are applied to, or rather painted upon, glass, the colours fuse at a moderate heat, and painted or stained glass is the result. By the last term, however, is not meant simple painting with transparent oil colours upon white glass, but the productions of designs *in a material which combines with the glass on the application of heat*. The colours of stained glass are, or should be, all transparent, because they are to be viewed by transmitted light,—that is, light from *outside* of the building; but occasionally, as in the cases of the great Dante window at the Exhibition, and the Shakespeare window shown in the engraving, certain parts are either quite opaque or only so far transparent as to give greater prominence to the lighter portions of the design. Great care must be taken with the colours employed, as many metallic pigments which afford a fine effect on paper are so changed by vitreous fusion as to present a totally different appearance when burnt, while others are altogether unfitted for application to stained glass.

The glass proper for receiving these vitrifying pigments, says Dr. Ure, should be colourless, uniform, and difficult of fusion, for which reason crown glass, made with little alkali, or with kelp, is preferred. When the design is too large to be contained on a single pane, several are fitted together, and fixed in a bed of soft cement while painting, and then taken asunder to be separately subjected to the fire. In arranging the glass pieces, care must be taking to distribute the joinings so that the lead frame-work may interfere as little as possible with the effect.

A design must be drawn upon paper, and placed beneath the plate of glass, though the artist cannot regulate his tints directly by his pallet, but by specimens of the colours produceable from his pallet pigments after they are fired. The upper side of the glass being sponged over with gum-water, dilute, when dry, a surface proper for receiving the colours, without the risk of their running irregularly, as they would be apt to do on the slippery glass. The artist first draws on the plate, with a fine pencil, all the traces which mark the great outlines and shades of the figures. This is usually done in black, or, at least, some strong colour, such as brown, blue, green, or red. In laying on these, the painter is guided by the same principles as the engraver when he produces the effect of light and shade by dots, lines, or hatches, and he employs that colour to produce the shades which will harmonise best with the colour which is to be afterwards applied; but for the deeper shades black is in general used. When this is finished, the whole picture will be represented in lines or hatches similar to an engraving finished up to the highest effect possible, and afterwards, when it is dry, the vitrifying colours are laid on by means of larger hair-pencils; their selection being regulated by the burnt specimen tints. When he finds it necessary to lay two colours adjoining, which are apt to run together in the kiln, he must apply one of them to the back of the glass. But the few principal colours are all fast colours, which do not run, except the yellow, which must therefore be laid on the opposite side. After colouring, the artist proceeds to bring out the lighter effects by taking off the colour in the proper place with a goose-quill cut like a pen without a slit. By working this upon the glass he removes the colour from the parts where the lights should be the strongest: such as the hair, eyes, the reflection of bright surfaces, and light parts of draperies. The blank pen may be employed either to make the lights by lines, or hatches and dots, as is most suitable to the subject.

By the metallic preparations now laid upon it, the glass is made ready for being fired, in order to fix and bring out the proper colours. The furnace or kiln best adapted for this purpose is similar to that used by enamellers. It consists of a muffle or arch of fire-clay or pottery, so set over a fire-place, and so surrounded by flues, as to receive a very considerable heat within, in the most equable and regular manner; otherwise some parts of the glass will be melted, while on others a superficial film of colours will remain unvitrified. The mouth of the muffle, and the entry for introducing fuel to the fire, should be on opposite sides, to prevent as much as possible the admission of dust into the muffle, whose mouth should be closed with double folding-doors of iron, furnished with small peep-holes, to allow the artist to watch the progress of the staining, and to withdraw small trial slips of glass, painted with the principal tints used in the picture.

The muffle must be made of very refractory fire-clay, flat at its bottom, and only five or six inches high, with such an arched top as may make the roof strong, and so close on all sides as to exclude entirely the smoke and flame. On the bottom of the muffle a smooth bed of sifted lime, freed from water, about half an inch thick, must be prepared for receiving the pane of glass. Sometimes several plates of glass are laid over each other with a layer of dry pulverulent lime between each. The fire is now lighted, and most gradually raised, lest the glass should be broken; and after it has attained to its full heat, it must be kept up for three or four hours, more or less, according to the indications of the trial slips, the yellow colour being principally watched, as it is found to be the best criterion of the state of the others. When the colours are properly burnt in, the fire is suffered to die away, so as to anneal the glass.

Here, then, we have the whole art, the antiquity of which is proved by many evidences, besides those of the material itself, for Pliny, nearly two thousand years ago, speaks of "coloured glasses made to imitate precious stones and gems," and we have undoubted authority for believing that the art was not altogether unknown to the ancients. Among the ruins of Pompeii have been discovered several pieces of vitrified material like coloured glass, and many specimens of painted windows exist in cathedrals and churches of the eleventh and twelfth centuries.

The earliest example of stained glass which we have in this country is to be seen in the cathedral of Canterbury. It is curious to trace the improvements made by successive artists, from simple angular forms we come to rude outlines of saints and martyrs, these are succeeded by regular subjects from Scripture history—that inexhaustible source of inspiration, and these, again, give way to the single figures and mosaic emblazonments of the Flemish and French artists; till, at last, as was seen in the Crystal Palace, all styles of ornamentation are attempted—and that, too, with no small degree of success—in a material the components of which are flint, sea-sand, and the rust of metals!

"There is a prejudice too readily entertained," says M. Flachat, "that the secret of painting upon glass has been lost for many ages; therefore we admire the painted windows of our churches, not so much for the beauty and harmony of their colouring, as for the supposed secret of the art which is enveloped in so much mystery. This is an error; the art of painting upon glass, it is true, was not practised in France after the seventeenth century, but it was known and practised in Germany, and especially in England, some time after that period. Some years ago, Sèvres exhibited, at one of the Royal Exhibitions, some painted glass, which elicited general admiration; in many respects it was superior to the ancient productions, and certainly inferior to them in no one point. An English artist, Mr. Edward Thom, who had been invited to France by M. de Noe, gave a new impulse to this branch of

art, and materially established it amongst us. The first experiment of painting on glass by Mr. Thom was made upon the windows of the church of Saint Elizabeth; since that period he has been attached to the establishment at Choisy-le-Roi, and has given great extension to the art."

The Shakspeare window, like many other specimens shown in the Exhibition, owes much of its beauty to enamel. Enamelling requires a great number of colours, and differs essentially from the former process described. Orange, red, blue, rose colour, &c., are used to produce the life-like effects of a portrait; these colours being vitrified until they become a portion of the glass on which they are laid, some of them requiring to be burnt four or five times before the painting is complete. The Italians have carried this art a step further, by occasionally substituting portions of opaque instead of translucent glass; and the effect attained is equal, if not superior, to an oil painting. It has been objected to this picture, that "the light is made to appear as it thrown upon the glass from within, instead of being transmitted through it from without—the back-ground being, in fact, quite opaque and luminous at all, but a reflecting surface. We [illegible] it not unreasonable to devote so much labour and cost on a material so fragile, and, when broken, so irreplaceable? *Stained* glass, composed of numerous pieces, may be [illegible] broken, and easily mended; not so this ambitious enamelling on large areas of this brittle substance." Without questioning the first part of the objection—except to remark that the picture is a treat to gaze upon in any light—we may question the correctness of the writer in regard to the [illegible] being usually placed in positions [illegible]

Mr. Baillie, has, with the single exception of Thom, produced the best specimen of enamelled glass in the Exhibition. Compared with surrounding productions, the "Shakspeare and Queen Elizabeth" stands like a brilliant amongst diamonds, it is so far beyond them in depth and richness of colouring.

Our immortal dramatist—and here we quote our own words in the ILLUSTRATED EXHIBITOR for October, 1851—[illegible] to be reading one of his works to Queen Elizabeth, who is seated in a chair of state, attended by certain ladies of her court, dressed in the costume of the age. Besides Shakspeare, there is Sir W. Raleigh and the Earl of Southampton, "fit audience and few" for such an occasion. The grouping of the figures is exceedingly well managed. The queen is attired in a [illegible] vest, with crimson stomacher, studded with pearls, and she wears her usual head-dress. Sir W. Raleigh and Shakspeare wear the slashed doublet and hose of the day, and the latter has also a small cloak of crimson velvet. Considerable effect is given to the draperies of the most prominent figures, every fold being painted with obvious accuracy, but the great beauty in this part of the painting is, that the different materials are represented so faithfully, the velvet and satin textures appearing as though you could distinguish them by touch. The general effect is, indeed, irresistible, and of itself is sufficient to characterise the art as one of the utmost utility of application. Every part of the picture is distinguished more or less for the purity of the colouring, and great judgment has been exercised in making it harmonise with the general distribution of light and shade. Some of the colours are put in at once with glass of the required colour; but where a variety or combination occurs, these have been painted on the glass first, and then burnt in. The pattern of the drapery is managed by the use of fluoric acid, which etches away the coloured surface, leaving it either bluish for the reception of another colour, or else a lighter tint of the original. By painting partly in front and partly at the back of the glass, the shadows can be represented with the greatest reality and precision. The transmission of the light, and the effect of the thickness of the glass, contributes much to modulate the intensity of the colouring. This is, doubtless, the cause of the wonderfully correct imitations of the satin and the velvet, both of which appear to great effect. Two medals, according to a notice attached to the painting, were given to his artist by the Society of Arts for enamelling on glass, one as early as 1833, the other in 1837. We repeat, with all respectful deference to pseudo-judges in these matters, that the "Shakspeare reading to Queen Elizabeth" is the most effective production by far in the English collection, and will bear in many respects a severe comparison with that of Signor Bertini, which must be acknowledged as a work of original conception and of masterly execution.

Of the other specimens of English stained glass in the Crystal Palace, it will be sufficient to say that they were good in design, and that they were executed with much care and an evident desire to excel. Foreigners are, we have been told, before us in the art; but of the truth of such an assertion we beg most respectfully to put in a doubt.

JAMES LOGAN, OF PENNSYLVANIA,

ONE OF THE FOUNDERS OF THE STATE OF PENNSYLVANIA.

JAMES LOGAN was descended from the Scottish family of Logan of Restalrig, known in history for little else save its connexion with the celebrated Gowrie conspiracy. Driven from Scotland by the legal proceedings consequent upon the singular discovery of their father's letters to Gowrie in 1608, the two sons of the last Logan of Restalrig migrated to Ireland, and established themselves at Lisnegarvey. Robert, the younger son, subsequently returned to Scotland, where he married, and had a son Patrick, who removed to Ireland, taking with him a well-connected Scottish bride, and an affection for the religious opinions of George Fox. Out of a considerable family, only two children of Patrick Logan grew up to manhood, William, who was a physician at Bristol, and James, the subject of the present biography. The latter was born at Lurgan "in 1671 or 1675." He seems to have had an aptitude for the acquisition of languages, and during a youth passed in various places in the three kingdoms—for his parents removed from Ireland back to Scotland, and thence to England—James Logan picked up considerable knowledge of Hebrew, Greek, Latin, French, Italian, and Spanish.

How or when he became acquainted with William Penn does not appear. Probably it was through Penn's second wife, with whose family Logan was acquainted. However begun, community of religious opinions and some superiority in manners and education to the Quakers in general, riveted the bond of union between the proprietor of Pennsylvania and the young disciple, and induced Penn, in 1699, to propose to James Logan, to relinquish his intention of engaging in trade at Bristol, and accompany him to Pennsylvania in the character of his secretary. They sailed in September, 1699, and after a three months' voyage the proprietor [illegible] reached the shore of the new land of promise, in which [illegible] intention to pass the remainder of his life. After two years Penn found it necessary to return to England, but he left his secretary in [illegible], with the [illegible] that arrangement Penn [illegible] Logan [illegible] else in authority in Pennsylvania looked upon Penn with jealousy, and strove to attain some selfish ends by infringing his acknowledged rights, or by taking advantage of his necessities. Logan alone acted fairly by him, and exhibited in his correspondence and in his conduct a due regard to his patron's interest, and a calm consideration of the practical possibilities of the position in which both of them stood. A more unquiet, litigious, hard-dealing set of men than Penn's colonists can scarcely be conceived. It all is true that is told of them, they certainly used Penn himself very ill, and oppressed every one who was inclined to treat him with more justice or liberality than themselves. Logan did not escape. In 1710 he was obliged to visit England in order to vindicate his conduct before the home authorities. He did so fully, and then returned to pursue his duties and his fortune in the new world. During the six years of paralytic helplessness which preceded the death of William Penn, a correspondence passed between Penn's wife and Logan, in which we have on the one side interesting but melancholy glimpses of the condition of the great Quaker philanthropist, and on the other valuable information respecting the growing colony. Penn sent his scapegrace eldest son to Pennsylvania, consigning him to the care of Logan and his other sober friends, but other companions were better suited to his taste, and the silly youth brought discredit upon his father and himself. In vain Logan addressed to him letters of sensible but cold advice—too wise by half to have had any weight with a youth so far gone in dissipation. Sage, sentimental aphorisms fall dead upon a wanderer whose own heart and conscience can supply him with

better teaching than any mere moral lessons, if he can but be persuaded to listen to its still small voice.

Logan had ere this time married, and settled himself in Pennsylvania. He prudently continued to devote his attention to commerce, as well as to the public affairs of the colony, and attained to eminent wealth as well as to the highest station. As his years and infirmities increased he partially withdrew from public affairs, and in a residence in the suburbs of Philadelphia devoted his declining years to literature and science. The last office he continued to hold was that of "Chief Justice of the Province of Pennsylvania," at a salary of 100*l.* per annum. In 1736 he speaks of having already been obliged for five years past to mount the bench on crutches. He desired to retire, but the government could not find a satisfactory successor to his office. During his period of retirement Logan corresponded with his friends in Europe upon metaphysical subjects, and made communications on natural phenomena to the Royal Society, in letters addressed to Sir Hans Sloane, Peter Collinson, and others. He also employed himself in collecting a library—then not an easy task in that part of the world—and having built a room for its preservation, and endowed it with £35 per annum for a librarian, he left the whole to the city of Philadelphia. The Loganian library still exists, but in combination with two other public libraries. The founder is also perpetuated in one of the public squares of Philadelphia, which bears his name. He died on 31st October, 1751.

Among the founders of Pennsylvania, Logan ought to be had in honorable remembrance. Firm in his friendship to William Penn, and in his adherence to his personal religious opinions, a zealous and useful citizen, honorable and upright in every relation of life, he has also the still further credit of having been the first to tincture the rising colony with literature and all those amenities which learning brings in its train.—*From the Gentleman's Magazine*

OLD BOOKS.

A LECTURE DELIVERED BY GEORGE DAWSON, AT THE BRIGHTON ATHENÆUM.

It has been thought by not a few scholars that there is danger in reading too much. If reading were made a duty, and not a means of acquiring some wisdom, then there is, indeed, some such danger. A man may thus run the risk of emasculation; his reading will take out all his manhood, and fill him with the elements of a weak and washy disposition. There may be some cause to fear this, too, if a man read new books only; but besides that, there is another course of reading—the reading of old books; and to that description of reading my remarks will be strictly and rigidly confined. It must not be looked upon as a depreciation of all new books if I say all I can in favour of the study to which I am now calling your attention. I purpose to speak of the matter rather than of the antiquity of a book itself. I love old books, good old books, and from my admiration of them I may be thought a bibliomaniac—one of those who love a book because it is old; and in truth I look upon old books as I do upon old China—I admire them and long to save them from decay and neglect. There are some old books which we like to read in the old editions, such as the "Pilgrim's Progress," printed on yellow paper, with curious old cuts, and done up in a thick clumsy binding. The pilgrim in the modern editions is too much like a dainty, paltry, lemonised gentleman. I would much rather read an old edition of "Ye Fairie Queene" than a modern one. I detest family Shakspeares and modern expurgated editions generally. I enjoy an old edition, over which, perchance, the author himself has presided. Old books enjoy many advantages over their more modern compeers. We look upon an old book with a feeling which we cannot bestow upon a new one. It will not do to talk to a man of being rebuked by another man living in the same parish as himself. If any one thinks of being a curate, let him not be the curate of his native parish; for if he does men will think little of his most prophetic discourses, and his instructions be of no avail. They think of something they have seen him do when he was a child; and if he were Boanerges himself it would not cause them to forget that they once gave him a drubbing in the playground. The greatest talents are not exempt from these consequences. People listened to Jesus when he taught in the temple, yet professed not to believe, for they knew his father, mother, and relations; they belonged to the same parish or district, and could not be taught by him. In these old volumes there is a wideness from all the party and personal feelings of the hour. Death has done for them what it has for your child or friend,—removed the mean, vulgar, and petty feeling. They are unspotted by the meanness of the hour, and remain gracious and noble; and from them we consent to learn. Meanness and pettiness always surround the things of the moment, and they are not seen in their true light till they have long passed. In looking at the present time fifty years hence we should say that it was the greatest era in modern history. But its greatness cannot be read in the newspapers. If a man takes one up and finds a grease spot in the middle of the column, or tumbles upon the information that one of his debtors is about to pay 1s. 6d. in the pound, it destroys the illusion utterly. The influence of the present is upon all modern literature. No man thinks anything of modern poetry, but Milton is read by all. This would not have been so if Milton had been living as a roundhead and a republican; no, he would be looked upon as a Grub-street nobody, and his beautiful poems would never be read. But two centuries of death have made all right, and we are now not ashamed to be rebuked by him. Some of the old books are of a strange character, and yet how few of them we could afford to lose! There are the books of the old gossips, for instance. Take "Pepys's Diary," an incredible book, which no man would like to include in the process of his reading; but who could spare it now? Some dignified people would not read it; but I could not spare it. Listen to a sentence from it,—"I went to church, saw a pretty woman in a pew, went about for to take her hand, which she perceiving did prick me with a pin." That a man should make himself an ass at any time in the day is really conceivable, but that a man should come home and write it down is really astonishing. Yet that book gives knowledge of the time in which the man who wrote it lived better than any pompous historical volume whatever. It is fashionable now-a-days to declaim against gossip; and when it is pointed by malice, no punishment is severe enough but an old gossip is invaluable. Who could spare Boswell, and yet who would be Boswell? These gossipy old writers are to us what no recognised historians could be: through the loophole of one of their simple sentences we see more to realise to us and impress on our minds the events of a period, than we could ever get from their more stately contemporaries. Take an example. History describing such an event as Queen Elizabeth going to view the troops at Tilbury would begin: "On that majestic morning when she who presided over the destinies of this country, and who combined some of the greatest parts of manly wisdom with the greatest weaknesses of womanly nature." All twaddle. It gives you no idea by which to realise the woman. But now turn to the pages of an old gossip, and find her sending a message to a refractory bishop to this effect.—"I made you, and by God I'll unmake you if you will not do what I tell you;" or turn to another and learn how she, who could review the troops at Tilbury, had yet such weakness that in her old age she was afraid to look in the glass, and so one day one of her ture women rouged her nose instead of her cheeks, and she moved about among the foreign ambassadors for one day with a rouged nose, all glowing and ruddy, and cheeks yellow as parchment. Take those two bits of gossip, and you never forget the "manly wisdom" or the "weakness of womanly nature" that made up her character. Again, Charles I., when he came to the throne, was very poor, and as his exchequer was empty, he was reduced to many a shift to pay the expenses of the court. The historians tell us this, but the gossips realise it so that we never forget it. They tell us that the court had occasion to go into mourning and the dealers, calculating that there would be an extensive demand for black cloth, ran up the price. Charles and his chamberlain consulted, and at last hit upon an expedient; they could not afford black cloth, so they bought white cloth and had it dyed; "at which," the old books say, "the tradesmen did mightily grumble." It is by these little things the gossips told history; and how well! I would defy anybody after reading that statement in common with his reign to forget that Charles was poor when he came to the throne. Now suppose we wanted to know the state of theology in 1603

Well, history might talk about it; but let us go to an old book, and we find a canon stating "that no minister or ministers without license or direction by the bishop under his hand and seal obtained, shall pretend under any pretence to cast out any devil or devils, under the pain for imposture and cozenage and deprivation of rentals." What a trait of the times! Devils were to be cast out orderly and properly, but not without due license. Again, for another trait. We find John Bunyan, in defending himself against a charge of immorality, saying, "I call everybody to witness, I kiss the ill-favoured of my flock as well as the good-looking." Erasmus spoke of kissing as an admirable custom that cannot be too much commended. From such little passages in old books how much is to be learned of the age in which the writers of them lived!

To get the secrets of the olden times out of the books thereof they must be read with love and faith. Some of them would shock one by their arrant nonsense; but take it with their wisdom. Take, for instance, Lord Bacon's case. Watch him go forth with his bright copper basin under his arm, see him put his basin down, and assure you that the moon shines admirably for the cure of warts. Yet nobody would deny Bacon's claim to wisdom, that was a point of knowledge he had not investigated. Old books for wisdom and new books for knowledge. The young for information and the old for wisdom, for they knew how to lead human life wisely, rightly, and well. Old books contain much marvellous ignorance and strange superstition; but these should be accepted with the wisdom and humanity. And those old writers betray a deep knowledge of humanity, though they had no telegraphs, and were carted about at six instead of sixty miles an hour. Travellers tell us that the man who has not been to the north pole or stood on the top of the pyramids, or walked the wall of China, knows nothing of life. Yet surely Shakspeare was no traveller. From Stratford-on-Avon he once made a journey to London, and he once went from London to Stratford-on-Avon, and he might once have gone as far as Dover; yet there is not a passion of the human heart, or a sentiment of which man is capable, or a thought hid in the quaint chambers of his imagery, of which he has not given us the clue and the working. Hobbs only read four books, and would read no more, lest he should become as ignorant as other people! He who ever hated one man thoroughly, or loved a woman deeply, knows all about hatred and love, and if that man were to love or hate fifty people afterwards, he could not love or hate them more intensely.

I love books of the olden times because they disclose to me specimens of real humanity. In our day, a man has so many claims on him, he is acted upon by so many benevolent and other influences, that his character is merged into that of the mass. It was not so with them. They kept what they took up, even their prejudices and weaknesses, and I plead guilty to liking men with weaknesses. I had a friend who so far despised human weakness, that he said, when he was dead, they might, for aught he should care, throw him in the next ditch, or "send him to an anatomical scholar to be cut up for the benefit of the species." Now I, when I am buried, should like to be laid in the old green churchyard among my forefathers, and, if possible, on the sunny side and under the branches of some spreading tree. My friend would prove to me that it was no matter where the body lay, for, like all others, it might come to be a beer barrel bung. Poor fool! The old patriarch said to his son, "Swear not to bury me in Egypt." My friend would call that a weakness, but give me the strength of the patriarch. It is not theory nor philosophy that causes in me the desire to be buried in the churchyard. It is not for the use of the thing. That test of usefulness is a poor standard to judge things by. I believe a bean boiled would eat as well without the spots on it. I believe the sun might set as well without causing a halo and a glory in the west. For the purpose of utility and beauty, one uniform calendar would be better. For practical ends the human body might be confined to its precise anatomy and have nothing of the roundness and the plumpness of the flesh. Our fathers had their weaknesses, and believed in something beyond utility. They believed also in witches, wizards, devils, sprites, and the like; and to me there is refreshment in reading of those matters. Those things may seem very silly now, but I rather like to catch a man who could tell a ghost story at Christmas. I like to get hold of a man who is not too enlightened. What a charm to get away from bright fire-irons and the fender upon which you do not dare put your feet, to an old farmhouse in the country where there is a spacious chimney corner, from which you may occasionally see the smoke issuing from the top and blot out the stars, and where there are provisions for a six months' siege. It is with a feeling like this I get away from the prunness and knowingness of modern writers. It is like quitting a party of "wall-flowers," and playing hunt the slipper with Dr. Primrose at the old vicarage of Wakefield. For I still believe in the propriety of such amusements. I have little sympathy with "serious" people. People are in danger of growing too religious now-a-days. We live in very serious times,—such times that one begins almost to regard as profane the preachings of the olden time, the days when Latimer, and Fuller, and South were in their pulpits. Still it is refreshing to turn to the old books in which their teachings are perpetuated, for those men possessed a hearty, manful, robust sort of piety, very different from the piety of modern days. If they were here now, I do not know what we should do with some of them; and before people could permit them to enter their churches, they would have to alter their way of estimating the religious character. They would not have a modern Luther among them,—a man who went out with coppers on a Sunday to buy something, in order, as he said, to keep his liberty! If any man said they were to keep a Jewish sabbath, what must be done with the man who drunk beer and sang songs, and sang them till he made the rafters ring? I cannot get through the doors of our churches. I do not see how Martin could be admitted. But I would admit him into my church, and take him as the type of the old piety, of the men, earnest, religious, and withal so humourous. The old divines carried wit and religion together; they jested, and yet they were good praying men.

There is one class of books, perhaps, the most useless of all old books, yet I keep a shelf in my library for them books of alchemy, astrology, witchcraft, and wizardry. You may cry "it's all rubbish." So it is. Yet those very useless books enable a man to understand that than which there is nothing more difficult of comprehension, the spirit of Paganism. It was once a marvel how men could ever have come to worship Jupiter, or believe in the host of Pagan deities. By the aid of these old books we can understand it. Of theology a little child had no conception, but was by nature a Pagan; if it fell on the floor and hurt itself, it would beat the floor because it believed the floor had done it some harm. In the early times men were children. In the middle ages they were little more, and in their beliefs there was a child-like simplicity. If the hinges of a door creaked, it was believed to be a cry of pain from a soul in punishment, for they believed that the souls of the wicked were put into the hinges of doors. And from a knowledge of all this, we can imagine how the children of remoter times came to the creation of their gods, how it was that they considered the thunder to be the frown of a god, the lightning the flash of his eyes, and the sighing of the wind round the oak his sweet voice.

And withal we must not fail to notice the quaint style of the authors of these favourite old books, and which lent them such a rare and irresistible charm. Supposing that a modern writer wanted to say, the founders of the pyramids of Egypt were unknown, it would be done after this style. "The mists of antiquity have so gathered round the heads of those remarkable structures that rise before the eyes of the traveller on the plains of Egypt,—witnesses of the pristine splendour of that country,—that it is impossible to say who were the founders," &c. Fuller wrote upon the same point, and stated it thus: "the pyramids doting with age have forgotten their founders." Well did those old preachers know that a great meaning in a few words was, as Solomon said, like nails driven in a sure place.

Apart from other considerations, there is something grateful in the influence of old books upon a man's mind. Whenever I become ruffled by hot controversy or party feeling, I resort to an old book, and it cools me down. When I go to a meeting and hear men say, "if you do not vote my way, the sun of England will set," and try to make me believe that after them would come the deluge,—I go home to the old books.

They set the matter at [illegible] When I have listened to the [illegible] on all sides, I go home [illegible] the world was threatened was threatened long ago, and the world was safe yet. The second coming should have occurred long ago, and I have been disappointed in the millennium several times in my life. I read old books, and agree with Solomon, that "there is nothing new under the sun." I also learn another important lesson from old books,—that of Catholicity. It is charming to me to see the books of men who lived in different generations laying close together, resting, like their authors, in peace. Loyola and Luther are quiet, Jesuit and Calvinist lay side by side so pleasantly, and the Protestant and Catholic keep company with the old Pagan without a murmur. As with my house, so with my books. I admit those with whom I agree, and those with whom I differ. I do not want a man to say "amen" to all I utter.

THE EDITOR'S TABLE.

BEFORE us are lying several books, which claim notice at our hands as being, some of them, adapted to the present season, and others of them especially well adapted to the readers of the WORKING MAN'S FRIEND at any and all seasons. Among the latter we may mention the

Lives of Eminent Men; or, Biographical Treasury containing Memoirs of the most Celebrated British Characters of the Past and Present Day. By John Tillotson. London: Thomas Hodges.

We have given this rather pompously-worded title in full. Among the personages selected for portraiture—both literary and artistic—are the poets Milton and Shakspeare, Southey and Oliver Goldsmith, Cowper and Burns, Wordsworth, Scott, Bulwer, Hogg, and Tom Moore. Then we have Peel, Canning, Brougham, and Grey, to represent the statesmen, and Nelson and Wellington, the warriors. Sir Humphrey Davy, Sir Joseph Banks, and Sir Isaac Newton constitute the scientific portion of the biographies, while Samuel Johnson, the late Duke of Cambridge, Sir Christopher Wren, Prince Albert, and others, are among what may be called the unclassified portraits. Several steel engravings illustrate this handsomely and cheaply got up volume, though we must say, that, for our own part, we greatly prefer the pen and ink drawings of the writer to the more elaborate work of the artist. Mr. Tillotson's style is correct, graceful, and not too much overloaded with quotations. His views of individual character, though they differ occasionally from those more generally received, are, on the whole, formed with liberality and kindly feeling. Speaking of Wellington, he says,—"We know but one man with whom he may be justly compared, namely, his great friend and illustrious co-operator, Sir Robert Peel. Both chiefs of the privileged class, they struck mortal blows at privilege, both taking their ground upon resistance, they [illegible] themselves at the head of the party of progress. Three great changes have taken place within the last thirty years—Catholic Emancipation, Parliamentary Reform, and Free Trade. Of these, Peel and Wellington personally accomplished the first two and accepted the last." Our readers will recollect in what way the writer of the memoir of Wellington in the WORKING MAN'S FRIEND differed from this estimate of the great soldier. Apart, however, from such matters of personal opinion, this volume of biographies is valuable, not so much because they contain many new facts, as that they collect what ever is known of the various men introduced, and tell what there is to tell in a pleasing, familiar, and very attractive manner. The "Lives of Eminent Men" is just the sort of book to give to a clever boy as a New Year's present.

Our next volume relates to,

The Adventures of Barnaby Lee, or, the Struggles of a Son and Heir. By Edward Thompson. London: J. Allen

THIS is a book in the Pickwick style, and only so far inferior to its great prototype as that it is of *later publication*. And this of course will explain much, to even unmitiated readers. Notwithstanding and nevertheless, there is much good writing in this tale, the interest in which never seems to flag. It is illustrated with some spirit by an, to us, unknown artist, whose work, by the way, is not improved by being printed on yellow paper. From the nature of the tale we cannot make an extract, but we may say, with perfect good faith, that "Barnaby Lee" is a book worth reading more than once.

A new edition of "Sterne's Sentimental Journey," with illustrations by the late Tony Johannot, has just been published by Willoughby and Co., who, we perceive, have lately brought out another edition of "Priceless Pearls," an elegantly illustrated volume on the Bath, Baptism, Miracles, Death, and Resurrection of Our Saviour.

We have lying on our table "The Wellington Almanack," with seven engravings, a calendar of all the events of the great warrior's life, a neatly written memoir, and various other attractive features, for a penny! The "Temperance Almanack," and the "Protestant Dissenters' Almanack," are both well illustrated by Gilbert—the former containing a tale by Mrs. Beecher Stowe, the authoress of "Uncle Tom's Cabin." The "Ladies' Drawing-Room Book," an elegant volume for Christmas, beautifully bound and illustrated, has just been published. Besides containing thirty-two pictures, with two pages of explanatory letter-press to each, this volume contains an illustrated explanation of the whole history and mystery of knitting, netting, tatting, crochet, and point-lace. This latter portion of the Drawing-Room Book has been edited by a lady well-known as a teacher of all kinds of needlework. The two volumes of the "Illustrated Exhibitor and Magazine of Art" for 1852, are bound together, and form a handsome table-book. Mr. Cassell has, we find, issued the first part of his highly-valuable work, "The Altar of the Household," it is edited by Dr. Harris, the author of "Anti-Mammon," and is a sufficient guarantee for its excellence. The first volume of the "Popular Educator," now ready, shows us more of the design of this excellent work than could be seen during its progress in detached numbers. We could have wished that there had been rather less of science, so called, and rather more of *popular explanatory writing* in the volume, but, on the whole, we cannot but consider this periodical as one of the great triumphs of the age. The best papers are those of Dr Beard on the English and Latin languages, on Geology by Dr Jenkyn, and on Mathematics by the Editor. The articles on Natural History are by no means so well written as they should be, and if we were in a criticising mood, we might take exception to the papers on Botany, as well as some of the Biographies. But we repeat, that no periodical work has hitherto attempted to teach so many subjects as have been here commenced, or has, as yet, succeeded in attracting so large a share of popular attention. The "Popular Educator" is a work which should form, and it is fitted for, a text-book for every village schoolmaster, every teacher, and every scholar in the kingdom.—Of the "Fables for the Young," published by John Lofts, Strand, the various shilling volumes of Messrs Routledge, Clarke, and Houlston, we must take another opportunity of speaking.

HEROES.

I sing of HEROES—old and young—
Who struggle much and labour hard,
But with head, or hands, or tongue,
And toiling feel their great reward,
Who aim to set the spirit free,—
These are the Heroes, boys, for me!

Not those who boast an ancient name,
And claim their golden stores of wealth,
Whose honour, like a burning flame,
Consumes at once their time and health;
Who seem to have no mind to free,—
They are not Heroes, boys, for me!

But he's the Hero high or low,
Or has he wealth or does he lack it,
Is he or fast or is he slow,
Black be his coat or fustian jacket;
Has he a mind, and is it free?—
That's the Hero, boy, for me.

Or rich or poor, whate'er his station,
In manhood's years, or vigorous youth;
Behold him scattering o'er the nation
The seeds of God's eternal truth:
Just such a man, where'er you see,
Is just the HERO, boys, for me.

Sligo W X.

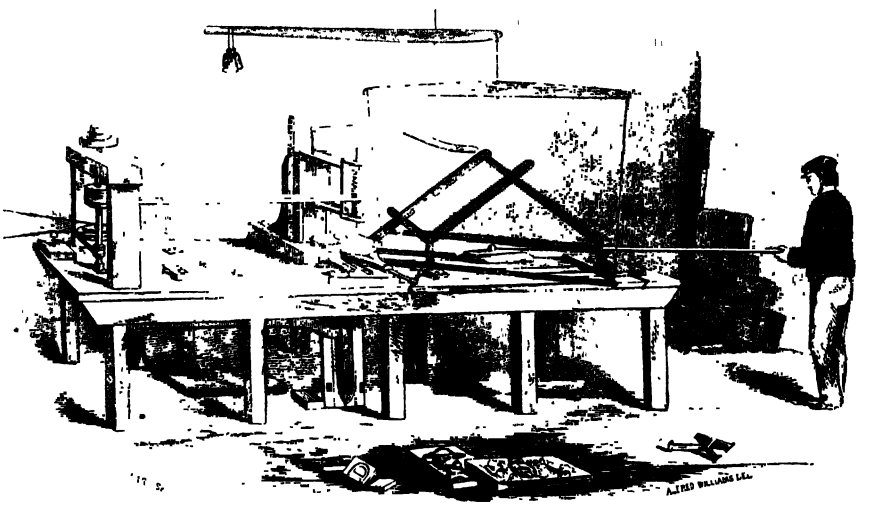
LETTERS TO WORKING MEN

No VI.

THE BALLOT.

The scandals of the recent elections in regard to bribery and intimidation are bringing out the usual amount of sense and nonsense about the ballot. It would be puzzling to a stranger —it is puzzling to some foreigners—to account for such an amount of sense as is talked on this subject being met by nothing but nonsense. A shopkeeper is threatened or solicited by some electioneering customer, Lady A. or Mrs. B, whose custom he could not well afford to lose. If the ballot were in established use, the shopkeeper need not pledge himself, one way or another, as pledging and promising must have come to an end under the liberty of secret voting. Squire C. threatens an humble tenant, that unless he votes for the aristocratic candidate, his family shall be turned out of their cottage, and there is no other to be had. Such has been, it is to be feared, the compulsion put upon many a rural voter in past and present elections. In future elections, if we have the ballot, the squire will not put it into his tenants' power to say of him with a grim of independence, that it is a pity the squire should show his teeth when he can't bite; and so on, through the whole list of tyrannies under which every electeur makes our hearts throb and our blood boil. "But it is un-English." Then the bribery and intimidation are English, are they? It is English to terrify the timid—to oppress the helpless—to take from him that had little—to trample upon a man already too deep in the dust. It is English to set a man's wife to teaze him to do what he thinks wrong. It is English to make a fond father look with a heavy heart upon his children. Is all this really English? To us it seems more English to put honest citizens beyond the reach of "the proud rich man's contumely,"—to take care that men are equal before the law—to put an end to the cant of calling a man's most galling slavery by the name of his political liberty. It seems to us thoroughly English to set that legal guard about an humble home, which may leave a man and his wife to agree or differ as they chose about his vote, and let him solace himself with his children at the end of his day's work, without the bitter thought that he must swear or act a lie to save their bread. To us it seems plain enough that the loyalty is with those who would secure the humble many from the cruelty of the insolent few, and that the grossest possible disloyalty to the English name and character is that shown by the opponents of the ballot, when, by their loud refusal of protection to voters, they hound on the rich to worry the poor. Of all the nonsense talked on this subject, perhaps the most astonishing to an American observer is the assertion that the ballot is not found to answer in America. This saying is worthy only of old ladies talking politics over the tea-table. There are no landowners in that country who have a rent-roll. There is no aristocratic class. There are no patrons and clients in any department of private life. The shopkeepers wait upon customers rather as a matter of favour than otherwise. The white labourer is worth his weight in gold, as a labourer, and has no occasion to give an account of himself to anybody. The suffrage being universal, is every man's attribute, as much as his power of locomotion, or anything else about him. No man's vote is made any fuss about, any more than a day's journey on his own affairs would be; and no citizen would think of asking how he means to vote, any more than he would inquire what business he went about on his day's journey. Such is the state of things in all purely American parts of the country. In the cities on the sea-board, and wherever British and Irish immigrants abound, something of the English electioneering methods and vices may be introduced; and there may be interference, turbulence, and corruption, during one generation of a particular class. But these are not the people who can give an account of the operation of the ballot on the other side of the Atlantic. In the genuinely American towns and villages the spectacle of polling is simple and quiet enough. Elections to several offices or functions usually take place at once. Lists of the candidates are printed, the Whigs on one slip of paper, the Democrats on another, and any third and fourth list if there be a third and fourth party. The voter usually approves the list of his party. If he does, he deposits it in the box or urn, keeping the other in his pocket, or destroying it, as he pleases. If he wishes any of the names changed, he changes them; or he can, of course, write out a list for himself, or get it written (if he does not wish his handwriting to be known); or he can paste the printed names on a list of his own. The door of the church, or of some other public building, stands open; he steps in at his leisure, and deposits his paper in the box. The probability is, that he may stand and chat on the steps with some acquaintance, and that he will say (if it be not taken for granted) how he has voted, but it is at his own choice. Some ask why, in a country where there are no overbearing, and no subdued classes, the ballot should exist at all. The answer is by another question —would the Americans part with the ballot? They say, one and all, that they would not. It must, therefore, have some use, and implicate some value. The fact is, some men as the secrecy it admits of, and all choose to keep the power of using it. Though a man's subsistence may be independent of his vote, and his dwelling-house, and the fortunes of his children, there are many cases in which social inconvenience and annoyances might be caused by the nature of his vote being known. He may value a man as a man, and love a relation as a relation, and esteem a neighbour as a neighbour, and a citizen of his locality, without thinking any one of them exactly fit for Congress, or for office in the General or State Government. There is no need to specify the many cases in which a citizen may have a good reason for voting this way or that, at his own discretion, without being a hypocrite for keeping his own counsel. Any of us who may feel that we should wish a personal friend to vote against us if he did not think us the best representative that he could find, may feel that some little exertion of magnanimity might be required to keep us on the same terms of friendship as before. If not, we shall be aware that with others it might be so, and that in small country settlements, or amidst the vivid intercourse of a stirring town, it is a very good thing to have the feeling perfectly established, that no man has any business with any other man's vote, and that it is an impertinence to inquire into it. Such is the established feeling in the United States; and in establishing it the ballot has "answered." All who really care for popular liberty in England should work without resting, till we have ascertained whether it would not "answer" equally well with us, for our need of it is greater than ever was known in America, or perhaps anywhere else.

From a period of immemorial antiquity, it had been the practice of English Governments to contract debts. What the Revolution introduced was the practice of honestly paying them.—*Macaulay.*



Goodness I call the habit, and goodness of nature the inclination. This, of all virtues and dignities of the mind, is the greatest, being the character of the Deity, and without it, man is a busy, mischievous, wretched thing, no better than a kind of vermin.—*Bacon.*

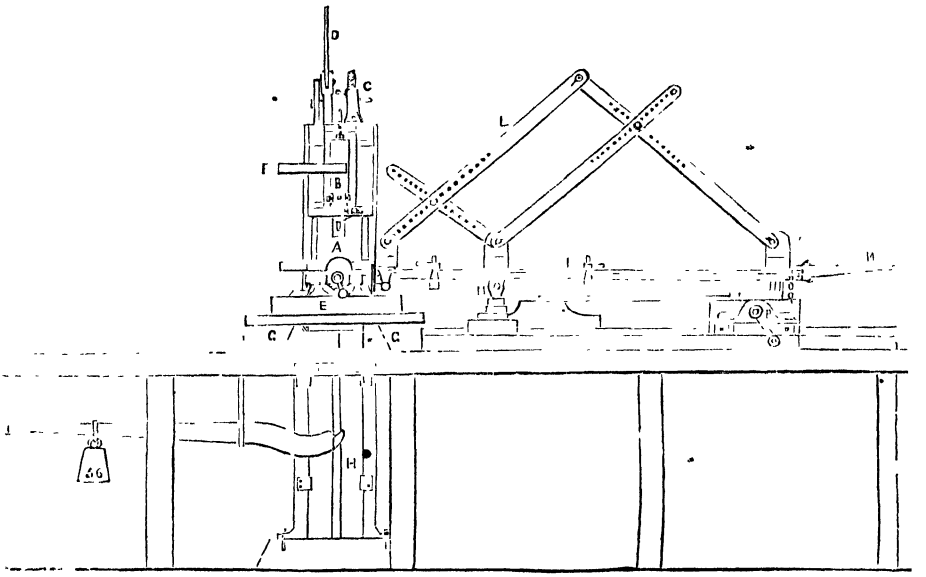
THE PANTAGRAPHIC CUTTING, CARVING, AND ENGRAVING MACHINE.

It is now generally understood and believed that every addition to the arts and sciences, every new discovery, improvement, and invention, has but one end—the promotion of the comfort and happiness of mankind. And thus it is that the public have at last come to consider machinery an aid rather than an evil, thus it is that mechanics and artisans—the last persons to acknowledge the utility of any plan which either does, or is supposed to, interfere with their just rights and privileges—have been brought to look upon the steam-engine as a valuable co-worker, instead of, as heretofore, a sort of mechanical thief. Indeed, the larger the number of useful machines invented, the greater seems the need of skilled workmen—for machinery, after all, does only the work of the labourer.

We have been led to make these remarks in consequence of a conversation we had with a friend on the subject of the machine we are now about to describe. The Pantagraphic Carving and Engraving Machine is a new invention of immense importance and capabilities, and by means of it nearly all kinds of cutting, carving, and engraving on marble, wood, stone, ivory, and other on paper; and indeed, if the workman were an artist—as a workman properly educated should be—a design might be transferred at once to the wood, &c., by the aid of the cutting instrument, without the employment of a separate drawing at all. To explain: this machine consists of a slide rest, or floating bed, to which is united a pair of pantagraphs, a tracer passes over every part of the pattern, and the cutting-tool makes on the material employed *fac-simile* indentations with the most perfect accuracy; and in such a manner, too, that all parts of the design to be copied are submitted to the action of the cutting tool. The office of the pantagraphs is to reduce the copy to any size required. To repeat, the lines of the design are determined by the patterns or originals submitted to the action of the tracer, and the tool being fixed, no deviation from the pattern can take place, provided it be accurately traced by the workman. The tracer being considered as one arm of the machine, and the cutter as the other, the operation is purely mechanical.

Thus all kinds of carvings for ecclesiastical, commercial, and other purposes may be produced at this machine. In the first

PERSPECTIVE VIEW OF THE PANTAGRAPHIC CARVING AND ENGRAVING MACHINE.



materials may be accomplished. Now it would appear at first sight that an instrument of this description would supersede skilled manual labour in the production of the various objects submitted to it, but that it cannot altogether take the place of the workman is evident from the fact that its powers are confined to copying; and that for every separate design there must be an artistic original. It imitates the work of man's hands in a most marvellous manner, but it cannot conceive or originate.

This assertion, however, requires some qualification—as, indeed, what assertion does not? Thus, when we say that an artistic original is required, we state nothing more than the truth; but we must also say that a *highly-finished* design is not absolutely requisite, so long as grace of outline and correctness of drawing is preserved—a groove being only required for the tracer to pass through in the pattern, and the moulding being given to the various parts of the perfect copy by the tool employed. And again, to such perfection has the machine already attained, that copies in metal or wood may be made of drawings or engravings engraving we have a perspective view of the instrument, in which both the horizontal and vertical pantagraphs are shown; but a better idea of it will be formed by an examination of the working drawing on the other page. For this engraving and its mechanical description, we are indebted to a gentleman well known in the scientific and literary world. A, is the cutter, beneath which is placed the object to be acted on. B, is a revolving spindle with socket, into which the cutter or tool is fixed. C, is a screw with nuts for lowering or raising the cutter in accordance with the pattern required. The lever D presses the tool down upon the substance to be engraved, which is fixed upon the bed, or frame E. A band marked F, communicates with the moving power, which may be of any description accessible. The machine with one cutter is not a heavy drive for a man of ordinary strength, but although manual power may be used, yet in practice steam power will be proferred. Two blocks, marked G G, are placed beneath the frame, when the engraving required can be produced by a horizontal operation of the tool, as in cutting plain letters in stone, and removed when a vertical motion is

necessary, for example, in cutting floral ornaments or figures. The letter H denotes a moveable slide used in vertical work, when the lever and weight, marked I, come into operation, the weight balancing that of the material employed, and being varied with its magnitude.

The two pantagraphs, marked L L, are in different positions. The vertical is described in the drawing, but the horizontal, wrought on the same principle, gives only what may be termed a side view. This double pantagraph is connected with the bed by a small joint, which will be readily observed attached to E in the engraving. The pantagraphs are moved by the handle N on the fulcrum or pivot M, and this handle N also moves the tracer O, which operates in the pattern fastened in the grip P.

The moving power gives the cutter many thousand revolution per minute, and after the cutter A has passed through an ordinary operation, it is found perfectly cool, so that in reality, one tool may make almost an indefinite number of cuttings The absolute motion being thus obtained, its direction is given by the operator from the handle N, through the pantagraph in strict accordance with his pattern, with the aid of the tracer O. The horizontal pantagraph gives an even pattern, and the vertical enables the workman to copy a floral or other pattern, such as a medallion of varied depths. The pantagraphs allow him to copy the pattern on various scales of size, adhering always to the precise proportions in the original.

WORKING DRAWING OF THE PANTAGRAPHIC CUTTING, CARVING, AND ENGRAVING MACHINE.

In the machine, as shown in the engraving, only one cutting instrument is employed, but we understand that several cutters may be employed at the same moment without interfering one with the other; so that with a single object of imitation, a dozen or more articles may be produced at one operation. The patent merits of this machine do not consist in the use of the pantagraphs for reducing the size of the copy—for this principle is well-known, and has long been in use for the purpose of taking profile likenesses—one leg of the pantagraph passing over the features, and the other recording the likeness on paper, nor does it rest with the union of the two pantagraphs in different directions, as might at first sight be supposed; nor with the moving power, the cutters, or the sliding rest,—but with the combination and adaptation of the whole of these peculiarities in one instrument. Though made up of several previously known principles, the Pantagraphic Carving Machine must be considered as perfectly original. Indeed, the very fact of taking old principles, and uniting them so that new effects may be produced from their combination, is the very essence of originality. The most remarkable fact, too, connected with this machine is its extreme simplicity, and so entirely free is it from complication, that one wonders when examining it, that such a machine should have remained so long unInvented. At first it was supposed that this instrument would be useful only for cutting wooden type letters and the wood letters used for shop fronts, and for the production of such objects, together with *the cutting and carving of all irregular figures*, has a patent been taken out, and a company formed. The insertion of the words we have italicised in the specification has not only made the patent one of the most secure in existence, but has also enabled the projectors, Messrs. Searby and Turner, to bring out the full capabilities of their very ingenious machine. By it they are enabled to produce all kinds of carved and engraved work in stone, metal, wood, or ivory. Every day brings its proof of some new adaptation of its principle, or some fresh evidence of its capabilities. From being intended merely to cut wood letters, it has been found capable of producing the most minute description of engravings on polished metals, gems, and other adjuncts of ornamental art. For the purposes of trade, this machine will multiply with extreme rapidity all kinds of architectural carvings in wood and stone, open tracery, such as is used for pianofortes, in the hard woods of America and India; blocks for the paper-stainer, and engraved cylinders for the calico-printer, picture frames, furniture mouldings, and many similar articles of extensive use.

In the production of one article alone, it seems that this machine is a sort of fortune to its proprietors. Of course everybody knows what a saw-handle is, and that a number of tools—key-hole saws, and chisels, and rasps, and files, and planes—must be used by the workman who makes one, but with this machine a pair of saw-handles can be turned out complete by a single

operation, in as little time as we have taken to write down the fact. And then as for the letters for shop fronts, we may simply state that they may be cut in stone or other substances at the rate of 5,000 a week.

But the capabilities of the machine have been yet further tested, and statuettes, busts in marble, and basso-relievos in ivory and metal have been produced which rival their originals in accuracy of detail and beauty of finish. Indeed, it is scarcely possible to put any limit to the productions of this very remarkable invention. When we were present at the Company's works at Pimlico, we witnessed the cutting of a letter in marble,—and, indeed, cut one ourself, though we are no mechanic, and never saw the machine before—and had put into our hands a bust of Jenny Lind in ivory, a bas-relief of Wellington, and various other objects carved by the machine. Among other wonderful performances of this machine, we may mention a minute engraving on the polished surface of a razor blade, and an engraved representation of a coat of arms upon a slip of glass!

Now, it is not possible to engrave on hardened steel by means of hand labour with any kind of instrument we possess, nor can figures or designs be [illegible] by a slow and expensive process. Here, then, is an entirely open in which few rivals will be found. So easily is the machine guided, that a lad of ordinary intelligence might be set to work on the first day of his engagement, and yet so multifarious are the objects it will produce, that the highest intellect, and the most practised talent, might be well employed in producing patterns for its imitation We have little doubt but that, in a short time, a complete revolution in the style of domestic architectural ornamentation will be brought about by means of this ingeniously contrived instrument, Of the commercial success of the company there can be no question —*From the Illustrated Exhibitor and Magazine of Art.*

DELAYS ARE DANGEROUS.

THERE is no other transaction in life in respect of which the maxim of "delays are dangerous" has such powerful reference as in relation to Life Assurance.

It has been remarked by a very high authority, that "all men think all men mortal but themselves," but do you not read every day of fatal accidents and sudden deaths? Although *your* turn is not yet come, you have a share in the chances of each that occurs. Do you ever look in the newspapers certain returns under the head of Bills of Mortality, showing how many people died in London last week—probably 1,100 or 1,200 persons? Calculate how many it is an hour. It is quite certain, according to the law of mortality developed in what are termed the NORTHAMPTON TABLES, that out of every 125 readers of this article one of the age of twenty-five—two *will be dead before the expiration of a year.* Such a rate of mortality is a serious matter; and the only reason for its not being felt as a serious matter is, that people do not accustom themselves to reflect upon it.

If the reader were told that, once within the ensuing twelve months, he would have to stand up in rank with 124 other men to be fired at, and that to a certainty two of them would be killed—and it is as certain that two of the 124 will be in the grave in twelve months as that he is now reading these sentences—he would most likely exclaim, "Good God, if *I* should be *one* of the *two*, what is to become of my wife and children; if any possible means can be pointed out to me for making provision for them, I will not lose another day in securing such a benefit, without the existence of which they may, within a few hours, be rendered helpless and hopeless."

Well, such means do exist—and the means are these:—Go up stairs and take £10 out of the drawer, which you have made the depository of the £30 or £40 you have already saved up as the beginning of a fortune for your children—take it to an Assurance Office,—*being most careful to ascertain that it is conducted and controlled by respectable and responsible persons*—and, having inquired for the manager, tell him you have come to invest £10 for the benefit of your family—that you have no idea what good £10 can do, but that you have been reading an article on LIFE ASSURANCE, the writer of which has pointed out to you the insecurity of life, and recommended you to effect an assurance. No doubt you will ask to be informed what is the exact nature of the benefit your family will derive from this small sum, and as little doubt is there that you will almost become dumb with astonishment, when you are told, that if you die before that day twelvemonth, or even the moment after you receive the manager's receipt, your family will be paid £500 by the office. This payment of £10 must, of course, be made to the office every year, so long as you desire to hold the company to the engagement; *but in case you should, in the course of three or four years, wish to discontinue the Assurance, either from inability or any other circumstance, then a fair proportion of what you have paid would be returned to you.*

The illustration here offered is only one of twenty different modes of assurances applicable to the various means, positions, and requirements of individuals. For instance, a man arrived at fifty, with a wife about his own age, and no children, may not care about realising a large sum of money at his death, the management of which he may not wish to delegate to a lady unaccustomed to such responsibilities He has, perhaps, an income of £200 derivable from a Government pension, or some form of annuity, terminable with his own life—even the profits of trade, or the returns for professional service dependant upon the talents and exertions of the individual have very much the character of an annuity—and his great anxiety is to provide that, after his death, the income of his wife shall not be materially abridged. This may be effected by his paying to the office about £5 a-year, which, after his decease, will secure for his widow an annuity of £100 during the remainder of her life, whilst his own income, during the joint continuation of their lives, will only be reduced from £200 to £165

As an instance of what may be effected by a very small saving, supposing a young man, entering business at the age of twenty-five, saves *two shillings and sixpence* per week, equal to £6 10*s.* per annum, which is often expended in cigars and other superfluities, this would secure £500 to his wife and family, and in some of the old offices, which are dividing large bonuses, that £500 would in all probability be doubled if he lived to the age of sixty five or seventy, or in lieu of this addition to the amount insured, the annual charge of £6 10*s.* might be periodically reduced, until, by the time he arrived at that age, it would be altogether extinguished.

DR MANTELL.

THE year has been prolific in the loss of great men. The last name we have to add to the already too-full list is that of the eminent geologist, Dr Mantell, who died on the 10th of November, in the 64th year of his age. Gideon Algernon Mantell, L L D, F R S, &c. &c —whose acquaintance we had the honour to possess —had been for some time past a severe sufferer, but, such was his cheerfulness and kind disposition, and such the amazing flow of his animal spirits, that it was impossible to be in his company for ten minutes without being innoculated with the mirthful energy which never deserted him At an early period he became distinguished for his love for, and knowledge of, natural history, though for many years he practised medicine in the town of Lewes, in Kent It is however as an investigator into the truths of geological science that his name will go down to posterity. While resident at Lewes he was led to devote himself, with great natural enthusiasm, to the investigation of the fossils of the Chalk and of Wealden of Sussex Little attention had hitherto been excited among geologists to the wonderful organic remains of this district, and to a mind of his penetration and sagacity a rich field presented itself for observation. In 1812-15, Dr. Mantell commenced forming, at Lewes, the magnificent collection of 1300 specimens of fossil bones, which is now deposited in the British Museum, and in 1822 appeared his "Fossils of the South Downs," a large quarto work, with forty plates, engraved by Mrs. Mantell, from drawings by the author Another work was published by him about the same time, entitled "The Fossils of Tilgate Forest," and compared with the geological literature of the period in which they were written, these books cannot but be considered as highly meritorious productions. In 1825 Dr. Mantell was elected a Fellow of the Royal Society, and he has contributed some important papers to its "Philosophical Transactions" For his memoir "On the Iguanodon" he had the honour, in 1849, to receive the Royal

Medal. He was also an active member of the Geological Society, and in 1835 was presented with the Wollaston Medal and Fund, in consideration of his discoveries in fossil comparative anatomy generally. From Lewes Dr. Mantell removed about this period to Brighton, and his collection being materially added to, was purchased by the Trustees of the British Museum for the sum of £5,000. Upon this he removed to a substantial residence on Clapham Common. Dr Mantell took great delight in imparting to others a knowledge of his favourite science; he was fluent and eloquent in speech, full of poetry, and extremely agreeable in manners to all. He now turned his attention to the more popular and attractive works for which his name will be chiefly remembered. His "Wonders of Geology," "Medals of Creation," "Geological Excursions Round the Isle of Wight," and an enlarged edition of his "Thoughts on a Pebble," all of which are profusely illustrated, and have passed through several editions, are well known to the members of Mechanics' Institutions and scientific enquirers His latest work was a handbook to the organic remains in the British Museum, entitled "Petrifactions and their Teachings." To these may be added "Thoughts on Animalcules," and "A Pictorial Atlas of Fossil Remains," selected from Parkinson's and Artis's palæontological illustrations, and among his early productions, a handsome quarto narrative, with portraits, of the "Visit of William IV and Queen Adelaide to the Ancient Borough of Lewes," which included some original poetry. Dr Mantell was a most attractive lecturer, filling the listening ears of his audience with [illegible] imagery, and leading them in amazement with his [illegible] No man has done more to popularise the science of geology than Dr Mantell, and we are happy to know that he has a worthy successor in his son, the gentleman who first made known the existence of the wingless birds of Australia

A WORD IN SEASON.

This is the first day of a New Year. It was once the custom, and still is among humble loving folk, to make presents on New Year's-day, and we should regret if so good a custom ever died quite out If the "good old times" were in many respects very bad, superstitious, obstinate, and weak-minded old times, as no doubt they were, they nevertheless possessed many charitable and Christian customs which we of these modern days would do well to revive. And this present-giving was one of them Christmas-day with its rollicking good humour, its roast beef and plum-pudding and hearty kindnesses, has passed away, and a new era is before us all. Another year is opened to us—another year has died away and been gathered to the tomb of all the annuals Such a time should not be let pass without a pause in the noise and toil and bustle of our ever stirring, ever active life Like a good thrifty tradesman, we should look into our books, should balance our accounts, should look at the debtor and creditor side of the question, and by a just and fair sum total, find out how we stand with the moral world. We should take stock of our inner selves. It is always best to know the truth. The man in trade who is afraid to look at his circumstances, afraid to know his true position, makes his position so much the worse by his neglect. A resolute inquiry into his liabilities, and the means which his fortune afford him for meeting the calls that sooner or later must be made upon him, puts him into a true position, and oftentimes enables him to weather the storm of adverse fortune. And it is the same with our moral liabilities. It is wise to talk with our past hours,

"And ask them what report they bore to heaven?"

Wise to question our own virtue and disinterestedness,—wise to regard ourselves, as it we were not ourselves;

"To see ourselves as others see us."

And surely in the whole 365 days there is no day so appropriate, no time so fitting, as when another year is gone, and we begin to enter on a new period of existence The hand of time is about to remove from our gaze another page of our history. Look at it. Every letter is of our own inscribing, every false character, every blot and blemish—all our own. We may learn wisdom from failure, and turning over a new leaf, inscribe in nobler form, and with a better grace, a fitting welcome to the year.

It is worth a thought or two, this annual birth and death We cannot part from an old friend who has seen strange sights with us, who has been with us in trouble and joy, without a sigh, and ere we take to sympathy the new friend which January brings, we like to regard him for a space, and ponder on the future and the past.

Old 1852 is dead. We are beside his grave. We think about his existence, and our friendship with him, we call up shadowy pictures of the scenes which we have witnessed in company, and ere we leave him to his rest, begin to think of his character as a whole—of his great public doings, and of our private dealings with him. There have been more eventful lives than his. The chronicles of his family present us with more exciting biographies, more spirit-stirring histories. Some of his brothers were of an heroic temperament, and sought

"The bubble reputation
Even at the cannon's mouth,"

but 1852 was the last who has made a name in history by soldiership. Others, in the olden time, have distinguished themselves by religious proselytism in a strange and doubtful light, and [illegible] records present us with memoirs of years that [illegible] preach with such strange discourse, that the [illegible], block and axe, gibbet and rope, powder and ball, were the results of such theology. Other years there are who went about upon exploring expeditions, and found out new countries, and founded new empires—till

"Two new worlds the circuit filled,
Which one world occupied of old"

And years there are which give their whole attention to unmistakeable labour. Such a one was the late 1851, whose interest in behalf of labour, whose appreciation of the workman's toil, was so great and good that he built a huge glass-house for a world-wide meeting, and held a mighty gathering in his own [illegible] [illegible] forgotten And now of [illegible] He has seen [illegible] sights, and done strange things in his time. In the Old and the New World he has stood beside the death-bed of a great man In America he has witnessed the closing scene of the life of Daniel Webster, in England he has seen the hero of a hundred fights, he whose glory has filled two hemispheres, breathe out his last and die. If there was nothing else in his career worth remembering, we should all recollect our old friend on account of that one event—the loss of Wellington 1852 will ever be associated with that great national disaster,—

"How blest the brave who sank to rest,
By all their country's wishes blest!"

The death of the great military leader—the honour and respect which not only England, but the world, sought to render—the solemnity of his funeral obsequies, all must and will be remembered. But 1852 has seen other things beside In France he witnessed a long and continued series of struggles and festivals, which came to an end at last in the declaration of the empire, and in Louis Bonaparte becoming Napoleon the Third. This event would give, independently of everything else, a marked and distinctive aspect to our friend, and more especially so when coupled with the fact that England's greatest hero—he who shattered the empire of old, and flung *le grand Empereur* out upon the rock to die—is himself laid in the tomb. Liberty, equality, fraternity—artillery, infantry, cavalry—culminate in a president unprecedented, who sways the hearts and lives and liberties of all true Frenchmen. 1852 has seen a [illegible] in Tuscany, which proved deeply on [illegible]—namely, [illegible] Madiai shut up in gaol for reading the pure Gospel. It seems to speak to him of a resuscitated past—to tell of days gone by come back again—and trembling for [illegible], the old year was sadly affected. For 1852 loved liberty, true liberty—liberty that did not interfere with other people's liberty, liberty everywhere and always; and glad was he when from the land of Columbus he heard the news of the late election to the president's chair,—he hailed the intelligence as an important sign of the times—the election of a free-trade and democratic president in the United States. The rejection of General Scott by an immense majority, simply because of his great military reputation, marks well the watchful jealousy with which all men of the Anglo-Saxon race look upon the struggles of successful soldiers for great political power In France, Scott would have been adored as a Messiah, and the

intellect and wealth of the country would have prostrated themselves at his feet; in America, with all their vapouring and boasting, they have shown that they love glory well, but love liberty better. General Pierce, too, is a free-trader. We may, therefore, safely look for some modifications in the tariff, and a progressive breaking down of the fiscal barriers which now separate the nations of the world. This is cheering, when we recollect that many of the transcendental and nationalistic party, who are bidding fair to hold sway over the intellectual portion of the community, are rigid protectionists,—amongst others, Horace Greeley, of the *New York Tribune*, a man who ought to know better. The abolition of slavery is the sure and inevitable goal of these onward tendencies of American politics. The day may be far distant which shall witness it, but as surely as all virtue and religion are not trampled out in millions of American hearts, so surely will the great principle of their declaration of rights, the equality of all men before God, become the law and practice of the United States.

As we stand beside the grave of the past year, we cannot help recalling these facts as connected with his past history. But what has he been to ourselves? How many things have happened since we greeted him last January, since the bells of the old church tower rang out a merry peal for the young heir! It may be that sorrow, with her pale face, has come into our abode—that sickness has laid its hand on those that we loved dearly, that we have seen the bright eye grow dim, and the ruddy cheek grow pale, and the robust frame become weak and feeble. It may be death has come, and beckoned one of ours away, saying, Arise and live for ever in the world unseen, the home of purity and peace; and now, that as the new year comes and opens out its vast extent before us, and bells again begin to wag and waver—that looking round upon our little circle, one space is vacant, and one voice is hushed. It may be that the very opposite of all this is our case, that we have been happier and wiser this year than we have ever been before; that we have now a second self to share our joys and sorrows, and a fond, loving heart that beats in unison with our own,—that we in fact are far more cheerful and far more prosperous than when 1852 first came upon us. Would it were the case with us all. But whether joy or sorrow be our portion, there is one thing still which should make us happy—hope is ours. Hope is the indefensible possession of all, a Constantine's banner in the eternal skies. Looking onward, happier scenes rise up before us, and we get comfort in the prospect of the future. Farewell 1852,—tears and smiles were mingled in thy life, the sunshine and the storm were seen alike, but on the clouds uniting they paint the iris of promise—the rainbow of a better time. So we bid farewell to 1852, and turning from the green grave of the past, begin to welcome 1853, as we join in the hearty and familiar greeting—A happy New Year to us all!

LINES

FROM THE SWEDISH OF HANS CHRISTIAN ANDERSEN

The night is calm, the sky is clear,
The birds are silent, and the flowers,
Fresh with the heavy summer dew,
Dream out the solitary hours
Then still be every whisper, lest
The sleep of any living thing
Be broken, for in every breast
Some little world is habiting

The lark dreams of the coming light,
And sings and soars in the pure air;
The flowers interpret their delight,
With their sweet odours everywhere.
Oh! endless worlds, both great and small!
Oh! mighty depths of heaven and space,
Into my heart I take ye all,
And give to all a resting place!

The eyes are filled with tears, although
A double sense of peace and rest
Makes all my senses to o'erflow
With love for all things that exist.
But now the stars wax pale, and soft
The daylight comes Yet dream and sleep!
The sky is blue, and clear aloft—
And my heart's peace is calm and deep.

THE DINNER OF THE MONTHS.

FROM NEELE'S "LECTURES ON ENGLISH POETRY."

Once upon a time, the Months determined to dine together. They were a long while deciding who should have the honour of being the host upon so solemn an occasion; but the lot at length fell upon December, for although this old gentleman's manners were found to be rather *cold* upon first acquaintance, yet it was well known that when once you got under his roof, there was not a merrier or more hospitable person in existence. The messenger too, Christmas-day, whom he sent round with his cards of invitation, won the hearts of all; although he played several mad pranks, and received many a *box* in return. February begged to be excused coming to the dinner, as she was in very bad spirits on account of the loss of her youngest child, the twenty-ninth, who had lately left her, and was not expected to return for four years. Her objection, however, was over-ruled; and being seated at table between the smiling May, and that merry old fellow October, she appeared to enjoy the evening's entertainment as much as any of the company

The dinner was a superb one; all the company having contributed to furnish out the table. January thought for the *thirtieth* time what he should give, and then determined to send a calf's head February, not being a very productive month, was also a little puzzled, but at length resolved to contribute an enormous cake, which she managed to manufacture in fine style, with the assistance of her servant, Valentine, who was an excellent fellow at that sort of ware, but especially at bride-cake. March and April agreed to furnish all the fish; May to decorate the dishes with flowers, June to supply plenty of excellent cider, July and August to provide the desert, September a magnificent course of all sorts of game, excepting pheasants, which exception was supplied by October, as well as a couple of hampers of fine home-brewed ale, and November engaged that there should be an abundance of ice. The rest of the eatables, and all the wine, were provided by the worthy host himself.

Just before sitting down to table, a slight squabble arose about precedency, some of the company insisting that the first in rank was January, and some that it was March. The host, however, decided in favour of January, whom he placed in the seat of honour, at his right hand; November, a prim, blue-nosed old maid, sat at his left, and June, a pleasant, good-tempered fellow, although occasionally rather too *warm*, sat opposite him at the end of the table.

The dinner was admirably served. Christmas-day was the principal waiter; but the host had been obliged to borrow the attendance of some of his guests' servants, and accordingly Twelfth-night, Shrove-Tuesday, and Michalmas-day, officiated in various departments: though Shrove-Tuesday was speedily turned out, for making rather too free with a prime, demure servant-maid, called Good-Friday, while she was toasting some hot-cross buns for the tea-table.

A short, squab, little fellow, called St. Thomas's-day, stood behind December's chair, and officiated as toast-master, and much merriment was excited by the contrast between the diminutive appearance of this man, and the Longest-day, who stood behind June, at the other end of the table. Master Thomas, however, was a very useful fellow; and, besides performing the high official duty which we have mentioned, he drew the curtains, stirred the fire, lighted and snuffed the candles, and, like all other little men, seemed to think himself of more importance than anybody else.

The pretty blushing May was the general toast of the company, and many compliments were passed upon the elegant manner in which she had decorated the dishes. Old January tried to be very sweet upon her, but she received him coldly, as he was known not to be a loyal subject, and to have once stolen a crown and sceptre, and hidden them in a grave; and May, who was loyal to the back-bone, had much trouble in finding out and *restoring* them. January at length ceased to persecute her with his attentions, and transferred them to November, who was of the same politics as himself, although she had not been quite so successful in supporting them. Poor May had scarcely got rid of her venerable lover, before that sentimental swain, April, began to tell her that he was

absolutely dying for her. This youth was one moment all sunshine, and smiles, and rapture; and the next he dissolved in tears, clouds gathered upon his brow, and he looked a fitter suitor for November than for May, who having at last hinted as much to him, he left her in a huff, and entered into close conversation with September, who, although much his senior, resembled him in many particulars.

July, who was of a desperately *hot* temper, was every now and then a good deal irritated by March, a *dry* old fellow, as *cool* as a cucumber, who was continually passing his jokes upon him. At one time July went so far as to threaten him with a prosecution for something he had said: but March, knowing what he was about, always managed to keep on the *windy* side of the law, and to throw *dust* in the eyes of his accusers. July, however, contrived to have his revenge; for being called upon for a song, he gave "*The dashing white sergeant*" in great style, and laid a peculiar emphasis upon the words "march! march! *away!*" at the same time motioning to his antagonist to leave the room.

April having announced that it was raining hard, January was much perplexed as to how he should get home, as he had not brought his carriage. At one time, when he was looking very anxiously out of the window to discover if there were any stars visible, October, at the suggestion of May, asked him if he thought of borrowing *Charles's wain* to carry him, as he had done so great a kindness to its proprietor? This put the old fellow in such a passion, that he hastily seized his head-gear (a red cap), sallied out through the rain, and would most likely have broken his neck in the dark, had not February sent her footman, Candlemas-day, after him with a lantern, by whom he was guided in safety to his lodgings, in Fog-alley.

On the retirement of the ladies—February, May, August, and November—the last proposed their healths, which were drunk with the usual honours; when April, being a soft-spoken youth, and ambitious of distinction as an orator, began to return thanks for them in a very flowery speech, but was soon coughed down by December and March; and March, by the bye, at length got into such high favour with his old enemy, July, that the latter was heard to give him an invitation, saying that if ever he came to his side of the Zodiac, he should be most happy to see him. October told the host that, with his leave, he would drink no more wine, but that he should be glad of some good home-brewed, and a pipe. To this December acceded, and said he should be happy to join him, and he thought his friend March would do the same March having nodded assent, they set to, and a pretty *puffing* and *blowing* they made among them. April, however, continued to drink Madeira; while June, July, and September, stuck, with exemplary constancy, to the Burgundy.

After repeated summonses to the drawing-room, they joined the ladies at the tea-table. November drew herself up, and affected to be quite overpowered by the smell of smoke, which March, October, and December, had brought in with them; although it was well known that the old lady herself could *blow a cloud* as well as any of them. October seated himself by May, and said he hoped that his pipe would not have the same effect upon her as upon her aunt: and after having very gracefully assured him that she was not at all annoyed by it, he told her that he would make her exercise her own sweet pipe before the evening was much older, which, instead of annoying, would delight every body. August, a grave stately matron of extraordinary beauty, although perhaps *un peu passé*, officiated as tea-maker. Good-Friday, who by this time had recovered the fright into which Shrove-Tuesday had thrown her, handed about the toasted buns, and Swithin, a servant of July, was employed to keep the tea-pot supplied with water, and which he too often did to overflowing.

Tea being over, the old folks went to cards; and the young ones, including October, who managed to hide his years very successfully, to the pianoforte. May was the *prima donna*, and delighted every one, especially poor April, who was alternately all smiles and tears, during the whole of her performance. October gave them a hunting song, which caused even the card-tables to be deserted; and August sang a sweet melancholy canzonet which was rapturously encored. April both sang and played most unmercifully; but the company had an ugly trick of yawning over his comic songs, and were ready to expire with laughter at his pathetics.

At length, Candlemas-day having returned from seeing old January home, his mistress, February, took leave of the company. April, who was a little the worse for the wine he had drunk, insisted on escorting November; although she held several servants in waiting, and her road was in an opposite direction to his own. May went away in her own carriage, and undertook to set June down, who lived very near her. The road was hilly and steep, but her coachman, Ascension-day, got the horses very well to the top; and July and August both walked home, each preceded by a dog-day, with a lighted torch. September and October, who were next-door neighbours, went away in the same hackney-coach; and March departed as he came, on the back of a rough Shetland pony.

THE TEA ROSE.

BY MRS. H. BEECHER STOWE.

Authoress of "Uncle Tom's Cabin," etc.

THERE it stood, in its little green vase, on a light ebony stand, in the window of the drawing-room. So pure it looked, its white leaves just touched with that delicious creamy tint peculiar to its kind; its cup so full, so perfect, its head bending as if it were sinking and melting away in its own richness—oh! when did ever man make anything to equal the living perfect flower!

But the sunlight that streamed through the window revealed something fairer than the rose. Reclined on a couch, in a deep recess, and intently engaged with a book, rested what seemed the counterpart of that so lovely flower. That cheek so pale, that fair forehead so spiritual, that countenance so full of high thought, those long, downcast lashes, and the expression of the beautiful mouth, sorrowful yet sweet—it seemed like the picture of a dream.

"Florence! Florence!" said a merry, laughing girl, entering the room, "put down that wise, good, and excellent volume, and descend from your cloud, and talk with a poor little mortal. I have been thinking what you are to do with your pet rose when you to go to New York, as, to our consternation, you are determined to do; you know it would be sad pity to leave it with such a scatterbrain as I am. I do love flowers, that is a fact; that is, I like a regular bouquet, cut off and tied up, to carry to a party; but as to all this tending and fussing, which is needful to keep them growing, I have no gifts in that line."

"Make yourself easy as to that, cousin," said Florence, with a smile; "I have an asylum in view for my favourite."

"Oh, then, you know just what I was going to say. Mrs. Marshall has been speaking to you; she was here yesterday, and was quite pathetic upon the subject, telling us the loss your favourite would sustain, and so forth; and she said how delighted she would be to have it in her greenhouse, it is in such a fine state now, so full of buds. I told her I knew you would like to give it to her, you are so fond of Mrs Marshall, you know."

"I am sorry, Kate, but I have given it away."

"Who can it be? you have few friends here."

"Oh, it is only one of my odd fancies."

"But do tell me, Florence."

"Well, cousin, you know the little pale girl to whom we give sewing."

"What! little Mary Stephens? How absurd, Florence! this is just another of your motherly, old-maidish ways—dressing dolls for poor children, making bonnets and knitting socks for all the little dirty babies in the region round about; and now, to crown all, you must give this choice little bijou to a sempstress-girl. What in the world can people in their circumstances want with flowers?"

"Just the same as I do," replied Florence, calmly. "Have you not noticed that the little girl never comes here without looking wistfully at the opening buds? And, do not you remember, the other morning she asked me so prettily if I would let her mother come and see it, she was so fond of flowers?"

"But, Florence, only think of this rare flower standing on a table with ham, eggs, cheese, and flour, and stifled in that close little room, where Mrs Stephens and her daughter manage to wash, iron, cook, and nobody knows what beside."

"Well, Kate, and if I were obliged to live in one coarse room, and wash, and iron, and cook, as you say—if I had to spend every moment of my time in toil, with no prospect from my window but a brick wall and dirty lane, such a flower as this would be untold enjoyment to me."

"Pshaw! Florence—all sentiment: poor people have no time to be sentimental. Besides, I don't believe it will grow with them; it is a green-house flower, and used to delicate living."

"Oh, as to that, a flower never inquires whether its owner is rich or poor; and Mrs. Stephens, whatever else she has not, has sunshine of as good quality as this that streams through our window. The beautiful things that God makes are his gift to all alike. You will see that my fair rose will be as well and cheerful in Mrs. Stephens' room as in ours."

"Well, after all, how odd! When one gives to poor people, one wants to give them something *useful*—a bushel of potatoes, a ham, and such things."

"Why, certainly, potatoes and bacon must be supplied, but, having ministered to the first and most craving wants, why not add any other little pleasures or gratifications we may have it in our power to bestow? I know there are many of the poor who have fine feeling and a keen sense of the beautiful, but which rusts out and dies because they are too hard pressed to procure it any gratification.

"Else why is it that we so often see the geranium or rose tree carefully nursed in an old cracked teapot in the poorest room, or the morning-glory planted in a box and twined about the window? Do not these show that the human heart yearns for the beautiful in all ranks of life? You remember, Kate, how our washerwoman sat up a whole night, after a hard day's work, to make her first baby a pretty dress to be christened in."

"Yes, and I remember how I laughed at you for making such a tasteful little cap for it."

"Well, Kate, I think the look of perfect delight with which the poor mother regarded her baby in its new dress and cap, was [illegible] I do believe she could [illegible] a barrel of flour."

"Well, I never thought before of giving anything to the poor but what they really needed: I have always been willing to do that when I could without going far out of my way."

"Well, cousin, if our heavenly Father gave to us after this mode, we should have only coarse, shapeless piles of provisions lying about the world, instead of all this beautiful variety of trees, and fruits, and flowers."

"Well, well, cousin, I suppose you are right—but have mercy on my poor head, it is too small to hold so many new ideas all at once—so go on your own way." And the little lady began practising a waltzing step before the glass with great satisfaction.

It was a small room, lighted by only one window. There was no carpet on the floor; there was a clean, but coarsely-covered bed in one corner, a cupboard, with a few dishes and plates, in the other; a chest of drawers; and before the window stood a small cherry stand quite new, and, indeed, it was the only article in the room that seemed so.

A pale, sickly-looking woman of about forty was leaning back in her chair, her eyes closed and her lips compressed, as if in pain. She rocked backward and forward a few minutes, pressed her hand upon her eyes, and then languidly resumed her fine stitching, on which she had been busy since morning. The door opened, and a slender little girl of about twelve years of age entered, her large blue eyes dilated and radiant with delight as she bore in the vase with the rose-tree in it.

"Oh! see, mother, see! Here is one in full bloom, and two more half out, and ever so many more buds peeping out of the green leaves."

The poor woman's face brightened as she looked, first on the rose and then on her sickly child, on whose face she had not seen so bright a colour for months.

"God bless her!" she said, unconsciously.

"Miss Florence—yes, I know you would feel so, mother. Does it not make your head feel better to [illegible] such a beautiful flower? Only see how many buds there are! Just count them, and only see all the flowers! Now, where [illegible] up?" And Mary skipped about, placing her flower first in one position and then in another, and walking off to see the effect, till her mother gently reminded her that the rose-tree could not preserve its beauty without sunlight.

"Oh yes, truly," said Mary; "well, then, it must stand here on our new stand. How glad I am that we have such a handsome new stand for it: it will look so much better." And Mrs. Stephens laid down her work, and folded a piece of newspaper, on which the treasure was duly deposited.

"There," said Mary, watching the arrangement eagerly, "that will do—no, for it does not show both the opening buds, a little farther round—a little more; there, that is right;" and then Mary walked round to view the rose in various positions, after which she urged her mother to go with her to the outside, and see how it looked there. "How kind it was in Miss Florence to think of giving this to us!" said Mary; "though she had done so much for us, and given us so many things, yet this is the best of all, because it seems as if she thought of us, and knew just how we felt, and so few do that, you know, mother."

What a bright afternoon that little gift made in that small room! But [illegible] when she bestowed the gift that there twined about it an invisible thread that would affect her whole future life. One cold afternoon in early spring, a tall and graceful gentleman called at the lowly room to pay for the making of some linen by the inmates. He was a stranger and wayfarer, recommended through the charity of some of Mrs. Stephens' patrons. As he turned to go, his eye rested admiringly on the rose-tree, and he stopped to gaze at it.

"How beautiful!" said he.

"Yes," said little Mary, "and it was given to us by a lady as sweet and beautiful as that is."

"Ah," said the stranger, turning upon her a pair of bright dark eyes, pleased and rather struck by the communication, "and how came she to give it to you, my little girl?"

"Oh, because we are poor, and mother is sick, and we never can have anything pretty. We used to have a garden once, and we loved flowers so much, and Miss Florence found it out, and so she gave us this."

"Florence!" echoed the stranger.

"Yes—Miss Florence L'Estrange a beautiful lady. They say she was from foreign parts, but she speaks English just like other ladies, only sweeter."

"Is she here now? Is she in this city?" said the gentleman, eagerly.

"No; she left some months ago," said the widow, noticing the shade of disappointment on his face; "but," she added, "you can find out all about her at her aunt's, Mrs. Carlysle's, No 10,————street."

A short time after, Florence received a letter in a hand-writing that made her tremble. During the many early years of her life spent in France, she had well learned to know that writing—had loved as a woman like her loves only once; but there had been obstacles of parents and friends, long separation, long suspense, till, after anxious years, she had believed the ocean had closed over that hand and heart; and it was this that had touched with such pensive sorrow the lines in her lovely face.

But this letter told that he was living, that he had traced her, even as a hidden streamlet may be traced, by the freshness, the verdure of heart, which her deeds of kindness had left wherever she had passed. Thus much said, our readers need no help in finishing the story for themselves.

CINDERELLA, OR THE GLASS SLIPPER.—Two centuries ago furs were so rare, and so highly valued, that the wearing of them was restricted, by sumptuary laws, to kings and princes. Sable, in those laws called *vair*, was the subject of many regulations as to the precise rank and quality of the persons permitted to wear it, as well as to the article of dress to which it might be attached. In the fairy tales attributed to Perrault, the dignity conferred on Cinderella is said to have been marked by presenting her with a slipper of *vair*. An error of the press probably converted *vair* into *verre*, and so *vair* became a slipper of *glass*.

NEW YEAR'S EVE AND NEW YEAR'S DAY IN THE OLDEN TIME.

FROM BRANDL'S "POPULAR ANTIQUITIES."

THERE was an ancient custom, which is yet retained in many places, on New Year's Eve: young women went about with a Wassail bowl of spiced ale, with some sort of verses that were sung by them as they went from door to door. Wassail is derived from the Anglo-Saxon *wæl hæl*, be in health "The *Wassail Bowl*," says Warton, "is Shakspeare's gossip's bowl, in the 'Midsummer's Night's Dream,' Act I. Scene 1. The composition was ale, nutmeg, sugar, toast, and roasted crabs or apples. It was also called *Lamb's Wool*."

It appears from Thomas de la Moore ("Vita Edw II") and old Havilhan (in "Arcmtren" Lib. 2) that *wes-hael* and *drinc-hael* were the usual ancient phrases of quaffing among the English, and synonymous with the "Come, here's to you," and "I'll pledge you," of the present day.

It is unnecessary to add, that they accepted little presents on the occasion from the houses at which they stopped to pay this annual congratulation.

The learned Selden, in his "Table-Talk" (article "Pope"), gives a good description of it. "The Pope," says he, "in sending relicks to Princes, does as wenches do to them Wassails at New Year's tide, they present you with a cup, and you must drink of a slabey stuff--but the meaning is, you must give them money, ten times more than it is worth"

Verstegan gives the subsequent etymology of Wassail — "And *was* is our verb of the preter-imperfect tense, signifying have *been*, so *was*, being the same verb in the imperative mood and now pronounced wase, is as much as to say *aroint*, or *become*, and *wassheil*, by corruption of pronunciation, afterwards came to be wassail"—*Restitution of Decayed Intelligence*, edit. London, 1653, 8vo, p 101.

Ben Jonson personifies it thus "Enter Wassel like a neat sempster and songster, her page bearing a brown bowl drest with ribbons before her."

Gough's "Anecdotes and Typography," vol i p. 218, edit 1775, is a wood-cut of a large oak beam, the ancient support of a chimney-piece, on which is carved a large bowl, with this inscription on one side, "Wassheil"

The ingenious remarker on this representation observes, "that it is the figure of the old Wassail-bowl, so much the delight of our hardy ancestors, who on the vigil of New Year never failed to assemble round the glowing hearth with their cheerful neighbours, and then, in the spicy Wassail-bowl (which testified the goodness of their hearts), drowned every former animosity, an example worthy modern imitation."

"As the vulgar," says Browne, "are always very careful to end the old year well, so they are no less solicitous of making a good beginning of the new one. The old one is ended with a hearty compotation; the new one is opened with the custom of sending presents, which are termed New Year's Gifts, to friends and acquaintances." He resolves both customs into superstitions, as being observed that the succeeding year ought to be prosperous and successful.

The poet Naogeorgus is cited by Hospinian, as telling us that it was usual in his time for friends to present each other with a New Year's Gift, for the husband to give to his wife; parents to their children; and masters to their servants, &c.; a custom derived to the Christian world from the times of Gentilism. The superstition condemned in this by the ancient fathers, lay in the idea of those gifts being considered as omens of success for the ensuing year. In this sense also, and in this sense alone, could they have answered the benevolent compliments of wishing each other a happy New Year.

Dr. Morison tells us that in Scotland it was in his time the custom to *send* New Year's Gifts on New Year's Eve, but that on New Year's Day they wished each other a happy day, and asked New Year's Gifts.

It is still usual in Northumberland for persons to ask for a New Year's Gift.

In the "Statistical Account of Scotland," Edinb. 1798, 8vo., vol. vii., p 188, Parishes of Cross, &c, County of Orkney, New Year's Gifts occur under the titles of "Christmas Presents," and as given to servant-maids by their masters. Ibid. p. 918, we read: "There is a large stone, about nine or ten feet high, and four broad, placed upright in a plain, in the isle of North Ronaldshag, but no tradition is preserved concerning it, whether erected in memory of any signal event, or for the purpose of administering justice, or for religious worship. The writer of this (the parish priest) has seen fifty of the inhabitants assembled there on the first day of the year, and dancing in the moonlight with no other music than their own singing."

NEW YEAR'S DAY IN GERMANY —It was in the beginning of the New Year, a day on which the general bustle, occasioned by the visits of congratulation, set the whole city in motion. To us children this day always afforded a pleasure long and eagerly wished for at our grandfather's house, where we used to assemble by break of day, to hear a concert performed by all the musicians belonging to the town, the military bands, and all who had any pretensions to handle flute, clarionet, and haut-boy. We were intrusted to distribute New Year's Gifts to the people of the ground storey: the number of receivers and the crowd of visitors hourly increased. Relations and confidential persons came first, functionaries and people in subordinate situations came next, and even the members of the Senate would not fail to pay their respects to their pretor. A select party used to sup in the evening in the dining-room, which was scarcely ever opened again during the remainder of the year We were plentifully supplied, as will easily be believed, with the [illegible], and sweet wines distributed on the occasion. In short, on this anniversary we enjoyed, on a small scale, everything that is usual on the celebration of more pompous festivals.—*Goethe's Memoirs of Himself.*

RING OUT, WILD BELLS!

BY ALFRED TENNYSON

Ring out, wild bells, to the wild sky,
The flying cloud, the frosty light,
The year is dying in the night,
Ring out, wild bells, and let him die

Ring out the old, ring in the new,
Ring, happy bells, across the snow,
The year is going, let him go,
Ring out the false, ring in the true.

Ring out the grief that saps the mind,
For those that here we see no more,
Ring out the feud of rich and poor,
Ring in redress of all mankind

Ring out a slowly dying cause,
And ancient forms of party strife,
Ring in the nobler modes of life,
With sweeter manners, purer laws.

Ring out the want, the care, the sin,
The faithless coldness of the times,
Ring out, ring out my mournful rhymes,
But ring the fuller minstrel in

Ring out false pride in place and blood,
The civic slander and the spite,
Ring in the love of truth and right,
Ring in the common love of good

Ring out old shapes of foul disease,
Ring out the narrowing lust of gold,
Ring out the thousand wars of old,
Ring in the thousand years of peace.

Ring in the valiant man, and free,
The larger heart, the kindlier hand;
Ring out the darkness of the land.
Ring in the Christ that is to be.

LEGISLATIVE NOMENCLATURE.

(From the Aberdeen Herald)

n the odd medley of names of Members of the new House of Commons may be found

'wo Kings, with Hope and Power, A'Court,
With Manners, Bland, and Bright;
Moody, Jermyn, Hastie, Scott,
A Marshal, Duke, and Knight.

An Abel Smith, a Turner, Prime,
A Potter and a Fuller,
A Taylor, Collier, Forrester,
Two Carters and a Miller.

A Parrot, Peacock, and a Coote,
A Martin, Daws, and Cocks,
A Roebuck, Bruen, and a Hogg,
A Swift, Marc, and a Fox.

Rich, Banks, with Goold and Wood and Clay,
And Massey, Cotton, Mills,
Two Chambers, Barnes, Burroughs, Wells,
Dunne, Moore, and Brookes, and Hills

A Booth, a Barrow, and a Crooke,
A Pattern, Pugh, and Bass,
A Buck, a Talbot, and a Heard,
A Cow-per and Dund-as.

A Painter has a Heathcoate reared,
A Gardener builds a Hutt,
A Goodman walks Long, Miles, to vote
For honest Edward Strutt.

Members there are of every Tynte—
White-side, Green-all, and Greene,
With Black-ett, Green-hill, Browne, and Dunne,
No Greys are to be seen.

South Durham elevates her Vane,
Carnarvon hoists a Pennant,
East Norfolk has a Wodehouse raised,
Lisburn provides a Tennent

From Somerset a Knatch-bull comes,
From Devonshire a Buller;
West Norfolk lies a Bagge that's full,
East Sussex one that's Fuller!

The North is claimed by Oxfordshire,
By Winchester the East;
A Sotheron aspect Wilts prefers,
Denbigh secures the West.

A Freeston, Kirk, with Bell and Vane,
A Freshfield, Baring, Rice,
A Currie powder, Lemon, Peel,
Coles, at a Free Trade Price!

A Butler to his master's Hall
Invites a friend and Guest,
Two Butts of Newport just come in
To open, try, and taste!

A Lincoln Trollope, with a Child,
Beau-mont and one Camp-bell;
Grace from Roscommon has arrived,
From Devonport Tuffnell!

A Morris dance, and Somerset,
French, Foley, and Lowe plays
On Mundy, in the month of March,
With East winds and a Hayes!

There's Knightley, Jocelyn in the house,
And Deedes of dark intent,
But Jones declares, and Johnstone swears,
No-el nor harm is meant!

The house is well defended by
The Thickness of its Wall;
Within it has reliance on
Its Armstrong and its Maule!

Disraeli, with his Winnington,
Contrives ten seats to Wynn,
And some few odd fish have been caught,
But neither Roche nor Phinn!

Reverses sad the Whigs have met
In Buxtons, Greenes, and Greys,
In Pagets, Stewarts, Somervilles
But all dogs have their days.

A fearless Horsman has been thrown,
A reckless Horsfall mounted;
But Derby chickens one they've hatched
Had better not be counted!

Wise men of Mary'bone elect
Brave Hall and noble Stuart;
Whilst dolts, at Liverpool reject
A Cardwell and a Ewart

We've lost a Barron, Clerk, and Craig,
A Spearman, Young, and Wyld,
A Palmer, Perfect, Bird, and Coke—
Their Best Hopes are beguiled

A dozen Railway potentates
Have managed seats to gain,
Resolved a foul monopoly
In traffic to maintain.

To crown this medley sad and strange,
A host of Lords are sent,
As if one house were not enough
To sate the lordly bent!

Protection's dead—its grave is dug—
The house provides a Coffin,
A Packe of Fellowes, Young, and Hale,
Rise up and Rush-out, Laffan!

EARNESTNESS IN MANNERS.—I know not [says Baxter] what others think, but for my own part, I am ashamed of my stupidity, and wonder at myself, that I deal with my own and others' souls as one that looks for the great day of the Lord, and that I can have room for almost any other thoughts and words, and that such astonishing matters do not wholly absorb my mind. I marvel how I can preach of them slightly and coldly, and how I can let men alone in their sins, and that I do not go to them, and beseech them, for the Lord's sake, to repent, however they may take it, and whatever pains and trouble it should cost me. I seldom come out of the pulpit but my conscience smiteth me that I have not been more serious and fervent in such a cause. It accuseth me not so much for want of ornaments and elegancy nor for letting fall an unhandsome word, but it asketh me, "How couldst thou speak of life and death with such a heart? How couldst thou preach of heaven and hell in such a careless, sleepy manner?—Dost thou believe what thou sayest? Art thou in earnest, or in jest? How canst thou tell people that sin is such a thing, and that so much misery is upon them, and before them, and be no more affected with it? Should thou not weep over such a people, and should not thy tears interrupt thy words? Shouldst thou not cry aloud, and show them their trangressions, and entreat and beseech them as for life and death?"

CHAMOIS LEATHER.—This leather, in England, is called wash leather. It is made of sheep skins, either split into two by machinery, or dressed whole. The process of preparing oil or chamois leather consists in beating fish oil into the pores of the skin, and afterwards partially drying or oxygenating the oil. When the skin is perfectly saturated, by the repeated process of hammering in the mill and partial drying, it is allowed to become hot by natural fermentation. Being afterwards washed in strong alkali, and thoroughly dried, it becomes the softest and most pliable of leathers. Vast quantities of wash leather are hawked about the streets of London by women and young men. Jews formerly had the trade of the streets in their own hands, but the sale of wash leather, sponges, and oranges appears to have passed from them to the Irish.

NOTICES TO CORRESPONDENTS.

A JOURNEYMAN PAPERHANGER AND DECORATOR.—The best book for your use is one published by *Bohn*, called "Whittock's Decorator's Guide;" but it will cost you £1 1s.

T. R. W.—We believe that the number of agricultural labourers in England and Wales is about 700,000.

A WOULD-BE INSURER.—You had better apply to some of the old and well-established offices; the one you name may be a good one, but it has scarce had time to establish itself.

W. R. BOYTON.—The process of making *artificial ultramarine* is both delicate and difficult; and unless you have good apparatus, and are a tolerably-expert chemist, we question whether you would succeed in making it. One mode is as follows:—Sulphur, two parts; dry carbonate of soda, one part; mix well, gradually heat them in a covered crucible to redness till the mixture fuses, then sprinkle on by degrees another mixture of silicate of soda and aluminate of soda (containing 72 parts of silica, and 70 parts of alumina), and continue the heat for one hour longer. The product contains a little free sulphur, but this may be separated by water

R. WHITE.—"The practical method of paper-stereotyping" cannot easily be explained without diagrams. You must get the knowledge you require from witnessing the process; but this you are not likely to be able to do, as it is patented. It is doubtful whether it will be practised very extensively, as it is said greatly to injure the type.

SEVERAL CORRESPONDENTS have inquired where a copy of the "*Rules and Tables of the Wills Fyendly Society*" may be obtained. Let them apply to the *Gazette* Office, Devizes

MARTHA.—You ask for a good receipt for *furniture polish*. An American correspondent says that "sweet oil and vinegar, mixed in equal quantities, used constantly, and the furniture afterwards well rubbed with soft wash-leather, is an excellent polish for mahogany, &c." He recommends, at the same time, the following *furniture cream*.—One gallon of soft water, two ounces of pearlash, one pound of beeswax, and a quarter of a pound of soap. Boil till all is dissolved, when a portion of the water will have evaporated. Spread this, thinly and evenly, over the furniture with a painter's brush; then polish off with soft leather

J. J. CHARLTON.—Bishop Berkeley died in January, 1753. His work, "The Minute Philosopher," obtained for him the patronage of Queen Caroline and promotion to the bishopric of Cloyne. It is, we believe, well worthy the commendation you bestow upon it, as a refutation of the various systems of atheism and scepticism, but we cannot undertake to reprint it.

A HUMBLE INQUIRER will obtain ample information on the subjects of Biblical antiquities from Professor Jahn's celebrated work, entitled, "Biblical Antiquities," of which an excellent translation, by Professor Upham, is published by Messrs. Ward and Co., Paternoster-row.

J. S. (Gartsherrie).—It is not likely that we shall issue a Bible in weekly numbers; good Bibles may now be had for 1s. or 1s. 6d. each.

"WOULD DO BETTER."—You will be sure to get constant employment as a good working carpenter in almost any part of Australia. Wages vary, but are in all cases good.

J. C.—Write to J. Walcott, Esq., Secretary to the Emigration Board, No. 9, Park-street, Westminster.

"A WOULD-BE EMIGRANT."—If you are, as you state, a youth of seventeen," and "in the printing profession," you are most probably an apprentice. If so, we say, *Stay at home!*

W. RICHARDS.—The title "*Pantaloon*" is from the Italian *Pantalone*; written in full the word is *Puntalcone*, signifying *lion-planter*. This was a name of honour given to a very powerful Venetian, who planted the lion banner, the symbol of the Venetian republic, on many islands of the Mediterranean.—"*Punch*" is derived from the Italian *Pulcinella*, and Pulcinella seems to be made up of *Puccio d'Amello*, that is Puccio, an ill made, witty clown of the town Aniello, who gained a livelihood by his antics in the market-places and public highways.—See Dr. Beard's Lessons on English, No. XXI, in the "Popular Educator," No. 31, for much curious matter on these and other suffixes.

All Communications to be addressed to the Editor, at the Office, Belle Sauvage Yard, London.

DOMESTIC ÆSTHETICS

SIDEBOARD, CARVED IN WALNUT WOOD, BY M. FOURDINOIS, OF PARIS AS EXHIBITED IN THE CRYSTAL PALACE IN 1851

DOMESTIC ÆSTHETICS.

The love of beauty is inherent and universal among men. It enters into the characteristics of the painted savage, no less than into the cultivated taste of the most educated and refined. It exhibits itself in various ways peculiar to the antecedents, the education, the prejudices, and the associations of the individual. Now, it assumes the form of a fine collection of statuary or paintings; now, in the acquisition of a wide-selected library; now, in the choice of appropriate furniture and dresses, and everywhere in some speciality suitable, or otherwise, to the worldly means of the man—in horses, dogs, stuffed birds, collections of insects, scraps of poetry, or autographs! The mind is restless in its search of those peculiar gratifications which appeal to the moral rather than the physical senses; and the taste—a cultivated faculty—is ever on the watch for fresh experiences and new objects of worship

This æsthetical feeling is either praiseworthy or blameable, either morally good or bad, according as means are taken to bring it under the control of the judgment. In other words, the taste for ornamentation, the love of nature and its imitative representation on the canvas of the artist, and the delight with which a man fills his house with graceful forms, or clothes his person with garments of appropriate outline and colour, are matters which require other aids than those of the uneducated fancy. We said that the love of beauty is a natural feeling, but we should add, that the correct appreciation of its proper claims on our regard is an acquired habit.

Nothing, perhaps, tends so much to the proper education of the taste as living in the midst of beautiful forms and harmonising colours; and nowhere can such a combination be so well perceived and appreciated as in a man's own house.

The furniture of man's house, says Mr. Redgrave,* had need to be well designed, well constructed, and judiciously ornamented, for, from being constantly under his hand and eye, defects overlooked at first, or disregarded for some showy excellence, grow into great grievances, when, having become an offence, the annoyance daily increases. Here, at least, utility should be the first object, and, as simplicity rarely offends, that ornament which is the most simple in style will be likely to give the most lasting satisfaction. Yet, on looking over the various articles of cabinet furniture exhibited in the Crystal Palace, how seldom has this consideration been attended to. The ornament of such works on the English side consisted largely of *imitative* carving; bunches of fruit, flowers, game, and utensils of various kinds in swags and festoons of the most massive size and the boldest impost, attached indiscriminately and without meaning, to bedsteads, sideboards, bookcases, pier-glasses, &c., rarely carved from the members of the work itself, but merely applied as so much putty-work or papier-maché might be. The laws of ornament are as completely set at defiance as those of use and convenience. Many of these works, instead of being useful, would require a rail to keep off the household. A sideboard, for instance, with garlands of imitative flowers projecting so far from the slab as to require a "long arm" to reach across it, and ever liable to be chipped and broken, and cabinets and book-cases so bristling with walnut-wood flowers and oak-wood leaves, as to put use out of the question. Now, besides that such treatments are not ornamental, they are not beautiful, and only enter into competition with stamped leather and gutta percha. There is great reason to doubt if this merely imitative carving is ever just in principle, when applied ornamentally to furniture, for, although the masterly chisel of Grinling Gibbons has raised it to great favour in this country, and although it may be tolerated when executed as skilfully as it is by W. G. Rogers yet it becomes absolutely unbearable under less skilful hands, and when it is lavished in such profusion as we find it on many other works. On the foreign side of the building there was far less of this false mode of decoration, and a better sense of ornament prevailed, the works were more frequently designed in the traditional styles in France, a modification of the *Renaissance* is principally used, and in this the ornament is in low relief, and does not interfere with use, although false construction is a vice of that period, which has not been remedied in modern works, but is sometimes exaggerated.

The style of Louis XV. lingers in some of the French works; its playfulness of line and surface, its varied treatment and mixture of materials, together with its showiness, still command favour with the multitude. In the French Court (and in some works of the English side, probably of French manufacture) it was seen in its genuine character. The surfaces of these works are curved, when practicable; they are veneered in parti-coloured wood, and panels are formed by or-molu mouldings, often in both instances completely at variance with the true construction; and occasionally the panels are filled with porcelain enamels, the whole having at least a gay and sparkling appearance. Some attempts have been made by English manufacturers to adapt ornament of this period to cabinet furniture, but it has been totally misunderstood. Instead of the treatment above described, the bold scrolls and shell forms used in the decoration of rooms at that period are here seen carved in all their coarseness on furniture. Such works bear out the remark before made, that these forms were especially adapted for gilding, and, indeed, are hardly bearable, except when so treated, or when made of metal. This becomes even more apparent when full-coloured woods are used, such as mahogany; in this material the ornament is even more coarse and heavy than in lighter-coloured wood. Since, however, the vendors of cheap furniture have adopted this manner as a cheap and flashy decoration for their goods, it is to be hoped that it will soon be entirely proscribed, or retained only by such dealers.

Those designers who unreservedly adopt the ornament of past times must, of course, apply it to their works without any peculiar significance or connected idea, but merely for its beautiful forms, elegance, grace, or richness. Where, however, any significant allusion, sentiment, or happy idea can be embodied in the ornament, uniting it with the use and intent of the work on which it is to be placed, it will have a charm which the others want. Not that this want is peculiar to the application of traditional ornament, since the designer in the natural or imitative manner seldom attempts any connexion between his decoration and the work to which it is to be applied. There seems no fitness, for instance, in surrounding the frame of a pier-glass with dead birds, game, shell-fish, nets, &c., although they may be excellent specimens of carving, nor is it clear why eagles should support a sideboard, or dogs form the arms of an elbow-chair, nor, again, why swans should make their nests under a table, at the risk of having their necks broken by every one seated at it, indeed, in most cases, as such imitative forms cannot in the strict sense be called ornament, they almost challenge inquiry as to why they have been adopted, and disappoint us when we find it has been without motive. This is not the case with traditional ornament, which, like the current coin, is accepted at once without inquiry.

The sideboard, carved in walnut, shown in the engraving, and which was exhibited in the French Court by FOURDINOIS, is an apt illustration of ornament having a just and characteristic significance. This piece of furniture is of rare excellence and merit in design, and of skilful and artistic execution as to carving, and, although of a highly decorative character, is fitted for the purpose for which it is intended. Six dogs, emblematical of the chace, resting on a floor of inlaid wood, support the slab, which has a simple carved moulding along its front, and is inlaid in geometric forms. The dogs are not merely imitative, but are treated as a part of an ornamented bracket or console, thus composed architecturally for bearing and support. Above the slab, standing on four pedestals, are female figures, gracefully designed as emblems of the four quarters of the world, each bearing the most useful productions of their climate as contributions to the feast. Thus Europe has wine; Asia, tea; Africa, coffee: and America, the sugar-cane. In the central space between the pedestals, which is rather the widest of the three, the products of the chace are poured out on the very board, and above this the space is filled with a framed picture of rare fruits, giving an opportunity to enliven the work by the addition of colour, without militating against good taste; above the figures, which are treated as statues, the cornice is bracketed, and supports boys with the implements of the vineyard and of

* Report on Design, by Richard Redgrave, R.A. Published in the Reports by the Jurors of the Great Exhibition of 1851.

agriculture. It rises into a pediment in the centre; this is broken in the manner of the *Renaissance*, and decorated with a figure of Plenty crowning the group. The upright line of the back is gracefully varied at the sides, and constructively strengthened by carved brackets, above which are terminal figures bearing the implements of fishery on the one side and of the chace on the other. The panels of the pedestals and of the side compartments below are filled with carvings formed of the fruits of various countries, grouped with the instruments of horticulture and agriculture. Two brackets on the side compartments between the figures give an opportunity for placing silver plate in a position for display. The ornamental parts of this piece of furniture are carved throughout in a masterly manner, and in a bold and free style; it is consistent as a whole, and free from puerilities, and, while it is thoroughly fitted for its purpose as a sideboard, it is at the same time of a highly ornamental character, without any of its decoration being overdone or thrown away. It corresponds in its constructive form with the *Renaissance* of the 15th century —in the style of its carvings rather with the works of the 13th; the gates of Ghiberti having evidently supplied the idea of the groups of fruit and implements which fill the pannels; and it may be remarked as a fault, that it has been overlooked that the relief in Ghiberti's work was suited to metal, the ornament standing beyond the face of the framing of the panel; but in adapting it in wood this should have been modified so as to bring the impost of the carving within the surface; such faults, however, are trifling in a work otherwise of great ability. The care which has been taken to keep all the ornaments details in the same scale throughout is an additional merit, and the wood has been judiciously chosen as to colour and grain.

We shall return to this subject.

NAT. PUCKETT, THE INDIAN HATER.

[We insert the following from the *Knickerbocker Magazine*, revolting to our feelings as are the incidents it relates, as a specimen of a species of literature greatly admired by a large portion of the American population, and as a proof that *some* portion of that population is still in a barbarous and savage state.]

In the summer of 1837, while on a visit to Texas, I was induced, by the favourable accounts I had received from the "West," to reconnoitre that portion of the "Young Republic." Having cut a hole in the middle of my blanket, through which I thrust my head, tied a "lariat" round my mustang's neck, and a couple of diminutive ox-bows, in the shape of stirrups, to my saddle, I mounted and set off, and in the course of a few hours was fortunate enough to overtake a company of some seven or eight others, who, like myself, intended making a "tour of observation" through the "West."

For several days we jogged along, encountering nothing in the way of adventure more piquant than the death of a deer, or an occasional scamper after a drove of wild horses. The country, however, over which we journeyed fully compensated for this dearth of "incident by flood and field," and we came unanimously to the conclusion, that it fully merited the glowing colours in which it had been described to us.

Never before had I seen such richness of verdure; such a happy blending of green, undulating prairies, and park-like woods. I doubt if I should have been at all surprised, had I come suddenly upon some turreted castle, with all its moats, draw-bridges, and frowning walls; so much did these natural lawns and parks remind me of the descriptions I had read of "lordly domains" and "regal estates."

But as yet, saving the log-houses of the back-woodsmen (which heaven knows were few and far between), nothing like civilisation was to be seen. As we had taken the precaution, however, when passing through the "city" of Brazoria, to supply ourselves with provisions and camp-equipage, we suffered no inconvenience on this account, but whenever and wherever inclination prompted, we pitched our tent, most generally upon the banks of some one of the numerous and beautiful little streams that intersected the country. Then after staking our horses among the luxuriant herbage (an ear of corn would have "stampeded" the whole drove), and placing a guard over them, we would build up a roaring fire, and attack such "creature-comforts" as our larder afforded, with well-sharpened appetites.

In this way we travelled on, until we came to the La Vaca, where we purposed resting a day to recruit our horses. That night it fell to my lot to stand guard over them. The moon was shining brightly, and, taking my gun in my hand, I sat down with my back against a fallen tree, in such a position as to command a "bird's-eye view" of the camp and its vicinity.

I know not how long I had been thus seated, when all at once the moon became eclipsed, and the horses seemed to increase in size, until it appeared to me they formed but one huge shadowy animal. I remember trying to recal to mind whether or not I had seen in the late almanacks any announcement of such eclipse, and also endeavouring to reason philosophically with myself upon the strange phenomenon of the horses; but the next morning when I awoke, not a single horse was to be seen. With secret misgivings I hurried to the spot where we had staked them out, but all were gone, saving my poor mustang, that lay dead upon the ground, with several arrows still sticking in his side. This explained all. The Indians (who perhaps had been waiting an opportunity for several days to steal our horses) had taken advantage of the eclipse of the moon to do so; and as my mustang, no doubt, had refused to go any course except his own (I had myself noticed that little amiable trait in his character at times), his death was the consequence.

A council of war was immediately held, as to what should be done, and it was resolved that some of us should return to a "settlement," a few miles back, procure other horses if possible, and then follow the Indians. Accordingly, a "committee of three" was appointed to wait upon the "settlement," and state our unfortunate situation to the inhabitants.

In the course of a few hours the committee returned, bringing with them a sufficient number of horses to re-mount our company, but as most of them were vicious, half-broken devils, just taken from the prairies, it was some time before we could bring them into terms. Fortunately for me, the one that fell to my lot was rather less fractious than the rest, and I only received two kicks and a bite before I was fairly seated in the saddle. As soon as we had examined our arms, to make sure that all was right, we set off in full gallop upon the trail of the Indians, which at first was plainly visible amidst the tall grass of the rich prairies bordering the river.

We had gone, I suppose, some three or four miles, when, perceiving that my girth had become unbuckled, I dismounted to re-fasten it. While engaged in this operation, I heard the sound of a horse's hoofs, and looking back soon discovered some one rapidly approaching on our trail. In a few moments he came along side of me, and giving me the usual salutation of "How goes it, stranger?" he observed, that hearing in the "settlement" of our intended expedition, he had concluded to join us, if it was entirely agreeable. I assured him that such a reinforcement to our small number would be perfectly "agreeable," and re-mounting my horse, as we rode on I had time to observe the "personnel" of the strange specimen who had so unexpectedly added himself to our party.

He seemed to be about forty years of age; tall and rather spare made, and had a complexion very near the colour of unburnt bricks: at the same time, however, the great breadth of his shoulders, and the swelling muscles of his arm, which were apparent as he reined in the fiery little Mexican horse upon which he rode, gave token of strength and power of endurance. He was dressed in a hunting-shirt and leggins, the usual costume at that time of all classes, and his head was covered with a coon-skin cap, the tail of which dangled gracefully on one side. A long rifle was balanced on his shoulder, which, with a shot-pouch, and a bunch of something hanging from his belt, that looked marvellously like human scalps, completed his equipments.

After we had galloped on some time in silence, he suddenly observed, "Stranger, did you ever shoot an Injen?" "No," I replied, "I never did, but if I can only catch the rascal that killed my mustang, I hope to have that satisfaction before long." "Satisfaction!" said he, "why, it's a real pleasure to tumble over one of them there yallow devils! How often

have I waylaid their paths, for whole days and nights, living upon nothing but dried venison, and exposed to all kinds of weather, just to get one pop at the varmints, and thought myself well paid when I had knocked over a straggling rascal, and taken a little thing like these (pointing to the scalps that hung at his belt) from the top of his head! I believe I am getting used to it, though, now," said he, "for (and he sighed to think how callous he was becoming) it don't stir me up like it did at first, when I draw a bead upon an Ingen, and see him pitch headforemost from his horse upon the ground. Then I used to jump out of my hiding-place, and whirl my gun around my head, and shout till my breath was gone, and stamp upon them with my feet, and tear their scalps from their heads; but now, though I like to kill Ingens as much as ever, I am getting sorter used to it, and never take on so. Oh, stranger, (and he sighed again,) how I envy you your first Ingen!"

I looked at the man in astonishment as he spoke thus, and for the first time observed that wild and restless expression of the eye, which usually denotes an unsettled intellect. My suspicions were confirmed, when, after a short silence, he said:

"Stranger, my name is Nathan Puckett, all the way from the old North State. I'm a 'remote circumstance,' I know, and can't read nor write 'pen-writing;' but when it comes to Ingen-fighting, you can set me down for seven chances!"

Wishing to humour him a little, I asked him why it was he had such a hatred to the Indians? But not seeming to notice the question, he continued:

"Here, of late, they have got in the way of killing off whole gangs of Ingens at once: that's a great waste, and if they keep it up, I shall soon have to move further West. People ought to be more economical of 'em. Kill one or two occasionally along, as I do, and then let 'em rest a spell, and the sport wouldn't be so soon over. I make it a p'int never to average more than two full-grown Ingens a month, and if other folks would do the same, and not go in great crowds and drive 'em into the crooks of rivers, and kill 'em off by hundreds at a time, they would last for years to come. Oh! it's a great waste!"

After a short silence, seemingly ruminating upon the great consumption of the raw material of which he had been speaking, he resumed.

"Now if I was only one of those great lords I have heard tell of in the 'old country,' and had one of their big parks, do you think I'd stock it with deer and such-like game? Yes, I'd have *them*, too, but I rather reckon Ingens would be the most plenty. Then every morning after breakfast, I'd throw my rifle over my shoulder, take a turn or so round the premises, knock over a Kickapoo, and, if I felt right Ingenfied, perhaps a half-grown Waco, and by that time I'd have an appetite for dinner. After dinner, a couple of Tonkewas, and a Lipan or so, would amuse me till night; and then, if their eyes would only shine, I'd give 'em a small turn at fire-hunting. Whoop! would n't that be sport, stranger?"

Apparently much elated by this little effort at castle-building, he put spurs to his horse, and dashed off at so rapid a rate, that I found considerable difficulty in keeping up with him. Gradually, however, as the excitement wore off, he slackened his pace, and repeating the question I had asked him a few moments before, namely, why it was he had such a hatred to the Indian race, he replied

"Stranger, they killed my father, my mother, my brothers, and my sisters, and they would have murdered me too, if I had not been preserved by Providence to revenge their deaths. I'll never forget that day, stranger! In the morning I had started out to kill some meat, and when I left home, my little brothers and sisters were playing in the yard. my poor old mother was in the house a-reading in the Bible to my gray-haired father, and every thing looked so peaceful and quiet. When I came back, the smoke was rising from the spot where my home had stood, and near by lay the bodies of my murdered father, mother, brothers and sisters. I was alone in the world. For a long time afterward, I wa'n't exactly right here," said he (tapping his forehead), "and even now, when Ingens is sca'ce, and I don't get my reg'lar number, I'm mighty flirty at times."

In a short time we overtook the rest of the party, who were busily engaged in trying to recover the trail of the Indians, which, passing at that point over a hard rocky prairie, had become totally invisible, at least to our unpractised eyes. And now it was that the genius of friend Nathan began to show itself. Dismounting, and leading his horse by the bridle, he walked slowly ahead of us, every now and then stopping to examine a broken blade of grass, or some leaf or pebble, that seemed to him to have been displaced from its natural position. At length he came to a dead halt: even he, with all his wood-craft, being unable to detect any farther sign of the Indians. Suddenly he exclaimed:

"Ah! I know now what the red devils are up to! They have 'squandered' here, and if we scatter too, and circumambiate around, we will be apt to strike the trail again where they come together."

His advice was taken, and by circling round the point where the last trace of the trail had been lost, wider and wider each time, in less than an hour we came on it once more, and so plain that we had no difficulty in following it as fast as our jaded horses could go. From thence the Indians seemed to have lost all apprehensions of farther pursuit, and in a short time we came to where they had encamped so recently that their fires were still burning. An hour's ride brought us to the Chicalete, a small tributary of the La Vaca, near which we discovered the blanket tents of the Indians, and putting speed to our horses, the Indians had scarcely time to seize their guns and bows before we were upon them. I say 'we,' but unfortunately for the military renown I was about to acquire, my mustang took it into his head to make his onset (after the manner of the Chinese) by turning a couple of somersets and a flip-flap, and then commenced a series of "pitchings" that would have done honour to a steam-boat in a heavy sea-way. At the first pitch, away flew one of my pistols from my belt; at the second, the other followed suit; and at the third, my hat went by the board, so that by the time we had pitched into the enemy's camp, I had nothing left but my rifle. Perceiving that the rest had dismounted and "treed," I thought it advisable to do the same, particularly as the balls began to whistle in very uncomfortable proximity to my head. I have read somewhere that a celebrated general once remarked, during a battle, that the whistling of bullets was to him the most melodious of sounds. It may have been so, but in my opinion he had a bad ear for music. But to return.

Just as I was in the act of dismounting, a tall, hideously-painted Indian stepped from behind a tree, a few paces off, and drew an arrow, that looked to me as long as a May-pole, directly upon me. Thinks I to myself, I'm spitted before I can say "Jack Robinson," and so, perhaps, I should have been, but just at that critical juncture, my mustang, frightened by the firing of guns and the yelling of the Indians, made a dozen pitches, all concentrated into one, which landed me head foremost upon the ground. I rose, thirsting for vengeance, and levelling my rifle at the rascal who shot the May-pole at me, I fired, and cut a limb from the oak under which he was standing After a few rounds, the Indians retreated, leaving two of their number upon the ground, but as neither of them, upon inspection, showed any evidence of having been killed by a falling limb, my conscience does not accuse me of being at all accessory to their death. I am afraid, however, that Nathan could not say as much, for he pointed to a ghastly wound in the breast of one of them, and remarked: "That's the kind o' hole my rifle always makes! At any rate," said he, "I shall claim his scalp:" and suiting the action to the word, he commenced cutting it off, with as much care as if engaged in some most delicate surgical operation. At that moment the sharp crack of a rifle was heard, and Nathan, letting fall the knife from his hand, staggered backward against the trunk of a tree. I thought at first it was all over with him; but he quickly recovered himself, having only been stunned by the concussion of the ball, which slightly grazed his forehead. Looking round to see from whence the shot had come, he observed the other Indian, whom we had supposed to be dead, in the act of sinking back again upon the ground, from whence he had partially risen in order to take a more deliberate aim at his hated foe. Nathan, casting his eyes toward him, as much as to say, "Now, don't be in a hurry; I'll attend to your case presently," coolly recommenced his surgical operations, in which he had been so unexpectedly disturbed. Having finished it to his satisfaction, he leisurely wiped the blood from his knife, returned it to the

scabbard, and picking up his rifle, he walked slowly and deliberately to the spot where lay the wounded Indian. Placing the muzzle directly against his head, he pulled the trigger with as much sang-froid as if it had been a rattlesnake he was about to shoot. I turned away just as the gun was discharged, and when I looked again, Nathan was calmly re-loading his rifle.

After collecting our horses, which were tied to the neighbouring trees, we shifted our saddles from those we had ridden during the day, and set out on our return, and about four o'clock in the morning arrived at the "settlement," having travelled (with the exception of a half hour or so, where we came up with the Indians) more than seventy-five miles without halting. That night a "blow-out" was given in the "settlement," in honour of our successful foray, and notwithstanding the hard ride of the previous day, the vigour with which we footed it to the enlivening tunes of "Hug 'em Snug," and "Kiss me Sweetly," was no doubt long remembered by the belles of La Vaca.

On inquiring for Nathan the next morning, I was told that, having laid in his usual supplies of ammunition, &c., he had just started off upon another "quiet, still hunt" after the Indians.

THE MYSTERIES OF A FLOWER.

BY PROFESSOR R. HUNT

FLOWERS have been called the stars of the earth, and certainly, when we examine those beautiful creations, and discover them, analyzing the sunbeam and sending back to the eye the full luxury of coloured light, we must confess there is more real appropriateness in the term than even the poet who conceived the delicate thought imagined. Lavoisier beautifully said "The fable of Prometheus is but the outshadowing of a philosophic truth—where there is light, there is organisation and life, where light cannot penetrate, Death for ever holds his silent court." The flowers, and, indeed, those far inferior forms of organic vegetable life which never flower, are direct dependencies on the solar rays Through every stage of existence they are excited by those subtle agencies which are gathered together in the sunbeam, and to these influences we may trace all that beauty of development which prevails throughout the vegetable world. How few there are of even those refined minds to whom flowers are more than a symmetric arrangement of petals harmoniously coloured, who think of the secret agencies forever exciting the life which is within their cells, to produce the organised structure—who reflect on the deep, yet divine philosophy, which may be read in every leaf —those tongues in trees, which tell us of Eternal goodness and order!

The hurry of the present age is not well suited to the contemplative mind, yet, with all, there must be hours in which to fall back into the repose of quiet thought becomes a luxury. The nervous system is strung to endure only a given amount of excitement, if its vibrations are quickened beyond this measure, the delicate harp-strings are broken, or they may undulate in throbs To every one, the contemplation of natural phenomena will be found to induce that repose which gives vigour to the mind—as sleep restores the energies of a toil-exhausted body And to show the advantages of such a study, and the interesting lessons which are to be learned in the fields of nature, is the purpose of the present essay.

The flower is regarded as the full development of vegetable growth; and the consideration of its mysteries naturally involves a careful examination of the life of a plant, from the seed placed in the soil to its full maturity, whether it be as herb or tree

For the perfect understanding of the physical conditions under which vegetable life is carried on, it is necessary to appreciate, in its fulness, the value of the term *growth* It has been said that stones grow—that the formation of crystals was an analagous process to the formation of a leaf and this impression has appeared to be somewhat confirmed, by witnessing the variety of arborescent forms into which solidifying waters pass, when the external cold spreads it as ice over our window panes This is, however, a great error; stones do not *grow*—there is no analogy even between the formation of a crystal and the growth of a leaf All inorganic masses increase in size only by the accretion of particles—layer upon layer, without any chemical change taking place as an essentiality The sun may shine for ages upon a stone without quickening it into life, changing its constitution, or adding to its mass. Organic matter consists of arrangements of cells or sacks, and the increase in size is due to the absorbtion of gaseous matter, through the fine tissue of which they are composed. The gas—a compound of carbon and oxygen—is decomposed by the excitement produced by light, and the solid matter thus obtained is employed in building a new cell—or producing actual growth, a true function of *life*, in all the processes of which matter is constantly undergoing chemical change.

The simplest developments of vegetable life are the formation of confervæ upon water, and of lichens upon the surface of the rock. In chemical constitution, these present no very remarkable differences from the cultivated flower which adorns our garden, or the tree which has risen in its pride amidst the changing seasons of many centuries. Each alike has derived its solid constituents from the atmosphere, and the chemical changes in all are equally dependent upon the powers which have their mysterious origin in the great centre of our planetary system.

Without dwelling upon the processes which take place in the lower forms of vegetable life, the purposes of this essay will be fully answered by taking an example from amongst the higher class of plants, and examining its conditions, from the germination of the seed to the full development of the flower—rich in form, colour, and odour.

In the seed-cell we find, by minute examination, the embryo of the future plant, carefully preserved in its envelope of starch and gluten. The investigations which have been carried on upon the vitality of seeds appear to prove that, under favourable conditions, this life-germ may be maintained for centuries. Grains of wheat, which had been found in the hands of an Egyptian mummy, germinated and grew; these grains were produced, in all probability, more than three thousand years since, they had been placed, at her burial, in the hands of a priestess of Isis, and in the deep repose of the Egyptian catacomb were preserved to tell us, in the eighteenth century, the story of that wheat which Joseph sold to his brethren

The process of germination is essentially a chemical one. The seed is placed in the soil, excluded from the light, supplied with a due quantity of moisture, and maintained at a certain temperature, which must be above that at which water freezes, air must have free access to the seed, which, if placed so deep in the soil as to prevent the permeation of the atmosphere, never germinates. Under favourable circumstances, the life-quickening processes begin, the starch, which is a compound of carbon and oxygen, is converted into sugar by the absorption of another equivalent of oxygen from the air, and we have an evident proof of this change in the sweetness which most seeds acquire in the process, the most familiar example of which we have in the conversion of barley into malt The sugar thus formed furnishes the food to the new living creation, which in a short period shoots its first leaves above the soil, and these, which, rising from their dark chambers, are white, quickly become green under the operation of light.

In the process of germination, a species of slow combustion takes place, and—as in the chemical processes of animal life and in those of active ignition—carbonic acid gas, composed of oxygen and charcoal, or carbon, is evolved. Thus, by a mystery which our science does not enable us to reach, the spark of life is kindled—life commences its work—the plant grows. The first conditions of vegetable growth are, therefore, singularly similar to those which are found to prevail in the animal economy. The leaf-bud is no sooner above the soil than a new set of conditions begin, the plant takes carbonic acid from the atmosphere, and having, in virtue of its vitality, by the agency of luminous power, decomposed this gas, it retains the carbon, and pours forth the oxygen to the air. This process is stated to be a function of vitality, but, as this has been variously described by different authors, it is important to state with some minuteness what does really take place.

The plant absorbs carbonic acid from the atmosphere through the under surfaces of the leaves, and the whole of the bark, it at the same time derives an additional portion from the moisture which is taken up by the roots, and conveyed "to the topmost twig" by the force of capillary attraction, and another power called *endosmose*, which is exerted in a most striking manner by living organic tissues. This mysterious force is shown in a pleasing way by covering some spirits of wine and water in a wine-glass with a piece of bladder; the water will escape, leaving the strong spirit behind.

Independently of the action of light, the plant may be regarded as a mere machine, the fluids and gases which it absorbs pass off in a condition but very little changed, just as water would strain through a sponge or a porous stone. The consequence of this is the blanching or *etiolation* of the plant, which we produce by our artificial treatment of celery and sea-kale—the formation of the carbonaceous compound called *chlorophyle*, which is the green colouring-matter of the leaves, being entirely checked in darkness. If such a plant is brought into the light, its dormant powers are awakened, and, instead of being little other than a sponge thro ugh which fluids circulate, it exerts most remarkable chemical powers;

the carbonic acid of the air and water is decomposed; its charcoal is retained to add to the wood of the plant, and the oxygen is set free again to the atmosphere. In this process is exhibited one of the most beautiful illustrations of the harmony which prevails through all the great phenomena of nature with which we are acquainted—the mutual dependence of the vegetable and animal kingdoms.

In the animal economy, there is a constant production of carbonic acid, and the beautiful vegetable kingdom, spread over the earth in such infinite variety, requires this carbonic acid for its support. Constantly removing from the air the pernicious agent produced by the animal world, and giving back that oxygen which is required as the life-quickening element by the animal races, the balance of affinities is constantly maintained by the phenomena of vegetable growth. This interesting inquiry will form the subject of another essay.

The decomposition of carbonic acid is directly dependent upon luminous agency: From the impact of the earliest morning ray to the period when the sun reaches the zenith, the excitation of that vegetable vitality by which the chemical change is effected regularly increases As the solar orb sinks towards the horizon, the chemical activity diminishes—the sun sets—the action is reduced to its minimum—the plant, in the repose of darkness, passes to that state of rest which is as necessary to the vegetating races as sleep is to the wearied animal

These are two well-marked stages in the life of a plant; germination and vegetation are exerted under different conditions the time of flowering arrives, and another change occurs, the processes of forming the alkaline and acid juices, of producing the oil, wax, and resin, and of secreting those nitrogenous compounds which are found in the seed, are in full activity. Carbonic acid is now evolved and oxygen is retained, hydrogen and nitrogen are also forced, as it were, into combination with the oxygen and carbon, and altogether new and more complicated operations are in activity

Such are the phenomena of vegetable life which the researches of our philosophers have developed This curious order—this regular progression—showing itself at well-marked epochs, is now known to be dependent upon solar influences; the

"Bright effluences of bright essence increate"

works its mysterious wonders on every organic form Much is still involved in mystery. but to the call of science some strange truths have been made manifest to man, and of some of these the phenomena must now be explained.

Germination is a chemical change which takes place most readily in darkness; *vegetable growth* is due to the secretion of carbon under the agency of light, and the processes of *florution* are shown to involve some new and compound operations. these three states must be distinctly appreciated

The sunbeam comes to us as a flood of pellucid light, usually colourless, if we disturb this white beam, as by compelling it to pass through a triangular piece of glass, we break it up into coloured bands, which we will call the *spectrum*, in which we have such an order of chromatic rays as are seen in the rainbow of a summer shower These coloured rays are now known to be the sources of all the tints by which nature adorns the surface of the earth, or art imitates, in its desire to create the beautiful These coloured bands have not the same luminating power, nor do they possess the same heat-giving property The yellow rays give the most LIGHT, the red rays have the function of HEAT in the highest degree Beyond these properties, the sunbeam possesses another, which is the power of producing CHEMICAL-CHANGE—of effecting those magical results which we witness in the photographic processes, by which the beams illuminating any object are made to delineate it upon the prepared tablet of the artist.

It has been suspected that these three phenomena are not due to the same agency, but that, associated in the sunbeam, we have LIGHT, producing all the blessings of vision, and throwing the veil of colour over all things—HEAT, maintaining that temperature over our globe which is necessary to the perfection of living organisms—and a third principle, ACTINISM, by which the chemical changes alluded to are effected We possess the power, by the use of coloured media, of separating these principles from each other, and of analysing their effects A yellow glass allows *light* to pass through it most freely, but it obstructs *actinism* almost entirely; a deep blue glass, on the contrary, prevents the permeation of *light*, but it offers no interruption to the *actine* or chemical rays; a red glass, again, cuts off most of the rays, except those which have peculiarly a *calorific* or heat giving power

With this knowledge we proceed in our experiments, and learn some of the mysteries of nature's chemistry. If, above the soil in which the seed is placed, we fix a deep pure yellow glass, the chemical change which marks germination is prevented, if, on the contrary, we employ a blue one, it is greatly accelerated, seeds, indeed, placed beneath the soil, covered with a cobalt blue finger-glass, will germinate many days sooner than such as may be exposed to the ordinary influences of sunshine;—this proves the necessity of the principle of actinism to this first stage of vegetable life. Plants, however, made to grow under the influence of such blue media present much the same conditions as those which are reared in the dark, they are succulent instead of woody, and have yellow leaves and white stalks; indeed, the formation of leaves is prevented, and all the vital energy of the plant is exerted in the production of stalk. The chemical principle of the sun's rays, alone, is not therefore sufficient; remove the plant to the influence of light, as separated from actinism, by the action of yellow media, and wood is formed abundantly; the plant grows most healthfully, and the leaves assume that dark green which belongs to tropical climes or to our most brilliant summers. Light is thus proved to be the exciting agent in effecting those chemical decompositions which have already been described, but, under the influence of isolated light, it is found that plants will not flower. When, however, the subject of our experiment is brought under the influence of a red glass, particularly of that variety in which a beautiful purpered is produced by oxide of gold, the whole process of floriation and the perfection of the seed is accomplished.

Careful and long-continued observations have proved that in the spring, when the process of germination is most active, the chemical rays are the most abundant in the sunbeam. As the summer advances, light, relatively to the other forces, is largely increased, at this season, the trees of the forest, the herb of the valley, and the cultivated plants which adorn our dwellings, are all alike adding to their wood Autumn comes on, and then heat, so necessary for ripening grain, is found to exist in considerable excess. It is curious, too, that the autumnal heat has properties peculiarly its own—so decidedly distinguished from the ordinary heat, that Sir John Herschel and Mrs. Somerville have adopted a term to distinguish it. The peculiar browning or scorching rays of autumn are called the *parathermic* rays. they possess a remarkable chemical action added to their calorific one. and to this are due those complicated phenomena already briefly described.

In these experiments, carefully tried, we are enabled to imitate the conditions of nature, and supply, at any time, those states of solar radiation which belong to the varying seasons of the year.

Such is a rapid sketch of the mysteries of a flower "Consider the lilies of the field, how they grow, they toil not, neither do they spin, and yet I say unto you, Solomon in all his glory was not arrayed like one of these."

Under the influence of the sunbeam, vegetable life is awakened continued, and completed, a wondrous alchemy is effected, the change in the condition of the solar radiations determines the varying conditions of vegetable vitality, and in its progress those transmutations occur which at once give beauty to the exterior world, and provide for the animal races the necessary food by which their existence is maintained The contemplation of influences such as these realizes in the human soul that sweet feeling which, with Keats, finds that

"A thing of beauty is a joy for ever,
Its loveliness increasing, it will never
Pass into nothingness, but still will keep
A bower quiet for us, and a sleep
Full of sweet dreams, and health, and quiet breathing.

* * * * *

"Such the sun and moon,
Trees old and young, sprouting a shady boon
For simple sheep, and such are daffodils,
With the green world they live in."

THE DOUBT.

Spake the Poet, doubtful-hearted
"Stirless here, in thought, shall I
Hear the roar of earth around me,
See the strife of life go by?
Thoughts—what are they?—seeds unfruitful;
Deeds the harvest are sublime—
Loud the voice of duty crieth,
'Act—with action fashion time.'"

Came the calmer words of Reason,
Clearer-visioned—"Mortal, see,
Thought, the living soul of action,
Thought may highest action be
Heaven to each his part assigning,
Marks for thee a power sublime—
Thine shall be the acts of races,
Thine the deeds of endless time!" W. C BENNETT.

TWELFTH NIGHT.

BY LEIGH HUNT.

CHRISTMAS goes out in fine style,—with Twelfth Night. It is a finish worthy of the time. Christmas Day was the morning of the season: New Year's Day the noon: Twelfth Night the evening, brilliant with innumerable planets of twelfth-cakes. The whole island keeps court, nay, all Christendom. All the world are kings and queens. Everybody is somebody else, and learns at once to laugh at, and to tolerate, characters different from his own, by enacting them. Cakes, characters, forfeits, lights, theatres, merry rooms, little holiday faces, and last, not least, the painted sugar on the cakes, so bad to eat, but so fine to look at, useful because it is perfectly useless, except for a sight and a moral,—all conspire to throw a giddy splendour over the last night of the season, and to send it to bed in pomp and colours, like a Prince.

And not the least good thing in Twelfth Night is, that we see it coming for days beforehand, in the cakes that garnish the shops. We are among those who do not like "a surprise," except in dramas. We like to know of the good things intended for us. It adds the pleasure of hope to that of possession. Thus we eat our Twelfth-cake many times in imagination, before it comes. Every pastry-cook's shop we pass, flashes it upon us.

"Coming twelfth-cakes cast their shadows before,"

for shadows they can be called, which shade have none, so full of colour are they, as if Titian had invented them. Even the little ragged boys, who stand at those shops by the hour, admiring the heaven within, and are destined to have none of it, get, perhaps, from imagination alone, a stronger taste of the beatitude, than many a richly-fed palate, which is at the mercy of some particular missing relish,—some touch of spice or citron, or a "little more" egg.

We believe we have told a story of one of those urchins before, but it will bear repetition, especially as a strong relish of it has come upon us, and we are tempted to relate it at greater length. There is nothing very wonderful or epigrammatic in it, but it has to do with the beatific visions of the pastry shops. Our hero was one of those equivocal animal-spirits of the streets, who came whistling along, you know not whether thief or errand-boy, sometimes with bundle and sometimes not, in corduroys, a jacket, and a cap or bit of hat, with hair sticking through a hole in it. His vivacity gets him into scrapes in the street, and he is not ultra-studious of civility in his answers. If the man he runs against is not very big, he gives him abuse for abuse at once; if otherwise, he gets at a convenient distance, and then halloos out "Eh, stupid!" or "Can't you see before you?" or "Go, and get your face washed." This last is a favourite saying of his, out of an instinct referable to his own visage. He sings "Buffalo Gals" and a "Shiny Night," varied occasionally with an uproarious "Rise, Gentle Moon," or "Coming through the Rye." On winter evenings you may hear him indulging himself, as he goes along, in a singular undulation of yowl,—a sort of gargle,—as if a wolf were practising the rudiments of a shake. This he delights to do more particularly in a crowded thoroughfare, as though determined that his noise should triumph over every other, and show how jolly he is, and how independent of the ties to good behaviour. If the street is a quiet one, and he has a stick in his hand (perhaps a hoop stick), he accompanies the howl with a run upon the gamut of the iron rails. He is the nightingale of mud and cold. If he gets on in life, he will be a pot-boy. At present, as we said before, we hardly know what he is; but his mother thinks herself lucky if he is not transported.

Well, one of these elves of the *pave*—perplexers of Lord Mayors, and imitators of the police—was standing one evening before a pastry-cook's shop-window, flattening his nose against the glass, and watching the movements of a school-boy who was in the happy agony of selecting the best bun. He had stood there ten minutes before the boy came in, and had made himself acquainted with all the eatables lying before him, and wondered at the slowness and apparent indifference of jaws masticating tarts. His interest, great before, is now intense. He follows the new-comer's eye and his hand hither and thither. His own arm feels like the other's arm. He shifts the expression of his mouth and the shrug of his body at every perilous approximation which the chooser makes to a second-rate bun. He is like a bowler following the nice inflexions of the bias; for he wishes him nothing but success; the occasion is too great for envy: he feels all the generous sympathy of a knight of old, when he saw another within an ace of winning some glorious prize, and his arm doubtful of the blow.

At length the awful decision is made, and the bun laid hands on.

"*Yah!* you muffin," exclaims the watcher, bursting with all the despair and the indignation of knowing boyhood, "you have *left the biggest!*"

Twelfth-cake and its king and queen are in honour of the crowned heads who are said to have brought presents to Jesus in his cradle—a piece of royal service not necessary to be believed in by good Christians, though very proper to be maintained among the gratuitous decorations with which good and poetical hearts willingly garnish their faith. "The Magi, or Wise Men, are vulgarly called (says a note in 'Brand's Popular Antiquities,' quarto edition by Ellis, p 19,) the three kings of Collen (Cologne). The first, named Melchior, an aged man with a long beard, offered gold; the second, Jasper, a beardless youth, offered frankincense; the third, Balthaser, a black, or moor, with a large spreading beard, offered myrrh." This picture is full of colour, and has often been painted. The word Epiphany (from the Greek, signifying, an appearance from above), alludes to the star which is described in the Bible as guiding the Wise Men. In Italy, the word has been corrupted into Befana, or Befana, (as in England it used to be called Piffany), and Befana, in some parts of that country, has come to mean an old fairy, or Mother Bunch, whose figure is carried about the streets, and who rewards or punishes children at night by putting sweetmeats, or stones and dirt, into a stocking hung up for the purpose near the bed's head. The word Befana, then, it seems, originally means a trick or mockery put upon any one—to such base uses may come the most splendid terms. Twelfth Day, like the other old festivals of the church of old, has had a link of connexion found for it with Pagan customs, and has been traced to the Saturnalia of the ancients, when people drew lots for imaginary kingdoms. Its observation is still kept up, with more or less ceremony, all over Christendom. In Paris, they enjoy it with their usual vivacity. The king there is chosen, not by drawing a paper as with us, but by the lot of a bean which falls to him, and which is put into the cake, and great ceremony is observed when the king or the queen "drinks," which once gave rise to a jest, that occasioned the condemnation of a play of Voltaire's. The play was performed at this season, and a queen in it having to die by poison, a wag exclaimed with Twelfth Night solemnity, when her Majesty was about to take it, "The queen drinks." The joke was infectious, and the play died, as well as the poor queen.

Many a pleasant Twelfth Night have we passed in our time; and such future Twelfth Nights as may remain to us shall be pleasant, God and good will permitting, for even if one should be round about them, we have no notion of missing those mountain-tops of rest and brightness, on which people may refresh themselves during the stormiest parts of life's voyage. Most assuredly will we look forward to them, and stop there when we arrive, as though we had not to begin buffeting again the next day. No joy or consolation that heaven or earth affords us, will we ungratefully pass by; but prove, by our acceptance and relish of it, that it is what it is said to be, and that we deserve to have it. "The child is father to the man," and a very foolish grown boy he is, and unworthy of his sire, if he is not man enough to know when to be like him. What! shall we go and sulk in a corner, because he is not just what he would have it? Or shall he discover that his dignity will not bear the shaking of holiday merriment, being two fragile and likely to tumble to pieces? Or lastly, shall he take himself for too good and perfect a person to come within the chance of contamination from a little ultra life and Wassail-bowl, and render it necessary to have the famous question thrown at his stately and stupid head—

"Dost thou think, because thou art virtuous, there shall be no more cakes and ale?"

This passage is in "Twelfth Night," the last play (be it never

forgotten) which Shakspeare is understood to have written, and which shows how in his beautiful and universal mind the belief in love, friendship, and joy, and all good things, survived his knowledge of all evil,—affording us an everlasting argument against the conclusions of minor men of the world, and enabling the meanest of us to dare to avow the same faith.

Here is another lecture to false and unseasonable notions of gravity, in the same play,—

"I protest (quoth the affected steward Malvolio) I take these wise men, that crow so at these set kind of fools, no better than the fools' zanies."

"O (says the Lady Olivia), you are sick of self-love, Malvolio, and taste with a distempered appetite. To be generous, guiltless, and of free disposition, is to take those things for bird-bolts, that you deem cannon-bullets."

This is the play in which are those beautiful passages about music, love, friendship, &c., which have as much of the morning of life in them as any that the great poet ever wrote, and are painted with as rosy and wet a pencil —

"If music be the food of love," &c

"Away before me to sweet beds of flowers,
Love thoughts lie rich when canopied with bowers"

"She never told her love
But let concealment, like a worm i' the bud,
Feed on her damask cheek," &c

"I hate ingratitude more in a man
[says the refined and exquisite Viola],
Than lying, vainness, babbling, drunkenness,
Or any taint of vice, whose strong corruption
Inhabits our frail blood."

And again,

"In nature there's no blemish, but the mind,
[that is to say, the faults of the mind],
None can be call'd deform'd but the unkind"

The play of "Twelfth Night," with proper good taste, is generally performed, at the theatres, on Twelfth Night. There is little or nothing belonging to the occasion in it, except that there are a set of merry-makers who carouse all night, and sing songs enough to "draw three souls out of one weaver." It is evident that Shakspeare was at a loss for a title to his play, for he has called it, "Twelfth Night, or *What You Will*," but the nocturnal revels reminded him of the anniversary which, player and humorist as he was, and accustomed, doubtless, to many a good sitting-up, appears to have stood forth prominently among his recollections of the year. So that it is probable he kept up his Twelfth Night to the last —assuredly he kept up his merry and romantic characters, his Sir Tobies and his Violas. And keeping up his stage faith so well, he must needs have kept up his home faith. He could not have done it otherwise. He would invite his Stratford friends to "king and queen," and, however he might have looked in face, would still have felt young in heart towards the budding daughters of his visitors, the possible Violas perhaps of some love story of their own, and not more innocent in "the last recesses of the mind" than himself.

We spent a Twelfth Night once, which, by common consent of the parties concerned, was afterwards known by the name of *the* Twelfth Night. It was doubted among us, not merely whether ourselves, but whether anybody else, ever *had* such a Twelfth Night;—

"For never since created cake,
Met such untiring force, as named with these
Could merit more than that small infantry,
Which goes to bed betimes"

The evening began with such tea as is worth mention, for we never knew anybody make it like the maker. Dr. Johnson would have given it his placidest growl of approbation. Then, with piano-forte, violin, and violoncello, came Handel, Corelli, and Mozart. Then followed the drawing for king and queen, in order that the "small infantry" might have their due share of the night, without sitting up too too-late (for a reasonable "too-late" is to be allowed once and away). Then games, of all the received kinds, forgetting no branch of Christmas customs. And very good extempore blank verse was spoken by some of the court (for our characters imitated a court), not unworthy of the wit and dignity of Tom Thumb. Then came supper, and all characters were soon forgotten but the feaster's own; good and lively souls, and festive all, both male and female,—with a constellation of the brightest eyes that we had ever seen met together. This fact was so striking, that a burst of delighted assent broke forth, when Moore's charming verses were struck up,—

"To ladies' eyes a round, boys,
We can't refuse, we can't refuse;
For bright eyes so abound, boys,
'Tis hard to choose, 'tis hard to choose."

The bright eyes, the beauty, the good humour, the wit, the poetry (for we had celebrated wits and poets among us, as well as charming women), fused all hearts together in one unceasing round of fancy and laughter till *breakfast*,—to which we adjourned in a room full of books, the authors of which might almost have been waked up and embodied to come among us. Here, with the bright eyes literally as bright as ever at six o'clock in the morning (we all remarked it), we merged one glorious day into another, as a good omen (for it was also fine weather, though in January), and as luck and our good faith would have it, the door was no sooner opened to let forth the ever-joyous visitors, than the trumpets of a regiment quartered in the neighbourhood struck up into the morning air, seeming to blow forth triumphant approbation, and as if they sounded purely to do us honour, and to say, "You are as early and untired as we."

We do not recommend such nights to be "resolved on," much less to be made a system of regular occurrence. They should flow out of the impulse, as this did, for there was no intention of sitting up so late. But so genuine was that night, and so true a recollection of pleasure did it leave upon the minds of all who shared it, that it has helped to stamp a seal of selectness upon the house in which it was passed, and which, for the encouragement of good fellowship and of humble aspirations towards *tree-planting*, we are here incited to point out for by the same token the writer of these papers planted some plane-trees within the rails by the garden-gate (selecting the plane, in honour of the Genius of Domesticity, to which it was sacred among the Greeks), and anybody who does not disdain to look at a modest tenement for the sake of the happy hours that have been spent in it, may know it by those trees, as he passes along the row of houses called York-buildings, in the New-road, Marylebone. A man may pique himself without vanity, upon having planted a tree, and, humble as our performance has been that way, we confess we are glad of it, and have often looked at the result with pleasure. The reader would smile, perhaps sigh (but a pleasure would or should be at the bottom of his sigh), if he knew what consolation we had experienced in some very trying seasons, merely from seeing those trees growing up, and affording shade and shelter to passengers, as well as a bit of leafiness to the possessor of the house. Every one should plant a tree who can. It is one of the cheapest, as well as easiest, of all tasks; and, if a man cannot reckon upon enjoying the shade much himself (which is the reason why trees are not planted everywhere), it is surely worth while to bequeath so pleasant and useful a memorial of himself to others. They are green footsteps of our existence, which show that we have not lived in vain.

"Dig a well, plant a tree, write a book, and go to heaven," says the Arabian proverb. We cannot exactly dig a well. The parish authorities would not employ us. Besides, wells are not so much wanted in England as in Arabia, nor books either, otherwise we should be two-thirds on our road to heaven already. But trees are wanted, and ought to be wished for, almost everywhere; especially amidst the hard brick and mortar of towns, so that we may claim at least one-third of the way, having planted more than one tree in our time; and if our books cannot wing our flight much higher (for they never pretended to be anything greater than birds singing among the trees), we have other merits, thank heaven, than our own to go upon; and shall endeavour to piece out our frail and most imperfect ladder, with all the good things we can love and admire in God's creation.

THE GATHERED ROSE.

BY MARY SOUTHWELL.

ONE burning day in June, when the sun had dispersed every cloud, and reigned in all his brightness over the glowing sky, I lay down tired on a bank of moss, where the drooping branches of a young sycamore cast a refreshing shadow. I was quite alone,—for the birds had hidden themselves in green boughs far above the earth, waiting till the scorching hour of noon was past, and the fainting flowers had closed their eyes, and bowed down their heads to dream about the cool night and the pleasant dews. But whilst lying so sorrowful because I was companionless, that I forgot to receive with thankfulness the sunny scenes by which I was surrounded, and the peaceful rest of my soft couch, the warm west wind, with blossoms on his robe, came floating by, and as he caught the rising sigh of sadness, stooped his compassionate wings beside me, and lingered to tell me so sweet a tale, that even now, when many years lie between me and that dear hour, the magical echoes of his voice still vibrate in my heart.

"You are resting on hallowed ground," he began, in tones of silver music. "Charms and recollections haunt this spot, of which you are unconscious, but they give pensive beauty to the violet that lies half hidden in the moss, and tender melody to the breeze that wanders here at evening, and then sweeps on to whisper in the poet's ear thoughts the world cannot understand.

"This hot season has dried the little brook that used to warble amongst the long grass beneath you—and the frosts of the past winter withered to the roots a fair rose-tree that looked into its waters. Alas, how fearfully omnipresent is death! Mysteriously is decay interwoven with our brightest dreams. The softest sigh may cast the fairest blosom to the dust. The day so earnestly desired may call away the friend best beloved.

"This rose-tree was not more favoured by situation than many of the flowers that grew around, but there dwelt within it a better heart,—causing it to receive to greater profit the warmth of the moss that crept humbly round its roots, and the gay spirit of the waters bringing life and joy into its veins, and the wonderful teaching of the varying sky, that, in smiles or storms, never ceased to watch over it. One single bud graced this happy tree. I have heard my eastern brother tell, that many once had clustered on its stems; but cankering sickness grew within them, until he carried them all, one by one, blighted to the earth—all but this precious bud of which I speak. I saw nothing of this. Love, and life, and beauty, alone did I ever find in that tree; but it might have been the softened pitying shadow of remembered death and separation that united this solitary rose-bud to its parent-tree so tenderly—making it love to nestle closer, as if for security within its encircling leaves, and put forth its sweetest smile beneath their shade. Day by day I came to that opening flower, which lifted up its fair head, and smiled a constant welcome, yielding the spirit to which it looked for guidance, the purest blessings he has ever known. In the fresh and early morning how ready was she to catch the earliest rays of the ascending sun, while her blushing leaves quivered at the notes of the lark, that was already out of sight, and tears of unutterable joy and love welled from her hidden heart. And at noon, when a hot stillness rested on the land, and my languid wings could scarcely bear me hither, I found her bowed in silent thoughtfulness—communing within herself; and at such hours her words were full of deeper and richer beauty—imparting such treasures of fragrancy, that I went forth laden with comfort and refreshment.

"'How is it,' said I, sometimes, 'that in this season, when the sun is become a burden, and the springs of nourishment are dried, such a fountain of bliss should be opened within you?' 'Do you not yet know,' she answered, 'that the time of bereavement is often that of holiest enjoyment? Does not the soul then more gratefully muse over, and more purely love the benefactor and the friend, when the body is no longer the medium of intercourse? How often have my leaves withstood your kind caress, or veiled from my spirit the friendly sun—tempting it to believe that he regarded me no more; nay, have they not at times, by wayward agitation, jarred even the melody of the nightingale to my heart? But now I see nothing, and am all thought—oh, how I love them now! and at night, when even you are sleeping, before the heavenly stars will I weep over my unfaithfulness. And think not, dearest friend, that in bodily forms only can pleasure and wisdom journey to the soul. Does not the child look up in love to his mother's face long before the words of tenderest affection are intelligible to him, and receive with smiles the bright sunshine while still unconscious that it has a name?'

"Then I went forth from the hushed flower, and sought the sorrowful and lonely; and, while they blessed the unseen breeze that brought them consolation, they learned willingly the lesson the rose had taught, and believing that vanished peace would yet again alight upon their path, they no longer sought to track its silver wings in the blinding mists of the past."

The Wind sighed, "Alas!" said I, "have not you then learned to rejoice always?" "Hush!" he whispered, "it is not forbidden even to the thankful-hearted to mourn, and he who is still a wanderer here, even among roses, cannot fail to weep full often, though he will ever find it his surest consolation to dry the tears of others. This is my happiest joy, but could I cheer them, had I never felt their grief? Is it not in hearing me sigh that they are comforted? Now listen, for I must away: the hour of noon is past, and the faint flowers will lament my absence.

"The green bands which had wrapped the young bud in happy retirement, were at length all loosened, and, blushing to the very heart the perfect rose looked forth upon the world. Rejoicing in the power to bless, she poured out all the treasure of her spirit on the air, and reflected the glory of the sun from the mirror of her dewy breast, and bent her head to cast a beautiful shadow on the gentle brook. It seemed as if she could not show forth all her love to the dear companions of her life.

"There passed by this way a human being, with eyes that delighted to rest upon the beautiful, and a voice that could speak beguiling words, but without a heart to love. Before every fair form his senses were enthralled—but he had never sought after the fountain of beauty in the pure heart. He looked upon the rose, and bent down to worship her. Still more willingly did she glow in her confusion, as he poured forth his ardent breath. Lingeringly he knelt, for he felt that he could not go away and loose her. 'Wilt thou come with me?' said he. 'I will carry thee into a brighter land than this, where clouds shall never hide thee from the sun, and throngs of worshippers shall bow before thy feet, whereas here thou art surrounded only by these poor vulgar weeds.' 'It is my home,' said the rose; 'the land of my birth. To the humblest flower here I am deeply grateful; and not a cloud has shadowed us together, whose remembrance is not pleasant to me.' Then the youth urged his *loneliness*—how that hitherto he had wandered, seeking vainly for perfection—whithout which he must die in painful yearnings. And he wrung his hands, and bewailed the hour he had first seen her, if now they were to part for ever. Then the tender rose looked up, and there were tears upon her cheek; and cold as was the being who knelt before her, her spirit acknowledged the divine majesty of man. 'Could I really bless you?' she asked timidly. 'Even here I am but the humble recipient of good; how then could I minister to your happiness?' The youth waited not to reply, but stretching forth his impatient hand, plucked the scarcely-shrinking flower, and; laced it in his bosom. And so eagerly were his proud thoughts fixed upon the matchless beauty of his glorious prize, and he did not even notice the tears she shed in parting from her parent-tree, and when I saw them fall unheeded to the ground—the only bequest she could leave to a place so long gladdened by her presence—I knew that he *loved* her not, and I sighed so heavily, that he turned and departed.

"We met again. The rose was somewhat paler, but certainly more lovely as she rested calmly beside him, drinking sunshine from his eyes and joy from his voice, but finding no home within his heart. And a short—oh, how short a time elapsed—and I found her blighted and dying, even on his breast; while he angrily complained that he must carry about with him a withered rose, when all around so many were glowing in their prime of charms, 'Is it you, dear friend?'

she murmered faintly, as I pressed closer to catch her last breath. 'Carry me to the bed of moss, by the silver brook; and lay me under the tree that gave me birth. No longer can my spirit yield sweet refreshment, and my leaves shall no more look fair, even to the eye of him who once told me they were changeless.'

"I raised the faded form upon my wings, and lifelessly it rested, for the very heart was broken in twain. The destroyer was almost unconscious that the dry and thorny stalk was all now left to remind him of his late blessing, so earnestly was he gazing on a snow-white lily at his side; and the sigh he had heaved for his sad fate, when I first addressed the rose, still lingered on his lips when mine, beneath that lonely tree, was waiting a requiem over the perished flower I had had to rear."

CLARA GREGORY, OR, THE STEPMOTHER.

A STORY IN TEN CHAPTERS.

CHAPTER I.—PART I.

"Do, dear Clara, stay at home to-night, father will be so grieved"

"He certainly has shown no great regard for my feelings, and he cannot expect me to be over tender of his. I am sure I could not endure to stay here, and my marvel is that you can"

Clara Gregory did not observe the tear that glistened in her sister's eye, as she spoke these words, in a bitter tone, yet her voice was gentler when she spoke again

"Please, Alice, just tie my tippet for me, my hands are gloved There, thank you."

She opened the hall-door, and stood for a moment listening to the moan the leafless trees made as they shivered in the blast

"Well, Alice, I suppose it is of no use asking you to go with me, so, good night" And she slowly descended the steps, and passed down the street

Alice stood watching her receding form until she disappeared, and then, with a shiver, she turned away

"How cold it is" she said to herself "I must be sure to have it warm and pleasant for them when they come Let me see I will have a fire in the little back parlour, it looks so bright and cheery. I know father will like that best."

The fire was kindled, the rooms were lighted, and the young girl wandered through them, again and again, to assure herself that nothing could make them more home-like and inviting In the large parlour, with their rich furniture and furnace-heat, there was little for her to do.

A certain awe forbade her to interfere with "Aunt Debby's" accustomed arrangements, but in the "dear little back parlour" she might do as she listed, and she found ample employment for her fairy fingers.

The fire was made to throw its bright blossom over the pale face, the curtains were to be set open, the slippers to be placed before the chair, the favourite books to be laid upon the table

All, at last, was done The pictures on the wall, the crimson curtains, and the carpet on the floor, reflected the streaming light of the fire with a grateful glow of comfort One circumstance remained to be decided. Should the old dog be suffered to crouch as usual on the hearth-rug, or be banished to less honourable quarters? After deep and anxious deliberation this was also settled Carlo was permitted to ensconce himself in the chimney-corner, while his young mistress placed herself in the great arm-chair before the fire, and fell to dreaming Alice Gregory was but fifteen years old, yet anyone would have longed to know of her dreams, who might have looked on her as she sat there, her thoughtful eyes fixed on the glowing coals, and her youthful face invested with a dreamy air And much she had to make her think and muse, poor motherless child, and this night was to bring a stranger into that place, so hallowed by the memory of her who had passed thence into the heavens

Two long hours did the girl sit there, awaiting her father's return Sweet visions of the past, dim visions of the future, were about her. All the saddest and the happiest hours of her brief life came back to her. They came as old familiar friends, sorrowful as were some of their face, and she clung to them, and could not bear to leave them for those coming hours that beckoned to her with so doubtful promise

"I hope she will love me," mused she of the strange mother, "but she cannot as Aunt Mary does, and nobody, nobody can ever love me as my own dear mother did" she sobbed, with a gush of tears But presently they staid in their fountain, for she thought of her mother still loving her, and of her Saviour, ever near, loving her more than mortal could. "I will try to be good and gentle," thought she, "and she *will* love me. Nine o'clock! Aunt Debby thought they would be here by seven, I must go and ask her what the matter can be."

The individual yclept "Aunt Debby" was no less a personage than Mrs. Deborah Dalrymple, whose pride it was, that for twenty years she light of her wisdom, and the strength of her hands, had been the dependence of Dr Arthur Gregory's household On this occasion, Alice found her in the dining room, seated in state, her bronzed visage graced by the veritable cap with which she had honoured the reception of the first Mrs. Gregory Its full double ruffle and bountiful corn coloured bows, made her resemble the pictures, in the primers, of the sun with puffed cheeks, surrounded by his beams She would show no partiality, not she What Dr. Gregory thought was right, was right He had been a good master to her as ever a woman need have, and she was sure of a comfortable home the rest of her days whoever came there Dr Gregory was in all things her oracle, her admiration, her sovereign authority. The world did not contain such a man as he, that that didn't But, barring the doctor, she sensibly realised the world had no more reliable authority than Mrs Deborah Dalrymple. Then she sat, anxiously speculating on the approaching revenue, and plying the needles on her best knitting-work with unwonted zeal.

"Aunt Debby, do you know it is nine o clock?"

"I heard the clock strike nine."

"Father should have been here two hours ago"

"I don't know that."

"Why! you said he would be here at seven.

"I don't know that"

"What then?"

"I *expected* him"

"Well, what can be the reason that he does not come?"

"Great many things"

"But what *is* the reason?"

"He knows better than I"

"What do you *suppose*?"

"Nothing"

Alice came to a pause with a decidedly unsatisfied expression.

"Was it winter when he brought my mother home?"

"No"

"Summer?"

"Yes"

"Was it a pleasant day?"

"Yes."

Despairing of Aunt Debby's communicativeness, Alice returned to her solitude, roused a wig from the grate, and sitting down on an ottoman beside Carlo, commenced an attack on his taciturnity

"But Lark! those are father's bells! No—yes! yes, they are come!"

Girl and dog sprang to the front together, and ran to the door In her haste, Alice brushed something from the work table It was nothing but her mother's needle-book, but she pressed it to her lips as she tenderly replaced it, and passed more slowly into the hall

The cordial greetings were over The cloaks and furs were laid aside, and Alice sat down in the chimney-corner to observe the new comer, in whose face the full radiance of the night fire shone, while she conversed with Aunt Debby about the journey and the weather

"She is not pretty," thought she "Very unlike mother—taller and slighter, with black eyes and hair—still, her features are noble, and she looks good"

She came to this satisfactory conclusion just as her father suddenly exclaimed—

"Where did you say Clara was, Alice? Has she not returned from Belford?"

"Yes, sir, she is staying with Ellen Morgan to-night"

"Is Ellen Morgan sick?"

How Alice wished she could say yes, or anything else than the plain, reluctant *no*—but out it must come An expression of pain and displeasure came over the doctor's countenance, and he glanced quickly at his wife. But she seemed to have no other thought than of the plants over which she was bending

"What sweet flowers have come to you, in the midst of the snow, Alice!" she exclaimed, as she lifted a spray of monthly rose, weighed down with its blossoms

Alice's eyes glistened with pleasure as she saw that her darlings had found a friend

"They were mother's," she began, then stopped suddenly.

"You must love them very dearly," said Mrs. Gregory, with feeling. "But where is the little Eddie? Shall I not see him?"

"Oh! he begged to sit up and wait, but he fell asleep, and Aunt

Debby put him to bed. Would you like to go up and look at him? He is so pretty in his sleep!"

"Indeed he *is* pretty in his sleep," thought the stepmother, as she bent over the beautiful child in his rosy dreams. She laid back his soft, bright curls, and lightly kissed his pure cheek, gazing long and tenderly upon him. Tears shone in her eyes as she, turning toward Alice, said softly—

"Can we be happy together, Alice dear?"

"I am sure we shall," answered the warm-hearted girl impulsively. "Indeed, I will try to make you happy."

Chapter II.

Late the next morning, Mrs Gregory was sitting in the parlour with little Eddie at her side, where he had been enchained for five long minutes by the charms of a fairy tale. But as some one glided by the door, he bounded away, crying—

"There's sister Clara! Clara, come and see my new mamma!"

Presently, however, he came back with a dolorous countenance, complaining—

"She says I have no new mamma, and she does not want to see her either. But I *have*," he continued emphatically, laying hold on one of her fingers with each of his round white fists, "and you will stay always, and tell me stories, won't you? Was that all about Fenella?"

"We will have the rest another time, for there is the dinner-bell, and here comes your father."

The joyous child ran to his father's arms, and then assuming a stride of mettable dignity, led the way to the dining-room.

"Has not Clara yet returned?" asked the doctor, in a tone of some severity.

"Yes, father," said her voice behind him, and as he turned she greeted him, respectfully, yet without her usual affectionate warmth.

Then came her introduction to the stepmother, who greeted her with a gentle dignity peculiar to her. Clara's manner, on the contrary, was extremely dignified, without any special gentleness, ceremonious and cold. As the family gathered around the table, all but one made an attempt at conversation. But the presence of one silent iceberg was enough to congeal the sociability of the group. Remarks became shorter than the intervals between them, and finally quite ceased. Mrs Gregory, meanwhile, had time to observe her eldest daughter. She was a handsome, genteel girl of about seventeen, elegantly dressed. Her fair face was intelligent, though clouded at this time with an expression of determined dissatisfaction. The red lips of her pretty little mouth pressed firmly together, as though to make sure that no word should escape them; the dark-blue eyes were continually downcast.

Suddenly little Eddie exclaimed, directing his spoon very pointedly towards Clara,

"What made you say I had no new mamma? There she is!"

The crimson blood rushed to Clara's temples, as she visited a most reproving glance on the child, while Alice hastened to relieve the awkward predicament by suggesting to him the desirableness of more sauce on his pudding. He was hushed for the moment, but presently broke forth again, as though a bright thought had flashed upon him.

"She isn't the same dear mamma I used to have, is she? Say, father, did you go up to heaven and bring her back? Oh! why did'nt you let me go too?"

"No, my child," said Dr Gregory very seriously, "I could not go for your dear mamma, nor would I if I could, for she is with those whom she loves more than even us. But, perhaps, she has sent you this mother to love you, and take care of you, till you can go to her, if you are good."

"I will be good," said the child very resolutely, and they rose from the table.

Alice and her mother lingered talking at the western window, which commanded a fine sea view.

"She is certainly a delightful woman," thought Alice, as, after a long chat, she tripped blithely up to her chamber.

As she opened the door, she discovered Clara thrown upon the bed, her face hidden in the pillows, weeping. She hesitated a moment, then going up to her, said in a tone of —

"Don't, dear Clara, cry so!"

But her only answer was a fresh burst of tears. So she sat down on the bed-side and took her mother's miniature, which Clara clasped between her hands. It was a picture of rare beauty, as well might be that of a faultless form, in the first pride of womanhood, glowing with life and love. Alice gazed on it with mournful fondness, and kissed its small, sweet face many times.

"Oh, I am wretched, *wretched!*" moaned Clara, "the happiness of my life is gone for ever."

Alice took her hand in hers, and said softly—

"You know we thought, when mother died, we could never cease to weep, we could not live at all. Yet we have been even happy since that, though we love her and think of her just as much as ever. Indeed, I believe I love her more and more. I think we we shall be happy still."

"Happy! with this strange woman thrust upon me, every day, in my mother's stead? I tell you, Alice, it will never, never be. I cannot say but *you* may enjoy life as well as ever, but not I. I do not want to be happy—I will not be happy with a stepmother. Oh, the odious name!"

In her excitement she rose from the bed and paced the floor.

"You can, undoubtedly, be as unhappy as you choose, and you can *hate* father's wife if you want to; but I think it would be a great deal easier to love her," said Alice. "I am sure, if our own blessed mother could speak to us, she would bid us treat her very kindly, and try to make her happy with us."

"There is no danger but she will be *happy* enough," retorted Clara. "Yet she shall lament the day she ever intruded upon us here."

"Oh, Clara, Clara! you are very wrong. You ought not to speak so or to feel so," said Alice, sadly, putting her arm about her sister's waist and joining in her walk. "Certainly she had a right to love our father and to marry him, and I do not see the need of suspecting her of a plot upon our peace."

"But what infatuated father to ask her? How *could* he forget my beautiful mother so soon!" and Clara threw herself, weeping, into a chair.

"He has *not* forgotten her," replied Alice, almost indignantly. "And you and I have no right to doubt that he loved her even better than we. But I know not why that should render it impossible for him to appreciate loveliness in another. He was very desolate, and I am thankful that he has found such a friend."

"*Such* a friend? I see nothing remarkably lovely about her."

"Why, I think she is very attractive."

"*Attractive!* Pray what has attracted you, dear? She is, certainly, very plain."

"I do not think she is."

"She looks as though she meant to rule the world, with her great black eyes and military form."

"Her 'great black eyes' are soft, I am sure, and I admire her form. Then she looks so animated when she speaks, and her smile, I think, is fascinating."

"Oh, look at me, I pray you hold my hand, Alice, and say, if you can, that you admire *her*."

"Nobody is so lovely as mother. But, if you were not determined to find fault, I know this face would please you. At any rate, you cannot dislike her manner, she is very ladylike. She dresses, too, in perfect taste."

"I suppose she is well-bred, and I have no reason to doubt her dress-maker's taste. But once more, Alice, I never shall like her, and I beg you never to speak to me of her, except from necessity. You, of course, can love her just as well as you have a mind to, but you must not expect me to. I shall try to be civil to her."

"Oh, I wish you could see Aunt Mary, I am sure she could convince you that you are wrong."

"You think that I cannot understand your feelings, and that nothing is easier for me than to receive a stranger here. But, Clara, you do know that you love not our precious mother more devotedly than I, nor cherish her memory more sacredly, I am quite sure that no child could. It was terrible for me, at first, to think of seeing another here in her place, of calling another by her consecrated name. It was sacrilege to me. But Aunt Mary talked to me so kindly, and taught me to think calmly and reasonably about it, and I became certain that I ought to be an affectionate, dutiful child to my father's wife, if it were in my power. And I am sure it will be easy, for she is loveable."

"I am grateful to father for giving me so excellent a friend. I shall never love her better than Aunt Mary, indeed; but it is so pleasant for us to be together once more in our own home. Only think—you at boarding-school, Neddie at grandfather's, I at uncle Talford's, and poor father here alone. I am sure we shall be vastly happier here together, if you will only be a good girl."

"I am not going to be!" said Clara, with a pouting smile.

"Ah! not another word," cried Alice, with a playful menace. "I shall call it treason to listen to you. I shall go away so that you may have nobody to say wicked things to."

And with the words she ran from the room and shut the culprit in.

Chapter III.

Weeks flitted over the Gregorys, whose course it is needless to trace.

Aunt Debby became fully satisfied that if there was a woman in the world fit for Dr Gregory, it was the one he had married. Few children ever had a stepmother like her, very few indeed. Never a loud word nor a cross look had she seen, never! She guessed, too,

there were not many women, ladies born and bred, that knew when work was done about right better than she, not many. She didn't know who should be a judge if she wasn't, that had kept Dr. Arthur Gregory's house for upward of twenty years—twenty years last August.

What was that gentleman's private opinion in the matter, these closing sentences of an epistle given under his hand will tell.

". . . A strangely excellent wife is this same Catharine Gregory. Alone in her society, I love her, with my children, I am grateful to her, among my friends, I am proud of her. Every day convinces me more perfectly that I have found in her such a combination of virtues as I have never seen or hoped to see since departed

'The being beauteous
Who unto my youth was given.'

Hoping, for your sake, my dear Ashmun (though with doubt, I confess,) that this planet bears such another, I am yours,

GREGORY."

And many were the doctor's patients whose pale faces lighted at the sight of her, and whose wo-laden hearts beat freer to the music of her step

"Ah, Nell!" sighed old, bed-ridden Betty Begoin, "Dr Gregory is a good doctor, as nobody may better believe than I, for the Lord knows *you* would have been in your grave nine years ago, Christmas, if He hadn't put it in the doctor's heart to save ye The doctor's a good doctor, I say, but his wife is better than all his medicines to a poor old thing like me! Nobody looks so kindly and sunny like, nobody reads the Scriptures so plain and clear as she.

"The first Mrs. Gregory was a fine lady, I dare say, I have often heard it. But she never came near us. Well, well! she had a young family to look to, and was weakly and ailin' toward the last, poor thing! I have nothing against her now she's dead and gone, anyway

"A'n't the gruel hot, dear?

"The doctor is a good doctor as anybody need have, but his wife is better than all his medicines to a poor, sick, old thing like me."

And many a sufferer was there in whose breast old Betty's sentiment would find an echo For, while her husband laboured to upbuild the outer man, Mrs. Gregory breathed courage into the fainting heart, and braced it to the effort of recovery Then, nobody could keep wide awake all night like her, nobody's cordials were so grateful, yet so harmless, nobody knew so exactly just what one wanted.

And in that dark, dark hour, when life's last promise is broken, and science can do no more, and loving hearts are quivering under the first keen anguish of despair, how often did they implore that her voice might tell the dying one his doom, that in its gentleness the death-warrant might lose its terror

How tenderly did she try to undo the ties that bound the trembling spirit to this world, and commit it to the arms of Him, who should bear it safe above the swelling waters! How trustingly did she point the guilt-stricken, despairing soul to the "Lamb of God that taketh away the sins of the world" And who shall conceive an intenser thrill of joy than was hers, as she witnessed the sublimity of that weak Child of Earth triumphant over Death, passing away, not as to "pleasant dreams," but as to "an exceeding and eternal weight of glory"

It was only in the inner circle of her life that hearts were cold towards Mrs Gregory. Alice, it is true, clung to her with the fond dependence of a child upon its parent Eddie was a wayward and ungovernable creature, perfectly subject to his passionate impulses, in one moment, foaming in a frenzy of infantine rage, the next, exhausting his childish resources for expressions of his extravagant love.

It was no light or transient task to teach such a nature self-control. She unspeakably dreaded to employ that rigid firmness which she saw so indispensable to gaining a permanent ascendancy over him. Watchful eyes were upon her, and lithe tongues were aching to be busy. She well knew how the thrilling tale would fly of the heartless hardness of the stepmother toward the little innocent.

He had been the darling of most doating grand-parents, to whom he had been committed, a mere baby, at his mother's death Mrs Gregory understood how galling restraint would be to him, hitherto unthwarted in a single wish, uncurbed in a single passion, and she feared to blast the affection which she saw beginning to twine itself about her.

"Yet," thought she, "I *must* govern, or the child is ruined He is given to me to be educated for honour, usefulness, heaven And shall I suffer passion and self-indulgence to fasten their clutches on him and drag him down to destruction, lest, forsooth, my fair name should get some slander? No, no, I will not be so selfish. I will be faithful to my duty, to my husband. I will treat him as though he were my own"

But it required many a hard struggle, many a long trial of unfailing forbearance and inexorable resolution, to execute her purpose. Still, she had the satisfaction of seeing that at the end of each the little rebel was drawn more closely to her. With the unerring instinct of childhood, he revered her justice and appreciated her patience

For him she laboured in hope. With delight she watched the development of better dispositions, the formation of healthful habits. It was rare pleasure to follow the rovings of his untiring curiosity; to open to his wondering mind the mysteries of the unfolding leaves, the limitless ocean, and the deep heavens; to watch the strange light that kindled in his beaming eye as Truth dawned upon him.

In this was the stepmother happy. But there was one member of her household in whose heart she had no home. Clara still held herself unapproachable. Neither Mrs. Gregory's uniform, cordial courtesy toward herself, nor her undeniable superiority as a woman, could avail to move her. She *would not* like a stepmother, and she was possessed of a strength of will very extraordinary for one of her youth and sex From this inflexible purpose to dislike unavoidably grew a habit of misconstruction In order not to see good where it obviously is, one must turn good into evil. This Clara unconsciously yet studiously did. To her sister it was at once painful and amusing to notice the ingenuity with which she sought out some selfish motive for the beautiful action, some sinister meaning for the well-spoken words. It was a continual vexation to her to observe the love with which the new-comer was regarded by every other member of the family, and the esteem and admiration in which she was held among the villagers. Yet she was far too proud to intimate her feelings to those sympathizing friends who are ever so very ready to listen to one's inmost secrets and offer their condolence, then hasten away, wiping their eyes, to gather for one the sympathies of a whole neighbourhood Nevertheless, her cold reserve toward her stepmother, and about her, was not unmarked.

One there was, however, to whom Clara poured forth her sorrows with that perfect freedom which, it is said, exists nowhere except among school-girls Arabella Acton had been her room-mate at Belford, and had parted from her with an agony of tears Indeed, it was Arabella's extreme pity that had first impressed upon her the breadth and depth of her misfortune in becoming a step-daughter. Seldom has the post-office establishment been blessed with more faithful patrons than were these two friends Clara would have blushed to yield her fortress so long as she had such an ally to whom to acknowledge it Therefore, she lived much secluded from the rest of the family in her little boudoir, where she had assembled all the most sacred relics of her mother, in the persuasion that she was the only one true to her memory Indeed, she was in the act of conveying her portrait thither one day, when her father met her and forbade it, saying kindly—

"You are too selfish, my daughter, the rest of us love it as well as you."

Toward her father she was always respectful She had the greatest reverence for him, but there could no more be that familiarity between them that once had been

To Mrs Gregory, this state of feeling was a source of continual but unavailing regret She could but see that Clara was fast losing her native generosity of character, and falling into habits of selfishness and indolence, but she was perfectly aware that any direct effort of hers to win her could but repel, and that her only way was to *wait*, hoping for a happier day

CHAPTER IV

"ALICE, it is getting late, and I beg leave to bid you good night *I* will wait for Clara."

"She said no one need wait for her," replied Alice, "and you are tired to-night, I know. I beg you will not sit up"

"It will be dreary for her, and I can very well sit up I shall be writing to my mother—good night, love."

Mrs. Gregory's letter was finished, and the last "Graham" read before her solitude was disturbed. At length, as she stood looking out into the starlight, footsteps and mirthful voices broke the stillness The loitering footsteps draw near, and halt at the door. The mirthful voices subside into the low, earnest hum of conversation Then the light "Adieu!" and the two part.

A smile still lingered on Clara's face as she entered, and—without observing that the room was occupied—threw herself down beside the fire, whose warmth was no unwelcome thing in the chill April night, and slowly pulled off her gloves. Mrs. Gregory still stood at the window, half hidden by the folds of the curtain She thought she had rarely seen a more beautiful face than was Clara's at that moment. Joyous words seemed to tremble on her lips,

and laughing fancies to peep out through the long lashes of her eyes, so roguishly! Then, when the little white hands untied the bonnet and took it off, dropping it on the carpet, and let the rich, clustering hair flow about the bright face,

"Ah, she is very charming!" thought her mother, while she said—

"You have passed a delightful evening, Clara."

Clara started and looked up The radiant smile instantly died away, and replying coldly—

"Very passable, I thank you," she rose, and taking a light from the table, left the room

Mrs Gregory sighed deeply, and, leaning her forehead against the cold window-pane, stood lost in painful thought, till many stars were set, and the embers on the hearth grew white and cold.

She for whom she thus sorrowed, meanwhile, flew to her chamber and, wrapping her shawl about her, sat down to her writing-desk and scribbled these lines—

"A word with thee, dearest Bel, before I sleep. Oh! if you could have been with me to-night! A little select party at Mrs Hall's, and such a delectable evening! All our choice spirits were there, and one entirely new star A "real, live" star, too, Bel, unquestionably the most elegant man that ever wore a mustache. Oh, you should see him! So *distingué*! Neither M——, nor Monsieur de V—— is a *circumstance* to him! I cannot conceive where Mrs. Hall found him, but she is always the first to introduce strangers—the only polite woman in town, I think. I suspect, however, that he is a friend of Frank, who has just returned from his winter's residence in the south

"They kept me at the piano half the evening, and this exquisite '*Don Whiskerando*' accompanied me—so sweetly!—with the flute. Under a perfect cannonade of entreaties he consented to sing, too although he would be persuaded to nothing but a *duett* with your humble friend The richest bary-tone.

"He will be here to-morrow, and I would give the world if my Bel might be here also! Oh! I forgot to tell you my hero's name is Brentford—did you ever hear it before?

"Do you not think Ellen Morgan an envious thing · Good night, love—dream of your Clara!

"Oh, one word more Don't you think *ma chere mère* must have an active mind to keep her up till this time, to observe my arrival? Oh, Eve, thou art undone!

"I hope all she saw and heard was satisfactory to her I suppose she expected that I should continue the conversation after I came in, for she kept so whist, that I was not aware of her presence till she discovered herself by the sagacious observation—

"'You have had a charming evening, dear,' in such an insinuating tone! Awed!"

(*To be continued*)

THE EMPEROR NAPOLEON III.

(*From Victor Hugo's "Napoleon the Little."*)

CHARLES LOUIS NAPOLEON BUONAPARTE, born at Paris, on the 20th April, 1808, is the son of Hortense de Beauharnais, married, by the emperor, to Louis Napoleon, King of Holland. In 1831, taking part in the insurrections in Italy, where his eldest brother was killed, Louis Buonaparte attempted to overthrow the Papacy. On the 30th October, 1836, he attempted to overthrow Louis Philippe. He had a failure at Strasbourg, and, pardoned by the king, he embarked for America, leaving his accomplices to be tried. On the 11th November he wrote.—"The king, in his clemency, has ordered me to be taken to America." He declared himself vividly affected by the king's "generosity," adding, "certainly, we are all culpable towards the government in having taken up arms against it, but the most culpable person is myself," and he ended thus.—"I was guilty against the government, therefore the state has been generous towards me." He returned from America and went to Switzerland, was appointed captain of artillery at Berne, and a citizen of Salenstein, in Thurgovia; equally avoiding, amid the diplomatic complications occasioned by his presence, to call himself a Frenchman or to avow himself a Swiss, and contenting himself, in order to satisfy the French government, with stating in a letter, dated the 20th August, 1838, that he lived "almost alone," in the house "where his mother died," and that he was "finally resolved to live in quiet" On the 6th August, 1840, he disembarked at Boulogne, parodying the disembarkation at Cannes, with the little hat on his head, carrying a gilt eagle at the head of a flag, and a live eagle in a cage, a whole bundle of proclamations, and sixty valets, cooks, the Temple, and buttons of the 42nd Regiment made in London. He scatters money amongst the passengers in the streets of Boulogne, sticks his hat on the point of his sword, and himself cries, "Vive l'Empereur!" fires at an officer (who had said to him, "You are a conspirator and a traitor") a pistol shot, which hits a soldier and knocks out three of his teeth; and, finally, runs away. He is taken into custody; there are found on his person 500,000 francs, in gold and bank-notes; the Procurer-general, Franc-Carre, says to him, openly, in the Court of Peers, "You have been tampering the soldiers, and distributing money to purchase treason." The peers sentenced him to perpetual imprisonment. He was confined at Ham. There his mind seemed to take refuge within itself and to mature. He wrote and published some books, impressed, notwithstanding a certain ignorance of France and the age, with democracy and with faith in progress: "The extinction of Pauperism," "The Analogies of the Sugar Question," "The Ideas of Napoleon," in which he made the emperor a "humanitarian." In a treatise entitled "Historical Fragments," he wrote thus: "I am a citizen before being a Buonaparte." Already, in 1852, in his book, "Political Reveries," he had declared himself a Republican. After five years of captivity he escaped from the prison of Ham, disguised as a mason, and took refuge in England. February arrived, he hailed the Republic; came to take his seat as a representative of the people in the Constituent Assembly; mounted the tribune on the 21st September, 1848, and said, "All my life shall be devoted to the confirmation of the Republic;" published a manifesto which may be summed up in two lines —liberty, progress, democracy, amnesty, abolition of the decrees of proscription and banishment; was elected president by 7,500,000 votes; solemnly swore the oath to the constitution on the 20th December, 1848; and, on the 2nd December, 1851, broke it. In the interval he had destroyed the Roman Republic, and had restored, in 1849, that Popery which, in 1831, he had essayed to overthrow. He had besides taken, more or less, a share in the obscure affair of the lottery of the ingots of gold. A few weeks previous to the *coup d'etat*, this bag became transparent, and there was visible within a hand greatly resembling his. On the 2nd December and the following days he, the executive power, assailed the legislative power, arrested the representatives, drove out the assembly, dissolved the council of state, expelled the high court of justice, suppressed the laws, took 25,000,000 francs from the bank, gorged the army with gold, swept the streets of Paris with grape-shot, and terrorised France. Since then he has proscribed eighty-four representatives of the people; stolen from the Princes of Orleans the property of their father, Louis Philippe, to whom he owed his life; decreed despotism in fifty-eight articles, under the name of constitution; garrotted the Republic; made the sword of France a gag in the mouth of liberty; pawned the railways; picked the pockets of the people, regulated the budget by *ukase*, transported into Africa ten thousand democrats; banished into Belgium, Spain, Piedmont, Switzerland, and England, forty thousand Republicans; filled all souls with sorrow; covered all foreheads with a blush.

Louis Buonaparte is a man of middle height, cold, pale, slow in his movements, having the air of a person not quite awake. He has published a tolerable treatise on artillery, and is thought to be acquainted with the manœuvring of cannon. He is a good horseman. He speaks drawlingly, with a slight German accent. His histrionic abilities were displayed at the Eglinton tournament. He has a thick moustache, covering his smile like that of the Duke d'Aitois, and a dull eye like that of Charles IX.

Before the 2nd of December, the leaders of the Right used habitually to say of Louis Buonaparte, *'tis an idiot*. They were mistaken. Questionless that brain of his is perturbed, and has large gaps in it, but you can discern here and there in it thoughts consecutive and concatenate. 'Tis a book whence pages have been torn. Louis Napoleon has a fixed idea, but a fixed idea is not idiotcy; he knows what he wants, and he goes straight on to it through justice, through law, through reason, through honesty, through humanity, no doubt, but still, straight on. He is not an idiot. He is a man of another age than our own. He seems absurd and mad, because he is out of his place and time. Transport him in the sixteenth century to Spain, and Philip II. would recognise him. to

Cæsar Borgia would embrace him. Or even, taking care to place him beyond the pale of European civilisation, place him, in 1817, at Janina, and Ali-Tepelini would grasp him by the hand. He is of the middle ages, and of the Lower Empire. That which he does would have seemed perfectly simple and natural to Michael Ducas, to Romanus Diogenes, to Nicephorus Botomates, to the Eunuch Narces, to the Vandal Stilico, to Mahomet II., to Alexander VI., to Ezzelino of Padua, as it seems perfectly simple and natural to himself. The only thing in that he forgets, or knows not, that, in the age wherein we live, his actions will have to traverse the grand courses of human morality, chastened by three ages of literature and by the French revolution; and that, in this medium, his actions will wear their true aspect, and appear what they really are, hideous. His partisans, he has some, complaisantly parallel him with his uncle, the first Buonaparte They say, "The one accomplished the 18th Brumaire, the other the 2nd of December: they are two men of ambition." The first Buonaparte aimed to construct the empire of the west, to make Europe his vassal; to dominate over the continent by his power, and to dazzle it by his grandeur; to take an arm-chair himself and give footstools to the kings, to create his place in history. Nimrod, Cyrus, Alexander, Hannibal, Cæsar, Charlemagne, Napoleon. to be master of the world. * * * * To be so he accomplished the 18th Brumaire. The other man aims to have horses and women, to be called Monseigneur, and to live luxuriously. To this end he brought about the 2nd of December. Yes. They are two men of ambition. the comparison is just. Let us add, that, like the first Buonaparte, the second also aims to be emperor But that which somewhat allays comparison is, that there is, perhaps, a slight difference between the conquering an empire and the pilfering it. * * * * *

The great talent of M. Louis Buonaparte is silence. Before the 2nd of December he had a council of ministers who, being responsible, imagined they were something. The president presided. Never, or scarcely ever, did he take part in their discussions. While MM Odillon Barrot, Passy, Tocqueville, Dufaure, or Faucher was speaking, he occupied himself, says one of these ministers, in constructing, with intense earnestness, paper figures, or in drawing men's heads on the documents before him. To feign death, that is his art He lies mute and motionless, looking in the opposite direction to his object, until the hour for action comes, then he turns his head, and leaps upon his prey. His policy starts out on you abruptly, at some unheeded turning, pistol in hand, *at fau* Up to that point there is not the least movement. For one moment, in the course of the three years that have just passed away, he was seen face to face with Changarnier, who, himself, on his part, meditated an enterprise. "*Dant obscuri*," as Virgil says France observed, with a certain degree of anxiety, these two men. What was in their minds? Was not one, she thought, Cromwell, the other, Monk? Men asked one another these questions as they looked on these two men. In both of them there was the same attitude of mystery, the same tactics of immobility. Buonaparte said not a word, Changarnier made not a gesture, this did not stir, that did not breathe, they seemed competing which should be the most statuesque. * * Machiavel has made small men, Louis Napoleon is one of them. * * * * *

POLICY OF PEACE-INSURANCE.

Let masses mumbled to the cannon's roar,
And eagles by embroidered bishops blest,
Soldiers and priests combined on Gallia's shore
These hate our faith and those our name detest.
Is this a time to sit, unarmed, at rest?
When scribes too, free to utter little more,
England with menace unrebuked defy
Pooh pooh! drab cockneys, give your twaddle o'er,
Inviting war. How soon, should foeman come,
You'd cease that cant, to scream, with mouths awry,
For those defenders whom you now decry!
Ne'er let us beat again aggression's drum,
And twist there's no attack for us in store
Meanwhile, my friends, we'll keep our powder dry!

A VISIT TO ABBOTSFORD.

BY AN AMERICAN LADY.

THE morning of our leaving Edinburgh, though far from brilliant, was not stormy, or chill, and we were sincerely thankful for a cessation of the pelting rain which had made "Auld Reekie," with all her modern beauties, so thoroughly dismal for the days of our visitation. We stopped at the Melrose station, and taking a carriage, drove over to Abbotsford, some three miles. The country, though exceedingly pleasant, did not strike us as remarkably picturesque, and before we dreamed of such a thing, we were at Abbotsford, which lies low, on the banks of the Tweed, hidden from the road by a thick plantation

The grounds are very beautiful, and have, need I say, a peculiar mournful charm in all their lovely lights and shades of greenery, and leafy luxuriance, from the recollection that he, the immortal master, planned and planted, and found his purest, richest pleasure in adorning them.

The house itself is a superb, baronial-looking residence, strikingly picturesque in effect, and wonderfully in keeping with the mind and taste of the noble builder It is one of the most natural productions of his genius. You could almost fancy it in all its varied forms of antique beauty, quaint and strange, yet ever graceful and imposing—his light enchanting poetry and his glorious romance resolved into stone. It is a curious pile—an odd, yet not inharmonious assemblage of architectural ideas, half religious, half feudal, simple yet stately—the charming conceits and bold fancies of poetry and the spirit of olden romance, revealed in towers and turrets, arches and windows, gables and chimney-tops.

The entrance-hall at Abbotsford is not very large, but is exceedingly beautiful, and tastefully hung with armour, antlers, weapons, and interesting relics from many lands. But after the guide pointed to a glass case, which contained the suit of clothes last worn by Sir Walter, I saw nothing beside in this apartment These brought the picture of the grand old man, worn down and broken before his time, with wondrous vividness before me I could see him as he tottered about his grounds, or sat in the shade of some favourite tree, with his faithful Willie Laidlaw—the great soul-light in his eye dimmed with deepening mist, and his gigantic genius shrunken into a babe's bounded and bewildered capacity—I could see on his worn brow the troubled struggle of memory and thought, in his eyes the faint moments gleaming of the old inspiration—but by the sweet, mournful smile of his wan lips, I could see, oh! nothing more, for the real tears which rained from my eyes seemed to hide the unreal picture of my fancy.

In the beautiful little study in which the great novelist wrote many of his works, the air seemed surcharged with the living magnetism of his genius. So *near* he seemed, so strangely recent his presence, so inevitable his speedy return, my mind grew bewildered, and my heart beat hurriedly and half expectantly. My very senses obeyed the strong illusion of my excited imagination. I looked toward the door by which he used to enter I listened, and spoke low. I dared not approach his writing-table, and sat in his chair, for fear he might surprise me when he should come in. But oh! how soon passed over my heart the chill returning wave of recollection, of reason—gone, gone for ever! dust, dust these twenty years!

The library, drawing, and dining-rooms are very elegant apartments, commanding some charming views. There are several fine pictures, by foreign artists, collected by Sir Walter, but of more interest to me were the family portraits. Of these there are two of the poet, taken in his early boyhood, wonderfully like those painted in his manhood and old age. There is a handsome full-length likeness of the last Sir Walter, and several portraits of his sister, Mrs Lockhart, whose son is the present master of Abbotsford. Of all the weapons curious and memorable in the armoury, of all the valuable relics, I was most moved by the sight of the pistols of Napoleon, Rob Roy's gun, and the sword of Montrose.

The wet state of the grass preventing our wandering about the grounds, we were obliged to return, much sooner than we would have chosen, to Melrose.

LINES TO MRS. H. B. STOWE.

AUTHORESS OF "UNCLE TOM'S CABIN"

HAIL to thy potent genius, generous STOWE!
May heaven's best blessings thy fair head endow!
And thy warm heart, long may its pulses swell
In genial tides; and may the magic spell
Of happiness around thy pathway rest,
And dwell sublime within thy peaceful breast!

Honoured thy mission! thou hast nobly wrote,
With giant power, the monster slavery smote,
Accursed of God and man it soon must fall,
But thou hast aimed a deadly blow withal,
E'en now its shaking pillars own thy power,
And shadow forth its last, its final hour.

All honour to thy voice, whose powerful strains
Pleads eloquent poor Afric's fettered chains,
Defends her rights, and echoes loud her cries,
And shows the tyrant through his proud disguise—
With foulest scorn the hellish system brands,
And justice loud for slaves—*for* men—demands

In heaven there is a God, and soon shall cease
This frightful source of human agonies,
The which us struggle onward, firm and strong,
Success shall crown our efforts yet, ere long,—
Let "UNCLE TOM" a rallying watchword be,
For God—for justice—and for liberty!

Alnwick, Northumberland E. ALLEN

GROWTH OF THE SUGAR AND TOBACCO TRADES IN LIVERPOOL.

IT has been seen that the sugar trade was introduced into Liverpool about the year 1667, when the first sugar-refinery was built in Sugar house Close, Dale-street. The tobacco trade was introduced a little earlier, and soon became the great trade of the port. We learn from the correspondence of Captain Tarleton, one of the first shipowners of Liverpool, in the reign of Charles the Second, that he had extensive transactions with Virginia and Maryland in the year 1676, and the first Liverpool policy of insurance which I have been able to find is a policy on Captain Tarleton's good ship Anne and Sarah, by which she is insured to Barbados and home again for a premium of four per cent on the ship and goods. By the close of the century the tobacco trade was firmly settled in Liverpool, and had taken the lead of all other.

In the year 1701 Sir Thomas Johnson, then one of the members for Liverpool, states, in a letter to one of his constituents, that a threatened interference with the tobacco trade would destroy half the shipping in Liverpool, in 1702 he mentions that the Irish and Scotch tobacco, that is, the supplies for those countries, was imported into Liverpool, in the same year Sir Thomas's brother-in-law, Mr Peter Hall, informs Mr. Richard Norris, that two new Custom-house-surveyors, Messrs. Manly and Walker, had come down to Liverpool, who had reduced the allowance for damaged tobacco from 150 lbs. the hogshead to 50 lbs., "and put all the Pilgarlics into a cold sweat." He then gave an account of a dispute between these new brooms and the merchants, which, "with much ado, they brought them (the Custom-house-officers) to stand on their feet, and hope in a few days to learn them to go," which they afterwards did, for the facetious Mr. Hall adds, in a postscript "We have now clear got over the point with Messrs. Manly and Walker, who are both very civil, ingenious men, and big with expectation at first, and treated us as they believed us to be, robbers, but our light now shines in darkness, and there is not one word to be believed that was spoken against us by the poor devils, they declare that they find us to be an honest, industrious people, and that we deserve encouragement."

In the same year, Sir Thomas Johnson speaks of the tobacco trade "as one of the chiefest trades in England," and in another letter he informs Mr. Richard Norris, that the Custom-house-officers, Manly and Walker, had not left Liverpool with quite so high an opinion of the tobacco importers as Mr. Peter Hall supposed, for he says, "Sir William Deans told me to-day he dined at a (London) merchant's house where all the surveyors of the port (of London) dined, and, after some discourse about tobacco, and his complaining how they had lost them trade, he did add that 100,000 lbs. allowed for damages in one ship, and some other circumstances, that I found it came from Manly. He could give an account of the town (of Liverpool) and how they lived, and said he was told Mr Houghton had a fine house, and kept good wine, but we all lived frugally, Mr Clayton had a fine house, but it was not furnished. Now, I suppose these gentleman thought we did not make enough of them *when they come again we shall know better how to deal with them.*" We are sadly envied, God knows, especially the tobacco trade, at home and abroad; nor were they altogether free from internal danger, for Sir Thomas Johnson and Mr Clayton, the members for the borough, quarrelled on the subject of tobacco, and Mr Clayton wrote a letter on it, which led to the following sharp comment from Sir Thomas. "Certainly his letter is a great reflection on all the merchants in town that ever repacked, my neighbour, R. H. [ougton] does not escape. Alas! there's the rise of it, he sees his out-done; it's a sad temper, God knows, when these gentlemen come to be partners, they will make havock with us, but, as you say, *I hope they will not stop up the river!*" In spite of envy and strife, Liverpool retained, and still retains, much of the American tobacco trade, which was the great trade of America, until it was outgrown by the cotton trade at the beginning of the present century.—*Baines's History of Liverpool*

IMPROVED BRICKS.—The improved machinery recently invented by Mr J. P. Oates, of Lichfield, is admirably adapted for the purpose in view. The clay in a plastic state is fed into a vertical hopper gradually contracting towards the extremity to the shape of the brick-mould used. This contracting portion is called the "rectum." Within the upper part of the hopper is fixed a shaft, to which are attached by bosses a series of knives or blades. Within the "rectum" is placed a vertical revolving screw, the threads of which come almost in contact with the sides of the interior. The clay is fed into the hopper and tempered by the action of the knives or blades on the revolving shaft, it is then carried down by the screw in the "rectum" and forced from the orifice thereof into one or other of the moulds. The moulds are formed in a sliding frame, which has a reciprocating movement immediately under the orifice of the "rectum," so as to bring the moulds alternately into a position to be filled by the clay in its forced descent. When one mould is filled the sliding frame is caused to move sideways, so as to clear the filled mould from the orifice and bring the second mould under it to be filled. The same motion causes also the top and bottom of the moulded brick while in the mould to be planed or smoothed, by the sliding frame passing between two flat surfaces in contact with its upper and lower sides. The moulded bricks are removed by the action of pistons, which force out the bricks on to a travelling web, from which they are taken to be stacked and burnt. For the purpose of forming other and less than bricks and tiles, the orifice of the "rectum" must be made of a form corresponding to that of the mould employed.

LITERARY NOTICES.

THE ILLUSTRATED EXHIBITOR AND MAGAZINE OF ART.—A new and improved series of this work under the title of the ILLUSTRATED MAGAZINE OF ART, has just commenced. Each Number will in future be enclosed in a wrapper. In addition to numerous Engravings in the text, it contains an Engraving, worked on Plate Paper. With Number I. was presented, gratis, a splendid View of the Interior of St. Paul's Cathedral, from a Drawing of the late Duke of Wellington, printed in the most exquisite manner by the Woodbury Type Company. This Engraving will be followed by a View of the Interior of Westminster Abbey, from a Drawing by W. Wyld, Esq., and a View of the Interior of the Sistine Chapel, from a Painting by Sir Joshua Reynolds, &c., &c.

THE ALTAR OF THE HOUSEHOLD, or, DOMESTIC WORSHIP. Part I. is now ready, price 1s. This work will contain 52 Sets of Services for the Family, adapted for every morning and evening throughout the year, viz., portions of Scripture, Prayers and Thanksgivings, suitably adapted to each other, to which will be added short practical comments to explain the subjects read, &c. &c. This work is edited by the Rev. Dr. Hall, assisted by a band of eminent divines in London.

CASSELL'S EUCLID.—THE ELEMENTS OF GEOMETRY. Containing the First Six, and the Eleventh and Twelfth books of Euclid. Edited by Robert Wallace, A.M., price 1s. in stiff covers, or 1s. 6d. neat cloth.

THE SCIENCE AND PRACTICE OF ARITHMETIC. Enunciations of all the Propositions of Colenso's Arithmetic, for the use of Colleges, Schools, and Private Students, is now ready, price 3d.

The PATHWAY, a Religious Magazine, price 2d. each Number, enclosed in a neat wrapper. The Fourth Volume has just commenced—Vols. I. II. and III., price 2s. 6d. each, nearly bound, are now ready.

BITS OF MY MIND.

I NEVER felt that melancholy sensation, "a weariness of existence," *save in a town* Shut up amongst walls and paved streets when the mind is tired with reading or deep contemplation, the eye has nothing on which to rest that is capable of giving pleasure or exciting pleasurable trains of thoughts,—at least so are towns with me. In the country, on the contrary, a tree, a shrub, a flower, nay, a bit of moss, or a blade of grass (putting aside the en .re landscape), is capable of raising trains of thoughts that, as the Poet Wordsworth says

——"lie too deep for tears."

In the country existence to me is only one round of varieddelight, admiration, and love.

IT IS a curious proof of the wealth of England and its diffusion a century and a half ago, that stage coaches were complained of as parsimonious, and as injuring the breed of horses, and lessening the expenditure of money Before the invention of stage coaches and spring caravans, most men "rode at tended by one or even two servants" "Now," says one author "*a miserly spirit* can come twenty miles into London for a few shillings." This was about 1680 or 1690

PEOPLE who are easily excited and easily quieted commonly arrogate to themselves the title of "persons of feeling," and pass for such with the world in general. I deny their title. Persons of *really deep and strong feeling* are *difficult* to be moved, but when once stirred, the tempest is tremendous. A messet dog barks, when a lion seems totally unheeding, but which is *stronger*, the lion or the pug? In truth, a little reflection shows us this must be so If people of intense feeling had not a strong *controlling power* as a protection, their lives must either be cut short, or else one scene of unadulterated misery and irritation

DIVERS most learned and powerful minds have tried to prove, but I must own not to my conviction, that Parliaments are of *Anglo-Saxon growth* and *formation*. I have met with nothing that has at all tended to convince me of this The Saxon "Witenagemotes," and such convocations as the earlier Norman monarchs got together, seem to me to have been a sort of gigantic but aristocratic privy councils. There sat the barons, the principal tenants "in capite," the "Proceres" or holders under the highest services, and the church dignitaries, who at that time were also the law dignitaries, but no commons in our sense of the term. As for the theory that the tenants "in capite" acted for those who had inferior holdings—that is easier said than shown. Why, however, such an *anxiety* to prove this? Suppose *real*, *Parliament* only to have sat from Henry the Third's time up to the middle of Henry the SIXTH's reign, when the forty-shilling freeholders and burgesses of free towns usurped the whole commons' influence, this only shows that the institution was slow of growth, and like a political aloe took a thousand years in flowering—a high compliment in my notion! I admit the *Anglo-Saxon* grand councils were the *germ* of the more modern English Parliaments but they were *not* Parliaments, in any modern meaning of the term.

WE are apt to imagine that before the invention of printing, and when books were rare, there was little knowledge. This is a serious mistake. The truth, I fear, is that since printing made writing cheap, we have left our *memories* uncultivated I have no doubt in my own mind and there is plenty of testimony, that before the printing-press much knowledge was communicated and handed down orally; and this learning was of the best and soundest kind. The "Lex Communis" was the traditionary law; and other sciences were taught in the same way. Printing has this great evil, that it sometimes puts what is false and worthless on a level with what is true and valuable. Tradition sifted knowledge, and the *bran* and chaff were rejected. We, who neglect our powers of memory, do not know their strength Franklin says the Indian woman will "rehearse" word for word "treaties of a century old" between tribe and tribe, or between tribes and whites. They are, says he, the "*Records*" of their nation In Europe they are the records of folly and scandal *Utrum horum mavis accipe*

IN one sort of "right divine" I am a believer, and that is in the right of true poets to reign unscathed and (as Burke would say) "in contempt" of all critics, criticism, and everything thereto pertaining The only blot in the Life of Tasso is his consenting to re-write parts of his "Jerusalem" to please the critics. This was a real crime, and came under the head of what lawyers term "Læsæ Majestatis" Happily his general readers tossed the emendations overboard, or they might have lost him his crown with posterity, however they might keep him to that in the capitol

As no man can walk comfortably in a crowded street unless at the same pace with those about him, so in the grand thoroughfare of the world, you must, if you value ease, *keep step* with the rest It is equally bad to be twenty years *before* your contemporaries as twenty years behind them.

THE *richest* men have the *fewest* luxuries; determination of *volition*, or in plainer terms *self-will*, is what constitutes strength and decision of character It is found to co-exist with all discriptions of mind and disposition. When united to *talent and virtue*, it is the chief of *blessings*. When joined to *folly*, or *vice* it is the greatest of curses

"ALL suffering must be pitied and relieved (saith the sage) without adverting to anything beyond the fact." This is philosophically true, doubtless, but let philosophers and sages preach or lecture as they will, the character of the sufferer *will* make a difference as long as human nature is human nature. Peevishness, illtemper, passion, and complaining, on one side, contrasted with meekness, fortitude, and consideration, on the other, is a scene that gives rise to two very different sets of feelings, do what you may to prevent it. Oh, no! be as humane, as kind, as sympathetic as you can, still, how are you to help seeing that a *suffering angel* is one thing, and a *suffering devil* another?

IT is an opinion that has long been growing upon me that Cromwell is one of those men whose character has been *systematically misrepresented* I see no reason to believe either that he was insincere in politics or in religion, but he filled a difficult position, and his character has suffered accordingly He made the best of bad materials, and contended as he might against conflicting elements, but his inclination was to be just, and his latter end was not that of a religious simulator and hypocrite The truth is, he is one of three remarkable men whom history has misused, because they were succeeded by their political enemies The *three* are Richard the Third, Cromwell, and Robespierre!

NOTICES TO CORRESPONDENTS.

B. J. C.—You do indeed need "to improve in spelling." Buy an English dictionary, which you may get at almost any book-stall for a shilling, and transcribe portions of it every day, carefully observing how those words are spelt which are in most common use. Also read the works of good authors with the same design and in the same manner. Write sentences occasionally, and then consult your dictionary to see if your spelling be correct.

MARS.—The word "Budget" is probably derived from the French *bougette*, a bag, or repository; it is sometimes rendered "a proposal," which idea seems to be founded on the fact that the proposal to be submitted is contained in a bag, thus the annual statement, made by the Chancellor of the Exchequer, of the public revenue and expenditure, together with his "proposals" as to the future, are, most probably, brought down to "the House" in a "bag," this is called "The Budget."

URBS INTACTA.—The answer to your questions as to the British government in India would occupy many pages; it would, indeed, comprise a history of British India. As to "the qualifications required for a clerk in the civil service of the East India Company," you had better write for information to the secretary of the company.

A YOUTH.—You must learn to write a better hand, and to *spell* correctly, before you can hope to obtain "an office in the EXCISE" (*excise*), or in any other respectable office. Try so "downing" (*doming*), you will "oblidge" (*oblige*) us, and greatly benefit yourself.

MARS.—The word "Philomath" signifies a lover of science, or learning.

ARABELLA W.—We cannot tell you the precise period "when parasols and umbrellas first came into use in England." Parasols, or sun shields, were used at a very early period. Dr. Hyard met with representations of them on the bas-reliefs at Nineveh. The umbrella, *as a sun shield*, is spoken of by Ben Jonson and others more than two centuries ago, but its use *as a defence from rain* commenced much later. Umbrellas appear to have been used by females about the commencement of the eighteenth century. Jonas Hanway, the celebrated philanthropist, is said to have been the first *man* who used an umbrella in England that must have been about the year 1750.

X. Y. Z.—Depend upon it the "spiritual manifestations" advertised at a certain house at the west end of the metropolis, are a gross and clumsy delusion. They are an English edition of the "Rappings" of America, the details of the trickery of which have been extensively exposed. Don't be guilty of spending a guinea upon any such wickedness.

W. B.—The lines commencing—

"Great Wellington the Great
Has met his fatal fate,"

are respectfully declined; as are also lines on the same subject, by "an *amateur*."

ANNE.—A friend informs us that "very excellent *beef-tea*" may be made thus:—Cut a pound of fleshy beef in thin slices, simmer with a quart of water twenty minutes after it has once boiled and been skimmed. Season to taste, but it is best with a little salt only. Put in a little bread well toasted, but not burnt.

C CALCOFT.—It was about the commencement of the eighteenth century that cotton began to be used for various articles of wearing apparel; and in a monthly magazine, published in 1731, we find "the *pernicious practice* of wearing cotton" denounced as one which had "occasioned great deadness of trade"—as one which would "bring the country into misery"—as one which would "cause the country to swarm with unhappy manufactors." We need not tell you that this "pernicious practice of *wearing* cotton" is adopted by millions, and that the practice of *manufacturing* cotton sustains a very large portion of the population of this country.

ERRATA.—No 66, p 219, 2nd col., 18th line from top of page; for 1852, *read* 1815, page 220, 1st col, 8th line, nationalistic, *read* rationalistic; line 42, in same page, indefensible, *read* indefeasible.

WORKING MAN'S FRIEND
AND FAMILY INSTRUCTOR.

NEW SERIES.—VOL. III., No. 68.] SATURDAY, JANUARY 15, 1853. [PRICE ONE PENNY.

JOHN HAMPDEN.

STATUE OF JOHN HAMPDEN, EXECUTED IN MARBLE BY J. H. FOLEY; AND ERECTED IN THE NEW PALACE OF WESTMINSTER.

JOHN HAMPDEN

The principal events in the life of John Hampden are of course familiar to the majority of our readers—we having given a somewhat lengthy account of both the man and his times in an early number of the WORKING MAN'S FRIEND.* The statue of "the patriot Hampden" by Mr Foley, is one of the most interesting of those in the New Houses of Parliament, not only for its associations with the place, but also on account of its artistic excellence as a great historical portrait. A very brief *résumé* of the life of the great man may not, however, be out of place—the more especially as we cannot refer to him or his times without acknowledging the importance of the principles for which he and his [illegible] struggled and died.

[illegible] of an ancient and noble family in Buckinghamshire, and was born in London in the year 1594. At an early age he entered as a commoner at the University of Oxford, where he spent a year or two in the study of the law, and then, after the fashion of the time, made the tour of Europe. The death of his father, however, put him in possession of an ample estate, and he returned to his country seat in Buckinghamshire, where the attention of the [illegible] gentleman. Events, however, occurred which roused up within him all the energies of his mind, and called him from his paternal acres, like another Cincinnatus, to take part in a great political struggle.

In 1621 he sat in the House of Commons, and at once attached himself to the popular party. Cousin-german to Oliver Cromwell, he could not be calmly on the usurpations of Charles and it was that he had soon to undergo the ordeal of a government prosecution for opposing the illegal impost of shipmoney. Though he lost the cause—which he defended in person against the Crown lawyers for twelve days—his adherence to the popular side gained for him the applause of the people and the hatred of the court. His defeat, though it was hailed as a great victory by the court, was considered as no small triumph by his party, because by it they were enabled to take a certain position in regard to the question when they had not hitherto assumed it. It is said that both Cromwell and Hampden contemplated emigrating to America after the trial, but that an order in council prevented their departure. As it was, the court gained but a small and temporary triumph, for Hampden took an active part in the contest between the king and the parliament, and when at last an appeal was made to arms, he joined the Earl of Essex in opposing the misguided monarch.

The history of the Long Parliament, and the issue of the struggle between the Roundheads and Royalists, is known to every child in Great Britain. In that struggle Hampden fell—too early for his country's good, but not too early for his own fame. Prince Rupert coming suddenly upon the parliamentary forces, near Thame, in Oxfordshire, Hampden eagerly headed a few horse soldiers that were rallied in haste, and in the skirmish that ensued received a wound in the shoulder which proved fatal. After lingering in great agony for six days, he expired on the 24th of June, 1643.

His death, while it threw his party into consternation and disorder, was looked upon by the adherents of the Crown as a real triumph, for they feared a man of so much eloquence, bravery, firmness, moderation, and good sense. Of the questions which agitated men's minds in those days, and the feelings which prompted their actions, happily little but the history remains. Time, the leveller and consoler, has enabled us to look with cooler judgment and clearer vision on the great events in which our forefathers were engaged, and in this day we may congratulate ourselves that the stern uncompromising principles of Cromwell and his parliament rendered all future antagonism between court and people, all misunderstanding about "royal prerogative" and "popular rights," for ever unnecessary. With the liberty which we in this year of grace, enjoy under the sway of a beloved Queen, we cannot well understand, or perhaps even sympathise with, the unyielding character of the political crisis which produced such a man as the Patriot Hampden

PAPERS FROM THE RED-TAPE BUNDLE.

FIRE ON BOARD A NORTH RIVER STEAMBOAT IN THE UNITED STATES.

It was one afternoon in September, in the year 1840, that, while engaged in my counting room looking over a trial balance, I was pleasantly surprised by a visit from my friend Dick B., a last year's fledgling of —— College, and a very good fellow withal. He had been spending the early season at the Springs, and, having become [illegible], had returned once more to the city, but a fortnight in the fashionable-deserted metropolis had been quite enough to cure him of his anticipated relish for brick and mortar; and hence the call, accompanied with the proposition to start on the first of October ensuing, with gun and dog, knapsack and fishing-rod, for the far west.

Dick B. was a man whom, from our first acquaintance, I had taken an incipient affection for. Noble and magnanimous in nature, quick and impulsive from indulgence, devoted even unduly to his studies, till he left college, where he had taken a high rank as a classical scholar, he had spent the last year of his life in the pleasures of which he had pursued and run the [illegible] with a certain eagerness and zest that characterised every other action of his life. And now, completely satiated with [illegible] its conventional refinements, he hailed with joy [illegible] of a race of beings of primitive simplicity in their feelings, as where they could be found in their primitive state, in their manners and habits, generous, hospitable, and grateful, brave and beautiful, unceremonious and unartificial, and perfect as God had originally made them.

Such was Dick's theory, based upon a slight acquaintance with a lovely specimen of her race, upon whose education no pains or expense had been spared, and who in her culmination promised to realise all the fond hopes and ardent wishes of her friend.

My acceding so readily to Dick's request was partly from a habit of saying yes to every proposition for a "lark" that [illegible] made, the sudden impulse usually giving them a zest which they would have lost by reflection and consideration, and partly from resolution, already formed, to devote a month to relaxation from the oppressive duties which had confined me to the city for the previous year.

The first of October brought a note from Dick, to meet him on board the S——, at the foot of —— street, at seven o'clock P.M. So throwing into my valise a dozen shirts, cap, shooting-coat and trousers, woollen stockings and thick boots, I took a cab for Pier ——.

Half-past six found me delivered at the steamboat Bald Eagle, at the landing. "Four for a shilling, sweet as honey," by a red-faced Irishwoman, with a true type of her dear Johnny hanging at her breast, a thump from the shoulder of her dear Johnny, or some other scoundrel, with a trunk on his back, accompanied with a "Beg pardon, Sir, didn't see you, Sir," but which nevertheless sent me stumbling forward, and left my hat in the mud behind, an Evening Express (confidentially) thrust into my face by the evident progeny of some mysterious shovel-er, who recovered my hat, and smoothed the mud over it very carefully with his coat sleeve, porters and cabmen running, passengers hallooing, cabs backing suddenly up and dumping their loads with marvellous facility, with a few more such pleasant accompaniments, came over me with a freshness that proved to my own mind that I must have kept myself very quiet since the world began to move, and to the minds of the cabmen and porters that I was possessed with a degree of viridity that might prove profitable.

Ploughing my way to the forward deck, through the three or four hundred people, who, to a stranger, might have seemed to have hit by some unlucky accident upon this particular day and this particular boat for their journey, I discovered Dick standing with his arms a-kimbo, surveying with no little complacency a pyramid of baggage, surmounted by a hand some little mulatto boy, of about fourteen years of age, drumming with his heels the devil's tattoo on a champagne-basket.

The last bell rang, a few farewells were exchanged, a few hands shaken, and the noble boat which had been snorting and pawing like a wild steed impatient for its liberty, [illegible] thrown upon its neck, darted out into the river through its moving crowd of fellows, and, apparently uncertain as to its course, as it made for the middle of the stream, turned its head gradually north, and with a final snort started on its long race with a speed

and untiring vigour that in an animal would have excited the world's surprise.

Consigning my defiled castor to the care of the illustrious Cato, and mounting in its place a cap, I ascended the promenade deck, where, finding Dick in interesting communion with a pretty black-eyed acquaintance whom he had found, I took a seat on the after-rail.

This I chose, to feel the electrical quivering of the iron-sinewed monster, whose convulsive energies, like the leaps of a race-horse which you are riding at full speed, seem almost to identify themselves with and become a part of your own. The hissing of the parted waves, like a flock of valiant geese, as they throw up their proud necks to the air, and then disappear in the distance, denote our progress. The constantly shifting and changing scenery, grouping and re-grouping, the opening and closing vistas, presenting rapid-moving double panorama, as we pace the paved way on either side, which it will occupy all your attention to appreciate and understand. When weary of this, you have before and around you an original and ever-varying medley, whose objects of study, appearance, manners, probable pursuits and residences, may afford you any extent of speculation.

On entering, we found the floor of the cabin covered with the usual complement of settees and their occupants. A black bushy head or two, a bald and very shiny one in close proximity to it, a full-length gentleman standing in the middle of the floor, half undressed, and looking very much disgusted at the necessity of displaying his scantiness in the act of denuding, composed a part of the foreground. Stretched around in every possible variety of attitude and position, lay, sat, reclined, and stood the remainder of the shadowy throng, undressed, and half dressed, a most unhappy group, each one inwardly wondering what in the name of confusion could have induced all the rest to have encroached on his private privilege, and looking upon each new comer as a new and most hateful intruder.

"One hundred and forty, and forty one," said Dick, doubtfully pulling out his tickets. "One hundred and forty one!" slowly drawing open the curtain of the lower berth, and stooping to reveal a remarkably corpulent gentleman in a particularly genial repose.

"Fire!" cried Dick

"Fire!"

"Sir!"

"Sir!"

"What, the devil!"

"No, no, sir," said I, "the upper one no doubt he left for you, as you see it is empty; and you could not certainly be so hard-hearted as to wish to arouse him from such a refreshing slumber."

"I have half a mind, nevertheless, to try the depth of his blubber with the end of my walking-stick," said Dick, giving way to my suggestion in no very pleasant temper. "I do not believe the puppy is any more asleep than I am."

He was not to be aroused.

Divesting myself of coat, boots, and hat, I turned into the middle berth, and was soon in a dreamy maze of half forgetfulness, half consciousness. The silent and shadowy movements of the waiters, as they stole noiselessly round among the sleepers, collecting the material for their nocturnal labours, the regular plunges and hissing of the powerful engine, and the trembling of the solitary suspended lamp, were soon lost in a wild fantasy of bull-dogs and bison-bulls, Indian maidens and red-faced Irish women, which flitted through my fancy in multitudinous profusion.

I was in the midst of a very interesting interview with a beautiful chocolate damsel, reclining on a couch of tiger skins, and surrounded by the spoils of war and implements of the chase, when I was awakened from my trance by a sudden cry of "Fire!" "Fire!" "The boat's on fire!" which was instantly echoed by a hundred mouths, and followed by a noise and confusion that beggars description.

I had barely time to rub open my eyes and draw aside the curtains, when there was a general rush to the companion-way of nearly the whole of the passengers. Out they rolled, pell-mell from their berths; tumbling over one another in the most amusing state of confusion. The heads and shoulders of the under tier were pounced upon as they were protruded by the upper tier, to the no small damage of noses and faces. Slipping, tumbling, swearing, striking officers shouting it was a false alarm, which was generally believed to be a fetch, captain rolling on the floor, having been tumbled over the balusters in a vain attempt to stop the rush up the companion way, were a few of the incidents.

A little fat man, with a squeaking voice, after one or two abortive attempts to get up stairs, in which he lost his wig, rushed with frantic energy to one of the wedge-like cabin-windows, and thrust his person so forcibly in that he could neither advance nor recede. What he said, the rudder could probably tell, but the violent flapping of his little turtle-fin legs was the only indication we had on this side of his state of feeling.

One tall and bony, but cool and collected looking man, whose specific gravity was certainly greater than the water, but whose natural gravity was much greater than the specific, after getting out of his berth, stretching himself, and giving a glance at the scene of confusion, coolly walked to the steward's closet, and after some fumbling, came out with two jugs! Drawing the cork of one, and smelling the contents, he applied it to his mouth, and after a long pull, smacked his lips with great apparent gusto, and pouring the remaining contents on the floor, replaced the cork, which he drove in forcibly. The same process was repeated with the other jug, a slight curl up of the eye-brows in each case denoting a [illegible]. He then took a sheet, and giving an additional blow to the corks, tied one jug in each end, and after walking to the unoccupied window, and noticing the height of the water, slung under his shoulders his ready-made life-preserver, and sat down quietly, to wait till he companion-way was clear.

This scene and choked passage made the exit very slow, and the crowd still more furious. Determined at length to have a little closer view, I was upon the point of jumping from my berth, when a hand from above pushed me back, and the next instant Dick vaulted over my head, and lighted astride the neck of the corpulent gentleman, who had so coolly taken possession of "forty-one," and who was at that instant slowly emerging from his den.

"Fire! fire!" cried Dick, twisting his legs together

"Get off, you scoundrel!" said the corpulent man

"Murder!" cried Dick

"Get off, you villain, or I will murder you!"

"Help! help! I am drowning!" said Dick, twisting his legs tighter, and seizing the stout man by each of his ears.

This was too much for poor human nature, and a desperate struggle ensued, which terminated in the rolling together on the cabin floor, Dick still maintaining his position, and the stout gentleman's face blazing with rage and vexation.

"Oh, my poor mother! I shall never see her again!" blubbered Dick, holding on with the energy of a drowning man.

Here Dick gave a tremendous twist of his legs, at which the fat gentleman opened his mouth, and evinced decided symptoms of strangulation.

"If I get up I will pound you to a mummy, sir!"

Dick took a better hold.

"Do you intend to let me up?" said the gentleman.

"I wonder how far it is to land," said Dick.

Here the round gentleman made a violent plunge, which resulted in a somerset, and had not Dick maintained his position a little his luck, I know not how far he would have rolled.

Succeeding at last in recovering from the convulsions into which the scene had thrown me, I jumped from the berth, and extricating the sufferer from his embarrassments with some little difficulty, raised him to his feet, and pointing to the companion-way, up which the tall man, who had been an amused spectator of the affray, was retreating, his jugs still slung under his arms, intimated that if he expected to save himself no time was to be lost. But no rage had succeeded fear, and the sole objects of his existence appeared to be, first to regulate his wind-pipe, and then to avenge himself on Dick, and it was not till, tapping my forehead significantly with my fore-finger, and bending my thumb mysteriously toward Dick, I conveyed the impression that he was a little damaged in the upper works—in fact nothing less than insane—that I succeeded in quieting him.

Casting first a look of incredulity, and then one of mild compassion and contempt upon Richard, he seized his coat, and enveloping himself in its ample folds, prepared to mount the deck and encounter the apprehended danger.

He was, however, spared the trouble, and the Hudson the pain of having such a sizzling hot subject thrust into its bosom.

The tide had turned, and he was encountered on the stairs by the return current of angry, laughing, scolding, jesting, half-naked, tattered passengers, who had made the important discovery that there was after all no fire or explosion, nothing more, in fact, than the crazy fancies of a man troubled with the night-mare, whose alarming cries had found an answering echo in the breasts of some half-dozen others, from whom the contagion spread to the rest with the rapidity of wild-fire.

I have often thought that there is no better test of a man's temper than an unnecessary fright or alarm, and the difficulty in this case with which sundry staid personages controlled their anger at being so suddenly astonished out of their dignity, and the unqualified pleasure with which a few of the victims enjoyed the joke, as they believed it, were as good indications of natural temper as of the amount at stake, which last is so well supposed to generally regulate one's care for life.

The little fat man who had been serving as a plug to the cabin-window, and who had been enjoying the pleasing contemplation of the waves, rising to his excited imagination with alarming rapidity, and about to engulf him, was seized by the legs by him of the jugs, and after several powerful efforts drawn in. If he could have been wire-drawn, or lengthened out by being pulled through the other way, it would have been a decided improvement to his person

Dick's friend I noticed making a vain attempt to obtain from the indignant captain, who would not listen to a word, the name and address of his volunteer cravat. How he disposed of himself for the night I was never able to ascertain. One thing is certain, he did not trust himself in Dick's vicinity.

The man of the jugs exchanged with the steward his ready-made life-preserver for a pair of clean sheets, and quietly turned in, being soon after followed by most of the remaining passengers. My last recollection is of being lulled to sleep by the bugle-note of his snore, which had been sonably stimulated by some cause, not in any way of course connected with the contents of the jugs.

THE TEST OF TRIFLES

By Clara Wallis.

The moving-spring of many minds, the component part of many existences, the semblances of many virtues, appearing in almost every form and under every name, how shall we distinguish *trifles* from the minute links of the infinite and eternal chain of consequence? Smiles, flower-gifts, tones of music awakening some sympathetic echo, and words carelessly uttered and soon forgotten by the speaker, may assist in transforming a nature, in colouring a destiny, while a soul-engrossing thought and life-engrossing ambition may be essentially trivial and worthless. It is not the nature of the thing alone, then, but the purpose to which it is consecrated, or to which it is degraded, that must assist to decide the question.

Whatever is identified exclusively with *self*, though wealth, fame, and power be involved, must be trifling in its nature, for it is utterly opposed to the development of all that is hallowed and beautiful—the completion of all that is true and real. He whose mind responds alone to what affects his own interest and comfort, has no power to appreciate the happiness he covet, for happiness can alone result from the performance of duty and the diffusion of truth, and in thus creating their consequence, happiness in others. Whatever conduces to the real welfare of mankind generally, or of individuals particularly must be important, though merely a word of kindness, a word reproof, or a truthful idea is conveyed,—though merely the suppression of a wish, of a feeling, is laid on the altar of obedience or affection.

But, worthless as they are, trifles are far from being powerless in their effects, the subtle poison that lurks within the beautiful blossom, to grasp which is most dangerous, is not more concealed by adventitious splendour than the heartlessness of trifling injuries is by the brilliant polish of plausibility and assumed benevolence, and may be, from the deadly reaction caused by its discovery, equally fatal in its results. For the protean aspects of all trifles corresponds with the attributes of the mind they influence; now, glaring beneath the eye of envy, or intenser hate; now, looming like a cloud-wrapt mountain, in the paths of indolence and timidity; anon, diminishing to a mere speck before the energetic progress of faith and will Thus, judging comparatively, we may securely infer that every occurrence, thought, or desire that militates against our duty is, if we analyse it, in reality a trifle; for that alone becomes real which is eternal, while, abstractedly considered, there is nothing trivial, as every atom, material or immaterial, must have a certain weight in either the scale of benefit or injury.

In elucidation, let us examine a cursory sketch or two from the busy world around us. Here we see a delicate interesting looking girl busily and anxiously employed in manufacturing some fairy fabric, it is essentially, of little real utility, but it is to be a token of gratitude to a kind friend who is going to a distant land, and it is all she can give; she looks fatigued, but she stays not to rest, for time is precious and affection moves her wearied hand. Turn to the next sketch look at that beautiful countenance; the rich tresses over which the rose-wreath twines so lovingly, the slender waist clasped with diamonds; the splendid drapery that falls so gracefully around that erect and stately form,—where has her morning been passed? In canvassing for the ensuing election, that her father may be returned to parliament, not for the well-being of her country, but that *he* may rise higher and higher in the scale of power and worldly wealth and honour. And now she is going to the hall of one she deems far inferior, in order that she may, by the condescension, secure additional votes, she is going to sacrifice her feelings at the shrine of ambition! Which, then, of the two is trifling away her time, which performing a duty, preparing her mind for its mission—that mission which is universal—of sacrificing the present for the future on the altars of immortal truth?

The next view represents a hero on the battle-plain, leading on his men to slaughter. The star of victory is culminating; amidst the gloom of war; the proud strains of triumph concluding, mingled with groans of despair and angony, and the visioned crown of fame glitters above his brow as the savage billows of contention ebb and flow;—ebb, to flow fiercer on, crimsoned with the red tide of life! Victory is his aim, that Fame may bestow her mockery of glory, Wealth her perishable treasures, Applause his transient praise, and Flattery his palling echoes! Some few, indeed, fight for their country's glory, not their own; but, though such a feeling is more gracious, and therefore less condemnable, the object to be won is equally illusory. No true glory can be gained by destruction, though much may be by preventing it. and supposing a nation should be compelled to struggle for its liberties—its existence—it should be mourned as a cruel necessity, not gloried in as an opportunity for the development of valour, often another name for obtuseness of nerve.

Here is one more imperfect delineation, and we will close our portfolio. Observe that old gentlemen, seated on a bench in his garden. He has a bunch of wild flowers and herbs in his hands, the nature and uses of which he is explaining to two dark-haired, bright-eyed boys, who are sitting on either side of him. He is teaching them—not from the abstract love of the study, but that they may trace each beauty of construction and adaptation, each wonderful property, to the beneficence of the All-wise Creator A few minutes, and the lesson is over: the boys are sporting joyously among the bright flowers of the garden, where the butterflies fan the rich petals with their painted wings—where the quiet hum of bees, and the sweet, low whistle of the blackbird blend with their merry laugh and rustling steps—where Nature reposes in her mutable but deathless beauty! Which was wasting his life, has allotted share in the distribution of time, and which improving his leisure hour?—the great subjugator of nations, or the simple and venerable studier of flowers and senator of peace?—*People's and Howitt's Journal.*

Domestic Doings in Devonshire.—A Devonshire magistrate says—"Some time since a woman applied to me for a summons against her husband. She said, 'My husband is on his death bed—the parish doctor says he cannot live a week, so I told him as soon as he was dead I should marry again, and he says so sure as I do he will come down the chimney and tear me abroad, so I wants a summons against him, your honour.'"

THE WORKMEN OF LYONS.

BY M. A. AUDIGANNE.

(Translated from the French for the WORKING MAN'S FRIEND, *by Walter Weldon)*

THE workmen of Lyons have been, for the last half century, surrounded by a strange and sinister *éclat*. How often, during the long days of distress, has not the attention of all France been riveted upon the ancient metropolis of the Gauls, in which the unfortunate but mistaken masses were waving the flag of social war! Even in the intervals of tranquillity, the gaze of France has rested anxiously upon this Etna only half extinguished, fearing each moment new and sudden eruptions. Nevertheless, the manufacturing workmen of Lyons are but imperfectly known beyond the bounds of their own city. In consequence of the peculiar industrial organisation which prevails therein, and which buries individual activity in the bosoms of the families, it is difficult to penetrate into the moral and intellectual life of the masses. Moreover, people are generally most inquisitive with regard to the Lyonnais in times of political crisis and agitation, when their most important characteristics have disappeared for a time amid the convulsive turmoil and tumult of the moment. There is to-day, however, a marked period of rest for the turbulent inhabitants of Lyons. They are not panting now behind the barricades, but breathing for a few moments calmly and in peace. The moment is, therefore, very favourable for fixing the essential features of this living picture.

An interest perfectly exceptional attaches itself to the study of the vast agglomeration of two hundred and fifty thousand individuals, of whom three-fourths, or thereabouts, are engaged in one single manufacture—that of silk. It was in the serried ranks of this great phalanx that the enemies and sworn adversaries of all social order found but yesterday that implacable army which they delighted to point to as the "arm of socialism." Where are to be found *now* the soldiers which were promised from it for new *emeutes*, the heroes and effectors of new revolutions,—and in what direction, at the present moment, is moving the intelligence of the population of Lyons? To these questions we ought not to be indifferent. An examination of the moral and political condition of that city will furnish a marvellous opportunity for observing what it really is that working men are able to gain by delivering themselves up to revolutionary agitation, and the pursuit of social and political fantasies. Never has a population been more thoroughly imbued with the adventurous spirit of revolution than has that of the great city of the silk-weavers. What has it gained by all its many efforts? To recompense it for its immense losses and long convulsions, has it approached one morsel nearer to its end? Has it not, on the contrary, arrived at perfect powerlessness, and tainted, without exception, every institution it has meddled with? The results which we are about to lay before the reader of our examination of the social, moral, and political condition of Lyons, will be able to teach a most important lesson to the world, and more especially to the working men thereof, for they will make evident the ties which bind the destinies of labour to the destinies of order.

In order to be able to penetrate into the actual thoughts and sentiments of the working classes of Lyons, it is necessary to be acquainted first with the *régime* to which they are subject, and with the natural inclinations of their minds and character. It is necessary also to have some knowledge of their exterior life, and to follow them into the agitated public scenes which are so frequently presented by their city, before we can appreciate the influence which is exercised over their minds by the recollections of recent insurrections. All this we propose to give and do in the course of the present paper.

I.—LYONS AND ITS INDUSTRY.

When one studies in its details this strange city of Lyons, which strikes the traveller every time he sees it with a new astonishment, one is struck with the evident connexion which exists between its topographical configuration and the spirit of its population. It is not a city bearing any likeness to any other, forming a compact and homogeneous mass, but everything in it is unequal and clashing with all else. The various parties among its inhabitants are divided from each other by natural barriers. Till very lately, when a presidential decree did away, partially, at least, with the anomaly, the very laws divided the population of Lyons into different *communes*, thus giving sanction to its ideas of division. It is essential that we should picture the topography of the city, if we would have the reader understand its moral situation.

At the point where the rivers Saone and Rhône prepare themselves to join, a high and steep hill separates, and bathes its feet in, their two yet unmingled floods. A little farther on, the mountain suddenly sinks into a plain, which is triangular in shape, a couple or three kilometres in length, and bounded on two sides by the two rivers, and on the third by the steep side of the mountain we have mentioned. The central point of Lyons is situated at the foot of this steep declivity, up which the city climbs by steps, consisting of six-storied houses, till it reaches the summit, upon which, covering it entirely, it finds the populous quarter *de la Croix-Rousse*. The city is not, however, wholly confined to the space which lies between the two rivers, but also spreads itself over the right bank of the Saone, which was the site of the original city, and over the left bank of the Rhone, to a great distance. Enclosed within the bosom of these grand natural divisions are others quite as boldly marked, which seem to render every quarter of the city as distinct from every other as are separate towns. Each social class is packed up by itself in its own quarter, as separately as the Jews were from the Christians in the towns of the middle ages. The *fabricans* are grouped about the foot of the declivity before described, and to which is given the name of the Grand' Cote. The merchants, the *commissionnaires*, have their counting-houses in the centre of the city, and upon the quays which cover the right bank of the Rhône, while those who are dependent upon neither trade nor commerce, the families whose fortunes are hereditary, reside in the most southerly portion of the city, sloping in the direction of the wide fields of Perrache. In the *Guillotière*, as it is called, which is situated upon the left bank of the Rhone, and also separated by that river from the most aristocratic portion of the city, are encamped the most nomadic class of the population, is found the rendezvous of all the *gens tarés et sans aveu*,* who are numbered among the children of Lyons, and are gathered together all those vicious elements which are always enclosed within the bosom of a great gathering of men. The houses placed under the surveillance of the police are situated in the Guillotière, in the low streets which run parallel with the banks of the river. Seek not there, however, for the workmen of Lyons, *les ouvriers de la fabrique*, as we say in common parlance, including thus under one designation all the artizans whose labours have connexion with the staple manufacture of the city. The numerous workmen who are included in this extensive category have their dwellings principally in the quarter of the Croix-Rousse, which consists of an immense assemblage of workshops, from all of which escapes the same dull sound, and in all of which the same occupations are carried on. In this part of the city none beside these *ouvriers* reside, not even a single vender of the necessaries of life dwelling within it, but —inconceivably vast as is its wide extent—it has grown to be insufficient for even the small accommodation which is asked for by the Lyonnais silk-weavers, and they have been obliged also to spread themselves over the surface of the Grand'-Cote, and to transport a portion of their body across the Rhône, on the other bank of which it occupies that part of the Guillotière which is situated at the least distance from the quarter of the Croix-Rousse, at whose further extremity, round the sombre and gloomy cathedral of Saint Jean, in the ancient *quartiers* of Saint George and of Saint-Juet, resides the only remaining portion of the weavers of Lyons.

It will thus be seen that this vast body of *ouvriers* forms, as it were, a single compact mass, in one place intersected by the Rhône, but otherwise undivided, and placed apart from all other portions of the population of Lyons, and it now remains for us to inquire into the nature of the *régime* under which it exists.

As the silk manufacture consists of a multiplicity of various operations,† it brings face to face the interests of more parties than

* Men whose characters will not bear scrutiny, and low people.

† The weaving of silk necessitates the performance of various labours of a goodly number of successive, which are generally divided between. To these are given the names of Apprentices, or draw-boys; Drawers, or folders; Doublers, or winders; Bobbineers, or pirn winders; and Warpers. Lisseuses, those who prepare the draw-boys; Liseurs, those who read the designs in order to put them upon the cards, &c. &c.

one, but of these interests it will be sufficient to name the three principal ones—that is to say, the interests of the *fabricans*,* those of the *chefs-d'atelier*, and those of the *compagnons*, upon the relations towards each other which are borne by each of which depends entirely the public peace and prosperity. The *fabricans* receive their orders sometimes from the *commissionaires*—commission agents—of Paris or of their own city, and sometimes directly from the merchants who require the goods. Excepting a few kinds of stuffs which are always saleable, and always form a safe investment, they never manufacture anything for which they have not orders, and the moment these are completed the looms they have put into motion cease to beat. The *fabricant*—so many and so various are the species of goods which he manufactures—has not always in stock, when he receives his orders, the raw material necessary for the manufacture of the goods required, and still more seldom has he in employment at the time the particular "hands" required to make them He has therefore to send out amongst the workmen of the city, in order to engage those of them he requires, just as the barons of the middle ages, before the formation of regular standing armies, sent out to enlist soldiers when they were inclined to fight a neighbour The *fabricant* delivers the unmanufactured silk—having first given directions respecting the pattern, &c &c, of the article to be woven—to the *chef-d'atelier*, who carries it to his workshop, weaves as much as he can of it himself, and enrolls *compagnons* to weave the remaining portion The looms made use of are nearly always the property of the *chef*. The *compagnons* labour with him in the same workshop, which rarely contains more than four or five looms, and is only calculated for the accommodation of a very limited number of workmen.

The *ouvriers* have *none* in absolute independence of the *fabricans* who supply them with the silk which they work up, the contract between the two parties always ending with the receipt from the workmen of the silk given out to them. A *fabricant* has, sometimes, supply one workshop for a length of time, but a fresh contract is entered into every time a new quantity of silk is furnished to its *chef*, so that no compensation is possible between the manufacturing system of Lyons and that which prevails in the vast factories of Flanders, Alsace, or Normandy

The province of which Lyons is the capital port more than one half of the departments which are seated near that of the Rhone, and, excepting times of commercial crisis and stagnation, there have been constantly and steadily thousand looms at work in it, and of these 35,000 are in the town itself To show the proportion of French silks which are manufactured in Lyons alone, it will be sufficient to state that the fabrics made of silk only, together with those of which the greater part is silk, employing in the country (France), about 130,000 looms, which produce goods to the annual value of 360 millions of francs, of which 200 millions worth are manufactured by us. Of the 360 millions of francs worth of silk goods, rather less than half are exported, the country's annual exports of such goods amounting to the value of 170 millions of francs, of which 120 millions worth are furnished by Lyons, which thus finds its principal markets in the exterior of France The most valuable customers of the Lyonnais are the merchants of the United States, with those of England, Germany, Belgium, Spain, Russia, Mexico, Turkey, Italy, and Brazil The rich brocaded stuffs for which their city has become so famous, although giving employment to very many of the best workman, are far from equalling in amount of value the commoner stuffs which form the staple of its manufacture. The annual value of the brocaded stuffs exported from Lyons is as nearly as possible equal to 40 millions of francs, or about a third of that of its gross exports. There exists in foreign countries an eager combination against the Lyonnais industry more than 230,000 silk looms being employed by foreign weavers Prussia brings largely into the markets of the world the [illegible] and velvet ribbons of Crevelt and Elberfeld, Switzerland [illegible] sarsenets, taffetes, and lute-strings of Zurich, Savoy the fabrics velvets of Faverges, and England the various silk fabrics which are manufactured at Paisley, Coventry, Derby, Macclesfield, Manchester The Great Exhibition, however, of 1851, has put into bold relief the superiority above all others of the fabrics of Lyons, and rendered evident to the most casual observer the incomparable beauty of the colours prepared by the Lyonnais dyers, the exquisite taste of her *fabricans* and manufacturers, and the unapproachable ingenuity of her weavers All the world has seen, too, from the specimens there exhibited, that the Lyonnais spin a great deal finer silks than are spun elsewhere and possess the art, more than any others, of appropriating to the various fabrics the kinds of silk which are the most suited for their manufacture Nevertheless, as certain foreign manufacturers have the advantage on the side of price, the contest between them and the Lyonnais brethren is often unfavourable to the latter, especially as in goods manufactured for the foreign markets, a low price is usually a greater recommendation than that superiority of execution which distinguishes even the commonest of the fabrics of Lyons.

It has been calculated that in silk-weaving every couple of looms requires for the weaving of their produce and the [illegible] operations the constant employment of five persons, so that [illegible] 70,000 Lyons looms [illegible] the Lyons silks must [illegible] employ [illegible] Of this number one half [illegible] inhabitants of the city itself,—of the Croix Rousses [illegible] neighbouring *quartiers*, we have mentioned— [illegible] are contained within the [illegible] of Lyons, [illegible] however, being [illegible] that of the [illegible] villages from the capital The numbers of the weavers are recruited in two ways, viz by hereditary descent, the son of a Lyons artizan generally following the trade of his father, and by the emigration from the country of new workmen, whom the reductions of the city have induced to forsake the plough and oxen for the loom and shuttle, and who are engaged by the *chef d'atelier* first as apprentices, then as *compagnons*. These companions arrive from a thousand different places, from Ain, from the Isere, Doubs, the Jura, Switzerland, Piedmont, and almost every part of France. When they have once become manufacturing artizans, it is seldom that they fail to remain such, but they very often change their *chef* and workshop, partly in consequence of the mobility of their humour, and partly in consequence of the changes which take place in the trade itself. Some of the *compagnons*—those of them who are careful and saving and determined to get on in life—become in the course of time *chefs d'atelier* themselves. These *chefs d'atelier* divide amongst the *compagnons* only one half of the amount which they receive from the *fabricans*, keeping themselves the other half for the rent of the workshop and that of the instruments of labour.

The wages earned by the weavers are generally but small. We will adduce an example which will give an idea. For the weaving of black silks, of an ordinary quality, such as form the greatest portion of the silks of Lyons, the *fabricant* pays 70 centimes * per mètre, and the *ouvrier*, by working from five o'clock in the morning till ten at night, is able—if he is not inordinately slow—to weave about four *mètres*. He thus earns as nearly as possible three francs per day, of which one half reverts to the *chef-d'atelier*, leaving only one franc and 50 centimes for himself. At some kinds of weaving higher wages

* The [illegible] [illegible] exact number [illegible] [illegible] [illegible]

may be gained, but on the other hand the earnings sometimes are considerably less, so that the sum we have just named may be fairly taken as the mean. The women who are engaged in the manufacture are styled *compagnonnes*, and are placed upon exactly the same footing as the men. They weave by far the greater portion of the plain silks, whose manufacture requires the exercise of considerably less physical strength than does that of the brocaded fabrics, in the weaving of which latter, after each throw of the shuttle, it is necessary to raise a number of cords to which extremely heavy weights are suspended. The process of weaving, however, although still extremely painful and unhealthy, as it constrains the weaver to continue always in one position and always to be making the same movements, is a far less heavier labour than it was in days gone-by, and has been rendered so, as all the world is aware, by the genius of a simple *ouvrier* of the city which we speak of. His name will be handed down to every future generation, as one of the greatest benefactors to his race that ever lived.*
